Identify the Resource Types (assets) that are reported by Wiz that you want to import with the Wiz Integration Resource Type configuration page in your ServiceNow AI Platform instance.

The Resource Types that you select apply to all the primary Wiz vulnerability and compliance integrations except the Wiz Container Vulnerability Integration. See the Wiz Vulnerability Response Integrations for more information about the vulnerability and compliance integrations.

Wiz Backfill Integrations

Retrieve and process data stored on the Wiz Missing Assets [sn_vul_wiz_missing_asset] table for assets that were not processed by the primary Host Vulnerability Integration with a specialized Wiz Backfill Integration.

The Host Vulnerability Backfill Integration is activated by default.

Note: The Wiz Asset Integration and the Wiz Container Vulnerability Integration do not have backfill integrations. The Wiz Asset Integration can discover assets and create and update discovered item records on the Discovered item [sn_sec_cmn_src_ci] table. The Wiz Container Vulnerability Integration imports and processes discovered container image records.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Import host vulnerability data with the Vulnerability Response Integration with Wiz

Import host vulnerability findings related to virtual machines and serverless assets in your cloud environment with Wiz's Host Vulnerability Integration. These findings are mapped to Host Vulnerable Items (VITs) within the Vulnerability Response application to support remediation workflows.

Modify the severity for a CVE or TPE

Vulnerability managers and vulnerability analysts can now adjust the severity of common vulnerabilities and exposures (CVEs) and third-party entries (TPEs) from the list view in the vulnerability manager workspace. The risk level of the associated vulnerabilities will be recalculated during the scheduled jobs based on the modified severity. You can also reset the severity to its original source value if required.

Questionnaire Support in Exception Management via Smart Assessment

Configure advanced questionnaires as part of the exception management process using Smart Assessment. This enhancement allows remediation owners to provide detailed context for exception requests and enables approvers to configure conditional questions to gather information for informed decision making.

- Collaboration and streamlined approval: Facilitate collaboration between your vulnerability management and remediation teams by streamlining the approval process with clear and complete exception justifications.
- Mandatory questionnaires: Block the submission of exception requests until mandatory questionnaires are completed. If a questionnaire is marked as mandatory, the test results and its associated remediation tasks remain in the 'Open' state until the questionnaire is completed and submitted.
- If the questionnaire is incomplete, the state change approval record is saved as 'Draft'. Only after completing the questionnaire can the user submit the exception request, which will then move the test results or remediation tasks to the 'In Review' state.

Lookup rules enhancements

When you reapply Lookup rules, Discovered items (DIs) that have been inactive for more than 90 days are ignored. These Discovered items (DIs) are also excluded from licensing considerations. Removing them from the lookup logic can improve performance and reduce processing time.

- Background job enhancements: New fields have been added to help you view successfully evaluate records, the time taken for processing, the time remaining, and an estimated number of records.
- Improved accuracy for non-CSDM Vulnerability Response users: A system property (sn_sec_cmn.ci_lifecycle_status_source) has been introduced to help users who do not follow Common Service Data Model (CSDM) standards. This property ensures that Discovered items (DIs) and associated VITs are properly marked as Decommissioned and are excluded from the CI Lookup. Additionally, the Retired Configuration Items PA indicator has been updated to accurately reflect CIs based on the decommissioning flags.
- The scheduled job to create reconcile unmatched discovered items feature is deprecated. You can "Reapply Look up Rules" for selected or filtered items in the discovered items table view.

Tenable.cs integrations with the Vulnerability Response and Container Vulnerability Response application

The Vulnerability Response Integration with Tenable application now supports data ingestion from Tenable.cs, enabling you to bring in cloud and container

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

vulnerabilities directly into ServiceNow. This integration enhances your ability to prioritize and remediate vulnerabilities identified in Tenable cloud resources and container images. Key capabilities are:

- Importing vulnerabilities discovered by Tenable.cs in cloud hosts and container images into ServiceNow automatically.
- Enabling remediation workflows to triage, assign, and resolve the most critical vulnerabilities across cloud-native and containerized environments.
- Using the Setup Assistant to easily configure credentials and integration parameters—get started with minimal manual setup.
- Scheduling jobs to run periodically to import findings from Tenable.cs, create vulnerable items (for cloud hosts), create container vulnerable items and associate them with the relevant cloud resources and container image records.

Assess vulnerability exposure by publisher

Starting with v5.0 of Vulnerability Exposure Assessment, a publisher-based assessment is introduced that enables you to assess the vulnerability impact by vendor. For example, Microsoft, and Red Hat. By focusing on recently disclosed vulnerabilities from critical vendors, you can prioritize remediation and proactively address threats, improving your overall security posture.

View risk score details of a vulnerable item in the Work notes section

Starting with v25.0.3 of Vulnerability Response, the system property `sn_sec_cmn.risk_score_changes_add_worknotes` is inactive by default. If you enable it, only then you can see all the changes related to the risk score of a vulnerable item in the Work notes section. Additionally, the work notes are updated only if there's a change in the risk score.

Quick Start Tests for Vulnerability Response

After upgrades and deployments of new applications or integrations, run quick start tests to verify that Vulnerability Response works as expected. If you customized Vulnerability Response, copy the quick start tests and configure them for your customizations.

Enhancements to exception rules handling

- Exception rules are reevaluated with nightly scheduled jobs.
- Vulnerable items that no longer match exception rule conditions are unlinked from remediation tasks.
- A deferred vulnerable item (VIT) is reopened if it doesn't match any active exception rules.
- Exception rules don't create remediation tasks. VITs are deferred directly and aren't associated with a remediation task.

Tenable's endpoint scanning integration

Support for Tenable's endpoint scanning integration to retrieve scan metadata. The integration fetches scan details using the last_schedule_id from existing asset data in Tenable.io.

Reopened Count field on vulnerable items

Added the Reopened Count field on vulnerable items to track the number of times their states change from 'Closed' to 'Open' or to 'Active'.

Out-of-the-box vendor advisories via Common Security Advisory Framework (CSAF) integration

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The following vendor advisories are configured out-of-the-box and are automatically activated when the Solution Management plugin is enabled: Redhat and Suse.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Enhanced UI experience in workspaces when reassigning vulnerable items

When you reassign a record (VIT, AVIT, CVIT, or CTR) in workspace to a group you're not a member of, the system now confirms the reassignment and displays a clearer message explaining why the record is no longer visible. This helps you understand that access is now limited to the new assignment group, reducing confusion.

Changed in this release

Granular VIT creation for Microsoft TVM recommendations

You can now configure recommendation as a vulnerability item (VIT) key for Microsoft Threat & Vulnerability Management (TVM). This enhancement enables each recommendation to generate a separate vulnerable item, offering more granular control for tracking, assigning, and managing remediation efforts, especially when different recommendations require actions from different teams.

Improved state management for remediation tasks and vulnerable items

State management logic for roll down of state from remediation tasks (RTs) to findings and roll up of state from findings to RTs has been refined across all modules. Updates improve accuracy by handling mixed item states (a combination of Deferred and Closed), supporting closure of tasks in sub-states like In-Review, and reopening tasks based on the Assigned To field. The update also improves handling of False Positive state transitions based on scanner results as source of truth. These enhancements reduce manual effort, clarify task ownership, and streamline remediation workflows.

Ability to manually cancel Exposure Assessment background jobs

Vulnerability Admins and Event Managers can now cancel Exposure Assessment background jobs that were triggered with incorrect parameters or are taking longer than expected. This enhancement reduces downtime by removing the need to wait for the job to complete. Once cancelled, the sub-state is immediately set to User cancelled, and the state updates to Complete after the job is fully terminated; giving you better control and flexibility.

Configure maximum rows in related lists

To improve readability and performance, you can now limit the number of rows shown in related lists on forms by setting the system property *sn_vul_cmn.related_list.set_max_row*.

Qualys Integration – Detection Splitting

Use the Qualys Host Detection Integration to create a separate VIT for each vulnerability instance based on proof. This improves accuracy in vulnerability tracking and supports clearer team ownership during remediation.

Activate the Qualys QVS score integration

Add Qualys-specific risk context to CVEs by importing QVS scores, helping you make more informed prioritization decisions.

Activation information

Install Vulnerability Response and third-party integrations by requesting them from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

ServiceNow AI Platform administration release notes

ServiceNow AI Platform® administration product enhancements and updates in the Zurich release.

Use ServiceNow AI Platform administration features to address the business needs of your organization. Administration features are active by default on all instances.

Advanced AI Search Management Tools release notes

The ServiceNow® Advanced AI Search Management Tools application helps AI Search administrators analyze search query traffic trends, review indexed record and configuration settings, and preview search query results. Advanced AI Search Management Tools was enhanced and updated in the Zurich release.

Advanced AI Search Management Tools highlights for the Zurich release

Zurich Patch 4

- Review performance metrics and trends more easily with an updated and refreshed dashboard UI.
- Analyze performance metrics and trends for search applications used in Recommended Actions.

Zurich Patch 1

- Analyze search trends from the preceding six months using the AI Search Analytics dashboard's **Date range** interactive filter.
- Understand your mobile search traffic with support for the Mobile Platform search application in the AI Search Analytics dashboard's **Search application** interactive filter.

See Platform Analytics Solution for Advanced AI Search Management Tools for more information.

Important: Advanced AI Search Management Tools is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Zurich Patch 4

AI Search analytics dashboard

The **Search application** interactive filter now allows analysts to review performance metrics and trends for search applications used in Recommended Actions.

Zurich Patch 1

AI Search analytics dashboard

The **Search application** interactive filter now allows analysts to review performance metrics and trends for the Mobile Platform search application.

Changed in this release

Zurich Patch 4

AI Search analytics dashboard

The performance metrics, trends, and charts for this dashboard have been refreshed to offer a cleaner visual experience.

Zurich Patch 1

AI Search analytics dashboard

The **Date range** interactive filter now enables you to access data from the last 180 days, rather than the last 90 days.

Activation information

Install Advanced AI Search Management Tools by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

You must have the User Experience Analytics API application installed from the ServiceNow Store to use Advanced AI Search Management Tools.

Related ServiceNow applications and features

AI Search

The ServiceNow AI Search application provides a consumer-grade search engine for ServiceNow Service Portal, ServiceNow Now Mobile®, and ServiceNow Virtual Agent. Intelligent query features help you quickly find the answers you need.

AI Search release notes

The ServiceNow® AI Search application provides a consumer-grade search experience for ServiceNow AI Platform® users. AI Search was enhanced and updated in the Zurich release.

AI Search highlights for the Zurich release

Zurich Patch 4

- Improve search precision and contextual relevance with hybrid search, available for customers with Now Assist in AI Search installed.
- Gain insights into search behavior with a refreshed and updated Search Preview UI.

Zurich Patch 1

- Search more intuitively with an updated, consumer-grade user experience in search portals, global search, and workspace search.

Zurich Early Availability

- Improve search precision by displaying external content search results in languages configured for the user's search session.
- Increase search recall by indexing searchable content and metadata from Multiple Choice and Select Box variables in records on the Catalog Item table and its child tables.

See AI Search for more information.

Important information for upgrading AI Search to Zurich

After you upgrade to Zurich from an earlier family release, run full document crawls in all your external content connectors to update their semantic vector indexing field mappings.

New in the Zurich release

Zurich Patch 4

Improve search precision and contextual relevance with hybrid search

Beginning with Now Assist in AI Search 15.0, customers with Now Assist in AI Search installed can enable the new hybrid search mode. Hybrid search combines keyword-based search with semantic understanding to deliver more accurate and relevant search results, with fewer zero-result searches.

Zurich Patch 1

Improve semantic search with third-party embedding models

Use custom and third-party embedding models supported by the AI Search RAG application to generate more accurate and relevant semantic search results.

Zurich Early Availability

Filter external content search results by language

AI Search filters external content search results, displaying only results that contain content in languages relevant for the user's search. These languages include:

- The search user's session language
- The fallback language for the user's session language (if configured)
- The language of the global fallback locale (if configured)

Indexing support for variables in records on Catalog Item and child tables

Index searchable content from Multiple Choice and Select Box variables in records on the Catalog Item table and tables that extend it.

New display properties for Search Result EVAM cards

Search Result EVAM cards include new **customIcon**, **customIconSize**, **forceNewTab**, and **useAttachmentViewer** properties that you can use to modify display settings and behavior for search results.

UI changes

Zurich Early Availability

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

Zurich Patch 4

Now Assist Multi-Content Response Genius Results

If you have Now Assist in AI Search installed, Now Assist Multi-Content Response Genius Results are supported in global and workspace search. Activating Now Assist Multi-Content Response Genius Results in global or workspace search

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

profiles overrides all other Genius Result configurations, so that global and workspace searches only display Genius Result answers from Now Assist Multi-Content Response Genius Results. Virtual Agent topic citations from Now Assist Multi-Content Response Genius Result answers in global or workspace search open the selected topic in the Now Assist panel so the user can continue their conversation on that topic.

Search Suggestions

Search administrators with the ais_admin granular admin role can access all Search Suggestions tables. Assign search administrators this role to eliminate needless propagation of full admin access.

Gain insights into search behavior with a refreshed and updated Search Preview UI.

Preview search query results using settings from a search application configuration or a search profile. Choose between keyword and hybrid search modes. Display search results as individual EVAM cards or as a JSON-format search query response object, with search and syntax highlighting. Review search query behavior and results and specify search query settings with the new Summary, Genius Results, Details, and Profile admin tools.

Zurich Patch 1

Consumer-grade search experience for search portals

The search results page for search portals has been revised to offer a more intuitive and consistent experience. Navigation tabs have been replaced with source facet buckets. All search results now open in a new browser tab, preserving your search in the existing browser tab. Facet buckets now show minimum search result counts, reflecting results removed by late binding content security. Search terms are no longer highlighted in search results.

Consumer-grade search experience for global search and workspace search

The search results page for global search and workspace search has been revised to offer a more intuitive and consistent experience. Navigation tabs have been replaced with source facet buckets. All search results now open in a new browser tab, preserving your search in the existing browser tab. Facet buckets now show minimum search result counts, reflecting results removed by late binding content security. A new `glide.ui.ais.show_all_facets` system property enables you to display facets from all sources when no source is selected. (The default behavior is to hide facets until a source is selected.) Search terms are no longer highlighted in search results.

Sort facet buckets alphabetically

Override the default sorting of facet buckets by their search result counts and display them sorted alphabetically by their labels.

Improved display for grouped attachment search results

When grouped with their parent search results, attachment search results now appear in collapsed form to save space. If a parent search result includes more than three grouped attachments, you can use the new **Show more** and **Show less** links to control how many attachments are visible.

Activation information

AI Search is a ServiceNow AI Platform feature that is active by default.

Browser requirements

AI Search doesn't support Internet Explorer.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Localization information

AI Search supports international languages. For details of language support by feature, see Internationalization support for AI Search.

Related ServiceNow applications and features

Advanced AI Search Management Tools

The Advanced AI Search Management Tools application adds new functionality to AI Search. Administrators can review dashboards with metrics, trends, and reports relating to AI Search usage and configuration.

Now Assist in AI Search

The Now Assist in AI Search application combines the power of search with the Now LLM Service agentic AI model to answer questions in user searches with actionable AI-generated answers from relevant Knowledge articles.

External Content Connectors

The External Content Connectors ServiceNow Store application enables AI Search applications to search content and metadata from supported external source systems, including Atlassian Confluence Cloud, Atlassian Jira, Google Drive, Microsoft SharePoint Online, Microsoft Teams, Salesforce Slack, ServiceNow product documentation, and public websites supported by the predefined web sources external content connector.

Application Manager release notes

The ServiceNow® Application Manager enables you to install, update, and manage licensed applications and plugins for your instance. Application Manager was enhanced and updated in the Zurich release.

Application Manager highlights for the Zurich release

Zurich patch 4

- Reduce potential runtime errors by installing and updating Now Assist applications with suites of interdependent versions.
- View all ServiceNow Store applications that are licensed or available for procurement from the **Available for you** tab.
- Gain insights about application installation requirements and blockers with application state indicators.

See Application Manager for more information.

Important information for upgrading Application Manager to Zurich

Application Manager is active by default on instances on the Zurich release. Upgrade your instance to Zurich patch 4 or later to use the latest features. For information about upgrading your ServiceNow AI Platform instance, see Prepare your upgrade.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New in the Zurich release

Zurich patch 4

Now Assist suites for version compatibility

Use the Application Manager to install and update Now Assist applications with suites of compatible application versions. Now Assist suites help verify that new Now Assist applications and versions remain compatible with the ones already installed to your instance.

Application state indicators

Review information about any applicable installation considerations, requirements, and blockers in the header of application details.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

Unlicensed application information

In addition to details about applications that are already licensed, the "Available for you" tab of the Application Manager now includes information about applications that haven't been procured from the ServiceNow Store yet.

Activation information

Application Manager is a ServiceNow AI Platform feature that is active by default.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Related ServiceNow applications and features

ServiceNow Store

Get applications that haven't been licensed yet from the ServiceNow Store, then install and update them through the Application Manager.

The Application Manager helps verify that Now Assist applications that you install or update remain compatible with any other Now Assist applications on your ServiceNow AI Platform instance.

Clone Admin Console release notes

The ServiceNow® Clone Admin Console application enables you to clone data between instances. Within this console, you can find your existing clone profiles, exclusions, preservers, and scripts. Clone Admin Console was enhanced and updated in the Zurich release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Clone Admin Console highlights for the Zurich release

- Configure the update set preservation up to 12 minutes before the clone executes.
- Preserve your in-progress update sets, regardless of when the scope was created in the specified time frame.

See Clone Admin Console for more information.

Important: Clone Admin Console is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Deprecations

- The legacy clone request page clone_instance.DO is going to be retired in the A release.
- Update to the latest version for the best experience and performance improvements. To update Clone Admin Console, see Clone Admin Console.

Activation information

Install the Clone Admin Console by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Data Management release notes

The ServiceNow® Data Management capabilities enable you to manage the growth of data in your instance. Data Management capabilities were enhanced and updated in the Zurich release.

Data Management highlights for the Zurich release

- View insights into storage consumption on your instance and manage data usage in the redesigned Data Management Console.
- Monitor data usage in a logical table view.
- View data usage for individual tables and their associated tables.
- View a summary of the data management rules on a table.

See Data Management for more information.

New in the Zurich release

Data Management Console

View a summary of data usage on your instance and manage the growth of data directly from the Data Management Console.

Monitor data usage at the table level

View a summary of data usage for an individual table and monitor data usage in associated tables that store attachments, audit records, and journal entries.

View data usage for logical tables

Monitor data usage for logical tables, including the Incident [incident], Problem [problem], and Change Request [change_request] tables.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Identify which tables are driving the most growth in other tables

View tables contributing the most growth to the tables that store attachments, audit records, and journal entries.

Rule summary

Track the number of records in the backlog and view the execution history of a table's data management rules.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Deprecations

The Data Usage Visualization Console dashboard has been deprecated in the Zurich release. Instead, you can monitor the growth of data on your instance using the Data Management Console.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Activation information

Data Management is a ServiceNow AI Platform capability that is active by default.

Dynamic Translation release notes

The ServiceNow® Dynamic Translation application enables translation of user-generated text by using third-party translation service providers. Dynamic Translation was enhanced and updated in the Zurich release.

Dynamic Translation highlights for the Zurich release

With the new Test Exclusion Rule module you can check what your exclusion pattern matches during a test translation, then create an exclusion rule based on the pattern you tested.

See Dynamic Translation and Exclusion Framework in Dynamic Translation for more information.

New in the Zurich release

Test Exclusion Rule

Use the new Test Exclusion Rule module to check your exclusion pattern in Dynamic Translation's Exclusion Framework. You can manually test either exact matches or pattern (regex) matches. See what your exclusion pattern matches when translating your input into target languages. When you are satisfied with your exclusion pattern, you can create an exclusion rule based on it with just one step.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Activation information

Dynamic Translation is a ServiceNow AI Platform feature that is available with activation of the Dynamic Translation plugin (com.glide.dynamic_translation). For details, see Activate Dynamic Translation.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Related ServiceNow applications and features

Localization Framework

Using configurable workflows, the Localization Framework application standardizes and enhances the process of translating artifacts across the platform.

Localization Workspace

Localization Workspace is a targeted translation management experience for content owners and translation fulfillers. With Localization Workspace you can manage and deliver multilingual content at scale.

System Localization

Set up location-based translation and currency support for users on your instance, wherever they are in the world.

External Content Connectors release notes

The ServiceNow® External Content Connectors application enables AI Search applications to search content and metadata from supported external source systems, such as Atlassian Confluence Cloud and Microsoft SharePoint Online. External Content Connectors was enhanced and updated in the Zurich release.

External Content Connectors highlights for the Zurich release

Zurich Patch 7

- Expand your search experience with external content connectors for Adobe Acrobat Sign, Aha! Roadmaps, Cornerstone, Fluid Topics, ManageEngine, and Workvivo source systems.
- Retrieve content and links from URLs found in sitemaps defined for your web source system when running content crawls for the Webcrawler external content connector.
- View a content crawl's start point via links in the content crawl list and in content crawl history entries.

Zurich Patch 4

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Expand your search experience with external content connectors for Adobe Experience Manager as a Cloud Service, Asana, Docusign, Dropbox, GitHub Enterprise Cloud, HubSpot, Lucidchart, Miro, monday.com, Notion, SAP DMS, Smartsheet, Trello, WordPress, Workday, and Zoom source systems.
- Customize user permission settings, choosing the fields you want to compare when mapping source system users to ServiceNow AI Platform® users.
- Make external content connector crawl results searchable by linking connector search sources to search profiles from the connector editor.
- Monitor connector behavior on individual crawl runs and over time with improved crawl statistics and analytics.

Zurich Patch 1

- Expand your search experience by indexing searchable content from your Amazon S3, Box, GitLab, Microsoft OneDrive, Microsoft Viva Engage, and Zendesk Guide source systems.
- Search KB articles from your ServiceNow instance.
- Make web content locally searchable by indexing pages from predefined or custom public web sites with the Webcrawler external content connector.
- Configure connector settings and schedule crawls as part of connector creation using the revamped UI.

See External Content Connectors for more information.

Important: External Content Connectors is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading External Content Connectors to Zurich

Beginning with version 2 of the External Content Connectors application, external content connectors implement semantic vector indexing for crawled items. When you upgrade to a version that supports semantic vector indexing, your existing connectors will reindex all previously retrieved items the next time they're visited by a crawl, even if those items' content is unchanged. To force semantic vector indexing of your external content items as soon as possible after upgrading, cancel any running crawls, then restart the canceled crawls manually.

When you upgrade to version 4 of the External Content Connectors application from an earlier version, searches may not show all previously crawled content until you've completed both a content crawl and a user mapping crawl for each upgraded connector. The first content crawl run after the upgrade will reindex all searchable content from the source system, and the user mapping crawl will reindex all security principals from the source system. All crawled content should be shown in searches after both of these crawls are complete.

New in the Zurich release

Zurich Patch 7

Retrieve searchable content and metadata from your Adobe Acrobat Sign source system.

Retrieve searchable content and metadata from your Aha! Roadmaps source system.

Retrieve searchable content and metadata from your Cornerstone source system.

Retrieve searchable content and metadata from your Fluid Topics source system.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Retrieve searchable content and metadata from your ManageEngine source system.

Retrieve searchable content and metadata from your Workvivo source system.

Zurich Patch 4

Connector admin role

Users with the sn_ext_conn.xcc_admin role can create, configure, and review details for external content connectors and crawls.

Adobe Experience Manager as a Cloud Service external content connector

Retrieve searchable content and metadata from your Adobe Experience Manager as a Cloud Service source system.

Asana external content connector

Retrieve searchable content and metadata from your Asana source system.

Docusign external content connector

Retrieve searchable content and metadata from your Docusign source system.

Dropbox external content connector

Retrieve searchable content and metadata from your Dropbox source system.

GitHub Enterprise Cloud external content connector

Retrieve searchable content and metadata from your GitHub Enterprise Cloud source system.

HubSpot external content connector

Retrieve searchable content and metadata from your HubSpot source system.

Lucidchart external content connector

Retrieve searchable content and metadata from your Lucidchart source system.

Miro external content connector

Retrieve searchable content and metadata from your Miro source system.

monday.com external content connector

Retrieve searchable content and metadata from your monday.com source system.

Notion external content connector

Retrieve searchable content and metadata from your Notion source system.

SAP DMS external content connector

Retrieve searchable content and metadata from your SAP DMS source system.

Smartsheet external content connector

Retrieve searchable content and metadata from your Smartsheet source system.

Trello external content connector

Retrieve searchable content and metadata from your Trello source system.

WordPress external content connector

Retrieve searchable content and metadata from your WordPress source system.

Workday external content connector

Retrieve searchable content and metadata from your Workday source system.

Zoom external content connector

Retrieve searchable content and metadata from your Zoom source system.

Configure user permission settings for an external content connector

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Specify the source system and User [sys_user] table fields to examine for matches when an external content connector maps source system users to your ServiceNow AI Platform users.

Statistics for external content connector content crawls

Review statistics about the documents (items or files with searchable content and metadata) retrieved by a content crawl.

Statistics for external content connector user permission crawls

Review statistics about the permissions (user and group-membership security principals) retrieved by a user permission crawl.

Analytics for external content connectors

Review metrics that show how your external content connector has run over time.

Zurich Patch 1

Amazon S3 external content connector

Retrieve searchable content and metadata from buckets in your Amazon S3 source system.

Box external content connector

Retrieve searchable content and metadata from user boxes in your Box source system.

GitLab external content connector

Retrieve searchable content and metadata from issues, wikis, merge requests, tags, branches, and commits in your GitLab source system's groups, projects, and repositories.

Microsoft OneDrive external content connector

Retrieve searchable content and metadata from individual drives in your Microsoft OneDrive source system.

Microsoft Viva Engage external content connector

Retrieve searchable content and metadata from conversations in your Microsoft Viva Engage source system's communities.

ServiceNow® instance external content connector

Retrieve searchable content and metadata from KB articles in your ServiceNow AI Platform instance.

Webcrawler external content connector

Retrieve searchable content and metadata from pages and subdomains in public web sources. Select a predefined web source or specify a custom web source.

Zendesk Guide external content connector

Retrieve searchable content and metadata from articles in your Zendesk Guide source system's knowledge bases.

Statistics for external content connector content crawls

Review statistics for searchable items retrieved by a content crawl.

Statistics for external content connector user permission crawls

Review statistics for user and group permissions retrieved by a user permission crawl.

UI changes

Zurich Patch 4

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Connector creation UI

The connector creation UI now includes optional steps for configuring user permission crawls (for connectors that support them) and for linking connector search sources to your search profiles. If you want to change these settings for an existing connector, you can configure these settings from the connector editor.

Zurich Patch 1

Connector creation UI

The connector creation UI now includes optional steps for configuring the new connector's crawl settings and creating and scheduling crawls for it. You can still configure these settings from the connector's editor, so you can skip these steps during connector creation if you want to configure crawl settings and create crawls later on.

Zurich Early Availability

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

Zurich Patch 7

Sitemap support in the Webcrawler external content connector

Retrieve content and links from URLs found in sitemaps defined for your web source system when running content crawls for the Webcrawler external content connector. A content crawl only retrieves sitemap URLs that include the crawl's starting point URL.

Start point links for scheduled partial content crawls

View the start point for a scheduled partial content crawl via a link in its entry in the the external content connector's list of crawls.

Start point links in partial content crawl history entries

View the start point for a scheduled partial content crawl via a link in its crawl history entries.

Limited Role-Based Access Control (RBAC) support in the Atlassian Confluence Cloud external content connector

Map source system user and group permissions assigned via RBAC roles to users in your ServiceNow AI Platform instance.

Zurich Patch 4

Analytics for external content connectors

Analyze connector performance and behavior in a selected time period using the redesigned Analytics page. You can access this page from the connector editor.

Atlassian Jira Cloud connection settings

The Atlassian Jira Cloud external content connector no longer requires your Atlassian Jira Cloud instance ID as a connection setting.

Microsoft OneDrive connection settings

The Microsoft OneDrive external content connector now accepts certificate SHA1 thumbprint hashes in hexadecimal format as well as in base64-encoded format.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Microsoft SharePoint Online connection settings

The Microsoft SharePoint Online external content connector now accepts certificate SHA1 thumbprint hashes in hexadecimal format as well as in base64-encoded format.

Microsoft Teams connection settings

The Microsoft Teams external content connector now accepts certificate SHA1 thumbprint hashes in hexadecimal format as well as in base64-encoded format.

Zurich Patch 1

Webcrawler external content connector

The predefined web sources external content connector has been subsumed into the new Webcrawler external content connector, which enables you to specify a custom web source or select a predefined one.

Activation information

Install External Content Connectors by requesting the External Content Connectors Application Suite from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Related ServiceNow applications and features

AI Search

Configure search applications to display results indexed by your external content connectors.

Instance Scan release notes

The ServiceNow® Instance Scan engine is used to interrogate your instance for configurations that indicate health issues and identify opportunities to address ideal configurations. Instance Scan was enhanced and updated in the Zurich release.

Instance Scan highlights for the Zurich release

- Scan your instance, update set, scoped application, or specific record using specified checks.
- Run custom checks against your existing configurations.
- Use as a tool in your development operations, release management, as well as pre- and post-upgrades.

See Instance Scan for more information.

New in the Zurich release

Scan cancellation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Cancel or abort an ongoing scan by either selecting **Cancel Scan** in the scan execution modal or the **Cancel Scan** related link in the results record.

Queuing of scans

Leverage the scan queue feature to line up your scans for automatic execution following the current scan.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Activation information

Instance Scan is a ServiceNow AI Platform feature that is active by default.

Legacy Application Manager release notes

The ServiceNow® Legacy Application Manager application enables administrators to install and manage applications. This application is currently supported for the Zurich release, but it will be deprecated in a future release.

Deprecated features

Starting with Zurich patch 4, Legacy Application Manager is being prepared for future deprecation. It will be hidden but will continue to be supported. For details, see the Application/Plugin Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

Localization Workspace release notes

ServiceNow®Localization Workspace is a targeted translation management experience for content owners and translation fulfillers that you can use to manage and deliver multilingual content at scale. Localization Workspace was enhanced and updated in the Zurich release.

Localization Workspace highlights for the Zurich release

- Dynamic artifact detection enables Localization Workspace to identify all translatable content, including your custom artifacts. From version 1.1.0.
- With status synchronization, translation requests in Localization Workspace reflect the same status as the Localization Framework projects. From version 1.1.0.
- A Configuration hub and two new Guided Setups are available to help admins configure Localization Workspace. From version 2.0.2.
- Optional due dates and language groups enhance the efficiency of creating translation requests. From version 2.0.2.
- When selecting specific documents to translate, translation requestors can take advantage of a bulk select/deselect option as well as text search of document titles. From version 2.0.2.

See Localization Workspace for more information.

Important: Localization Workspace is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New in the Zurich release

Guided Setups for Configuring Localization Workspace

Two Guided Setups are available in the interface to assist admins with configuration of Localization Workspace. Guided Setups provide an outline and actionable steps for the configuration process. From version 2.0.2.

Configuration hub

Configuration Hub provides centralized access to the tables and properties often used by admins. You can update the tables and properties of dependent applications such as Dynamic Translation without leaving the Localization Workspace interface. From version 2.0.2.

Language Groups

You can optionally preconfigure language groups. Your users save time and effort by selecting an available language group rather than adding each target language individually to a translation request. From version 2.0.2.

Bulk select or deselect for content items

When users create a translation request, Localization Workspace retrieves and displays all translatable documents for a content type. A bulk select/deselect option is available on the retrieved list to enhance efficiency. From version 2.0.2.

Text search for content items

When users create a translation request, Localization Workspace retrieves and displays translatable content items in a list. You can search for terms in the titles of content items to filter the retrieved list. From version 2.0.2.

Optional due date field for translation requests

Your users can enter a due date when creating a translation request. Translation request due dates can be used to trigger email notifications. From version 2.0.2.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

Dynamic artifact detection

Dynamic artifact detection enables Localization Workspace to identify all translatable content, including your custom artifacts. From version 1.1.0.

Status synchronization

With status synchronization, you see the same status for your translation request in Localization Workspace as you see for the corresponding project in Localization Framework (Submitted, In progress, Complete). From version 1.1.0.

Activation information

Install Localization Workspace by requesting it from the ServiceNow Store. See Localization Workspace on the ServiceNow Store. Visit the ServiceNow Store website to view all the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Related ServiceNow applications and features

Dynamic translation

Translate user-generated content live on your instance to streamline communication for your agents and end users. Integrate with the machine translation service provider of your choice to enable translation on forms, activity streams, and chats.

Localization Framework

Localization Framework uses configurable workflows to standardize the process of translating artifacts across the platform. Translate Service Catalog items, Knowledge Base articles, Document Templates, and more.

System Localization

Give your users specialized support with System Localization. Define locales and adjust localization settings to display specific time/date and currency to users.

Notifications release notes

The ServiceNow® Notifications application enables you to create, manage, and send custom notifications in workflows for important events, actions, and alerts. Notifications was enhanced and updated in the Zurich release.

Notifications highlights for the Zurich release

- Use email diagnostics dashboard to monitor email delivery metrics, track bounce management, and overall health associated with email sender and reader jobs.
- Control the preferences page to display relevant notifications.
- Support multiple target records for email digest.
- Use the standard forms for system notification preference.
- Handle incoming email requests intelligently with the new email agentic workflow by identifying intent, executing actions, and drafting appropriate email responses.

See Notifications for more information.

New in the Zurich release

Email diagnostics dashboard

With email diagnostics you can track bounce management, email delivery metrics, email sender, and reader jobs health.

Email agentic workflow

With email agentic workflow you can intelligently handle new email agentic workflows by identifying intent, executing actions, & drafting appropriate email responses.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Allow Digest

The **Allow Digest** check box is dynamic and includes **Digest type**.

Changed in this release

Email digest for multiple target records

The email digest now supports both single or multiple target records within a set time interval.

Notification preferences

Enables admins to control the list of notifications displayed for users under the advanced notification preferences.

Activation information

Notifications is a ServiceNow AI Platform feature that is active by default.

Install Email agentic workflow by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

ServiceNow AI Platform core feature release notes

The ServiceNow AI Platform® core features provide configurations for applications and other parts of the ServiceNow AI Platform. The ServiceNow AI Platform core features were enhanced and updated in the Zurich release.

ServiceNow AI Platform core features highlights for the Zurich release

- Simplify and build queries with fewer conditions by leveraging hierarchical relationships in a condition builder.
- Use additional scripting features, including Promises and Async await, with the ECMAScript 2021 (ES12) JavaScript mode.
- Define dynamic categories and dynamic attributes once and reuse them using dynamic namespaces across multiple tables and dynamic attribute store fields.

See Administer the ServiceNow AI Platform for more information.

Important information for upgrading ServiceNow AI Platform core features to Zurich

The dynamic schema application framework has been revised in the Zurich release. If you implemented dynamic schema in Xanadu or Yokohama, the application is automatically migrated to a new framework as part of the upgrade to the Zurich release. For details on the migration, see the Dynamic Schema Zurich Migration Guide [KB2146133] article in the Now Support Knowledge Base.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New in the Zurich release

Hierarchical queries in condition builders

Simplify and build queries with fewer conditions using existing hierarchical data in a table. You can also define new hierarchical relationships between records that are in the same table.

Dynamic namespaces

Define categories and attributes once and reuse them using dynamic namespaces across multiple tables and dynamic attribute store fields. A dynamic namespace is automatically created when you add a dynamic attribute store field.

Experimentation framework

Help enable innovation by trying new ServiceNow® feature variants in your instance. Only single customer instances or Gen AI Innovation Program participants have early access to new innovations via experimentation framework. You can opt out of specific experiments or turn off the framework entirely.

Audit Management Console and audit retention

Simplify your audit data management and configuration by using the Audit Management Console module. It includes a new Retention option, which automates and simplifies the deletion of audit data based on your requirements.

Monitor requestors' API usage rates through the Inbound API Integration Usage dashboard

Inbound integrations track web service requests for OAuth registered applications and user accounts making those requests.

Use schemas to define the structure and format of REST API responses and requests

When you define a schema in the ServiceNow AI Platform, the schema can be used to define the structure of requests and responses within the associated REST API. The schema data for the requests and responses is then available in the exportable OpenAPI specification for the API.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

AI indicator in forms

The AI indicator is a visual cue that identifies form fields in configurable workspace and Core UI that have been updated with AI-generated content. This feature enhances user experience by providing a consistent and clear indication of AI involvement across the platform.

Changed in this release

ECMAScript 2021 (ES12) JavaScript mode supports additional scripting features

Use additional scripting features, including Promises and Async await, in applications or scripts that use the ECMAScript 2021 (ES12) JavaScript mode.

Stream multipart responses with REST APIs

Stream multipart responses rather than buffering responses until complete by default with REST APIs that support the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

multipart/mixed requests, such as the *Batch* API. The *glide.rest.serialize.disable_response_stream_buffering* system property controls this behavior and applies only to instances configured with Application Delivery Controller, version 2 (ADCv2).

Additional field types supported in a configurable workspace

The following field types are now supported for use in a configurable workspace:

- **datetime**
- **email_script**
- **int**
- **integer_time**
- **related_tags**
- **user_input**

Vertical layout configuration for radio buttons in a configurable workspace

Configurable workspaces now support a vertical layout configuration of radio buttons.

More dictionary attributes available for selected fields in a configurable workspace

Applicable fields used in a configurable workspace now support the following dictionary attributes:

- **choice**
- **decimal**
- **float**
- **html_editor**
- **integer**
- **ip_addr**
- **is_searchable_choice**
- **phone_number_e164**
- **readonly_clickthrough**
- **ref_ac_columns**
- **translated_html_editor**
- **types**

New plugins available for the TinyMCE HTML editor

The TinyMCE HTML editor now supports two new plugins in Core UI and configurable workspaces:

- The Image Editing (editimage) plugin adds a contextual editing toolbar to images in the editor.
- The Help plugin (help) enables you to check shortcuts and keyboard navigation for accessibility.

New run types available for scheduled jobs

The following run types are now available for all scheduled job types, enabling flexible scheduling:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Day and Month in Year**
- **Day in Week in Month in Year**
- **Week in Month**

The new run types are available in the following standard scheduled job types:

- **Scheduled Email of Report**
- **Scheduled Entity Generation**
- **Scheduled Script Execution**

To enable these new run types in other scheduled job child tables, you must configure your applicable form view to include the fields **Day**, **Month**, and **Year**. For more information, see Enable run types for scheduled job child tables.

New advanced options available for scheduled jobs

The following new advanced options are available when configuring scheduled jobs, offering greater flexibility in job planning, execution, and recurrence:

- **Starting**
- **Ending**
- **Repeat every**

Export lists to Google Sheets

Export your lists to Google Sheets directly from the Export menu.

Removed in this release

- The *glide.script.use.sandbox* system property has been removed. The script sandbox is enabled by default.
- Dynamic groups have been removed. Instead, use dynamic attributes in dynamic categories to simplify administration and improve the dynamic schema user experience.

Deprecations

Starting with the Zurich release, Application Insights is no longer deployed, enhanced, or supported. Instead, Overview of Instance Observer offers a powerful solution for enhancing system performance. Contact your account manager to discover more. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

Activation information

The ServiceNow AI Platform core features are active by default.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Subscription Management release notes

The ServiceNow® Subscription Management application enables you to manage your subscriptions proactively and monitor subscription usage on your instances. Subscription Management was enhanced and updated in the Zurich release.

Subscription Management highlights for the Zurich release

- Manage custom applications and table mapping through the custom application list and custom table inventory list.
- View and filter subscribers by domain for user-based subscriptions in domain-separated instances.
- View and filter Now Assist usage by domain in domain-separated instances.
- Monitor Workflow Data Fabric usage and view token use rate of each capability.

See Subscription Management for more information.

Important: Subscription Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Subscription Management to Zurich

Subscription Management version 5.0 is active by default on all instances of the Zurich release. Update to Subscription Management version 6.1 or later to use the latest features. For more information about updating Subscription Management, see Update an application or plugin.

New in the Zurich release

Manage custom applications and table mapping through the platform

Map any missing custom application and tables in Subscription Management to a subscription directly from the Custom Applications list or Custom Table Inventory list.

Support for domain separation

View and filter subscribers by domain for user-based subscriptions and view Now Assist usage by domain.

Monitor Workflow Data Fabric usage

Monitor and track Workflow Data Fabric capability usage and view the relative token use rate of each capability.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

Assist usage excludes demo data

Demonstration instances are excluded from the total Assist usage count to improve tracking of Assist consumption.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Changes to Now Assist usage measurement

Now Assist usage measurement is evolving. If your instances are below Zurich Patch 6, update Subscription Management to version 6.0.2 or later on all instances to avoid mixed measurement states. For more information, see Now Assist Usage - Overview & New Measurement Logic [KB2704710].

Hidden user-based subscription allocations

To help prevent inaccuracy when allocations aren't complete, allocation details for user-based subscriptions are now hidden from the Subscription Management overview. Contact your account executive for user-based subscription allocation details.

Activation information

Subscription Management is a ServiceNow AI Platform feature that is active by default. Updates for Subscription Management are available through the ServiceNow Store. For cumulative release notes information for applications available on the ServiceNow Store, see ServiceNow Store release notes.

Upgrade Console release notes

The ServiceNow® Upgrade Console application guides you for a comprehensive and efficient upgrade experience. Upgrade Console was enhanced and updated in the Zurich release.

Upgrade Console highlights for the Zurich release

- Enable a smooth upgrade experience on your production and sub-production instances by completing essential tasks before, during, and after the instance upgrade.
- Access Upgrade Console and Guided upgrade by experiencing the new and updated options.

See Upgrade Console for more information.

Important: Upgrade Console is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Additional way to access Upgrade Management

You can now access Upgrade Console through the Admin menu by selecting **Admin Home**, and then selecting the **Upgrade Console** link.

Guided upgrade on sub-production instance

Upgrade your sub-production instance to facilitate a seamless and successful transition. This process is structured into three pivotal phases: Pre-upgrade, Instance upgrade, and Post-upgrade tasks.

Guided upgrade on production instance

Elevate your upgrade experience within your production instance by meticulously completing each stage of the transition. This comprehensive process encompasses four crucial phases: Select upgrade, Pre-upgrade, Instance upgrade, and Post-upgrade tasks, all designed for a successful upgrade experience.

Additional step in pre-upgrade activities

You an now choose an upgrade plan in the Choose an upgrade plan step by either selecting an existing plan or by creating a new plan. This new step is applicable for both production and sub-production instances.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enhanced functionalities in the Preview application upgrades step

Experience the new functionalities within the Preview application upgrades step for a seamless upgrade experience on your instance. These new functionalities are applicable for both production and sub-production instances.

Enhanced capabilities in the Store application upgrades step

Review the Store application upgrades step in the post-upgrade activities for updated information in the App updates and Upgrade store applications sections. You can also use the new **Sync Now** option to update the list of installed applications that were either added or upgraded outside the upgrade process.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

Updated access to Guided upgrade

Apart from the **Guided upgrade** tab option, you can also access Guided upgrade by selecting **Resume upgrade** if there is an ongoing upgrade in the instance.

Removed in this release

- Removed the Ready your environment step in the pre-upgrade activities on a production instance.

Activation information

Upgrade Console is a ServiceNow AI Platform feature that is active by default.

ServiceNow AI Platform security release notes

ServiceNow AI Platform® security product enhancements and updates in the Zurich release.

Use the ServiceNow AI Platform® security to secure the instance, encrypt your data, authenticate users, and view your current compliance levels based on application security standards.

Access Management release notes

The ServiceNow® Access Management application provides robust tools to manage security data on the ServiceNow AI Platform. Access Management includes many controls, such as access control lists (ACLs), security attributes, contextual security manager, and data filtration. These controls provide granular control and help improve security for managing data access. Access Management is a new application in the Zurich release.

Access Management highlights for the Zurich release

- Enforce access to data via REST or SOAP endpoints using the Machine Identity Access Controls, which helps improve security, governance, and auditability.
- Target all table columns of a given data type with a single ACL using Datatype ACLs.
- Govern scripting permissions with the Scripting Governance tool, a new base system deny-by-default behavior.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Access Control List Rules for more information.

Access Management features

Machine identity access controls

Enforce fine-grained access to data via REST or SOAP endpoints using Machine Identity Access Controls. This feature enables you to define which integrations can access specific data, confirming that the integrations only have access to the resources they need.

Scripting Governance Tool tool and role

Review and help reduce the number of users with scripting privileges using the Scripting Governance Tool. This tool helps improve platform security with scripting governance based on user role.

A new deny-by-default behavior is enforced for scripting unless you have the snc_required_script_writer_permission role. After an upgrade or zBoot, this role is automatically assigned via the Conditional Script Writer group.

Datatype ACL

Simplify and help reduce redundant ACL definitions with Datatype ACLs. Create a single ACL to target all table columns of a specific data type, streamlining access control configurations.

Activation information

Access Management is a ServiceNow AI Platform feature that is active by default.

Authentication release notes

The ServiceNow® Authentication application supports many authentication mechanisms that enable you to validate the identity of users. Authentication was enhanced and updated in the Zurich release.

Authentication highlights for the Zurich release

Zurich Patch 7

Knowledge-based factor enhancement for AI voice service

Following are the knowledge-based authentication (KBA) enhancements:

- Voice input support for KBA questions: Configure KBA questions to support Voice as an input type, allowing users to provide spoken responses during identification and authentication. When Voice input is enabled, you can configure the expected format, provide examples, and optionally define a validation pattern using regular expressions.
- Script-based validation for external systems: Configure KBA answers to validate that are created against external systems using custom scripts through the Script Configuration field. When set to Identification mode, you can write scoped scripts that validate caller identity against external authentication systems instead of internal ServiceNow AI Platform tables.

OAuth enhancements

Following are the OAuth enhancements:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use **Opaque** or **JWT** token option for your inbound integration endpoints.
- Use the **Allow access only to APIs in selected scope** option to enable access to the APIs that are explicitly listed in the selected scopes for your inbound integrations.
- Use the OAuth Entity Resource tab for outbound integrations to configure resource parameters so they flow into the OAuth token request and are reflected in the token from your OAuth provider.

Zurich Patch 4

Authentication factors for AI voice service

Enable caller access to AI voice agents by configuring the required identification and authentication factors.

OAuth enhancements

Following are the OAuth enhancements:

- Use **Opaque** or **JWT** token option for your inbound integration endpoints.
- Use the **Allow access only to APIs in selected scope** option to enable access to the APIs that are explicitly listed in the selected scopes for your inbound integrations.
- Use the OAuth Entity Resource tab for outbound integrations to configure resource parameters so they flow into the OAuth token request and are reflected in the token from your OAuth provider.

Zurich Patch 3

Provider name for Inbound integrations

Use the Provider name field to enter the details of your inbound integrations to distinguish between different inbound integrations on your ServiceNow AI Platform®. Update the Provider name in your API integrations to improve monitoring capabilities:

- For OAuth integrations, update the provider name using the Provider name field. To know more, see OAuth inbound.
- For Basic authentication integrations, update the Provider name in the integration registration form. To know more about the integration registration form, see View Inbound API Integration Usage dashboard.

Zurich Patch 1

OAuth token enhancement

Use Opaque or JWT token option for your inbound integration endpoints.

Zurich

- Experience the new Inbound integration configuration in the Machine Identity Console.
- Use the new MFA Dashboard to understand insights such as MFA user enrollment, privileged admins who haven't opted in to MFA, and compliance.
- Use the FIDO factor policy to enforce FIDO-based authentication.
- Use the enhanced SSO login and logout experience.
- Configure the authentication policies to restrict access, reduce roles, or enforce MFA based on Identity Provider (IdP) attributes that are received from the OIDC response.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Authentication for more information.

New in the Zurich release

Machine Identity Console

Manage your inbound integration with ServiceNow's Machine Identity Console. Inbound integration in Machine Identity Console provides a simplified configuration experience for your inbound integrations.

Multi-factor Authentication dashboard

Use the new MFA Dashboard to understand insights such as MFA user enrollment, privileged admins who haven't opted in to MFA, and compliance. You can verify that all users have MFA enabled for enhanced security with the help of the MFA Dashboard.

Multi-factor Authentication Guided Setup

Use the new MFA Guided setup to configure multi-factor Authentication (MFA) for users who currently log in to ServiceNow with only a user name and password. This update enhances security by guiding administrators through the MFA setup process and verifying that all users are protected with an additional layer of authentication.

Identity Provider attributes for OpenID Connect

Use the Identity Provider (IDP) Attributes received from the OIDC response from the Identity Provider as a filter criteria for authentication.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

Enhanced SSO login and logout experience

Use the enhanced SSO login and logout experience. Enhancement includes:

- Display of active SAML and OIDC Identity Providers (IdPs) on the ServiceNow platform and portal login pages.
- Assign users to specific groups during SAML and OIDC auto-provisioning.
- Set up OIDC with the same well-known URL. The OIDC configurations can use the same well-known URL of the IdPs for multiple SSO records.
- Display login failure reasons to the users who logged out of ServiceNow due to session expiry or other reasons. Use the login link on the external logout page to again log in to ServiceNow in case of successful logout.
- Display of a generic error message for unsuccessful single log out.
- Enhanced email notifications for SAML certificate and Encryption Key store update.

FIDO2 as an MFA factor

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the FIDO factor policy to enforce FIDO (Hardware key or Biometric as second factor for authentication) as second factor authentication to users who attempt to log in to the instance.

OAuth integrations

Configure OAuth integration that includes the following enhancements:

- You can provide a maximum client secret length up to 4096 characters to meet security requirements of the third-party systems.
- You can provide a JSON Web Key Set (JWKS) URL to automatically manage and update the public key for JSON Web Tokens (JWT) signature validation.
- You can request OAuth tokens using the JWT grant type signed with Elliptic Curve Digital Signature Algorithm (ES) signing algorithms, including ES256, ES384, and ES512, for inbound JSON Web Tokens (JWT). It also supports RS256, RS384, RS512, HS256, HS384, and HS512.
- You can customize the JWT ID (JTI) claim name in both inbound OpenID Connect (OIDC) and JWT Bearer flows.

Deprecations

Due to the launch of new simplified inbound integration configuration in Machine Identity Console, the following inbound integrations configurations in the Application registry page are deprecated:

- OAuth API endpoint for external clients
- OAuth JWT API endpoint for external clients
- OIDC provider to verify ID tokens

Activation information

Authentication is a ServiceNow AI Platform product that is active by default.

Related ServiceNow applications and features

Secure your instance

Platform Security is built into all levels of the ServiceNow AI Platform. Implement the security features that are appropriate for your organization. Manage failed log in and encrypted password protection, access control rules, and audit logs.

Code Signing release notes

The Code Signing (CS) application validates scripts and code that runs on your instance. Code Signing was enhanced and updated in the Zurich release.

Code Signing highlights for the Zurich release

Zurich Patch 4

Code Signing OOB Apps Signatures plugin

Use this plugin (`com.glide.code_signing.oob_apps_signatures`) to install build time signatures for all relevant records in trued-up ServiceNow® Store application versions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use Code Signing Guardrails to improve checks during the signing process to create more secure workflows.
- Use the Code Signing Migration workflow to identify the signatures that are created with expired or inactive certificates and re-assign them to the appropriate records automatically.
- Revoke Code Signing certificates securely using a quorum-based approval policy to prevent unauthorized use.
- Monitor and manage your Code Signing environment with the new Health and Status dashboard.
- The restructured navigation panel and the renamed pages provide improved accessibility and streamlined functionality.

New in the Zurich release

Code Signing Installation using Plugin

Customer administrators can now install the Code Signing plugin directly from the ServiceNow Plugin portal without the need to contact the Customer Service and Support team to enable the Code Signing framework. This enhancement supports self-service deployment and simplifies the installation process.

Quorum Controlled Certificate Revocation

Revoke Code Signing certificates using a quorum-based control policy. Revoke certificates to help prevent them from being used to verify signatures. A quorum-based approval flow promotes added security by requiring approvals from multiple stakeholders, to help prevent unintended or unauthorized certificate revocations.

Code Signing Health and Status Dashboard

The new **Code Signing Health and Status** dashboard provides a centralized, user-friendly interface to monitor the overall health and configuration of your code signing environment. It highlights configuration settings, displays the status of essential components, and offers actionable guidance to help resolve issues effectively.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

Enhanced Code-Signing Verification for ACC Framework Table

You can now generate KMF signature files for tables that extend Agent Client Collector Configuration (`sn_agent_configuration_file`) and Agent Client Collector Plugin (`sn_agent_asset`). This enhancement allows attachments from the tables to successfully pass code-signing verification and be downloaded to the MID Server when code signing is enabled.

Activation information

Code Signing is a ServiceNow AI Platform feature that is available with activation of the Code Signing (com.glide.code_signing_enterprise) plugin. For details, see Configuring Code Signing.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Related ServiceNow applications and features

Encryption and Key Management

Encryption is a cryptographic procedure that converts plain text into cipher text, which helps prevent anyone but the intended recipient from reading that data.

Key Management Framework

The Key Management Framework lets you fully customize and manage how cryptographic operations are performed on your instance.

Edge Encryption

Edge Encryption encrypts sensitive data on your company premises before sending it over the internet to your instance (encrypted in flight), where it remains encrypted at rest.

Cloud Encryption with Key Management

Cloud Encryption offers encrypted storage for the database by using block encryption, with enhanced key management. Cloud Encryption is available with the Platform Encryption subscription bundle.

Data Privacy release notes

The ServiceNow® Data Privacy application enables you to classify sensitive data, remove personally identifiable information (PII) from user data in a production instance, and anonymize data in production and non-production instances. Data Privacy was enhanced and updated in the Zurich release.

Data Privacy highlights for the Zurich release

- Use a revamped Data Discovery interface, enhancing your Data Discovery experience with intuitive widgets, a streamlined user experience, and a guided setup for first-time users.
- Target scans on specific table columns for discovery using column-level discovery and expanded support for Field Encryption.
- Discover PII in Microsoft Excel and CSV files with expanded file support.
- Generate regex patterns using prompts with the text-to-regex feature, which leverages Now Assist and supports all large language models (LLMs) approved by ServiceNow.

See Platform Privacy for more information.

Important: Data Privacy is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

New Data Discovery experience

Use the new Data Discovery experience, which simplifies the experience of discovering and anonymizing PII.

Column-level discovery

Select a specific column of a table for granular scanning during data discovery jobs.

Anonymization of encrypted field

Anonymize encrypted columns to help you achieve compliance with data privacy regulations and defense-in-depth data protection.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Changed in this release

Full scan support added

Data Discovery jobs support full type scans, which scan for sensitive data patterns in all the records. You can also use an incremental scan, which acts as a delta scan from the point of the last full scan.

XLS and CSV support added

Data Discovery attachment scan type jobs now support XLS and CSV files. Attachment scans are incremental scans by default.

Text to Regex from a LLM

Create a regex data pattern with the help of Now Assist, which supports all third-party LLMs approved by ServiceNow.

Activation information

Data Privacy is available with activation of the Data Privacy plugin (sn_dp_store_app). For details, see Activate data privacy.

Domain Separation release notes

The ServiceNow® Domain Separation application enables you to separate data, processes, and administrative tasks into logically defined domains. Domain Separation is a new application in the Zurich release.

Domain Separation highlights for the Zurich release

- Changes to the domain table are queued sequentially and batched into a single background job. This helps simplify domain table updates.
- Domain Admins can delete by domain to efficiently manage domains and reduce storage overhead.

See Domain separation for service providers for more information.

Domain Separation features

Domain Admins may now delete by domain to efficiently manage domains and reduce storage overhead. The tool also includes data recovery and retention, enabling rollbacks and retention policy setting.

Changes to the domain table are now queued sequentially and batched into a single background job. This helps simplify domain table updates. Users are notified when a job needs to be delayed as well when a job needs to start.

Activation information

Domain Separation is a ServiceNow AI Platform feature that is available with activation of the com.glide.domain.activation_utility. For details, see Domain separation plugin.

Encryption Release Notes

The ServiceNow® Encryption Key Management application protects your data by using encryption, tightly controlled key access, National Institute of Standards and Technology (NIST) 800-57-based key life-cycle management, and FIPS 140-2-L3 validated key protection. Encryption Key Management was enhanced and updated in the Zurich release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Encryption highlights for the Zurich release

- Use row conditions for Field Encryption to define encryption rules for rows within a specific column, based on dynamic conditions.
- Use any of the three Field Encryption APIs to encrypt attachments.

See Encryption for more information.

Important information for upgrading Encryption to Zurich

For the GlideEncrypter API, NIST 800-131A Rev 2 has recommended against using the Triple Data Encryption Standard (3DES) encryption. The following changes are taking place in the Zurich release with the official removal of 3DES encryption for GlideEncrypter.

- The GlideEncrypter API defaults to using the Key Management Framework (KMF) based algorithm, Advanced Encryption Standard (AES), for encryption and decryption operations for upgraded instances only.
- For instances created with the Zurich release or later, this API isn't supported.
- Learn more about 3DES deprecation in KB1704481.

In the Zurich release, Column Level Encryption has received a required upgrade to Key Management Framework Column Level Encryption (KMF-CLE) due to the platform-wide deprecation of 3DES. For more information about this upgrade, see KB1700704.

New in the Zurich release

Encrypt data using Row Conditions

Use row conditions for Field Encryption to define encryption rules for rows within a specific column, based on dynamic conditions.

Changed in this release

Field Encryption Enterprise API

Use all three Encryption APIs to encrypt on attachments, without needing to use any one specific API.

Deprecations

Prepare your instance for GlideEncrypter deprecation

Encrypted string keys 3DES format is no longer supported. Key Management Framework (KMF) is the supported format.

Activation information

The Platform Encryption subscription bundle is a group commercial entitlement that includes Field Encryption Enterprise and Cloud Encryption.

Field Encryption Enterprise is the unlimited license of Field Encryption. The Enterprise plugin is available with the activation of the com.glide.now.platform.encryption plugin. For details, see the Encryption and Key Management subscription bundle.

Related ServiceNow applications and features

Key Management Framework

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Encryption is a cryptographic procedure that converts plain text into cipher text, which helps prevent anyone but the intended recipient from reading that data.

Key Management Framework Reference

The Key Management Framework lets you fully customize and manage how cryptographic operations are performed on your instance.

Code Signing

Code Signing creates digital signatures for the data, which are later checked to confirm the authenticity and integrity of the data. Code Signing is a module licensed as a component of Vault.

Cloud Encryption with Key Management

Cloud Encryption offers encrypted storage for the database by using block encryption, with enhanced key management. Cloud Encryption is available with the Platform Encryption subscription bundle and the ServiceNow Vault subscription bundle.

Encryption Key Management release notes

The ServiceNow® Encryption Key Management application protects your data by using encryption, tightly controlled key access, National Institute of Standards and Technology (NIST) 800-57-based key life-cycle management, and FIPS 140-2-L3 key protection. Encryption Key Management was enhanced and updated in the Zurich release.

Encryption Key Management highlights for the Zurich release

- See the changes to the Key Management and Field Encryption records that are now logged on the Sys Audits [sys_audit] table.
- The GlideEncrypter API has been updated and now uses AES256-GCM encryption via the Key Management Framework.
- Enable or disable GlideEncrypter by using the **glide.security.glideencrypter.allow** system property.

See Key Management Framework for more information.

Important information for upgrading to Zurich

- In previous releases, the GlideEncrypter API used the three-key Triple Data Encryption Standard (3DES) encryption standard, which NIST 800-131A Rev 2 has recommended against using after 2023. The following changes are taking place in the Zurich release in preparation for a full deprecation of GlideEncrypter/3DES in the future:
  - New Zurich instances can't use GlideEncrypter. All base system scripts have been changed to use alternative encryption processes.
  - if you're upgrading your Zurich instances, you can still GlideEncrypter, which has been updated to use AES256-GCM encryption via the Key Management Framework.
  - Learn more about 3DES deprecation in KB1704481.

New in the Zurich release

Keep track of Field Encryption and Key Management changes

By default, the changes to the records on these tables are now logged to the Sys Audits [sys_audit] table:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Encrypted Field Configurations [sys_platform_encryption_configuration]
- Module Access Policies [sys_kmf_crypto_caller_policy]
- Cryptographic Modules [sys_kmf_crypto_module]

For details on accessing the Sys Audits [sys_audit] table, see Viewing Sys Audit and Audit Relationship Change tables.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

Updates to GlideEncrypter functionality

The GlideEncrypter API has been updated to use AES256-GCM encryption via the Key Management Framework. If needed, your instance can be changed to use legacy 3DES encryption, but this task can only be done by ServiceNow support.

Disable GlideEncrypter on your instance

GlideEncrypter can be enabled or turned off using the **glide.security.glideencrypter.allow** system property. This property is unavailable on new Zurich instances, but administrators with the security_admin role can edit this property in upgraded instances. When this system property is set to **false**, users see this error when attempting to run GlideEncrypter.

```
Unsupported call to GlideEncrypter. Details:
 GlideEncrypter is deprecated and now returns null,
 please refer KB1320986
```

Activation information

The Platform Encryption subscription bundle is a group commercial entitlement that includes Field Encryption Enterprise and Cloud Encryption.

Field Encryption Enterprise is the unlimited license of Field Encryption. The Enterprise plugin is available with the activation of the com.glide.now.platform.encryption plugin. For details, see Encryption and Key Management subscription bundle.

Related ServiceNow applications and features

Encryption and Key Management

Encryption is a cryptographic procedure that converts plain text into cipher text, which helps prevent anyone but the intended recipient from reading that data.

Identity release notes

The ServiceNow® Identity application supports mechanisms that let you validate the identity of users. Identity was enhanced and updated in the Zurich release.

Identity highlights for the Zurich release

Zurich Patch 4

- Configure AI Agents or AI users by selecting the `AI` option from the **Identity type** drop-down menu.
- Use the `ai_user_admin` role for creating, editing, and role management of AI users. Using the role you can view, create, edit, assign roles to, and delete users with the identity type as `AI`.
- Use role masking for AI agents and agentic workflows to limit the inherited roles during tool execution, verifying that AI agents run with restricted privileges, minimizing potential security risks and helping prevent unintended actions. To learn more, see Role masking in Now Assist AI agents.
- Access Analyzer v.6 supports agentic workflows and AI agents in the Analyze Permissions feature.

> **Important:** Access Analyzer is available in the ServiceNow Store. For more information, visit ServiceNow Store.

- Use Federated ID to uniquely identify roles across multiple instances. Federated ID provides a unique identifier for roles, making it easier to manage and track them across instances. To know more, see Explore Federated ID.
- View the Inbound API Integration Usage dashboard under the Machine Identity Console's Unique API calls page to access statistics for requestors and their API calls. To know more, see Metrics and View Inbound API Integration Usage dashboard.

Zurich

- Manage your non-human identities (NHIs) using the Machine Identity Console.
- Support security data filter functionality in Applied or Undefined status and Controlled by Refs functionality during access control list (ACL) query.

> **Important:** Access Analyzer is available in the ServiceNow Store. For more information, visit ServiceNow Store.

See Identity for more information.

New in the Zurich release

Machine Identity Console

Use the Machine Identity Console to see what data integration accounts are accessing and how they're configured. This console helps you make smarter security decisions about setting up these accounts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

Access analyzer

Display the Security data filter that is in the **Applied** or **Undefined** status in the Access Analyzer results. Access Analyzer also supports the new criteria in ACLs that is controlled by reference.

> **Important:** Access Analyzer is available in the ServiceNow Store. For more information, visit ServiceNow Store.

Activation information

Identity is a ServiceNow AI Platform product that is active by default.

Related ServiceNow applications and features

Secure your instance

Platform Security is built into all levels of the ServiceNow AI Platform. Implement the security features that are appropriate for your organization. Manage failed log in and encrypted password protection, access control rules, and audit logs.

Security Center release notes

The ServiceNow® Security Center empowers admins to maintain the highest level of security posture for their ServiceNow deployment with ease. Security Center was enhanced and updated in the Zurich release.

Security Center highlights for the Zurich release

- Use the new Identity and Access Management (IAM) section in Security Center to access IAM tools.
- Use the overview summary pages for each IAM tool to get a summary of which utility each tool provides.
- See all the platform security tasks that need your attention in Security Center. You can see notifications outside Security Center so that you're aware of these tasks without having to monitor the task list constantly.

See Security Center for more information.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important: Security Center is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Security Task management

The new Platform Security Tasks enable administrators to see and manage all their platform security tasks in one place. Use this feature to prioritize, delegate, and monitor progress for tasks related to platform security across your teams. Security tasks can be automatically generated by the platform and manually created by users. Tasks can be assigned to any user who is notified the in app Notifications.

Updated overview summary pages

Use the overview pages for Security Center tools to understand whether you need to act on the security area these tools help you manage. The following overview pages have been updated.

- Security Hardening
- Security Scanner
- Security Metrics
- Best Practices

New information and video overlays

Security Center has been updated to show overlays with short feature introductory videos to help users understand what the tool can do and how to use it. These overlays are tailored to assist both new and infrequent users of Security Center.

New Auditor Suite checks

Added two new auditor checks:

- Review Public Knowledge Bases
- Review Public Knowledge Base Articles

Granular admin role for Security Center

The granular admin role enables developers and administrators to complete administrative configuration tasks for Security Center without requiring the full admin role.

Use the new Access Controls console within Security Center to review and remediate access issues and misconfigurations. The Access Controls console provides enhanced visibility and control of your Access Analyzer findings, and streamlines remediation efforts by enabling you to track, prioritize, and resolve access issues by assigning tasks.

Enhanced IAM Integration in Security Center

Use the new Identity and Access Management (IAM) section in Security Center to access to critical IAM tools. The new section provides a comprehensive view of security metrics. This integration simplifies the administrative experience by bringing essential IAM functionality directly into Security Center, reducing the need to navigate multiple separate tools.

Changed in this release

Auditor checks

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Review Public Knowledge Bases and Review Public Knowledge Base Articles checks use global API calls, so they've been added in the Global scope.

Security Center **Theming for Security Center**

Security Center banners and Cascading Style Sheets CSS elements have been updated to conform to any instance-wide themes you apply.

Updated first time user experience

Security Center has been updated to provide guidance to understand what the tool can do and how to use it. This redesign is tailored to assist both new and infrequent users of Security Center.

Hardening settings updates

Updated the Security Hardening tool with the latest Instance Security Hardening Settings baseline V6.

Security Hardening tool Updates

The security Hardening tool has been updated to the latest Instance Security Hardening Settings V7.

Activation information

Security Center is a ServiceNow AI Platform application that is installed by default with the Zurich release. In addition, Security Center can be updated from the ServiceNow Store in between family releases for faster adoption of new features.

ServiceNow Vault release notes

The ServiceNow Vault application provides a set of data security tools that protect sensitive information from unauthorized access, corruption, or theft throughout its entire life cycle. ServiceNow Vault was enhanced and updated in the Zurich release.

ServiceNow Vault highlights for the Zurich release

Zurich Patch 4

- Manage and monitor cloud encryption metrics.
- Get AI guidance using the Ask Now Assist panel in Vault console.

- Use guided setup to begin autoclassifying sensitive data within Financial Services and Customer Service Management applications.
- Monitor and review critical sensitive data metrics from the centralized ServiceNow Vault Console dashboard.
- Navigate between security tools efficiently using the ServiceNow Vault Console dashboard.

See ServiceNow Vault for more information.

Important: ServiceNow Vault is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading ServiceNow Vault to Zurich

To install ServiceNow Vault, the following must be installed:

- Data Discovery
- Data Privacy

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Data anonymization
- Field Encryption
- Zero Trust Access (ZTA)

Note: Field Encryption, Data Discovery, and Data Privacy can be automatically installed using Vault Console.

New in the Zurich release

Zurich Patch 4

ServiceNow Vault console dashboard

- Manage and monitor cloud encryption metrics.
- Get AI guidance using the Ask Now Assist panel.
- Explore more detail for each metric.

Zurich Early Availability

ServiceNow Vault console dashboard

Monitor your sensitive data in ServiceNow Vault with a comprehensive dashboard. The dashboard view shows metrics from each of the ServiceNow Vault tools and provides easy access to them.

Guided Vault

Use guided setup to quickly start using ServiceNow Vault on the following applications:

- Financial Services
- Customer Service Management

Activation information

Install ServiceNow Vault by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Data Discovery

Run a discovery scan to look for data patterns that might be sensitive data. After it's discovered, data can be reviewed or classified for further protection and management.

Data Classification

Create data classes and organize your data into data classes for better data management. After it's classified, data can be protected at the class level.

Data anonymization

Anonymize data by data class with different anonymization techniques to preserve data patterns while removing sensitive data. Data anonymization can help when sanitizing instances for development or removing specific user data because of rights to be forgotten.

Encryption

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Securely protect sensitive data while providing access for authorized users, which helps you increase protections from bad actors.

Zero Trust Access (ZTA)

Use continuous authentication on classified sensitive data in real time.

Now Assist for Vault release notes

The ServiceNow® Now Assist for Vault application generates custom data patterns, checks role access for an encrypted column, and schedules data discovery jobs. Now Assist for Vault can make it easier for admins to run common tasks without going to multiple systems. Now Assist for Vault is a new application in the Zurich release.

Now Assist for Vault highlights for the Zurich release

Zurich Patch 4 The generate custom data pattern skill now uses the Now LLM Service as the default provider. You can switch to another provider as needed.

Zurich release notes The Now Assist for Vault application generates custom data patterns from text descriptions to streamline your workload, checks role access for an encrypted column to monitor your instance's encryption access posture, and schedules data discovery jobs to detect sensitive data.

See Now Assist for Vault for more information.

Important: Now Assist for Vault is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Now Assist for Vault features

Zurich Patch 4

Generate a custom data pattern by using Now Assist for Vault

The generate custom data pattern skill now uses the Now LLM Service as the default provider. You can switch to another provider as needed.

Zurich release notes

Using Now Assist for Vault

The Now Assist for Vault application generates custom data patterns from text descriptions to streamline your workload, checks role access for an encrypted column to monitor your instance's encryption access posture, and schedules data discovery jobs to detect sensitive data. Enable these skills in Now Assist Admin console:

- Generate custom data pattern
- Check role access for encrypted column
- Schedule Data Discovery job

Activation information

Install Now Assist for Vault by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

ServiceNow AI Platform user interface release notes

ServiceNow AI Platform® user interface product enhancements and updates in the Zurich release.

These release notes describe product enhancements for core platform functionality in user interfaces, such as lists and forms.

Next Experience release notes

The ServiceNow® Next Experience application delivers an intuitive, personalized experience that enables your organization to drive productivity, improve engagement, and inspire learning with the ServiceNow AI Platform. Next Experience was enhanced and updated in the Zurich release.

Next Experience highlights for the Zurich release

- Customize the visual experience of the Now Assist menu by using the new toggle to switch between standard or wide view.
- Manage the visibility of page alerts with a new accessibility user preference.
- Access usage analytic data for applications and web pages directly with the new Usage Analytics utility menu.

See Next Experience UI for more information.

New in the Zurich release

Lazy loading of Workspace pages user preference available

Control how your Workspace pages are loaded, either all at once or as needed, by using the new Workspace lazy load user preference. Lazy loading is enabled by default and displays content dynamically, reducing page load times. See the Accessibility information section for additional details.

Use the menu toggle to view the Now Assist menu in wide mode

View the Now Assist menu in wide mode to reduce the need for scrolling and truncating content.

Configure Next Experience accessibility preferences

Use a new accessibility preference to keep page alerts visible. See the Accessibility information section for additional details.

Usage Analytics utility menu available

Obtain usage analytic data for your applications and web pages with the Usage Analytics utility menu. The Usage Analytics menu appears for those users with the analytics_viewer role.

View the number of active calls from the OpenFrame phone icon

View the number of active calls from the numbered badge on the OpenFrame phone icon.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

For existing customers who upgrade to Zurich, use Theme Builder to publish Coral theme to your instance or add Coral theme to the Next Experience UX Parent App Theme table. Once enabled by a system administrator, Coral is available for selection in the user's Theme preference.

Activation information

Next Experience is a ServiceNow AI Platform feature that is active by default when the user loads or upgrades to the Zurich release. If there are known problems with turning on Next Experience on an instance, an opt-out system property can be created before upgrade.

Theme Builder comes with the Next Experience and is active by default.

Browser requirements

The Zurich release doesn't support Internet Explorer 11. The iOS version of Firefox is also not supported.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

New Accessibility preference added for page alerts

Turn on the **Do not auto-dismiss page alerts** preference to keep page alerts visible until you manually close them.

New Workspace preference added to enhance screen reader output for your Workspace pages

A new Workspace preference lets you turn off lazy loading for workspace pages. When you turn off lazy loading, the entire page loads at once. This action improves compatibility with screen readers and provides a more consistent and reliable reading experience.

Service Portal release notes

The ServiceNow® Service Portal application enables you to build mobile-friendly self-service experiences for your customers and employees with a simple-to-use modular portal framework. Service Portal was enhanced and updated in the Zurich release.

Service Portal highlights for the Zurich release

- Use the support for Service Portal in the iOS Google App.
- As an admin, configure the widget load order on Service Portal pages.
- As an admin, defer the loading of AI Search assets to enhance page performance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Service Portal for more information.

New in the Zurich release

Approval Info Record widget

The Service Portal Approval Info Record widget shows details about the approval request and a full record for an approval including the activity stream.

The Approval Info Record widget and the new Now Assist Approval Assistance AI agent maintain parity. To use the new Approval Info Record widget, activate the Approval Details Page Route Map, and uptake the Approval Info Record widget in your custom page.

The new Now Assist Approval Assistance AI agent allows you to see your pending approvals, as well as the details about your pending approvals. For more information, see Platform Approval assistance AI agent.

Configure Service Portal Approval Configuration record

Configure the Service Portal Approval Configuration record to make the Approval Assistance AI agent and Approval Info Record widget work better for your specific use case.

Configure widget loading order in Service Portal

As an admin, configure the widget loading order to defer their loading. This feature enables faster loading of the page and makes the widgets available for interaction as they load, thus improving the user experience.

Deferred loading of AI Search assets in Service Portal

Enable deferred loading of AI Search assets on the Service Portal page until the main content is loaded. This feature helps the page load faster and improves user experience.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Activation information

Service Portal is a ServiceNow AI Platform feature that is active by default.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

AI Search

The ServiceNow® AI Search application provides search capabilities for Service Portal, ServiceNow® Now Mobile, and ServiceNow® Virtual Agent.

User Experience Analytics

After you enable ServiceNow® User Experience Analytics for Service Portal, you can view detailed key performance indicator (KPI) data on a dashboard and in list views.

Authentication

Validate the identity of users who access an instance and enable them to use features that match their role or job function. You can enable portal users to log in without a password by enabling PIV/CAC card authentication.

Theme Builder release notes

The ServiceNow® Theme Builder application enables you to customize the visual experience for your users so that you can update the look and feel to be more like your brand. Theme Builder was enhanced and updated in the Zurich release.

Theme Builder highlights for the Zurich release

Zurich Patch 7

- As of Zurich Patch 7, use Now Assist to automatically create brand-aligned themes, then refine and publish them in Theme Builder.
- Publish the new Next Experience Coral theme from Theme Builder.
- Add custom fonts to your theme for enhanced branding.
- As of Theme Builder version 6.1, configure modal, tile icon, banner, and card colors, and override these default illustrations with your own custom imagery.
- As of Theme Builder version 6.1, enable dark mode to improve usability of Theme Builder in low-light conditions.

See Working with themes in Next Experience for more information.

Important: Theme Builder is available by default and upgrades are available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Publish the new Coral theme

Publish or unpublish the new Coral theme directly from Theme Builder. This theme provides a fresh look and feel and features brand-neutral illustrations to enhance your user experience. A dark theme variant is available for web and mobile experiences.

Upload and manage custom fonts in your theme

Use your organization's fonts to maintain a consistent look and feel for your brand throughout your experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Upload, preview, and edit at most 10 custom font families from the **Global styles** or **Component styles** tabs.
- Add unlimited associated font faces to each font family and apply them individually to components.
- Delete your font family or font face from your theme.

Explore the expanded image categories with color editing and override capability

As of Theme Builder version 6.1, configure the following new image categories to further enhance your theme:

- Edit the colors of banners, modals, tile icons, and cards from within Theme Builder.
- Override each of these default illustrations with your own custom images to uniquely align with your branding style.

Guided tours in Theme Builder

As of version 6.1, learn about additional features and complete tasks through interactive steps by taking guided tours within Theme Builder.

As of Zurich Patch 7, leverage Now Assist to generate themes based on your brand image. After generating a theme, navigate to Theme Builder to publish and apply additional styling. This feature requires Now Assist for Creator.

As of Zurich Patch 7, use AI to generate themes from brand images, preview multiple options, and refine results all within the updated Create a theme wizard. If you prefer, you can skip the AI step and continue creating your theme manually using the existing workflow. This feature requires Now Assist for Creator.

UI changes

Global styles upload and selector modals updated

A more consistent, user-friendly interface is now available for uploading logos, fonts, and shapes. The following changes have been made:

- A larger modal for uploading your company logo with a browse or drag-and-drop capability.
- A larger modal for selecting predefined corner shapes and fonts.
- A preview window within each modal for immediately viewing your selections before they're applied to your theme.

Updated Global styles Overview panel

The Global styles Overview panel has been updated in the following ways:

- The Font section has been renamed Typography.
- The font family field that is listed in the Typography section has been renamed as the Default font family. The Default font family still indicates which font is applied globally across your theme, unless you override it at the component level.

Create a theme wizard color selector updated

As of Theme Builder version 6.1, when you create a theme, the color selector now defaults to Coral theme colors instead of static gray tones. This means your initial color options feature a blue hue for a more vibrant look. Colors can still be customized at any time by selecting a preferred color in the color selector.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activation information

Theme Builder is included as a core plugin with the Next Experience application and is available by default. You can update to the latest version of Theme Builder from the ServiceNow Store.

Accessibility information

Upload a custom font to your theme

The ability to upload custom fonts to your theme can help users with disabilities in several ways, including:

- **Improved readability**: Custom fonts can be selected to enhance readability, making text easier to see, understand, and retain. This is beneficial for users with visual impairments, as clear letter forms reduce eye strain.
- **Support for cognitive differences**: Custom fonts can address cognitive accessibility needs. For instance, users with dyslexia or Attention- Deficit/ Hyperactivity Disorder (ADHD) may benefit from fonts that reduce reading strain and improve information processing.
- **Improved globalization support**: Custom fonts tailored to specific languages improve the readability for non-Latin alphabets and ensure consistent, accessible user experiences across global audiences.

Dark mode in Theme Builder

As of version 6.1, Theme Builder is now available in light and dark mode. This option is commonly used to alleviate eye strain and improve readability. Dark mode applies to the Theme Builder interface only and does not affect the appearance of individual themes.

Related ServiceNow applications and features

Build apps using App Engine Studio

Use ServiceNow® App Engine Studio for developing rich web applications to store information, automate business processes, and solve business problems.

UI Builder

Use ServiceNow® UI Builder to build pages for workspaces that are generated with App Engine Studio or custom web experiences by using Next Experience Components and custom web components.

Configurable Workspace release notes

The ServiceNow® Configurable Workspace application provides tools to agents, case managers, help desk professionals, and managers for answering customer questions and resolving customer problems. Configurable Workspace was enhanced and updated in the Zurich release.

Configurable Workspace highlights for the Zurich release

- See who is active within a form with live presence and user avatars that display a contact card.
- Use the Record List component bundle to create lists for all list types and the Predicate Builder component to create conditional statements.
- Create emails, work notes, and comments while working on other tasks with a pop-out, modeless dialog in the Compose editor.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Rename and reorder the **Emails**, **Work notes**, and **Comments** tabs in the Compose editor.
- Send emails with a digital signature that verifies you as an authentic sender and an email encryption that certifies authentic recipients.

See Workspace UI for more information.

New in the Zurich release

Activity stream compose with modeless dialog component bundle

Open the Compose editor as a pop-out, modeless dialog to draft comments, work notes, and emails while working on other tasks.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Lists

The following UI changes have been made to lists:

- Change list header organization for responsive experiences.
- Access the filter from the list header.
- Use HTML fields in lists that are scrollable and display formatted text.

Forms

The following UI changes have been made to forms:

- Live presence displays who is viewing the form. Access a user's contact card by selecting their avatar.
- Currency fields display a menu with a search field and currency descriptions.

Activity stream

The following UI changes have been made to the Activity stream:

- The Compose header is hidden when you're not using the stacked view.
- Text area inputs are displayed as a single line.
- Text area and rich text editor resize automatically.
- The line height was set to display the scrollbar.
- In the Activity stream, a post indicates when field changes were made by an AI agent instead of a human agent. When the AI agent updates the fields, the post also displays a message that field changes were made by Now Assist.
- Translate emails in the Activity stream to your system language using the translate button.

Email composer

Email recipient pills display whether the user is online. Select an email recipient pill to view the user's contact card.

Attachments panel

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The following UI changes have been made to the Attachments panel:

- Preview files, change file names, select an encryption module, and remove files individually with a preview modal for attachments. After you select attachments to upload, the modal displays the selected files in a list view. For mobile experiences, the preview modal displays as a carousel with thumbnails.
- Delete selected attachments from the Attachments panel by using the More Actions menu.

Changed in this release

Browser warning for unsaved changes

Configure a browser warning to alert you of unsaved changes when you navigate away from a page using the back or forward buttons.

Record List component bundle enhancements in UI Builder

Configure these enhancements to the Record List component bundle in UI Builder:

- Select **Related** list as a list type option.
- Switch between the standard view and gallery list, which displays list items as cards.

Export lists to Google Sheets

Export your lists to Google Sheets directly from the Export menu.

Live updates for lists

Configure live updates at the list page level without affecting other lists in your Configurable Workspace.

Predicate Builder component enhancements in UI Builder

Configure these enhancements to the Predicate Builder component in UI Builder:

- Use the Predicate Builder for all list types.
- Set up a read-only version of the Predicate Builder to display all conditions without users editing them.

Form component enhancements in UI Builder

Configure these enhancements to the Form component in UI Builder:

- Display Boolean fields as a toggle.
- Add an indicator that marks unsaved fields after any changes.
- Wrap field labels instead of truncating them.
- Change field-level configurations from field context menus displayed as a gear icon beside every field label.
- Choose whether related lists load with the form, after the form, or on demand.
- Hide the related list header when the last record is removed.
- Choose to display field labels beside its value or stacked vertically.
- Suppress special handling notes and notifications from secondary forms on a page.

Personalize Form menu

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Customize which fields display on a form with the Personalize Form menu () in the form header. Use system properties to hide the Personalize Form menu or change the roles with access to the menu.

Format string fields with guidance text and inline validation

Set up guidance text to display in string fields with format requirements such as account ID, SSN, or SIN. Use regular expression inline validation to display an error message if input values are incorrect.

Advanced view rules configuration

Use client scripts to set up view rules configurations.

Activity Stream Compose component enhancements in UI Builder

Configure these enhancements to the Activity Stream Compose component in UI Builder:

- Hide the rich text editor toggle for your workspace without affecting other experiences.
- Rename and reorder Emails, Work notes, and Comments tabs.
- Annotate new activities to make it easier for you to find unread emails and messages.

@mentions for the email composer

Configure @mentions in UI Builder for the Email composer and Email composer (mini) components, enabling you to add an email recipient by using an @mention in the email body.

Digital signature and encryption in the email composer

Send emails with a digital signature that verifies you as an authentic sender and an email encryption that certifies authentic recipients.

Custom attachment layout

Configure a custom layout mode for the Attachments component in UI Builder. Customize the maximum file size, file types, multiple file uploads, and preview modal.

Adding the Now Assist icon to action buttons

Use declarative actions to create buttons with the Now Assist (✦) icon and hover animation.

Removed in this release

- The List, List - Simple, and List - Related components are no longer available in UI Builder are replaced by the Record List component bundle.
- The Condition Builder component is no longer available in UI Builder and is replaced by the Predicate Builder component for all list types.

Activation information

Configurable Workspace is a ServiceNow AI Platform feature that is active by default.

Browser requirements

Configurable Workspace doesn't support mobile devices, Internet Explorer, or Microsoft Edge. Instead, use Microsoft Edge, Chromium or one of the other supported browsers that are listed in Browser support.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ServiceNow AI Platform® capabilities were enhancements and updates in the Zurich release.

Expand the services your system of action delivers with ServiceNow AI Platform capabilities. Activate and configure these optional features to create custom business logic, manage and secure data, and build alternate user interfaces.

Advanced Work Assignment (AWA) release notes

The ServiceNow® Advanced Work Assignment (AWA) application automatically assigns work items to your agents based on their availability, capacity, and optionally, skills. AWA was enhanced and updated in the Zurich release.

AWA highlights for the Zurich release

Use AWA with an inbox card in Workspace without an existing interaction or work item.

See Advanced Work Assignment for more information.

Important: AWA is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Use AWA without existing interaction or work item

Use AWA with an inbox card in Workspace without an existing interaction or work item.

New interaction record field

A new interaction record field was added to indicate whether this interaction is related to a third-party provider.

Activation information

AWA is a ServiceNow AI Platform feature that is available with activation of the Glide Advanced Work Assignment plugin (com.glide.awa). For details, see Activate Advanced Work Assignment.

To use the External routing functionality on your instance, you must activate the External Routing Support plugin (com.glide.awa-external).

Browser requirements

Advanced Work Assignment doesn't support mobile devices, Internet Explorer, or Microsoft Edge. Instead, use Microsoft Edge - Chromium or one of the other supported browsers that are listed in Browser support.

Related ServiceNow applications and features

The Now Assist application uses generative AI that is designed to enhance user productivity and efficiency through conversation and proactive experiences.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Workspace application provides agents, case managers, help desk professionals, and managers with tools to help answer customer questions and to resolve customer problems.

Automated Test Framework release notes

The ServiceNow® Automated Test Framework enables you to create and run automated tests to confirm that your modified instance works after an upgrade, during application development, or when deploying instance configurations with update sets. Review failed test results to identify the changes that caused the failure and the changes that you should review. Automated Test Framework was enhanced and updated in the Zurich release.

Automated Test Framework highlights for the Zurich release

- Reduce upgrade and development time by replacing manual testing with automated testing.
- Design tests once and reuse them in different contexts and with different test data sets.
- Keep test instances clean by rolling back test data and changes made after each test run.
- Create and schedule test suites to organize and run tests in batches.
- Reduce test design time by copying quick start tests and test suites. You can also create custom test steps to expand test coverage.

See Automated Test Framework (ATF) for more information.

Important: ATF Test Generator and Cloud Runner is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Automated Test Framework to Zurich

Copy and customize quick start tests provided by the ServiceNow AI Platform® to validate that your instance works after you make any configuration changes. For example, if you apply an upgrade or develop an application.

The tests can produce a pass result only when you run them on a base system without any customizations and with the default demo data that is provided with the application or feature plugin. To apply a quick start test to your instance-specific data, copy the quick start test and add your custom data. For more information, see Available quick start tests by application or feature.

New in the Zurich release

ATF failure insights

Reduce the time to resolve your ATF test failures with actionable support from the new ATF failure insights feature.

Configurable Workspace

Enable simplified test creation through direct component interaction on Configurable Workspace pages via the Page Inspector.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activation information

Automated Test Framework is a ServiceNow AI Platform feature that is active by default.

Note: By default, the system property that is used to run automated tests is turned off to help prevent you from accidentally running these tests on a production system. To avoid data corruption or an outage, run tests only on development, test, and other non-production instances. For more information, see Enable or disable executing Automated Test Framework tests.

To use the quick start tests for an application, activate the plugin that is associated with the application. For more information, see Available quick start tests by application or feature.

Set the *sn_atf.runner.enabled* property to **True** to activate the content pack for the ATF Test Generator and Cloud Runner store application.

Browser requirements

Automated Test Framework supports running tests only from desktop browsers. You can't run tests or test suites from tablets, mobile browsers, or the mobile UI. Some desktop browsers require additional configuration. For more information, see Browser recommendations for Automated Test Framework.

Automated Test Framework offers limited support for test design on tablets. You can't add new custom UI test steps from tablets because tablets can't retrieve components. Review any existing custom UI test steps that were added from a desktop browser instead.

Configuration Management Database (CMDB) release notes

The ServiceNow® Configuration Management Database (CMDB) application stores data about the infrastructure of your organization. CMDB was enhanced and updated in the Zurich release.

CMDB highlights for the Zurich release

- Access a centralized location with a comprehensive view of the configuration item (CI) details by using the new CI form in CMDB Workspace. You can view and edit the CI attributes, relationships, and data, such as the CMDB Health report for the CI, CMDB 360 data that is associated with the CI, and the CI resources, activities, and related services.
- Access the Data Certification dashboard in CMDB Workspace to gain insights about the data certification activities and progress, examine policies and tasks, and see the reports about the certification instances, charts of the aging certification tasks, and group and individual workloads.
- Add or remove CIs directly from a map in Unified Map. You can also add, modify, or delete CI relationships in CMDB.
- Configure the system to use Identification and Reconciliation Engine (IRE) identification rules to uniquely identify CIs in a payload, instead of using the *source_name* and *source_native_key* attributes.
- In zbooted instances, the itil user role no longer contains the sn_cmdb_editor user role, and the itil_admin user role no longer contains the sn_cmdb_admin user role. However, the sn_cmdb_admin and the sn_cmdb_editor user roles now have full (create, update, delete) access to the Configuration Item [cmdb_ci] class.

See Configuration Management for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important information for upgrading CMDB to Zurich

Due to the removal of the **Design** value for the operational status attribute in a CI, after an upgrade, you must review all CIs that have the discovery source attribute set to *Manual via IRE*. Review the operational status attribute of those CIs and set it to a supported value in CMDB for your environment. For example, you can set the attribute to *Non-Operational*. For more information about the operational status values, see Life cycle of tangible/physical CIs.

On an upgraded Zurich instance, to configure the sn_cmdb_admin and the sn_cmdb_editor user roles with the necessary permissions to perform some CMDB Workspace tasks, you must manually run the scheduled job *Remove CMDB Roles from ITIL roles and Add CUD access to sn_cmdb_admin/sn_cmdb_editor roles*. This scheduled job modifies the user roles as follows:

- Updates the itil user role to no longer contain the sn_cmdb_editor user role, and updates the itil_admin user role to no longer contain the sn_cmdb_admin user role.
- If those permissions don't exist, updates the sn_cmdb_admin and the sn_cmdb_editor user roles with create, update, and delete access to the Configuration Item [cmdb_ci] class. For more information about the *Remove CMDB Roles from ITIL roles and Add CUD access to sn_cmdb_admin/sn_cmdb_editor roles* scheduled job, see Remove sn_cmdb_admin from itil_admin and sn_cmdb_editor from itil, and then add create/update/delete access to cmdb_ci table for sn_cmdb_admin / sn_cmdb_editor [KB2290506].

New in the Zurich release

CMDB Workspace v8.0:

You can now use the Create CI experience in CMDB Workspace to create a CI with a lookup identifier entry that contains mandatory attributes. When you select a lookup identifier entry on the Required attributes page, those mandatory attributes now appear and you can set their values for proper IRE processing. For more information, see Create a CI manually in CMDB Workspace.

CMDB Workspace v7.6:

- Access a centralized location with a comprehensive view of CI details by using the new CI form in CMDB Workspace. The form shows the attributes (key attributes are highlighted on a Summary page), tags, resources, activities, relationships, related services, health state, performance indicators, and CMDB 360 data that is associated with the CI. While viewing, you can also modify many of those CI details. For information about all the details on a CI form, see Manage CI details in CI Form.
- Access the Data Certification dashboard in CMDB Workspace. The Data Certification dashboard provides the insights about the data certification activities and progress, policies and tasks, reports about certification instances, charts that show the aging certification tasks, and group and individual workloads. For more information, see Data Certification Dashboard.
- Create or manage a shared preset. Save Unified Map filter settings as shared presets that any user on the team can access. This task requires the sn_cmdb_admin, sm_admin, or admin role.
- Access Unified Map from the main navigation panel. Access Unified Map from the main navigation panel by navigating to **All** > **CMDB Workspace** > **Unified Map**.
- Archival and destroy processes of certification policy related records, are now separated from those processes for records of all other policy types. This separation facilitates the extension of the retention period of certification policy records as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The table cleanup rule for the CMDB Data Management Policy Executions [cmdb_data_management_policy_execution] table, which is stored in the Auto Flushes [sys_auto_flush] table, now excludes certification policy execution records from recurring cleanups.

  Retaining certification policy execution records instead of deleting them after 7 days is useful in situations where those records are needed for audits and are also useful for the Data Certification Dashboard, which is populated by these records.

- The Archive CMDB Data Management Tasks archive rule, that applied to all CMDB Data Manager policy execution records, now excludes certification policy records. At each archive run, this archive rule is configured to also automatically archive its related records in the CMDB Data Management Certification Task To Document [sn_cmdb_ws_dm_certification_task_to_document] table (Archive Related Records).
- The archive rule, Archive Certification Instances, is added to specifically archive certification policy execution records from the CMDB Data Management Policy Execution [cmdb_data_management_policy_execution] table. This new archive rule is configured to archive certification policy execution records 2 years after creation, and to destroy those records 7 years after they are archived.
- The archive rule, Archive Certification tasks, is added to specifically archive the certification task records from the CMDB Data Management Task [cmdb_data_management_task] table.
- The archival of related records in the CMDB Data Management Certification Task To Document [sn_cmdb_ws_dm_certification_task_to_document] table is now moved as an Archive Related Records entry from the Archive CMDB Data Management Tasks archive rule to the new Archive Certification tasks archive rule.

The Zurich release includes an installation of CMDB Workspace. However, you can download a newer version of CMDB Workspace so that you can use its latest features in your Zurich instance. For more information, visit the ServiceNow Store.

Quick start tests for CMDB

After upgrades and deployments of new applications or integrations, run quick start tests to verify that CMDB works as expected. If you customized CMDB, copy the quick start tests and configure them for your customizations.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

CMDB Workspace v7.6

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- On the Published policy tile on the Data Manager policies page, the policies list view now shows the scheduled job that is associated with the policy and the user that the policy runs as.

  For more information, see Create a CMDB Data Manager policy.

- Instead of the system automatically setting the *run as* attribute of the scheduled certification and attestation jobs to be the user that authored the policy, you can now set a specific user that adheres to the policies and regulations in the organization. Configure the default values for the run as user and user accounts available for run as assignees for auditing purposes when it's important to know who initiated the changes.

  For more information, see Components related to CMDB Data Manager.

- For certification and attestation policy tasks, choose how to assign tasks in cases where a specified task assignment field is empty for a target CI. Specify a user or a user group to assign such tasks to, or create the tasks without assigning them. An administrator can later review and assign those tasks.

  For more information, see Create a CMDB Data Manager policy.

- View the closed tasks in the My Work view in CMDB Workspace. Select the Closed card in the Task status tile to review the (in read-only mode) details for tasks that are in the Closed Complete, Closed Canceled, Closed Incomplete, or Rejected state.

  For more information, see My Work view in CMDB Workspace.

- New CIs in the Create CI experience no longer have their *Operational status* attribute set. The new *CI Operational state* attribute appears on the Additional attributes page of the Create CI experience. Setting it to any value is optional.

  For more information, see Create a CI manually in CMDB Workspace.

- The itil user role now contains the sn_cmdb_user user role and no longer contains the sn_cmdb_editor user role. As a result, the following functions that were accessible to itil users now require the sn_cmdb_editor user role:
  - Create and delete the operations that are related to CMDB 360 queries.
  - Access the CMDB Retirement Definitions module by navigating to **All** > **Configuration** > **CMDB Retirement Definitions**.
  - Access the Create CI quick link on the Home view of CMDB Workspace.

Containment in the itil user role

In zBooted instances, the itil user role no longer contains the sn_cmdb_editor user role and the itil_admin user role no longer contains the sn_cmdb_admin user role. However, the sn_cmdb_admin and the sn_cmdb_editor user roles now have full (create, update, delete) access to the Configuration Item [cmdb_ci] class.

Constraints when deleting a CMDB Data Manager retirement definition

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The same constraints that exist when deleting a retirement definition in CMDB Workspace now apply when directly accessing the CMDB Retirement Custom Definitions [cmdb_retirement_custom_definitions] table:

- The retirement definition that you want to delete must be in an inactive mode (**Active** = **false**).
- The retirement definition for the Configuration Item [cmdb_ci] class can't be deleted.

Prioritize using IRE identification rules for uniquely identifying CIs

Configure the system to prioritize the use of IRE identification rules to uniquely identify CIs in a payload, instead of using the **source_name** and **source_native_key** fields. For more information about using the *glide.identification_engine.skip_sys_object_source_matching* system property to control this behavior, see Properties.

Run a query in an enhanced execution mode

Set the execution mode for a saved CMDB Query Builder query to run using an enhanced query execution engine, which is designed for improved performance and scalability.

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *Users with selected roles* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they won't execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add. After the roles are configured, users must have the specified role to invoke the agentic workflow or AI agent.

New role required for the Create configuration item agentic workflow

The sn_cmdb_admin role is now required to use the Create configuration item agentic workflow (was sn_cmdb_editor).

Removed in this release

- Common Service Data Model no longer provides **Design** as a value for the *Operational status* attribute in CIs.

Deprecations

- The Data Certification plugin (com.snc.certification_v2) is now deprecated and no longer supported or available for new activation. The latest experience for this functionality is included with CMDB Workspace.

Activation information

CMDB is a ServiceNow AI Platform feature that is active by default.

Related ServiceNow applications and features

Common Service Data Model (CSDM)

Common Service Data Model (CSDM) provides prescriptive guidelines for service modeling within CMDB and is the standard for all ServiceNow products that use

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

CMDB. CSDM provides a framework for mapping data from your IT services and other products to CMDB. Following the CSDM framework helps confirm that the required data for your ServiceNow application maps correctly to the appropriate CMDB tables.

Service Graph Connectors

Use predefined ServiceNow® Service Graph connectors to import data from third-party applications, such as Microsoft SCCM, into your CMDB. In addition, you can use the IntegrationHub ETL store app to create and manage custom ETL transform maps so that you can integrate third-party data into CMDB without compromising its integrity.

CMDB Workspace store app

Use the CMDB Workspace store app to search, explore, and gain insights into CMDB. The CMDB Workspace is a store app that provides a central place for working with CMDB. In CMDB Workspace you can examine the health and recent activity related to CMDB, and access various CMDB dashboards and tools to support the tasks in your organization.

Now Assist for Configuration Management Database (CMDB)

Use ServiceNow® Now Assist for CMDB to improve the quality of CMDB data, to get help as you search the CMDB, troubleshoot issues with Service Graph Connector import sets, remediate duplicate CIs, manually create CIs, and view the comprehensive summaries for CIs. For release notes, see Now Assist for CMDB release notes.

Now Assist for CMDB release notes

The Now Assist for CMDB application enables you to improve the quality of CMDB data, search the CMDB quickly, find and remedy issues with Service Graph Connector import sets, view comprehensive summaries for configuration items (CIs), accelerate the process of remediating duplicate CIs, and manually create CIs. Now Assist for CMDB was enhanced and updated in the Zurich release.

Now Assist for CMDB highlights for the Zurich release

Zurich Patch 7

- Get AI-powered answers your questions on CI classes and attributes to help you work in CI forms, dashboards, home pages, and other views on the workspace.
- Search queries can now span multiple tables and relationships between CIs.

Zurich Patch 5

- Review changes to Now Assist usage measurement

Zurich Patch 4

- Some Now Assist skills and agentic workflows are now turned on by default.
- Agentic workflows and AI agents included with Now Assist applications now require additional security configuration.
- Reduce the debugging time and effort when you resolve issues with Service Graph Connector import sets.
- Find and resolve de-duplication tasks.
- Speed the process of manually creating CIs.
- Methodically work through the process of improving CMDB data governance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Search for CIs by specifying any of several attributes of the CI of interest.
- View a concise summary of the key CI data on a CI form in a workspace page or on any list view.

Zurich Patch 3

Zurich Patch 2

Zurich Patch 1

See Now Assist for Configuration Management Database (CMDB) for more information.

Important: Now Assist for CMDB is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Now Assist for CMDB to Zurich

The installation (activation) process has changed for the Now Assist for CMDB v2.1 plugin. See Configuring Now Assist for CMDB for the new instructions.

Changed in this release

Zurich Patch 7

The skill answers your questions on CI classes and attributes to help you work in CI forms, dashboards, home pages, and other views on the workspace. You can submit similar queries on the Explore CI view.

CMDB searches can include relationships

Search queries can depend on relationships between CIs and can span multiple tables. For example, you might ask: "Search for servers that depend on databases - only Linux servers running Redhat".

Zurich Patch 5

Changes to Now Assist usage measurement

Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Zurich Patch 4

Some Now Assist skills, agents, and agentic workflows are turned on by default

The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically.
- Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive.

New role required for the Create configuration item agentic workflow

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The sn_cmdb_admin role is now required to use the Create configuration item agentic workflow (was sn_cmdb_editor).

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *Users with selected roles* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they won't execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add. After the roles are configured, users must have the specified role to invoke the agentic workflow or AI agent.

Create a CI using Now Assist

Verbal interaction with this feature has improved. Occasionally, you might need to create a CI manually. To help you, the CI creator agentic workflow accepts your natural language request and verifies that it understands which class the new CI should belong to. The workflow then checks Identification and Reconciliation engine (IRE) rules to determine the required attributes for the CI and requests that information. After you provide sufficient data, the workflow ensures that the proposed CI includes the attributes that you requested, complies with IRE rules, and is not a duplicate. The workflow then creates the CI.

Getting advice from Now Assist on CMDB governance

To help users understand the value of each step in the process, responses now include richer context. The CMDB Governance agentic workflow supports administrators and service owners by improving CMDB data governance. Before starting in on each governance task, the workflow presents the reasons for the task to help you better understand the importance and benefits of the activity. The objective is to ensure that CMDB data is accurate and complete so that users can trust the data.

Use Now Assist to search the CMDB for CIs

Verbal interaction with this feature has improved. Users can now select the CI inline when multiple CIs are returned as matches. A summary of the CI now appears in the conversation. The CMDB search agentic workflow enables you to search for CIs by specifying any of several attributes of the CI of interest. The workflow accepts your natural language request, verifies your search goal, and then generates a keyword search, a single-table search with dot walks, or a multi-table search, depending on the information that you provided. The workflow can infer CI relationship data to generate an appropriate query.

View CI information with the Now Assist CI summarization skill

Verbal interaction with this feature has improved. You can now view a concise summary of the key CI data by selecting the CI on a CI form, in a workspace page, or on any list view. The summary can include discovery data, ownership, and key related items such as open incidents, alerts, problems, upcoming change requests, and security vulnerabilities. Additionally, the summary lists the service instances that the CI is part of.

Resolve de-duplication tasks with support from the Now Assist Manage duplicate CIs skill. CMDB administrators follow step-by-step guidance to perform remediation, and can preview remediation results before applying a template.

Fix SGC import set issues with the Now Assist SGC diagnosis skill

Verbal interaction with this feature has improved. You can now diagnose a failed import set that is associated with a Service Graph Connector to get a summary of the errors and recommendations for resolving the issues.

Activation information

Now Assist for CMDB is a ServiceNow AI Platform feature that is available with activation of plugins that you get from the ServiceNow Store. For details, see Configuring Now Assist for CMDB.

Related ServiceNow applications and features

Service Graph Connectors

Use a Service Graph Connector to import and integrate third-party data into CMDB and non-CMDB tables.

Now Assist

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

Now Assist Admin console

Use the Now Assist Admin console to provide you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Now Assist panel

Use the conversational interface in Service Operations Workspace to summarize a chat, an incident, or resolution notes so that you can get the context of this information more quickly.

Now Assist skills

Use the Now Assist products to provide generative AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Document Services release notes

The ServiceNow® Document Services application provides a broad range of services that are related to document management, such as creating, maintaining, and converting documents, as well as integrating with third parties like Microsoft SharePoint. Document Services was enhanced and updated in the Zurich release.

Document Services highlights for the Zurich release

- Compare any two document versions and track changes by using document comparison.
- Connect and manage external cloud documents by uploading files, storing URLs, and syncing metadata with your records.
- Authenticate with your personal accounts on an external cloud, Microsoft OneDrive, or Google Drive.
- Control public sharing by using document classification to ensure document security.
- Accelerate documents insights with instant summaries for highlights and quick insights, interactive Q&A, and FAQs.

See Document Services for more information.

Important: Multi Provider Document Services Framework is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.

New in the Zurich release

Document comparison

Compare two versions of the document side by side.

Guardrails for PDF generation and accessibility

Use static and dynamic guardrails to help maintain stability during PDF generation and accessibility.

Smart Documents

Accelerate insights with quick summaries, dynamic Q&A, and FAQs that reduce time spent searching for information

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Upload to provider button

The **Upload to provider** button was changed to **Upload to cloud** button within the Connect with external cloud dialog box.

Sync button

The **Sync** button was changed to the **Download from Cloud** button.

Upload to cloud button

The **Upload to cloud** button has been added for versions.

External Provider Settings tab

The **External Provider Settings** tab was changed to the **External Cloud Settings** tab.

Summarize button

The **Summarize** button was changed to the **Ask Now Assist** button.

Changed in this release

Connect documents on external cloud

Upload your files directly to an external cloud (including multiple versions of the document).

Permissions for external cloud files

Set the sharing permissions on your external cloud files.

Authenticate personal accounts on external cloud

Implement personal token-based authentication for an external cloud so that you can verify user-specific access, audit trails, and compatibility with existing and future integrations.

Connect file extensions

Link any Google Drive file to a document record by selecting a provider and entering the file URL All file extension are now supported.

HTML to PDF Conversion

Specify an image retrieval timeout for HTML to PDF conversion.

Document classification

Limit public sharing based on a document's classification.

PDF generation

Generate a PDF with accessibility for regulated markets.

Property value for digital signature using CAC or PIV smart cards

Specify the method used to identify and validate the user who has signed the PDF using the property value.

Document summarization

Use AI to generate summaries for feedback, disclaimers, and usage tracking in PDFs and Microsoft Word files.

Document Services Framework for Microsoft OneDrive

Retrieve the list of files and folders based on the given search query from Microsoft OneDrive.

Document Services Framework for Google Drive

Retrieve the list of files and folders based on the given search query from Google Drive.

Activation information

Document Services is a ServiceNow AI Platform feature that is active by default.

Document Management is available with activation of the Document Management plugin (com.snc.platform_document_management). For more details, see Activate Document Management .

Multi Provider Document Services Framework needs to be installed by requesting it from the ServiceNow Store. For more information, see Multi Provider Document Services Framework. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Guardrails for PDF generation and accessibility

Added static and dynamic guardrails for accessibility support for PDF document generation

PDF generation and accessibility

Added support for PDF document generation with accessibility for regulated markets.

Hermes Messaging Service release notes

The ServiceNow® Hermes Messaging Service application enables you to integrate your Apache Kafka environment with your ServiceNow® instance. Hermes Messaging Service was enhanced and updated in the Zurich release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Hermes Messaging Service highlights for the Zurich release

- Monitor Hermes data usage over time.
- Verify that topics are synchronized between Hermes clusters.

See Hermes Messaging Service for more information.

New in the Zurich release

Monitor Hermes data usage

Monitor data usage by application and track data usage by topic using the Hermes Usage Dashboard.

Synchronize topic partition count

Verify that the partition count is synchronized between topics in Hermes clusters.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Activation information

Hermes Messaging Service is a ServiceNow AI Platform feature that is available with activation of the ServiceNow Stream Connect Installer (com.glide.hub.stream_connect.installer) plugin or installation of the Log Export Service application. For details, see Activating the Hermes Messaging Service.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Related ServiceNow applications and features

Using Stream Connect for Apache Kafka

Produce Apache Kafka messages from your ServiceNow instance using Workflow Studio, and then consume the messages in an external application. You can also produce Apache Kafka messages from an external application and then consume the messages in your ServiceNow instance using a variety of consumers with Stream Connect.

Exploring Log Export Service (LES)

Export log data securely to your external data lake for reporting, auditing, or regulatory purposes using Hermes Messaging Service with the Log Export Service.

Instance Data Replication

Improve the performance and processing efficiency of Instance Data Replication by upgrading the replication sets that you created before the Washington DC release to use Hermes Messaging Service.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Instance Data Replication release notes

The ServiceNow® Instance Data Replication (IDR) application simplifies the data replication process between instances. Instance Data Replication was enhanced and updated in the Zurich release.

Instance Data Replication highlights for the Zurich release

- Monitor the progress of all your scheduled replication sets.
- Track the progress of scheduled replication requests within a scheduled replication set.
- Access details of scheduled replication requests within a scheduled replication set.

See Instance Data Replication for more information.

Important information for upgrading Instance Data Replication to Zurich

- Improve the performance and processing efficiency of Instance Data Replication (IDR) by upgrading your replication sets to V2, which uses Hermes Messaging Service. For details, see Upgrading legacy replication sets to V2 in Instance Data Replication.
- Log rotation is automatically enabled for the Replication Payload Error [idr_replication_payload_error] table after the upgrade. By default, the log rotation schedule is composed of seven shards, with five days for each shard. All log entries in this table created before the upgrade are automatically truncated.

New in the Zurich release

Monitor scheduled replication sets

Monitor the progress your scheduled replication sets in the IDR Monitoring Dashboard.

Track scheduled replication requests

Track the progress of scheduled replication requests in the Scheduled Replication Requests related list.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Removed in this release

- The Key Management Service test has been removed from the IDR Diagnostics page.
- The VAULT Service Status test has been removed from the IDR Diagnostics page.

Deprecations

Legacy replication sets have been deprecated in the Zurich release and are no longer supported.

Activation information

Instance Data Replication is a ServiceNow AI Platform feature that is available with activation of the IDR (com.glide.idr) plugin, which requires a separate subscription. For details, see Request an Instance Data Replication subscription.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Related ServiceNow applications and features

Hermes Messaging Service

Hermes Messaging Service is a multi-tenant, multi-cluster data transport and queuing service built on Apache Kafka that enables your instance to produce and consume large volumes of Kafka events reliably.

Knowledge Management release notes

The ServiceNow® Knowledge Management application enables you to share Knowledge articles that provide users with information for self-help, troubleshooting, and task resolution. Knowledge Management was enhanced and updated in the Zurich release.

Knowledge Management highlights for the Zurich release

- Experience seamless navigation and viewing experiences across various devices, with the incorporation of responsive design in the workspace that enables pages to adapt to different screen sizes and orientations.
- Upgrade your Knowledge and article viewing experience with an enhanced view and access to key components on the workspace.
- Enhance operational efficiency with migration from legacy Knowledge Management workflows to the latest low-code flow designers.

See Knowledge Management for more information.

New in the Zurich release

Boost efficiency and simplify operations by replacing the existing Knowledge Management processes built on workflow with the latest and innovative, simple-to-use visual flow designers.

UI changes

Next Experience preferences Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

essential resources. The new responsive design enables smooth navigation and effortless viewing on any device. It automatically adapts to different screen sizes and orientations.

Activation information

Knowledge Management is a ServiceNow® feature that is active by default.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Related ServiceNow applications and features

CSM Configurable Workspace

The ServiceNow® CSM Configurable Workspace and ServiceNow® CSM Agent Workspace enable customer service agents to read Knowledge articles attached to their cases and gain additional information that helps them resolve cases more efficiently.

Field Service Management

Enable field service agents to read Knowledge articles that are attached to their work order tasks while they're offline through the Now Mobile Agent app. For more information, see Knowledge articles on ServiceNow Agent.

Communities

Harvest Knowledge information from posts on a Community site. Create structured Knowledge articles from unstructured discussions around a question.

Problem Management

Create structured Knowledge articles from information generated from a problem form that could be useful to solve similar issues.

Incident Management

Resolve issues by searching for Knowledge articles from an incident. Flag issues with an article, edit articles from incidents, and report knowledge gaps while resolving an incident. Formalize tacit knowledge by creating articles from an incident using article templates.

Employee Service Management

Use Knowledge blocks with HR Knowledge Management to simplify both HR Knowledge authoring for writers and Knowledge consumption for readers. Enable an HR agent to identify cases that have insufficient knowledge coverage and to report knowledge gaps using the Demand Insights for HR Cases dashboard. For more information, see Demand Insights for HR Cases dashboard.

Service Catalog release notes

The ServiceNow® Service Catalog application provides a requester view of the available services and products offered by the departments within your organization. Service Catalog was enhanced and updated in the Zurich release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Service Catalog highlights for the Zurich release

- Enable catalog item creators to create complex catalog items in Catalog Builder with ease. They can create, edit, or delete client scripts, or create advanced reference qualifiers.
- Help requesters complete catalog item forms faster on portals and Next Experience UIs using caller-provided key-value pairs that pre-fill catalog item forms.
- Ease the work of catalog item requesters by letting them drag one or more attachments directly onto the form for faster submissions.
- Use the Catalog browse component for an enhanced catalog item browsing experience on the Next Experience UI for catalog users.

See Service Catalog for more information.

New in the Zurich release

Create complex catalog items in Catalog Builder

Enable catalog item creators to create complex catalog items effortlessly in Catalog Builder.

They can create, edit, or delete client scripts to build a complex catalog item. Creators can also configure questions, set dynamic and advanced reference qualifiers, and scripted default values.

Use Catalog browse component

Use the Catalog browse component in UI Builder to add catalog item browsing in your custom pages. Drag it onto the Next Experience UI page to use the Catalog browse component.

The component enables requesters to explore and request items from various catalogs and categories, providing a hierarchical view to sort by catalog, category, or subcategory. The component provides a grid or list view for items and a search function to search for items as needed.

Changed in this release

A property to delete a draft of catalog item

Use the property *glide.sc.delete_draft_item_on_version_change* to determine whether to delete a saved draft of a catalog item on its modification.

Dynamic Lookup Choices and Enhanced Table Sourcing

Lookup questions are now more flexible and user-friendly. You can effortlessly display choices directly from a specific table field, offering similar ease for select box configurations. Additionally, create dynamic dependent lookups where the choices refresh automatically based on the values selected in other fields on the same form, guiding users to more relevant selections.

Enhanced Sorting Control for Lookup Fields

Customize the display order in lookup select boxes, look up multiple choice, and list collector fields with the new *ref_ac_order_by* attribute. This attribute enables options to be sorted primarily by a specified data column, and then by their display label, providing a more logical and predictable presentation for users.

Activation information

Service Catalog is a ServiceNow AI Platform feature that is active by default.

Related ServiceNow applications and features

Catalog Builder

You can create or edit a catalog item (catalog item or record producer) using a visual and guided experience along with specified restrictions. The Catalog Builder experience enables you to delegate the creation and maintenance of the catalog.

Now Assist in Catalog Builder

Use ServiceNow® Now Assist in Catalog Builder to create catalog items of your choice in Catalog Builder by giving text inputs.

MID Server release notes

The ServiceNow® MID Server application enables communication and data transfers between a ServiceNow instance and external applications, data sources, and services. MID Server was enhanced and updated in the Zurich release.

MID Server highlights for the Zurich release

- MID Server smart workload manager continuously evaluates load and assigns jobs in a cluster to ensure that no server is overloaded.
- MID Server logging has been improved with log backups that are preserved in a compressed format on a local host with an option to fetch to the instance.

See MID Server for more information.

Important information for upgrading MID Server to Zurich

For the latest MID Server system requirements, see MID Server system requirements. The minimum JRE version supported is 17.0.10 and the recommended version is 17.0.12.

If you have installed your own JRE, the upgrade process takes the following actions to verify that the MID Server uses a supported JRE:

- If a MID Server is using an unsupported version of the JRE when it upgrades, the upgrade process displays a warning message with the minimum and recommended JRE version.
- If a supported JRE is running on the MID Server host, the upgraded MID Server uses that version.

All MID Server host machines require access to the download site at `install.service-now.com` to enable auto-upgrades. For additional details, read how the system manages MID Server upgrades.

Only one Windows MID Server service is permitted according to the executable path. Upgraded Windows MID Servers that have multiple services pointing to the same installation folder can't start. See MID Server fails to start for more information.

For more information about MID Server upgrades, see the following topics:

- MID Server pre-upgrade check: Describes how the AutoUpgrade monitor tests the ability of the MID Server to upgrade on your system before the actual upgrade.
- Upgrade the MID Server manually: Describes how to upgrade your MID Servers manually.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New in the Zurich release

ITOM Infra Services Workspace

The ITOM Infra Services Workspace provides a concise overview of MID Server activity. The dashboard integrates several previously disparate tables so that issues can be monitored and resolved. The workspace provides real-time monitoring, proactive alerts, automation of common tasks, and centralized diagnostics to reduce downtime and support tickets.

MID Guardian Agent

The MID Guardian Agent is an advanced AI feature within the MID Server ecosystem/ITOM Infra Services workspace, designed to proactively assist users in diagnosing and resolving issues related to configuration, connectivity, upgrades, and operations. By intelligently analyzing logs, signals, and runtime behaviors, it offers guided troubleshooting steps, automated fixes, and predictive insights. This significantly reduces Mean Time to Repair (MTTR) and enhances the reliability and operational efficiency of the MID server.

Changed in this release

Smart Workload Manager in clusters

MID Servers in a cluster now assign jobs based on the true load, using a variety of criteria. The smart workload manager continuously evaluates the queue size, execution time, CPU usage, and buffer size. The manager then assigns tasks to ensure that no server is overloaded.

Enhancements to MID Server logging and JFR

MID Server logging has been improved with log backups that are preserved in a compressed format on local host with option to fetch to the instance. You can enable JFR logs every four hours and backup JFR files for a set time.

MID Server has improved performance during heavy discovery load

MID Servers no longer have performance degradation due to script include cache misses when using large amounts of worker threads.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Activation information

MID Server is a ServiceNow AI Platform feature that is active by default.

Related ServiceNow applications and features

Discovery

ServiceNow® Discovery uses the MID Server to launch probes and patterns that return information to the CMDB about devices and applications running in your environment. Discovery schedules select appropriate MID Servers based on their configured capabilities and assigned IP ranges.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Orchestration

ServiceNow® Orchestration uses the MID Server to do work on internal and external systems. Orchestration selects MID Servers based on their capabilities and the applications that they're allowed to use.

Service Mapping

ServiceNow® Service Mapping uses the MID Server to launch patterns that return information about business services running in your environment.

Event Management

ServiceNow® Event Management uses the MID Server to receive and process events, collect data for root cause analysis (RCA), and collect SNMP traps.

Cloud Management

ServiceNow® Cloud Management uses the MID Server to collect and process VMware events.

Operational Intelligence

ServiceNow® Operational Intelligence uses MID Server clusters to capture operational metrics data from external data sources and analyze them for anomalies.

Health Log Analytics

ServiceNow® Health Log Analytics uses the MID Server to collect log data streaming into your instance and helps you identify the root cause of issues.

Notify release notes

The ServiceNow® Notify application adds support for SMS and voice channels on the ServiceNow AI Platform® to communicate with customers. Notify was enhanced and updated in the Zurich release.

Notify highlights for the Zurich release

- Build Notify subflows according to your requirements by using the default subflows provided in new instances.
- Coral is the new default theme for Next Experience and Core UI, offering a user-friendly experience.

See Notify for more information.

Important information for upgrading Notify to Zurich

Starting with the Zurich release, Notify uses subflows instead of workflows. For existing users in Zurich, your current workflows are still supported. For new users, your Notify plugin installations use subflows.

As part of this transition, the following workflow activities are available as flow actions and can be used when creating subflows:

- Join conference call
- Call
- Send SMS
- Forward call

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Input
- Hangup
- Play
- Record
- Reject
- Say
- Forward to notify client
- Queue

Maintain, build, and modify your own custom subflows in Workflow Studio with subflows for new instances. The following base system workflows have been migrated to subflows:

- (Re)join Conference Call
- Join Conference Call with muting
- Join Conference Call with SMS

Your existing workflows continue to function after the upgrade.

Note: All workflow-related artifacts have been moved to a new plugin, which is maintained in a support-only mode and isn't available for new installations.

New in the Zurich release

Notify workflow activities

Manage the subflows for Notify use cases with the following actions.

- Input - Advanced: This action is intended for advanced scenarios where the *Say and Play* activity must be repeated multiple times.
- Get Notify Number: This action generates a Notify number by accepting the required type as input—*Voice*, *SMS*, or *both*.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Activation information

Notify is a ServiceNow AI Platform feature that is active by default.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Knowledge Center release notes

The ServiceNow® Knowledge Center helps you manage your knowledge articles from a single interface. It consists of dashboards that provide metrics of articles and facilitate swift actions. Knowledge Center is introduced in the Zurich release.

Knowledge Center Knowledge Center highlights for the Zurich release

- Use Knowledge Center to manage and distribute organizational knowledge through a centralized and organized interface.
- Enhance productivity, reduce redundant work, and help ensure that users have access to the latest and most accurate information.
- Format your content within a knowledge article using editing tools in the article editor.
- Improve the quality and health of knowledge articles with article optimization, ensuring that the information is latest and relevant.

See Knowledge Center for more information.

Important: Knowledge Center is available in the ServiceNow Store. For details, see the **Activation information** section of these release notes.

Knowledge Center features

Search knowledge article

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Build a complete and accurate knowledge base, focus on continuous improvement by discovering and filling content gaps, removing redundant information, and optimizing existing articles for better quality.

Knowledge Center Article Optimization

Improve the quality and health of your knowledge articles by using the Article Optimization tool in the Knowledge Center to scan the articles, and get instant, actionable feedback.

Generate and edit articles using Now Assist in the Knowledge Center article editor

Use the editing tools in the Knowledge Center to format knowledge article content such as text, images, and media.

Potential knowledge gaps

Proactively identify and fill potential knowledge gaps. Identify missing knowledge articles and recurring issues that have incomplete or no knowledge article to refer to.

UI changes

Knowledge Center Home Page

The Knowledge Center home page comes equipped with dashboards. New features like article optimization, identify knowledge gaps and, manage duplicate articles improve productivity. The enhanced article editor is integrated with article optimization support to generate high quality content effortlessly.

Activation information

Knowledge Center would be available by default to all the roles of Knowledge Management.

Plugin information

New plugin

The following plugin is new in Zurich:

Knowledge Center (com.snc.knowledge_center): Knowledge Center helps you manage your knowledge articles from a single interface.

Related ServiceNow applications and features

CSM Configurable Workspace

The ServiceNow® CSM Configurable Workspace and ServiceNow® CSM Agent Workspace enable customer service agents to read Knowledge articles attached to their cases and gain additional information that helps them resolve cases more efficiently.

Field Service Management

Enable field service agents to read Knowledge articles that are attached to their work order tasks while they're offline through the Now Mobile Agent app. For more information, see Knowledge articles on ServiceNow Agent.

Communities

Harvest Knowledge information from posts on a Community site. Create structured Knowledge articles from unstructured discussions around a question.

Problem Management

Create structured Knowledge articles from information generated from a problem form that could be useful to solve similar issues.

Incident Management

Resolve issues by searching for Knowledge articles from an incident. Flag issues with an article, edit articles from incidents, and report knowledge gaps while resolving an incident. Formalize tacit knowledge by creating articles from an incident using article templates.

Employee Service Management

Use Knowledge blocks with HR Knowledge Management to simplify both HR Knowledge authoring for writers and Knowledge consumption for readers. Enable an HR agent to identify cases that have insufficient knowledge coverage and to report knowledge gaps using the Demand Insights for HR Cases dashboard. For more information, see Demand Insights for HR Cases dashboard.

Source-to-Pay Operations release notes

Source-to-Pay Operations has new and updated features in the Zurich release.

Accounts Payable Operations release notes

The ServiceNow® Accounts Payable Operations application enables accounts payable specialists to automate cost allocations in the invoice lines using distribution sets. The AI-powered agent provides business owner recommendations for non-PO invoices based on historical patterns. The Accounts Payable Operations was enhanced and updated in the Zurich release.

Accounts Payable Operations highlights for the Zurich release

- Leverage Accounts payable document classification skill to classify email attachments into invoice, credit memo, or supporting documents based on the AI recommended confidence score resulting in error free invoice data extraction.
- Validate supplier provided tax against a system-calculated tax by integrating an enterprise-grade tax engine resulting in straight-through processing of invoice while improving accuracy, compliance, and operational efficiency.
- Process your invoice more effectively and accurately with the new missing tax code invoice exception and currency mismatch.
- Handle various AP related inquiries and tasks through a single entry point by using the Universal Request (UR) as a multi-purpose request form.
- Leverage AI-powered agentic workflow to recommend the appropriate business owner for non-PO invoices based on historical patterns.
- Automate cost allocations in the invoice lines using distribution sets.

See for more information.

Important: Accounts Payable Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

The tax engine integration framework validates supplier-provided tax against system tax at invoice line level, maintains compliance with regional and global tax regulations. This integration triggers automatic tax validation, handles exceptions

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

for tax variance and missing data, enables manual revalidation and rolling up of system tax.

Enable your accounts payable specialist to manually change the invoice type, which results in improved accuracy and compliance. For example, changing a non-purchase order (PO) invoice to a PO invoice type.

Process your invoices more efficiently, adhere to compliance, and provide financial accuracy across processes by using new exceptions such as the Missing tax code invoice and currency mismatch between invoices and purchase orders.

Confirm that ITAM receipts are available and the received quantity is updated in the purchase orders through the integration between the IT Asset Management and Accounts Payable Operations applications.

The recommend invoice owner AI agent auto-suggests and fills in the appropriate business owner based on historical patterns. This process sets up auto-confirmation from suppliers, resulting in shorter invoice processing cycles.

Employees and suppliers can raise general case requests and track case activity updates from their respective portals by using the ServiceNowUniversal Request (UR) application. Universal requests eliminate confusion about which department to contact for assistance.

Apply predefined distribution sets to split invoice amounts across multiple cost centers or GL accounts without having to do manual entry for each invoice line in PO invoices and non-PO invoices. This process helps distribute costs to multiple cost centers automatically, reducing manual work for Accounts Payable specialists.

Changed in this release

The Insufficient goods receipt exception has been enhanced to validate line-level quantities accurately when multiple invoices are submitted against a single purchase order even if a sufficient goods receipt exist.

The Insufficient Funds (Line Amount) functionality has been enhanced to perform validation of available funds at the invoice line level, matching each invoice line against its respective purchase order line when multiple invoices are generated for the same purchase order line.

The Insufficient Funds (Header Amount) logic has been enhanced to validate available funds at the invoice header level against the corresponding purchase order when multiple invoices are created for the same purchase order.

Activation information

Install Accounts Payable Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Localization information

Accounts Payable Operations supports multiple languages. However, the current DocIntel model is trained to extract invoices in the English language only. If you want to process an invoice in the multiple languages supported by DocIntel, you must train the DocIntel model.

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Now Assist for Source-to-Pay Operations release notes

The Now Assist for Source-to-Pay Operations application includes improved AI search, enhanced AI agents, and Summarization skills for fulfillers on the ServiceNow AI Platform. The Now Assist for Source-to-Pay Operations were updated in the Zurich release.

Now Assist for Source-to-Pay Operations highlights for the Zurich release

Zurich Patch 5

- Review changes to Now Assist usage measurement.

Zurich Patch 4

- Some Now Assist skills are now turned on by default.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Previous Patch releases

- Some Now Assist skills are now turned on by default.
- Create purchase requisitions faster by uploading vendor quote files directly through Now Assist's AI-powered chat interface in the Employee Center.
- Use the improved AI search in Shopping Hub, powered by the Retrieval Augmented Generation (RAG) framework, to get more accurate and relevant results.
- The Help fulfill procurement requests agentic workflow has been renamed to Conversational intake for sourcing and procurement to better reflect its expanded scope and capabilities.
- Use enhanced AI agents for the Conversational intake for sourcing and procurement agentic workflow in Now Assist for SPO to improve usability and operational efficiency.
- Use enhanced AI agents for the Coordinate supplier onboarding agentic workflow in Now Assist for SLO to automate the registration of external suppliers and companies and streamlines the onboarding process.
- Use the Field extractor skill to automate the extraction of invoice number or supplier invoice number from the inquiry case generated through various channels (emails, virtual agent chats, or web content). Automating the extraction of invoice and supplier numbers enhances Accounts Payable agents' efficiency, leading to faster and more accurate resolutions.
- The Enhanced Inquiry resolution provider AI agent uses more data sources to suggest resolution to supplier inquiries.

See for more information.

New in the Zurich release

Now Assist for FSC Common

The Field Extractor skill extracts the invoice number and supplier invoice number from the inquiry case that is generated through different channels (emails, virtual

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

agent chats, or web content). The access control lists (ACLs) confirm that only authorized agents can activate or configure the skill.

The Supplier summarization skill in Source-to-Pay Operations workspace provides unified view of supplier-related inquiries and pending actions. This feature helps specialists and supplier managers to quickly view a concise summary of supplier-related cases, tasks, and exceptions.

The Inquiry classifier skill auto-populates the subcategory of an invoice inquiry case by analyzing its description and short description in the Accounts Payable Operations.

Now Assist for Sourcing and Procurement Operations (SPO) skills in a Virtual Agent chat

Requesters can leverage contextual generative AI by using Now Assist for SPO in a Virtual Agent chat to complete self-service tasks, such as purchasing products.

Now Assist for Sourcing and Procurement Operations (SPO)

Upload quotes from vendors to request a purchase using the Procurement product recommendation AI agent. Now Assist automatically extracts supplier information, item descriptions, quantities, and pricing from uploaded vendor quotes to pre-fill purchase requisition forms, eliminating manual data entry and accelerating request submission.

Long term stable (LTS) models are part of Now LLM Service and provide longer model stability windows for regulated industries. These models can integrate with tools to provide governance, monitoring, and compliance controls.

The Help fulfill procurement requests agentic workflow has been renamed to Conversational intake for sourcing and procurement to better reflect its expanded scope and capabilities.

Employees can initiate sourcing and procurement requests conversationally, with the agent automatically applying organizational policies, routing logic, and pre-filling request details for faster completion.

To enhance performance and simplify maintenance, the Conversational intake for sourcing and procurement agentic workflow now includes three core AI agents. The Procurement purchasing plan and Procurement sourcing plan AI agents have been consolidated into a single, unified Procurement product recommendation AI agent.

- **Procurement request tracking AI agent**: Finds and summarizes request status details to answer employee inquiries.
- **Procurement product recommendation AI agent**: Recommends products based on organizational buying criteria, creates purchasing or sourcing plans, and guides employees through the checkout or request process.
- **Procurement inquiry analysis AI agent**: Analyzes employee inquiries to determine next steps, routes tasks to the appropriate agent, provides knowledge-based answers, and manages fallback handling for unsupported requests.

Now Assist for Supplier Lifecycle Operations (SLO)

Now Assist for SLO includes the Coordinate supplier onboarding agentic workflow to streamline the supplier onboarding process by automating supplier registration. AI agents automate the supplier onboarding process by validating profile data and banking details, checking for duplicate suppliers, task generation, communication with suppliers, and final approvals, streamlining the entire process for faster time-to-activation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To make the workflow more dynamic, the Supplier document strategy generator AI agent creates tasks by referring to a KB article which has all the details about the regions and industry related tasks and documents required for onboarding. The KB article is available as a part of demo data, however, the admin can edit and configure this KB article as required.

The following AI agents in the Coordinate supplier onboarding agentic workflow perform the supplier onboarding tasks:

- **Supplier data steward AI agent**: Validates supplier data and checks for duplicate records, creates an invitation case for the supplier contact and assigns the necessary supplier tasks. Also, if required, communicates to the supplier about missing information that must be updated.
- **Supplier data validator AI agent**: Validates supplier-provided profile information and banking details (like account name, account ID, and bank name) in real time.
- **Supplier approval AI agent**: Manages approval or rejection of the supplier onboarding.
- **Supplier document strategy generator AI agent**: Generates a plan to create tasks after referring to the dedicated KB article which includes all the details about the tasks required for onboarding based on the region and industry.

For more information, see .

The Now Assist for APO includes Inquiry resolution provider agent and Recommend invoice owner which resolves invoice inquiries autonomously and recommends business owner for invoices (Non-PO, Non-PO type credit memo).

- The Inquiry resolution provider AI agent processes high volumes of repetitive invoice inquiries through various channels (web, email, virtual agent, mobile and manual entry) to significantly reduce the workload of human agents.
- The Recommend invoice owner AI agent identifies the missing business owner through semantic matching or by creating tasks. The Recommend invoice owner agent triggers when a Missing or invalid business owner exception is raised. For more information on the AI agents, see

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed features

Zurich Patch 5

Changes to Now Assist usage measurement

Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic .

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Zurich Patch 4

Some Now Assist skills are turned on by default

The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills are turned on automatically.
- Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Activation information

Install Now Assist for Source-to-Pay Operations by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Sourcing and Procurement Operations release notes

The ServiceNow® Sourcing and Procurement Operations application provides your employees with a simple automated tool that they can use to shop for goods and services that they need at work. Sourcing and Procurement Operations was enhanced and updated in the Zurich release.

Sourcing and Procurement Operations highlights for the Zurich release

- Enable shoppers to view and select their local currency throughout the Shopping Hub experience, including supplier cards, product detail pages, cart, checkout, my purchases, and request tracker.
- Enable procurement admins to configure and render unique question types for quick and full checkout experiences for each product or service line.
- Use dashboards and tabs in the Source-to-Pay Workspace to view spend, savings, and pipeline projects, identify savings opportunities, and create pipeline projects directly from filtered lists.
- Enable requesters to submit sourcing requests with multiple products in a single sourcing intake form, automatically generating individual sourcing events for each product.
- Allow requesters to view and manage third-party RFx tasks in the Employee Center and navigate to the third-party sourcing tool to review, publish, and award RFx.
- Initiate catalog and off-catalog procurement workflows from the IT Asset Management (ITAM) workspace using the ITAM-SPO better together feature.
- Enable decimal quantities for service items when creating purchase requisitions using quick or full checkouts in Shopping Hub and Employee Center.
- Enable requesters to accept or reject case resolutions through email or Employee Center before closure, reducing premature case closures.

See Sourcing and Procurement Operations for more information.

Important: Sourcing and Procurement Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Multi-currency support in Shopping Hub

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enable multi-currency display across approval-related views, including To-Dos, tasks, email notifications, and the Bundles page. Currency values are shown in both the approver's local currency and the original supplier currency where applicable. The local currency is displayed as the primary value, with the original currency shown as a secondary reference. This display format provides consistent currency visibility for approvers during review.

Enable requesters to enter and edit decimal quantities for service-based purchase requisitions and purchase orders without validation errors. Decimal quantities are supported only for services to maintain data integrity. Decimal quantities for goods are not supported and return a clear validation message. This validation logic is consistent across Shopping Hub and Employee Center.

Automatically classify service requests, purchase requisitions, and purchase orders into the correct spend categories using the Spend categorization agent. This classification process reduces manual classification effort and improves consistency across procurement workflows.

Enable users to purchase on behalf of others without requiring delegate configuration in Shopping Hub. Users can manage individuals they are authorized to purchase for, directly within the buying experience. Purchases made on behalf of others are visible through filtering by business owner in the My Purchases view.

Purchase requisition line-level questions in Shopping Hub

Create configurable, line-level questions during checkout in Shopping Hub. These questions are defined in Catalog Builder and are specific to certain products or product categories.

Multi-currency support in Shopping Hub

View and select your local currency while shopping for products in Shopping Hub to provide a seamless multi-currency experience.

Category management tab

Access a unified, filter-based view of category performance across spend, savings, pipeline projects, contracts, purchase orders, and suppliers.

Category analytics

View savings opportunities across the sourcing pipeline using the Savings dashboard in the Category Analytics module of the Source-to-Pay Workspace.

Pipeline management tab

Gain insights into savings and pipeline projects to enhance visibility, tracking, and collaboration across teams.

Report savings when awarding multiple suppliers

Enter the spend and savings data for the sourcing event associated with the pipeline project when awarding multiple suppliers.

Create a pipeline project from an expiring contract

Create a pipeline project directly from an expiring contract using a guided, decision-based workflow.

Submit multi-product sourcing requests

Submit sourcing requests with multiple products in a single sourcing intake form, and the third-party sourcing solution will automatically create separate sourcing events for each product.

Manage third-party RFx tasks in Employee Center

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

View and manage third-party Request for anything (RFx) tasks in the Employee Center and navigate to the third-party sourcing tool to review, publish, and award RFx.

Sourcing and Procurement Operations integration with IT Asset Management

The Asset Management Integration for Sourcing and Procurement Operations plugin (com.snc.sn_spend_asset) provides an integration between IT Asset Management (ITAM) and Sourcing and Procurement Operations (SPO) applications, enhancing operational efficiency. This integration enables asset managers to access catalog items, including those items without assigned prices, directly within the ITAM workspace. By enabling procurement actions without switching platforms, it streamlines workflows and improves the user experience.

Sourcing Pipeline Management

Sourcing Pipeline Management introduces a centralized approach to managing sourcing projects, enabling you to create, track, and manage sourcing activities in one place. It includes workflow automation to reduce manual effort, improves visibility into sourcing activities, and supports tracking and forecasting of cost savings.

Using Shopping Hub

Enter decimal quantities when creating purchase requisitions for service items using quick or full checkout flows in Shopping Hub. Edit service acknowledgments with decimal values to enable more precise tracking of service consumption.

Purchasing tasks and procurement cases

Review and respond to proposed case resolutions based on conditions defined in the decision tables before the case is permanently closed. When a fulfiller marks a case as resolved, the system now automatically transitions the case status to Awaiting Acceptance, pausing closure until the requester takes action. Requesters are notified via email with actionable buttons and can also accept or reject the resolution directly through the Employee Center. This notification helps to ensure that unresolved issues are addressed before a case is closed, improving resolution accuracy and customer satisfaction.

UI change

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

Components installed with Sourcing and Procurement Operations

The Negotiation event table label has been renamed to Sourcing event. This change affects the label only. The underlying table name, [sn_shop_negotiation_event], remains unchanged.

Activation information

Install Sourcing and Procurement Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Related ServiceNow applications and features

Now Assist for Sourcing and Procurement Operations (SPO)

Use the ServiceNow® Now Assist for SPO application to simplify request creation with conversational intake and summarize records to help fulfillers act promptly.

Source-to-Pay Workspace

Provide experiences and tools to support key activities, such as procuring goods and services, onboarding high-performing suppliers, and processing invoices.

Purchase Order Management release notes

The ServiceNow® Purchase Order Management application helps identifying, tracking, and resolving anomalies or irregularities in the purchase order execution process. Purchase Order Management is a new application in the Zurich release.

Purchase Order Management highlights for the Zurich release

- Use a collaborative workspace to coordinate with suppliers and relevant stakeholders simultaneously.
- Receive automatic notifications, automatically prioritize them, and assign them to the appropriate person.
- Utilize resolution tools to automatically update orders and review order plans for the affected material and location.

See Purchase Order Management for more information.

Important: Purchase Order Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Purchase Order Management features

Reporting delivery plan issues

Suppliers can report delivery plan issues related to purchase order line through the Supplier Collaboration Portal, ensuring prompt visibility for the appropriate buyer. Suppliers can also track and collaborate with the buyers on the purchase order exception on the related record in Supplier Lifecycle Operations.

Centralized interface for purchase order exceptions

The Purchase Order Management page provides operational buyers with a centralized interface to monitor and review purchase order exceptions. Users can quickly identify urgent issues, view recent tasks, and take approval actions, improving workflow visibility and exception handling.

Resolving purchase order exceptions

Enables buyers to resolve purchase order exceptions directly from the exception page, with options to accept supplier proposals or make custom edits. It also allows

buyers to find alternative suppliers with open orders for the same materials and request order expediting or increased quantities.

Activation information

Install Purchase Order Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Plugin information

New plugins

The following plugins are new in Zurich:

Purchase Order Management (com.snc.sn_poem_core): Purchase Order Management is a plugin that identifies, tracks, and resolves anomalies or irregularities in the purchase order process.

Related ServiceNow applications and features

Source-to-Pay Operations

ServiceNow® Source-to-Pay Operations unifies sourcing, procurement, and payments into a single experience. It automates transaction processes, integrates with ERP systems, and accelerates implementation, enabling teams to optimize spend, reduce risk, and achieve their organizational ESG goals through sustainable sourcing.

Supplier Lifecycle Operations

ServiceNow® Supplier Lifecycle Operations empowers suppliers with self-service to simplify operations and improve productivity. You can effectively collaborate with suppliers, manage supplier relationships, monitor risk, compliance, and performance across the supplier life cycle.

Source-to-Pay Operations Integrations release notes

The ServiceNow® Source-to-Pay Operations extends its capabilities by integrating with third-party applications. The Source-to-Pay Operations integration with SAP, Oracle EBS, Coupa, and SAP Ariba are new applications in the Zurich release.

Source-to-Pay Operations Integrations highlights for the Zurich release

- Send purchase orders, receipts, and invoices created in SAP ECC and SAP S4 HANA from your ServiceNow instance using the Source-to-Pay integration with SAP ECC and S4 HANA.
- Handle sales orders, procurement, finance, and so on, in Oracle EBS from your ServiceNow instance using the Source-to-Pay integration with Oracle EBS.
- Handle business spends and automate approvals, contracts, inventory, purchase orders, requisitions, suppliers, and user management in Coupa from your ServiceNow instance using the Source-to-Pay integration with Coupa.
- Handle sales orders, procurement, finance, and so on, in SAP Ariba from your ServiceNow instance using the Source-to-Pay integration with SAP Ariba.

See Source-to-Pay integration with third-party applications for more information.

Important: Source-to-Pay Operations Integrations with third-party applications ares available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important upgrade information for Source-to-Pay Operations Integrations

Important: Due to a performance issue identified with the upgrade fix script, the sourcing fix script has been modified. This script will no longer execute automatically during the upgrade process. Instead, it is now delivered as an on-demand job. Administrators must manually execute this job outside of business hours after the upgrade is complete.

Source-to-Pay Operations Integration features

Source-to-Pay integration with SAP

- You can use this integration to perform Integration Hub actions for purchase requisition, purchase order, receipt, and invoices.
- You can also perform the following:
  - Create, update, or cancel purchase orders in SAP ECC and SAP S4 HANA.
  - Create good receipts in SAP ECC and SAP S4 HANA.
  - Create invoices in SAP ECC and SAP S4 HANA.

Source-to-Pay integration with Oracle EBS

- You can use this integration to perform Integration Hub actions for Invoices, cost centers, product models, payment terms, purchasing organizations, departments, GL accounts, currencies, FX rates, invoice payment details, suppliers, plant addresses, and legal entities.
- You can also perform the following:
  - Create, update, or cancel purchase orders in Oracle EBS.
  - Create good receipts in Oracle EBS.
  - Create invoices in Oracle EBS.

Source-to-Pay integration with Coupa

You can use this integration to perform Integration Hub actions for loading primary data, supplier management, purchase requisition, purchase order, receipt, invoice, and sourcing. You can also look up Legal Entity, Currency, and Supply details respectively.

Source-to-Pay integration with SAP Ariba

You can use this integration to perform Integration Hub actions for invoices, cost centers, payment terms, purchasing organizations, departments, GL accounts, currencies, FX rates, invoice payment details, suppliers, and legal entities. You can also create good receipts in SAP Ariba.

Activation information

Install Source-to-Pay Operations with third-party applications by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Supplier Lifecycle Operations release notes

The ServiceNow® Supplier Lifecycle Operations application enables you to quickly onboard and collaborate with suppliers, manage supplier relationships, monitor risk, compliance, and performance across the supplier life cycle. Supplier Lifecycle Operations was enhanced and updated in the Zurich release.

Important Supplier Lifecycle Operations highlights for the Zurich release

- The plugin Supplier Operations (com.snc.sn_so) **must** be installed after upgrading to Supplier Lifecycle Operations Zurich release. For more information, see Install Supplier Operations.
- The Supplier Lifecycle Operations plugin (com.snc.sn_supplier_mgmt) is renamed to Supplier Case Management. For more information, see Supplier Case Management.

See Supplier Lifecycle Operations for more information.

Important: Supplier Lifecycle Operations is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Supplier Operations

Supplier Operations provides support for advanced case management capabilities to handle key supplier lifecycle events such as onboarding, offboarding, and ongoing operations. It includes the ability to resolve cases via Playbooks for a structured and consistent approach.

Supplier Payment Optimization

Supplier managers can identify, prioritize, and track suppliers with high potential for accepting credit card payments.

- Supplier Managers can initiate credit card enablement cases, enabling suppliers to use credit card payments as their preferred payment method.
- They can initiate credit card enablement journey for new or existing suppliers after checking their propensity scores (currently requires manual updates).
- They can view the saving estimates associated with the card for a given supplier using the **Savings calculator** tool. They can also view the calculation details of the savings estimator formulas.

Relish Integration for Supplier Lifecycle Operations

Supplier managers can conduct sanction screening, validate banking details change requests, and supplier location change requests via Relish integration.

Automated KPI data collection

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

This feature enables automated data collection, KPI template modifications, and calculation at supplier and contract levels. The automated KPI system integrated into action plans can be used for comprehensive performance monitoring.

Mapping multiple internal stakeholders to a supplier

This feature enhances supplier governance in SLO by enabling the mapping of multiple internal stakeholders such as legal, business, technical, and risk teams to suppliers, improving visibility and management of supplier relationships.

Universal Request

Supplier contacts can create generic cases by selecting **Request Help** in the Supplier Collaboration Portal, if they can't find the relevant search results or are unsure of which department to contact for help. These cases are triaged and routed internally to appropriate case types. Universal requests remove ambiguity and improve efficiency for both suppliers and internal operations.

Overall supplier dashboard

The overall supplier performance dashboard provides detailed information about overall supplier scores, count of all active suppliers, their all-time spend, and overall risk ratings. It also includes the Supplier Insights section and the Action plans section showing relevant details.

Supplier managers can use the segmentation rules and assessment templates to create smart assessments in bulk for users. Smart assessments provide a survey-like experience with enhanced UI capabilities for both internal and external users. This feature utilizes the capabilities of the Smart Assessment Engine application.

Supplier managers can access their emails within the Source-to-Pay Workspace from the **Emails** tab in the case, task, and supplier details pages respectively. Email actions are reflected, incomplete email errors are handled, and email-related activities can be summarized from the workspace.

Supplier contacts receive the emails and they can perform the assigned tasks directly via email without logging in to the Supplier Collaboration Portal.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Activation information

Install Supplier Lifecycle Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Strategic Portfolio Management release notes

Strategic Portfolio Management (formerly IT Business Management) has new and updated features in the Zurich release.

Collaborative Work Management release notes

The ServiceNow® Collaborative Work Management (CWM) application provides a central hub to plan, visualize, and collaborate on work with team members across your organization. CWM was enhanced and updated in the Zurich release.

Collaborative Work Management highlights for the Zurich release

- Plan, track, and manage team work in Agile methodology with sprint planning in the CWM workspace.
- Streamline task management for teams by integrating various work items across ServiceNow applications into CWM Boards.
- Filter and group work by vertical and horizontal swimlanes in the Kanban view for a specific work item type.

See Collaborative Work Management for more information.

Important: Collaborative Work Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Enterprise Agile Planning (EAP) integration with CWM

Enhance visibility and streamline planning for your teams with EAP integration into CWM.

For Agile teams managing non-agile work items like incidents and change tasks, this integration bridges the gap by automatically creating a dedicated Space and Board in CWM. Agile work is seamlessly brought over via Connected Work, while EAP sprints are reflected directly in CWM's Sprint planning view, thus enabling unified planning across all work types. Teams can plan work for their sprints and update work status directly from the CWM Board, with performance reports in EAP dynamically reflecting these changes. This integration enables teams to manage their full scope of work from a single, connected workspace.

Board preferences

Reduce cognitive load and focus on the most relevant and actionable tasks by filtering work items on CWM boards based on their last updated date and hiding those items marked as Closed complete. From the Board preferences menu on the Board header, you can choose to show items last updated within 7 days, 30 days, 90 days, 120 days, or 1 year.

Kanban card layout settings

Surface the information that's most relevant to you using Card Layout settings for Kanban view of a CWM Board. You can now personalize Kanban cards by selecting up to five fields to display on them. For a cleaner, distraction-free view, you can enable the Compact layout, which shows only the work item name on the card. Alternatively, the Full view shows all selected fields, offering better context directly on the card. Based on your workflow needs, tailor your workspace to enhance the way you track tasks.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Dynamic data linking in CWM Docs

Keep record information in your documentation always current and reduce manual effort with the Dynamic data linking feature in Docs. You can now reference any ServiceNow application record and Docs will automatically reflect the latest updates from those records. For example, if you add a reference to a Project record, the reference will show the latest field information of the project in Docs without requiring manual edits. Clicking the project reference opens up the project form so that you can view the full details of the project record and make any necessary changes. Dynamic linking also enables adding references to a particular field of a record, such as Assigned to of an Incident record.

You can add references from any ServiceNow table you have access to, with no setup or configuration needed, thereby eliminate the hassle of switching between applications to copy and paste data from various records into Docs.

Agile sprint planning in CWM

Plan, track, and manage work for your teams by using Agile sprint planning in the CWM workspace. You can use CWM to manage tasks in multiple methodologies including ad hoc, waterfall, and Agile practices.

- View such details as the backlog, current sprint, and future sprints at a glance from the Sprint planning view of the CWM Board.
- Add Agile item types, such as stories, with other CWM tasks to the backlog.
- Create sprints with a custom duration and sprint capacity.

Connected work in CWM

Streamline team collaboration and planning by enabling your teams to view and plan all their work in one place by connecting work across multiple ServiceNow applications. By defining the type of work you want to connect to CWM, you can bring in records from other applications into CWM Boards.

After the records are added to a CWM Board, your teams can update their status and other details from within CWM, or perform sprint planning for all the work on the Board. This unified experience improves efficiency because your teams don't have to switch between multiple workspaces.

Navigation panel enhancements

Move Spaces, Boards, and Docs around in the navigation panel of the workspace by using the drag and drop functionality.

Enhancements to Kanban view

- Quick filters: Filter the tasks based on the work type that you would like to see in the Kanban view of a CWM Board. You can select single or multiple work item types based on the swim lanes selected. Any filters that you apply to the Kanban view are specific to this view and aren't applied to List or Gantt views.
- Horizontal lanes: Group the cards on the Kanban view by using a vertical and horizontal lane for improved visibility into the type and progress of work. You can save horizontal lane preference into Board views and templates.

Copying and pasting content within Docs

Copy and paste the content such as text, images, lists, and tables from one Doc page to another. The following content is supported for the copy and paste action:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Text blocks with existing formatting
- Bulleted and numbered lists
- Tables
- Images
- Single and multiple paragraph blocks into a table cell
- Lists into a table cell
- Images into a table cell

New keyboard shortcuts

- Create Space:
  - macOS: Option + S
  - Windows OS: Alt + S
- Create Board:
  - macOS: Option + B
  - Windows OS: Alt + B
- Create Doc:
  - macOS: Option + D
  - Windows OS: Alt + D

Keyboard shortcut enhancements within CWM Docs

- Insert a URL in the Doc:
  - macOS: Cmd + K
  - Windows OS: Ctrl + K
- Insert a new row in a table after the last row: Enter
- Move to adjacent cells within a table: Arrow keys
- Create a new list item within an existing list in a table or paragraph: Enter
- Create a new line in the same bullet point: Shift + Enter
- Indent a list item: Tab

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

My Work enhancements

Track all your work from one place using the enhanced My Work in CWM. My Work now supports all ServiceNow task records-such as incidents, changes, and requests-whether they originate in CWM or outside, giving you a unified view of

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

everything assigned to you. This helps you stay on top of overdue or open tasks and improves on-time delivery.

Additionally, the Item type filter has been refined to show all CWM tasks (including custom ones) grouped under a single category, instead of listing every CWM task type individually. You'll also only see task types in the filter that you're actually assigned to, reducing clutter and making it easier to filter what matters.

Enhancements to tables in Docs

- Resize the column width of a table per your preference.
- Add color to single or multiple table cells.
- Select multiple cells of a table using the mouse device or by pressing **Shift+ one of the arrow keys** on the keyboard.
- Delete content from multiple cells using the **Backspace** or **Delete** keys.
- Copy and paste cell content:
  - Copy content from one cell and paste it to multiple cells.
  - Copy content from n number of cells and paste it to another set of n number of cells.
  - Copy content from multiple cells and paste it as a new table in an empty block on the page.

Enhancements to CWM Board templates

- Save template: While saving a Board as a template, choose between saving the current view or all shared views. You can see the number of Board views and custom task types that are included in this template.

  These details are displayed in the Template Center, where you can select a template that best meets your team's needs.

- Apply template: While applying a Board template, you can see the number of Board views and custom task types that you get if you apply this template. The Board views drop-down list lets you switch between views and provides information on the type of views that are enabled in this template.

  Only those custom columns that are part of these views are brought over when you apply this template.

Collaborating with Spaces in CWM

When a user is added to the **Assigned to** field of a CWM task but doesn't yet have access to the Space, the email notification requesting access is sent only to the Space owners. This way, there's less email clutter for all the Space users because notifications are sent to only those users who need to know this information.

New columns for CWM tasks

Every task within a CWM Board has new columns called Sprint and Story points. You can use these columns if you choose to plan any task into Sprints. These columns are available on every type of work item, including the items that are brought into the Board through Connected work.

Changes within CWM Docs

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Open the keyboard shortcut panel:
  - macOS: Cmd + Option + K
  - Windows OS: Ctrl + Alt + K
- Images can be resized after inserting them within a table cell.
- The page name can be updated by editing the name and clicking anywhere on the Doc.
- Moving content blocks to within a numbered list or deleting a list item from a list automatically adjusts the list numbering.

Activation information

Install Collaborative Work Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Now Assist for Collaborative Work Management (CWM) release notes

The ServiceNow® Now Assist for Collaborative Work Management (CWM) application uses generative AI skills to improve the time to value for tasks you perform in CWM. Now Assist for CWM is a new application in the Zurich release.

Now Assist for CWM highlights for the Zurich release

Zurich Patch 5

- Review changes to Now Assist usage measurement.

Zurich Patch 4

- In Zurich Patch 4, some Now Assist are now turned on by default.
- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
- Help increase the efficiency of your teams using the generative AI capabilities of Now Assist for CWM.

See Now Assist for Collaborative Work Management (CWM) for more information.

Important: Now Assist for CWM is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Generate acceptance criteria for stories in CWM

Generate clear, consistent acceptance criteria for user stories with the acceptance criteria generation skill. By using story details as context and predefined templates, the skill helps you generate acceptance criteria in a format that aligns with your organizational requirements.

Generate and improve content using open-text prompts

Help improve your content and productivity with the ability to enter custom prompts directly in the Docs, alongside the Summarize, Elaborate, and Shorten options.

Generate content with Now Assist for CWM directly in your Docs. In addition, summarize existing sections, elaborate where needed, and refine drafts.

New third-party AI model provider options available for all Now Assist applications

Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Changed in this release

Zurich Patch 5

Related ServiceNow applications and features

Collaborative Work Management

Collaborative Work Management (CWM) provides a central hub to plan, visualize, manage, and collaborate on work with your teams.

The Now Assist for CWM application uses generative AI skills to help save time and improve efficiency for actions you perform within CWM.

ServiceNow® Now Assist uses generative AI to help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

The Now Assist Admin console provides you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Use the Now Assist panel conversational interface in CWM to generate tasks from Docs and add them to CWM Boards.

Now Assist for Strategic Portfolio Management (SPM) release notes

The ServiceNow® Now Assist for Strategic Portfolio Management (SPM) application introduces generative AI skills into Strategic Portfolio Management. You can summarize feedback or content in Docs, create stories for epics, generate project insights, create demands through conversations, and quickly gain updates into projects. Now Assist for Strategic Portfolio Management (SPM) was enhanced and updated in the Zurich release.

Now Assist for SPM highlights for the Zurich release

Zurich Patch 5

- Review changes to Now Assist usage measurement.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Zurich Patch 4

- All Now Assist for SPM skills are activated by default.
- Use the identify similar records skill to find similar demands based on contextual similarity.
- Enable the project task monitor AI agent to autonomously monitor project tasks on the critical path of a project.
- Use the **Send preview** button to share a project insights email instantly.
- Generate measurable targets from goals information and optional context with the target generation skill.

Zurich Patch 1

- Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

See Now Assist for Strategic Portfolio Management (SPM) for more information.

New in the Zurich release

Zurich Patch 4

Schedule project insights email

- Schedule project insights email in the Configure project insights modal. The project email is emailed to the project managers and users and continues on the selected schedule that you select until the project is inactive or paused.
- Schedule and instantly send the project insights email to your project managers by selecting the **Send preview** button.
- Track important updates such as the delayed end dates, the status turning red, or the state updates of your projects and receive project insights email on the schedule that you select.
- Select the email frequency that works for you: weekly, bi-weekly or monthly.
- Monitor critical elements such as milestones, resources, projects, and project tasks.
- Receive proactive, AI-based notifications when project milestones or critical tasks could lead to delays using Monitor project task agent. Use the Enable critical task alerts option from planning page to enable the project task monitor AI agent.
- Choose the recipients to whom you want to send the project insights email.

Identify similar records using Now Assist

Detect similar existing demand records when creating or editing a demand using the identify similar records skill. The skill compares the **Name**, **Description**, and **Business Case** fields for contextual similarity.

Accelerate target creation with the target generation skill

Generate measurable targets from goals information and optional context with the target generation skill. The skill automatically populates key fields in the target creation form, helping teams define clear, measurable outcomes and create targets quickly.

Generate acceptance criteria for stories

Generate clear, consistent acceptance criteria for user stories with the acceptance criteria generation skill. By leveraging story context and predefined templates, the skill helps you align with requirements.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enhancements to Story generation

Use the upgraded agile story generation skill to convert epics into actionable user stories quickly. Powered by an agentic workflow, the skill analyzes epic details to recommend the optimal number of stories, enables adjustments, refines story content, and creates story records.

Zurich Patch 2

Improve efficiency and quality using refine records skill with Now Assist Context Menu

Simplify record creation and updates by using the refine records skill with Now Assist context menu. Improve record quality by enabling AI-assisted text refinement in the text fields of Product idea, Demand, Epic, Projects, Capability, Feature, Stories, Project tasks, Risks, Strategic priorities, Goals, Targets, Initiatives, Feedback, Milestones, and Story forms.

Zurich Patch 1

Configure ACLs for custom roles

Update the ACLs for custom roles that require access to Now Assist skills.

Generate and improve Docs content

Help improve your content and productivity with the ability to enter custom prompts directly in the Docs, alongside the Summarize, Elaborate, and Shorten options.

Generate content with Now Assist for SPM directly in your Docs. In addition, summarize existing sections, elaborate where needed, and refine drafts to help improve your productivity.

You can interact with Now Assist directly in your Doc to create content, add context, or improve existing sections.

New third-party AI model provider options available for Now Assist

Google Gemini 2.0 Flash, Google Gemini 2.5 Pro, and AWS Claude 3.7 Sonnet are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI GPT-4.1 and GPT-4.1 mini.

UI changes

More actions context menu UI enhancements

- Email project summary option has been renamed to Configure project insights.
- Enable critical task alerts option has been added.
- Disable critical task alerts option has been added.

Configure project insights modal UI enhancements

- Email project summary modal has been renamed to Configure project insights modal.
- **Disable email summary** check box has been renamed to **Pause cadence** check box.
- Choose topics, personalize content, and set frequency setup have been added.
- **Project tasks**, **Milestones**, and **Resources** check boxes have been added.
- **Include critical path task changes** check box has been removed.
- **Schedule and send** button has been renamed to **Schedule** button.
- **Send preview** button has been added to send an email instantly.

Skill name updates

The email project summary skill has been renamed to the project insights generation skill.

Demand Management UI changes

- The **Identify similar demands** button has been added to the demand form to identify and view any similar demands with the identify similar demands skill.
- The Similar Demands related list has been added, which displays the list of similar demand records identified by Now Assist.

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Email project summary modal UI changes

- The **Enable AI Agents to monitor task changes on the critical path** check box has been added.
- The **Users** option has been added under Recipients to add recipients or users for the project summary email.

Changed in this release

Zurich Patch 5

Changes to Now Assist usage measurement

Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Zurich Patch 4

Some Now Assist skills, agents, and agentic workflows are turned on by default

The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows:

- New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically.
- Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive.

Zurich Patch 1

ppm.ai_project_manager_agent user role

The agentic workflow, agents, and scheduled jobs are configured to run under the new ppm.ai_project_manager_agent user role instead of the administrator account.

Activation information

Now Assist features are available with activation of the Now Assist for Strategic Portfolio Management (SPM) plugin. For more information, see .

Related ServiceNow applications and features

ServiceNow® Now Assist uses generative AI to help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

The Now Assist Admin console provides you with quick and easy access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Use the Now Assist panel conversational interface in the Enterprise Agile Planning workspace to get story recommendations, split or combine stories, and create stories for your epics with the help of generative AI.

Now Assist skills

Now Assist products provide generative AI skills that are tailored to meet the needs of users in different workflows, including feedback summarization, content summarization in Docs, demand creation, and epic to story generation.

Portfolio Planning release notes

The ServiceNow® Portfolio Planning application helps you enhance traditional product and portfolio management by visualizing the alignment of work with organizational objectives. Portfolio Planning was enhanced and updated in the Zurich release.

Portfolio Planning highlights for the Zurich release

- View the planned costs of your planning items for the past fiscal periods.
- Use **Display mode** to switch between different views of the financials record page.
- Experience consistent roadmap bar colors for choice list attribute values across all portfolio plans. View the roadmap-level milestone row while scrolling down the Roadmap page. Use different icons to distinguish item-level milestones.
- Apply filters using string-type and Boolean field values to view the desired data.
- Customize and apply a theme to your roadmap to match your organization’s standards.
- Create and manage monetary benefit plans to capture and track projected and actual benefits.
- Manage and run projects in various global currencies besides the functional currency using multicurrency.
- Generate labor cost on sub-projects based on the resource assignments.

See Portfolio Planning for more information.

Important: Portfolio Planning is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Roadmap enhancements

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create custom themes for your roadmap bar colors to align with your organization's standards.
- Experience consistent roadmap bar colors for choice list attribute values across all portfolio plans.
- View the roadmap-level milestone row while scrolling down the Roadmap page.
- Use different icons to distinguish item-level milestones.

Dynamic data linking in Docs

Keep record information in your documentation always current and reduce manual effort with the Dynamic data linking feature in Docs. You can now reference any ServiceNow application record and Docs will automatically reflect the latest updates from those records. For example, if you add a reference to a Project record, the reference will show the latest field information of the project in Docs without requiring manual edits. Clicking the project reference opens up the project form so that you can view the full details of the project record and make any necessary changes. Dynamic linking also enables adding references to a particular field of a record, such as Assigned to of an Incident record.

You can add references from any ServiceNow table you have access to, with no setup or configuration needed, thereby eliminate the hassle of switching between applications to copy and paste data from various records into Docs.

Scenario planning enhancements

With the sn_align_core.apw_admin role, you can enable or disable the scenario planning feature. The *sn_align_ws.is_scenario_planning_disabled* system property allows you to enable or disable the scenario planning feature.

Quick filters enhancements

Apply filters using string-type and Boolean field values across the Planning page to view the required dataset. These filters are saved as part of your user preferences, enabling you to access the same filtered data when you log back in and continue your planning seamlessly.

Financial enhancements

- View only the planned costs of your planning items to track the total cost of projects or demands.
- Use **Display mode** to switch between focused views to better plan and track the financials of your planning items.
- Manage the planned and actual monetary benefit plans for your projects to identify the financial performance of your project using the Cost and benefits screen.
- Use multicurrency to view and manage financial records of the project in Investment currency, which can be different from your functional currency. Manage multiple financial records such as planned and actual expenses, planned and actual benefits, and so on.
- Generate and track labor cost for sub-projects, based on the resource assignments of your sub-projects and planning items such as features and capabilities.

UI changes

Coral theme

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Financials in Portfolio Planning

- Use the new **Display mode** in the Financials record page to select and view forecast, compare planned vs actual costs, planned costs, or allocate budget.
- Renamed **Cost** tab as **Costs and benefits** to manage cost plans and benefit plans in one view.
- Renamed **Baselines** as **Baseline comparison** to create and compare financial baselines.
- Renamed **Time scope** as **Filter time scope** to adjust the time scope to view a focused and customized financial snapshot.
- New **Generate labor costs** button to generate labor costs based on the resource assignments.
- New **Currency** list option to switch between functional and investment currency.
- New **Edit investment currency** option to define investment currency for your projects.
- **New monetary benefit plan** option to create new forecast benefit plans.
- New **Planned Benefits** widget displays the total forecasted benefits.
- New **Total Return** widget displays the total actual benefits form the projects.
- New **Record type** column to classify the financial records between benefits and costs.
- Renamed **Estimate At Completion** widget to **EAC Cost**.
- Renamed **Actual Cost To Date** to **Actuals (Incl. current fiscal period)**.

Activation information

Install Portfolio Planning by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Strategic Planning

Prioritize, roadmap, and track work when using traditional, agile, or hybrid methodologies with ServiceNow® Strategic Planning. Align strategy to execution by defining and tracking goals across your organization.

Project Portfolio Management release notes

The ServiceNow® Project Portfolio Management application enables you to create and manage a wide range of planning items from a few small tasks to large portfolios of projects. Project Portfolio Management was enhanced and updated in the Zurich release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Project Portfolio Management highlights for the Zurich release

- Synchronize resource assignment dates with the project end dates, and end resource assignments automatically when a project reaches its end date.
- Manage all project-specific resource assignments in one place by accessing the resource page directly from Project Workspace.
- Identify similar demand records based on contextual similarity in the name, description, and business case content using the identify similar records Now Assist skill.
- Convert demands to Enterprise Agile Planning (EAP) entities, such as Epic, Feature, or Capability, directly from Demand Management.

See Project Portfolio Management for more information.

New in the Zurich release

Managing projects with Project Workspace

- End resource assignments when a project ends, view assignment details, and synchronize assignment dates with project dates.
- Access and edit the resource details directly from the Resource page without switching between views.

Identify similar records using Now Assist

Detect similar existing demand records when creating or editing a demand using the identify similar records skill. This skill compares the **Name**, **Description**, and **Business Case** fields for contextual similarity.

Convert demands to EAP entities

Convert your demand records quickly to Enterprise Agile Planning (EAP) entities, such as Epic, Feature, or Capability. When you convert a demand, the system generates a new record of the selected entity type, replicates common fields from the demand, and moves the demand to the Approved state.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Project Workspace UI changes

The following items were added to Project Workspace:

- Resource page to access and manage resource assignments.
- **Sync all** button to synchronize project dates for all the resource assignments.

Demand Management UI changes

- The Artificial Intelligence value has been added to the **Investment Type** field of the Demand form so you can choose AI as an investment type.
- Three values, EAP Epic, EAP Feature, and EAP Capability, have been added to the **Type** field in the Demand form. These options are available only when the value in the **Category** field is set to **Strategic**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- An option to create the selected type of EAP entity has been added under Related Links in the Demand form. This option is available when the demand is in the Draft state and until an EAP entity is created.
- The EAP Details section has been added to the Demand form. This section is displayed after the demand is in the Draft state and includes two fields:
  - **Team**: Choose a team for the EAP entity.
  - **Converted to**: Name of the created EAP entity after it's generated.

  After the EAP entity is created, both fields are set to read only.
- The following items have been added to the demand form and are available if you have the identify similar records Now Assist skill activated:
  - The **Identify similar demands** button, which identifies and displays similar demands.
  - The Similar Demands related list, which displays the list of similar demand records identified by Now Assist.

Deprecations

Resource Management reports

Starting with the Zurich release, Resource Management reports are deprecated. You can start using the interactive Overview dashboard in Resource Management Workspace to work on reporting.

For more information on the Overview dashboard, see Using Resource Management Workspace.

Resource Management classic

Starting with the Zurich release, the Resource Allocation workbench and Capacity planning overview are removed from the product navigation of Resource Management for new customers.

Activation information

Project Portfolio Management is available with activation of the PPM Standard (com.snc.financial_planning_pmo) plugin. For more information on activation, see Activate PPM Standard (Project Portfolio Management).

Install Strategic Spend Tracking for PPM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

Project Workspace

See the Project Workspace documentation for more details about using ServiceNow Workspace in Next Experience.

Use Resource Management Workspace

You can use Resource Management Workspace to manage resource assignments as a replacement for Allocation workbench.

Capacity Planning

Use the Capacity in Strategic Planning Workspace to generate user capacity as a replacement for Capacity planning overview.

Now Assist for Strategic Portfolio Management (SPM)

Now Assist enables you to use generative AI skills in multiple SPM apps. With Now Assist for SPM, identify similar demand records to avoid duplication and redundancy.

Project Workspace release notes

The ServiceNow® Project Workspace application provides an intuitive user experience that enables project managers to plan and manage their projects. Project Workspace was enhanced and updated in the Zurich release.

Project Workspace highlights for the Zurich release

- Guide teams through predefined stages and actions for each process using Playbooks.
- Track, modify, and synchronize all resources assignment for a project from the resource assignment list page, which displays all assignments associated with that specific project.
- Create and manage monetary benefit plans to capture and track projected and actual benefits.
- Manage and run projects in various global currencies besides the functional currency using multicurrency.
- Generate labor cost on sub-projects based on the resource assignments.

See Project Workspace for more information.

Important: Project Workspace is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Use Playbooks in Project Workspace

- Playbooks provide structured stages and activities to keep projects on track.
- Added two playbooks for Project Workspace: Project Default and Stage-gate Default.
- Use one of the two out-of-box playbooks or create your own to match your project process.

Monitor and update project report status

- Track the status of project reports using the Status drop down, and change the status from Draft to Published once updates are complete.
- Status changes are restricted to the Project Manager role.

Copy and edit status report enhancements

- Simplified workflow for copying and editing status reports. Duplicate a status report directly without opening a form modal.
- The duplicated report automatically refreshes with the latest project updates (for example, overall status, milestones, or metrics).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Any static or manually added data from the original report is retained in the duplicated version.
- When editing is disabled, all fields in the status report are read-only. When editing is enabled, only dynamic fields remain read-only. You can edit the status report in both the scenarios using the Edit Status Report action in the context menu.

Resource assignment updates

- Access and modify resource details directly from the Resource page without having to navigate to Resource Management Workspace.
- End resource assignments when a project ends. View the resource assignments and synchronize the resource assignment dates with the project dates.
- Move resource assignments to a new start and end date to align with task dependencies or resource availability.

Status report properties

- Updates made on the status report form are reflected in the Status Report document when the `sn_pw.status_report_doc_read_only` property is set to `true`.
- Updates made on the status report form are not reflected in the document content when the property is set to `false`.

Project financials

- View only planned costs of your planning items to track the total cost of your projects.
- Use **Display mode** to switch between focused views to better plan and track the financials of your projects.
- Manage the planned and actual monetary benefit plans for your projects to identify the financial performance of your project using the Cost and benefits screen.
- Use multicurrency to view and manage financial records of the project in Investment currency, which can be different from your functional currency. Manage multiple financial records such as planned and actual expenses, planned and actual benefits, and so on.
- Generate labor cost for sub-projects based on the resource assignments of your sub-projects.

UI changes

Status report

- A Status drop down is added in the Project Status Report with two options Draft and Published.
- Renamed the **Copy** button to the **Duplicate status report** button.
- Added the Playbooks page to define structured stages for projects.
- Added the **Create from template** button on homepage.

RIDAC UI changes

Filter, Personalize columns, Settings, and Item details icon are moved to panel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Project Workspace UI changes

- A Resource page is added to access and manage resource assignments.
- **Sync all** button is added to synchronize project dates for all resource assignments.
- A new value, Artificial Intelligence, has been added to the Investment Type field in details section of Project form to allow users to choose Artificial Intelligence as an investment type.

Managing financials for your projects

- Select and view forecasts, compare planned vs. actual costs, and view planned costs or the allocated budget through a new display mode on the Financials record page.
- Renamed **Cost** tab as **Costs and benefits** to manage cost plans and benefit plans in one view.
- Renamed **Baselines** as **Baseline comparison** to create and compare financial baselines.
- Renamed **Time scope** as **Filter time scope** to adjust the time scope to view a focused and customized financial snapshot.
- New **Generate labor costs** button to generate labor costs based on the resource assignments.
- New **Currency** list option to switch between functional and investment currency.
- New **Edit investment currency** option to define investment currency for your projects.
- **New monetary benefit plan** option to create new forecast benefit plans.
- New **Planned Benefits** widget displays the total forecasted benefits.
- New **Total Return** widget displays the total actual benefits form the projects.
- New **Record type** column to classify the financial records between benefits and costs.
- Renamed **Estimate At Completion** widget to **EAC Cost**.
- Renamed **Actual Cost To Date** to **Actuals (Incl. current fiscal period)**.

Activation information

Install Project Workspace by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Use a simplified, team-oriented approach to Project Management and IT development by combining several individual applications.

Resource Management Workspace release notes

The ServiceNow® Resource Management Workspace application provides resource managers with a more efficient way to work with a dedicated workspace to view and manage resource assignments. Resource Management Workspace was enhanced and updated in the Zurich release.

Resource Management Workspace highlights for the Zurich release

- Move an assigned or unassigned resource assignment to a different start date to align the work with your organization's prioritization cycle.
- View the type of operational work assigned to a resource in the resource board drill-down view.
- Allocate effort from unassigned resource assignments using the following ways — auto-assign work among all the available resources, or partially assign work among for selected resources.

See Resource Management Workspace for more information.

Important: Resource Management Workspace is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Resource Management Workspace features

Move a resource assignment

Move any assigned resource assignment without actuals or an unassigned resource assignment to a different date to align the work with your project realignment, prioritization, or resource availability. You can move individual resource assignments based on your project or organizational priorities.

Using Resource Management Workspace

- View the type of operational work that is assigned to a resource using the resource board drill-down view.
- Filter your resource board using data grid filters to easily navigate and modify the resource assignments in the top tray.
- Sync the resource assignments to align them with change in planning item dates.
- Override resource rate for each assignment from the assigned work in the top tray.
- Apply filters using string-type and boolean field values across the resource card top tray to view the required dataset.

Assign resource assignments

Allocate effort from unassigned resource assignments using the following ways:

- Auto-assign work among all the available resources.
- Partially assign work among for selected resources.

UI changes

Using Resource Management Workspace

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Added the new **Move** option in the row context menu in the top and bottom tray of the resource board view.
- Added sub-labels for the row context menu options in the resource board to better estimate the actions.
- Updated **Assign modal** with options to auto-assign and manually assign the available resources
- New **Preview** button in the Assign modal to see the real-time simulation of allocations for an assignment.
- Added **Resource not synced** icon to identify and sync the resources assignments which are not aligned with the changes to planning item timelines.
- New **Rate override** field to enable editing of resource rate using the inline editing feature.
- New **Resource rate** field to edit resource rate from the workspace view for each resource.

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Related ServiceNow applications and features

Planning user capacity in Strategic Planning Workspace

Capacity Planning gives you insights about resource availability, allocation details, availability, and operational work assignments. Resource managers can use this information to approve requested resource assignments and allocate work.

Strategic Planning release notes

The ServiceNow® Strategic Planning application helps you accomplish end-to-end planning using a single workspace. Strategic Planning was enhanced and updated in the Zurich release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Strategic Planning highlights for the Zurich release

- Categorize your strategic priorities, goals, planning items, and execution items—projects and demands as Artificial Intelligence to track and monitor their progress from the AI Control Tower workspace.
- Experience consistent roadmap bar colors for choice list attribute values across all portfolio plans. View the roadmap-level milestone row while scrolling down the Roadmap page. Use different icons to distinguish item-level milestones.
- Apply filters using string-type and boolean field values to view the desired data on the Planning and Scoring pages.
- Work on financial planning for various planning items such as Capabilities, Features, and so on.
- View the planned costs of your planning items for the past fiscal periods.
- Use Display mode to switch between different views of the financials record page.
- Create and manage monetary benefit plans to capture and track projected and actual benefits.
- Manage and run projects in various global currencies besides the functional currency using multicurrency.
- Generate labor cost on sub-projects based on the resource assignments.

See Strategic Planning for more information.

Important: Strategic Planning is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Important information for upgrading Strategic Planning to Zurich

After upgrading to Strategic Planning v4.8.0, the existing **Investment type** and **Investment class** fields will appear as **Investment type (Deprecated)** and **Investment class (Deprecated)** respectively across the Planning page including in the Prioritization and Roadmap views and in the Scenario Planning page. The values from these deprecated fields will be automatically copied to the new **Investment type** and **Investment class** fields.

If you previously applied filters or personalized your view using the deprecated fields, you must update those configurations to use the new **Investment type** and **Investment class** fields across the workspace—including in the Prioritization and Roadmap views on the Planning page, as well as in the Scenario Planning page.

New in the Zurich release

Strategic Planning and AI Control Tower

Categorize your strategic priorities, goals, planning items, and execution items —projects and demands as Artificial Intelligence to track and monitor strategy progress from the AI Control Tower workspace.

Use the **Type** field for strategic priorities, the **Category** field for goals, the **Investment type** field for planning items - to classify them as Artificial Intelligence and monitor their progress in the AI Control Tower workspace.

Integrate Enterprise Agile Planning (EAP) with Atlassian Jira

Facilitate execution of the work planned in EAP and executed in Jira. With this integration, enable seamless tracking of work across tools with bidirectional sync between Jira and EAP. Key updates made in one system, such as a status change

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

or field update for Epics and Stories, will automatically reflect in the other. This integration ensures your team can collaborate and track development efforts without switching contexts, reducing manual effort and improving visibility across platforms.

Enterprise Agile Planning (EAP) integration with CWM

Enhance visibility, planning, and execution for your teams with seamless integration between EAP and CWM.

For Agile teams managing non-agile work items such as incidents and change tasks, this integration bridges the gap by automatically creating a dedicated Space and Board in CWM. Agile work is seamlessly brought over via Connected Work, while EAP sprints are reflected directly in CWM's Sprint planning view, thus enabling unified planning across work types. Teams can plan work for their sprints and update work status directly from the CWM Board, with performance reports in EAP dynamically reflecting these changes. This integration enables teams to manage their full scope of work from a single, connected workspace.

Dynamic data linking in Docs

Keep record information in your documentation always current and reduce manual effort with the Dynamic data linking feature in Docs. You can now reference any ServiceNow application record and Docs will automatically reflect the latest updates from those records. For example, if you add a reference to a Project record, the reference will show the latest field information of the project in Docs without requiring manual edits. Clicking the project reference opens up the project form so that you can view the full details of the project record and make any necessary changes. Dynamic linking also enables adding references to a particular field of a record, such as Assigned to of an Incident record.

You can add references from any ServiceNow table you have access to, with no setup or configuration needed, thereby eliminate the hassle of switching between applications to copy and paste data from various records into Docs.

Portfolio plan enhancements

- Create portfolio plans for AI-related items by applying a filter on the planning item tables, setting the **Investment type** field value to **Artificial Intelligence** during portfolio plan creation. This allows you to focus exclusively on AI-related items.
- With the sn_align_core.apw_admin role, you can update the following system properties:
  - *sn_align_core.planning_item_types_allow_list* - Defines the planning item types that can be configured and allowed for a portfolio plan.
  - *glide.ui.sn_align_core_dependency_activity.fields* - Enables activity stream for the dependency formatter fields.
  - *sn_align_ws.gantt_show_higher_planning_upper_entities* - Enables display of entire hierarchy of lens structure from top to bottom in prioritization hierarchy view for high-level portfolio plans.
  - *sn_align_ws.portfolio_plan_items_limit* - Defines the number of planning items to be loaded on the planning page.

Roadmap enhancements

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create custom themes for your roadmap bar colors to align with your organization's standards.
- Experience consistent roadmap bar colors for choice list attribute values across all portfolio plans.
- View the roadmap-level milestone row while scrolling down the Roadmap page.
- Use different icons to distinguish item-level milestones.
- Match milestone colors with their status labels across the roadmap, milestone popover, and side panel. For example, a missed milestone displays the same color in all locations.
- With the sn_align_core.apw_admin role, you can define the number of milestone items to be loaded in the Roadmap tab. The *sn_align_ws.item_milestone_limit* system property allows you to define the number of milestone items to be loaded in the Roadmap tab.
- With the sn_align_core.apw_admin role, you can define the list of planning item types that can be created in a free-form roadmap. The *sn_align_ws.freeform_planning_items_creation_list* system property allows you to define the list of planning item types that can be created in a free-form roadmap.

Scenario planning enhancements

With the sn_align_core.apw_admin role, you can enable or disable the scenario planning feature. The *sn_align_ws.is_scenario_planning_disabled* system property allows you to enable or disable the scenario planning feature.

Quick filters enhancements

Apply filters using string-type and boolean field values across the Planning page and Scoring page to view the required dataset. These filters are saved as part of your user preferences, enabling you to access the same filtered data when you log back in and continue your planning seamlessly.

Investment type and Investment class fields on the Planning item table

The **Investment type** and **Investment class** fields have been added to the Planning item [sn_align_core_planning_item] table to enable these attributes to be defined at the parent planning item level.

A new value, **Artificial Intelligence**, has also been added to the **Investment type** field to categorize a planning item as an Artificial Intelligence initiative.

Goal management enhancements

- With the sn_gf_goal_admin role, you can update goal-specific system properties:
  - *sn_align_ws.goal_hierarchy.max_records* - Defines the number of targets to load on the Hierarchy tab in the Targets view. The default value is 250.
  - *glide.ui.sn_gf_goal_activity.fields* - Enables activity stream for fields of the goals.
- Experience faster loading of goals data, even when large volumes of data are present.
- With the sn_gf.goal_admin role, you can edit any goal and target as needed, even when you aren't the owner or contributor of a goal or target.
- With both the sn_gf_goal_admin and sn_apw_advanced.spw_goal_user roles, you can edit target breakdowns as needed.

Financial enhancements

- View only the planned costs of your planning items to track the total cost of your planning items.
- Use Display mode to switch between focused views to better plan and track the financials of your planning items.
- Manage the planned and actual monetary benefit plans for your projects to identify the financial performance of your project using the Cost and benefits screen.
- Use multicurrency to view and manage financial records of the project in Investment currency, which can be different from your functional currency. Manage multiple financial records such as planned and actual expenses, planned and actual benefits, and so on.
- Generate and track labor cost for sub-projects, based on the resource assignments of your sub-projects and planning items such as features and capabilities.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Financials UI changes

- New Display mode in the Financials record page to select and view forecast, compare planned vs actual costs, planned costs, or allocate budget.
- Select and view forecasts, compare planned vs. actual costs, and view planned costs or the allocated budget through a new display mode on the Financials record page.
- Renamed **Cost** tab as **Costs and benefits** to manage cost plans and benefit plans in one view.
- Renamed **Baselines** as **Baseline comparison** to create and compare financial baselines.
- Renamed **Time scope** as **Filter time scope** to adjust the time scope to view a focused and customized financial snapshot.
- New **Generate labor costs** button to generate labor costs based on the resource assignments.
- New **Currency** list option to switch between functional and investment currency.
- New **Edit investment currency** option to define investment currency for your projects.
- **New monetary benefit plan** option to create new forecast benefit plans.
- New **Planned Benefits** widget displays the total forecasted benefits.
- New **Total Return** widget displays the total actual benefits form the projects.
- New **Record type** column to classify the financial records between benefits and costs.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Renamed **Estimate At Completion** widget to **EAC Cost**.
- Renamed **Actual Cost To Date** to **Actuals (Incl. current fiscal period)**.

Changed in this release

Investment type and Investment class fields

The **Investment type** and **Investment class** fields have been deprecated from the Project and Demand planning item tables. These fields are now created at the parent level in the Planning item [sn_align_core_planning_item] table.

Goal management

By default, only active goals—those goals with the **Active** field set to **true**—are displayed across the workspace. This change applies to the **Dashboards** and **Goals and targets** tabs on the Goals page, the **Goal**/**Parent goal** reference fields in all applicable tables, and all relevant dashboards.

Default related list view changes for Stories

In the Stories list for an Epic, Feature, or Capability in the Enterprise Agile Planning workspace, the Assignment group and Sprint columns in the default related list view are replaced with the EAP team and Iteration columns.

Enhancements to tables in Docs

- Resize the column width of a table per your preference.
- Add color to single or multiple table cells.

Deprecations

The **Investment class** and **Investment type** fields have been deprecated from the Project [sn_align_core_project] and Demand [sn_align_core_demand] tables.

Activation information

Install Strategic Planning by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Related ServiceNow applications and features

AI Control Tower

ServiceNow AI Control Tower allows you to track and monitor all your strategic priorities, goals, targets, planning items, and execution items—projects and demands categorized as Artificial Intelligence in the Strategic Planning Workspace.

Now Assist for Strategic Portfolio Management (SPM)

Now Assist enables you to use generative AI skills in multiple SPM apps. With Now Assist for SPM, summarize product feedback, create stories for epics, generate concise project summaries, rephrase content for docs, create demands through a conversational experience, and quickly gain insights into projects.

Digital Product Release Workspace

ServiceNow Digital Product Release Workspace helps product managers track the planning items associated with the product enhancements that are defined in the Strategic Planning Workspace using the Digital Product lens.

Telecommunications, Media, and Technology release notes

ServiceNow® Telecommunications, Media, and Technology has new and updated applications and features in the Zurich release.

Telecommunications products and applications

The Telecommunications industry solution includes the following applications:

- Telecommunications Service Management connects your entire telecommunications operations, from network to customer, with one platform to deliver proactive care and maximize the availability and quality of service. It includes the following applications:
  - Service Exchange
  - Proactive Service Experience Workflows
  - Customer Success Management
  - Customer Service Problem Management
- Sales and Order Management for Telecommunications. See Sales and Order Management release notes.
- Telecommunications Network Inventory
- Telecommunications Service Operations Management
- Strategic Portfolio Management for Telecom
- Field Service Management for Telecommunications
- Now Assist for Telecommunications, Media and Technology (TMT)

Technology products and applications

The Technology industry solution includes the following applications:

- Technology Service Management connects your entire technology operations, from network to customer, with one platform to deliver proactive care and maximize the availability and quality of service. It includes the following applications:
  - Service Exchange
  - Proactive Service Experience Workflows
  - Customer Success Management
  - Technology Product Support Case
- Sales and Order Management for Technology Providers. See Sales and Order Management release notes.
- Now Assist for Telecommunications, Media and Technology (TMT)

Customer Service Problem Management release notes

The ServiceNow® Customer Service Problem Management application helps customer to identify and resolve service problems. Automatically suggests relevant diagnostic tests, as configured by admin, to check the service quality and troubleshoot the problem effectively. After identifying the root cause, the application helps generate a repair task based on the test outcomes, leading to a successful resolution. Customer Service Problem Management was enhanced and updated in the Zurich release.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Customer Service Problem Management highlights for the Zurich release

- Run the diagnostics from the contextual panel in the Customer Service Problem Management playbook.
- As an agent, use the Test group to help group test definitions. The Test group contains multiple test definitions.
- Enables your customer to modify the visibility of the **Diagnose** tab and run diagnostics from the contextual panel in the Decisions table.

See Customer Service Problem Management, Setting up a test group, and Setting up test definitions for more information.

Important: Customer Service Problem Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Customer Service Problem Management features

Components installed with Customer Service Problem Management

The granular admin role enables developers and administrators to complete administrative configuration tasks for Customer Service Problem Management without requiring the full admin role.

Setting up a test group

Enables the system to trigger the required tests for service problem cases, incidents, and change request, helping to identify the root cause of the problem. Test group includes test definitions.

Diagnose and resolve a service problem case

Review, diagnose, resolve, and close a service problem case for the service-related issue experienced by the customer.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Activation information

Install Customer Service Problem Management and Service Test Management by requesting it from the ServiceNow® Store.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Related ServiceNow applications and features

Incident Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ServiceNow® Incident Management restores normal service operation while minimizing impact to business operations and maintaining quality. You can record an incident and track it through the entire incident life cycle until service is restored and the issue is resolved.

Change Management

The ServiceNow® Change Management application provides a systematic approach to control the life cycle of all changes, facilitating beneficial changes to be made with minimum disruption to the business operations.

Process Mining

ServiceNow® Process Mining helps analysts and process owners quickly analyze and optimize their business processes. Create automated business process flows from your data that enable you to monitor and more quickly discover inefficiencies in your processes.

Sales and Order Management

Learn how you can use the ServiceNow® Sales and Order Management (SOM) applications to manage the product sales life cycle in your organization. Your agents can use these applications to generate pre-sales leads and opportunities, provide sales quotes, capture and fulfill orders, work with contracts and entitlements, and manage the customer order workflow for changes.

Customer Success Management release notes

The ServiceNow® Customer Success Management application helps you to streamline your onboarding process, define and track objectives and outcomes, identify and mitigate risks, and increase renewal rates. Customer Success Management was enhanced and updated in the Zurich release.

Customer Success Management highlights for the Zurich release

- Account Lifecycle Events has been renamed to Customer Success Management.
- Enable managers to see a high-level aggregate view of their entire customer portfolio.
- Monitor adoption scores for sold products and track implementation progress for customer engagements.
- View the engagement hierarchy and timeline of events.
- Use the new metrics data source to calculate metric values dynamically based on the weighted sums of other metrics.
- View the detailed information of risk level records in the risk occurrence timeline.
- The activity stream component displays a list of the activities occurring on a risk signal and issue record.
- The **Related Items** tab provides access to the Risk Signal and Issue related lists.
- Determine the engagement health score from the Calculated data source.
- Retrieve data from internal and external tables with the Table type data source.

See Customer Success Management for more information.

Important: Customer Success Management is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New in the Zurich release

Calculate health score

Starting with Customer Success Management 5.3.11, you can use the **Calculated** metric data source to determine the health score for an engagement. If you are upgrading from Customer Success Management 5.3.10 or earlier versions, you must run the `Set health migration status` script to enable the health score calculation using this data source.

Define a table data source

Starting with Customer Success Management 5.3.11, you can use the **Table** type data source to retrieve and analyze data from internal and external tables. To retrieve data from external sources, you must install the Workflow Data Fabric Hub application and create data fabric tables.

Risk and issues page

Use the risk timeline visualization to manage the risk occurrences.

Granular admin roles

The granular admin role enables developers and administrators to complete administrative configuration tasks for Customer Success Management without requiring the full admin role.

Read-only field enhancements

Read-only field protections have been moved from the client side to the server side. This move prevents users from updating read-only fields through client-side methods.

Success report dashboard

Use the Success report dashboard to see the overall view of all the engagements under your hierarchy and manage your entire customer portfolio. Monitor engagement metrics, risk indicators, and get insights into onboarding and adoption status, risk indicators, onboarding and adoption insights, and expansion and renewal metrics.

Product adoption and usage

Measure product adoption trends and proactively guide users to achieve desired outcomes using products and services that have been purchased. Identify active and power users and areas where additional training or support is required due to low engagement.

Implementation record

Track the progress of a partner or customer implementing a product or a service. Get a centralized view of the implementation status, identify risks, and run playbooks to mitigate issues.

Engagement hierarchy

View aggregate hierarchical data for an engagement. Make informed decisions, improve customer satisfaction through detailed tracking, identify risks early, and help prevent escalations.

Engagement timeline

View a chronological list of critical events related to an engagement. Review timelines to recall past events, customer interactions, and identify any issues.

Contextual color bands

Associate thresholds and visual representations to health metric data. View product adoption and usage information relative to a specific product.

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Related ServiceNow applications and features

Customer Service Management

The Customer Service Management application enables you to automate your onboarding and case monitoring processes and provides service agents with visibility into the customer systems and tools that you need to deliver proactive services to your customers.

Service Exchange

ServiceNow® Service Exchange connects multiple ServiceNow instances to provide seamless support and service experiences across the ecosystem, from enterprise customers to suppliers and system integrators. Service Exchange provides a frictionless experience that enables efficient collaboration and request processing while giving users the convenience of working in their own ServiceNow instance.

Field Service Management for Telecommunication release notes

The ServiceNow Field Service Management for Telecommunication application enables you to manage the field service workflow for the telecommunication industry. Field Service Management for Telecommunication was enhanced and updated in the Zurich release.

Field Service Management for Telecommunication highlights for the Zurich release

Manage your work order using the TMF 697 Open API.

See Field Service Management for Telecommunications for more information.

Important: Field Service Management for Telecommunication is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Managing work orders for telecommunication services

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Manage the work orders for field services to support the installation, activation, and site assessments that are needed for connectivity services. This feature supports the POST, PATCH, GET, LIST, and DELETE operations for work orders via the TMF 697 Open API.

Activation information

The Telecommunications appointment booking feature is available with activation of the Telecommunications Open API (com.sn_tmf_api) and Field Service Management for Telecommunications (com.sn_fsmt) applications. Install these applications by requesting them from the ServiceNow Store.

Related ServiceNow applications and features

Field Service Management

The ServiceNow® Field Service Management application enables you to manage work orders and related tasks, resources, skills, assets, and locations. Use this application to dispatch work order tasks and agents to the customer location for performing any kind of field work, such as install, repair, or maintain equipment.

Now Assist for Telecommunications, Media and Technology (TMT) release notes

The ServiceNow® Now Assist for Telecommunications, Media and Technology (TMT) application enriches purpose-built industry workflows with generative AI to supercharge insights, actions, and self-service experiences. Now Assist for Telecommunications, Media and Technology (TMT) was enhanced and updated in the Zurich release.

Now Assist for Telecommunications, Media and Technology (TMT) highlights for the Zurich release

Zurich Patch 5

- Review changes to Now Assist usage measurement.

Zurich Patch 4

- Address voice quality issues and validate tickets with RADCOM.
- Summarize the risk signal and issues records along with respective risk solution and occurrence records.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

Zurich Patch 1

- Manage and resolve billing inquiry case requests using a team of AI agents.
- Analyze network incidents, correlate associated cases, and provide resolutions.
- Summarize Knowledge Graph service details, success initiatives, internal plays, customer plays, and Zoom meeting details.
- Analyze account health, trigger renewal flows, schedule, and manage touchpoint meetings.
- Use agentic AI to quickly create consumer registrations.

See Now Assist for Telecommunications, Media and Technology (TMT) for more information.

Important: Now Assist for Telecommunications, Media and Technology (TMT) is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Zurich Patch 4

Address voice quality issues

Collect customer details about the voice quality issue, open a service ticket with RADCOM (https://radcom.com/), and generate a resolution plan.

Risk signals and issues summarization

Generate summary details including the record and associated risk solutions and risk occurrences for risk signal and issues records.

Zurich Patch 1

Help remediate bill issues

Handle billing inquiry case requests, analyze customer invoices, and recommend better plans based on customer usage patterns.

Analyze network incidents

Identify historic incidents and determine resolution plans. The AI agent also has the capabilities to identify field values, estimate resolution time, and create actionable tasks.

Support renewals and expansion

Streamline customer success management by automatically assessing account health, value realization, and adoption trends. Deliver timely, data-driven insights that guide renewal planning and play recommendations.

Trigger risk mitigation touchpoint

Enable customer success agents to optimize meeting schedules within the customer success workflow by creating and managing meetings. Create and manage meetings based on key details such as invitees, agenda, meeting type, and scheduling preferences.

Success summarization

Generate summary details including overview, current status, and open tasks for success initiatives, internal plays, and customer plays. Enhance Zoom meeting summaries by updating key notes, and enabling sentiment tracking.

Analyze metric data trend

Collect and analyze metric data for engagements, identify patterns, and generate a trend chart.

Service summary generation

Generate a service summary for a product inventory.

Knowledge graph schema generation

Use the Knowledge Graph (KG) to create Knowledge Graph schema.

Customize a summary card for service summary

Customize the summary card of the service summary and UI actions according to your needs.

Register consumers using Agentic AI

Initiate the consumer registration process using agentic AI to receive step-by-step guidance, including error checks during registration and support for resolving those errors.

Configure ACLs for AI agents and agentic workflows

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

UI changes

Zurich Patch 0

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Changed in this release

Zurich Patch 5

Changes to Now Assist usage measurement

Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Zurich Patch 4

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they won't execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add. After the roles are configured, users must have the specified role to invoke the agentic workflow or AI agent.

Activation information

Now Assist features are available with activation of the Now Assist for TMT plugin. For more information, see .

Related ServiceNow applications and features

Help improve the productivity and efficiency in your organization, deliver better self-service, recommend actions, provide answers, and empower your users to search more effectively.

The Now Assist Admin console provides you with quick and effortless access to the important information that you need to set up, configure, and monitor Now Assist applications and features.

Use this conversational interface in CSM Configurable Workspace to summarize a chat, a case, or resolution notes so that you can get the context of this information more quickly.

Use the Now Assist products to provide agentic AI skills to meet the needs of users in different workflows, including case or incident summarization, chat summarization, resolution notes generation, and code generation.

Now Assist for Sales and Order Management for Telecommunications (SOMT) release notes

The ServiceNow® Now Assist for Sales and Order Management for Telecommunications application enriches purpose-built industry workflows with generative AI to supercharge insights, actions, and self-service experiences. Now Assist for SOMT is a new application in the Zurich release.

Now Assist for SOMT highlights for the Zurich release

Zurich Patch 5

- Review changes to Now Assist usage measurement.

Zurich Patch 4

- Collects the customer order information, identifies if the order needs enrichment, and creates the enrichment tasks. On closure of the enrichment task, it invokes the order fulfillment agent.
- Uses the historic order tasks to create the order tasks. If the historic data doesn't return any results, the large language model (LLM) is used to get the response.
- Checks the automation flow and fulfill order tasks.
- Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications.

See Now Assist for Sales and Order Management for Telecommunications (SOMT) for more information.

Important: Now Assist for SOMT is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

Now Assist for SOMT features

Zurich Patch 4

Order enrichment agent

Use the order enrichment AI agent to collect the customer order information, identify if the order needs enrichment, and create the enrichment tasks. The AI agent creates a task and triggers the order fulfillment AI agent on its completion.

Order fulfillment agent

Use the order fulfillment agent to identify the tasks for domain orders using historical data from similar orders. After decomposition, the fulfillment AI agent creates and fulfills order tasks by checking the historical and applicable tasks.

Configure ACLs for AI agents and agentic workflows

Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.

Role configuration required for agentic workflows and AI agents

Proactive Service Experience Workflows release notes

The ServiceNow® Proactive Service Experience Workflows helps your technical support teams identify your impacted customers, communicate directly with them, escalate a case if needed, and auto-generate cases for faster issue resolution. Proactive Service Experience Workflows was enhanced and updated in the Zurich release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Proactive Service Experience Workflows highlights for the Zurich release

- Diagnose the incidents and change requests in the Proactive Service Experience Workflows. Create a resolution task manually to resolve the issue.
- Run the diagnostics from the contextual panel in the Proactive Service Experience Workflows, Incident, Change request, and Product Support for Technology playbook.
- Execute tests for a Configuration Item (CI) in the Proactive Service Experience Workflows, Change request, and Product Support for Technology playbook. For Configuration Items (CIs), run related tests directly from the CI form view.
- Enables your customer to modify the visibility of the **Diagnose** tab and run diagnostics from the contextual panel in the Decisions table.
- Technology Product Support Case application is renamed to Product Support for Technology
- Technology Product Support Case application is renamed to Product Support for Technology.

See Proactive Service Experience Workflows for more information.

New in the Zurich release

Components installed with Proactive Service Experience Workflows

The granular admin role enables developers and administrators to complete administrative configuration tasks for Proactive Service Experience Workflows without requiring the full admin role.

Components installed with Product Support for Technology

The granular admin role enables developers and administrators to complete administrative configuration tasks for Product Support for Technology without requiring the full admin role.

Diagnose and resolve an incident

Diagnose the incident in the Proactive Service Experience Workflows and create the resolution task manually to resolve the issue.

Diagnose and resolve a change request

Review, diagnose, resolve, and close a change request case for the service-related issue experienced by the customer.

Diagnose and resolve a Product Support for Technology case

Review, diagnose, resolve, and close the Product Support for Technology Case.

UI changes

Product Support for Technology application

Technology Product Support Case menu is renamed to Product Support for Technology Case.

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Activation information

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Related ServiceNow applications and features

Field Service Management

The ServiceNow® Field Service Management application helps organizations manage work tasks performed on location. Match tasks to agents based on skills, geographic territory assignments, and available inventory. Agents can record details on assigned tasks like completion status, travel time to jobs, and time spent.

Incident Management

ServiceNow® Incident Management restores normal service operation while minimizing the impact to business operations and maintaining quality. You can record an incident and track it through the entire incident life cycle until service is restored and the issue is resolved.

Change Management

The ServiceNow® Change Management application provides a systematic approach to control the life cycle of all changes, facilitating beneficial changes to be made with minimum disruption to the business operations.

Process Mining

ServiceNow® Process Mining helps analysts and process owners quickly analyze and optimize their business processes. Create automated business process flows from your data that enable you to monitor and more quickly discover inefficiencies in your processes.

Service Exchange release notes

ServiceNow® Service Exchange will be renamed for the 2026 Australia release and will maintain the same functionality. This application enables providers and consumers to connect and track services directly between instances without having to configure and maintain custom integrations. Service Exchange was enhanced and updated in the Zurich release.

Service Exchange highlights for the Zurich release

- Streamline data replication from provider to consumer instances with foundation data sync.
- Enable seamless collaboration between provider and consumer with enhanced journal entry support.
- Enable consumer users to access linked resources in the provider instance using magic links.

See Service Exchange for more information.

Important: Service Exchange is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important information for upgrading Service Exchange to Zurich

- Service Exchange version 2.x.x: Which was first released with the Xanadu release, doesn't support migration of Service Exchange (Legacy) versions.

  Service Exchange (Legacy) version: Before you upgrade to the Zurich release, follow instructions in the Service Bridge for Providers (Legacy) - Migration Utility [KB1499823] article in the Now Support Knowledge Base to migrate your configuration data.

- Service Exchange version 1.x.x: When upgrading, follow the steps in the Upgrade Guide - Service Bridge for Providers and Consumers application (v2.x.x release) [KB1700387] article in the Now Support Knowledge Base to migrate your Service Exchange applications.
- Service Exchange version 2.x.x: Due to the introduction of mismatched version support, new entitlements can't be activated until both the consumers and providers upgrade to Service Exchange version 2.x.x. Older active entitlements continue to work but new ones can't be activated.
- When you upgrade to Service Exchange version 2.0.55 with Sales and Order Management plug-in version 1.0.4, before upgrading the platform to the Zurich release, new Deny ACLs aren't installed. To ensure the Deny ACLs get installed, after upgrading to Zurich, select Repair to reinstall the Service Exchange application.
- When using Service Exchange for Providers and Service Exchange for Consumers in a single instance, you must upgrade both applications simultaneously to the same version to maintain compatibility.
- When you install the Service Exchange application, the Service Exchange Global Script Include is automatically installed or updated on the following platform versions:
  - Washington DC patch 9
  - Xanadu patch 4
  - Yokohama
  - Zurich

New in the Zurich release

Foundation data sync

Reduce manual effort, and eliminate the need to share data externally by sharing selected foundational data types with your consumers on a scheduled cadence. This data transfer supports the service life cycle by providing foundational data context for operational workflows. The supported tables are CMDB (CIs), CMDB Relationship, Asset, User, Group, Location, Company, and Department.

Journal field framework

- Write journal entries as a named user instead of using a generic company name to enhance authenticity and accountability.
- Maintain a complete historical record across instances by synchronizing previous journal entries between provider and consumer instances.
- Ensure that all critical operational updates remain current by mapping and synchronizing any journal-type field between provider and consumer instances.

Flow action

Ensure that Remote Tasks and Remote Record Producers continue to function correctly as you adopt newer revisions by maintaining flow compatibility across

configuration revisions using four new Flow Actions that preserve mapped variable integrity.

Magic links

Convert regular links sent from a provider instance into magic links that enable consumer users to directly access the linked resource in the provider instance without having to manually log in.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Activation information

Install Service Exchange by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Accessibility information

Dark theme

The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Related ServiceNow applications and features

Sales and Order Management

The Sales and Order Management applications enable you to manage the product sales life cycle in your organization, including pre-sales opportunities, sales quote generation, order capture, order fulfillment, and post-sales engagement.

Supporting information for HR Service Delivery

Improve the employee service experience by automating HR interactions and providing a single platform for all HR services. Replace manual and siloed processes with cross-functional digital workflows for increased efficiency. Align business goals with employee needs, including onboarding, career growth, and other transitions.

Telecommunications Network Inventory release notes

The ServiceNow® Telecommunications Network Inventory application enables network planners to model physical, logical, or virtual networks, support datacenter infrastructure management, and perform design and assign services. Telecommunications Network Inventory was enhanced and updated in the Zurich release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Telecommunications Network Inventory highlights for the Zurich release

- The Logical interfaces (such as VLANs) and physical interfaces (such as Gigabit Ethernet ports) are now related to their parent equipment or card to help prevent duplicate CI creation.
- Get converged experience for Network Inventory workflows using Service Operations Workspace.
- Upload and manage CAD/PNG of floor maps to view the datacenter layout with physical asset placements over the floor.
- Ingest operational data and show time series metrics on the datacenter floor map to monitor health.
- Capture an inventory of operational facilities and define their relationships to respective network hardware such as the power chain.

See Telecommunications Network Inventory for more information.

Important: Telecommunications Network Inventory is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Create a logical connection record using the Design and Assign function

Logical interfaces created are now automatically related to their corresponding cards or parent equipment. This enhancement ensures consistency across systems and helps prevent duplicate CI creation by improving the alignment between logical and physical interfaces.

Visualize your network infrastructure

Use the new L1 menu that consolidates all network visualizations into a single canvas and include a tabular section for each view, such as site, floor, and topology. The following roles are introduced to manage datacenter infrastructure.

- DC Floor Designer (sn_ni_core.dc_floor_designer) – Design floor layout in Map Studio.
- DC Ops Agent (sn_ni_core.dc_ops_agent) – Oversee the operations of the data center floor.
- DC Ops Viewer (sn_ni_core.dc_ops_viewer) – View the Network Inventory Workspace and its components.

Floor map

Use the floor map to view the layout of your datacenter infrastructure. View network asset placement and operational details to monitor power, thermal, and usage data. View the incidents and alerts and take appropriate action.

Geo map

Use the geo map to view the geographical locations of your network sites and data centers. Geo map supports rendering data centers on the map, enabling the relevant persona, such as the DC Ops Viewer, to view connected data centers. You can open a data center floor map directly from the geo map for more detailed insights.

Upload and manage floor map for your datacenter

Upload and manage your datacenter map objects using the Map Studio interface. Enable you to view respective floor plans for a selected building in a campus.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Service Operations Workspace for TNI

Provides a converged experience for agents to view both incident/alarm details and Network Inventory entities within a single Workspace. Enhances efficiency in retrieving information and significantly improves the overall user experience.

Capacity management

Supports pushing operational data to REST endpoints through an exposed API and store it in the ClothoDB. Overlay time series metrics on the datacenter floor map to monitor overall health and take appropriate action.

Collect operational values for datacenter

Manually record operational values of Configuration Items (CI) and store it in ClothoDB. Use this data for datacenter performance tracking.

Define the datacenter details

Define your datacenter record to view the location-specific attributes for each datacenter, including the campus, buildings, and floors where your network asset is located.

Define the power circuit details

Define the power circuit record to represent the electrical pathway that delivers power within a data center.

Define the facility hardware details

Define the facility hardware record to represent power, HVAC (Heating, Ventilation, and Air Conditioning), network representation, and their connectivity in a data center.

Create a facility model

Create a facility model to define the physical characteristics data of the facility record based on the product manufacturer's recommendations.

Create an equipment record by using design and assign

View datacenter records listed in the Equipment task attribute form.

Define the network interface details

Add **Wavelength** attribute to the Network Interface form and **Port position** attribute to Interface Model form.

Create an equipment holder model

Added **RU numbering direction** attribute to define the numbering sequence of rack units in the Rack view.

UI changes

Coral theme

Coral is now the default theme for new portal, web, and mobile experiences with Next Experience or Core UI enabled. This theme provides a fresh look and feel, featuring brand-neutral illustrations to enhance your user experience. A dark theme option is available for web and mobile experiences.

Visualize your network infrastructure

The Network Visualization L1 menu is added to the Telecommunications Network Inventory Workspace. The Topology L1 menu has been removed and is available as **Topology** tab within the Network Visualization view.

Geo map

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Network site map L1 menu is removed and repositioned as **Geo map** tab in the Network visualization view.

Define the power circuit details

The **Power Circuits** inventory is added.

Define the facility hardware details

The **All Facilities** inventory is added.

Create a facility model

The **Facility Models** inventory model is added.

Lists view

The **Network site** is renamed to **Site**.

Changed in this release

Define network service instance details

xNF Instance is renamed to **Service Instance**.

Define network function details

xNF is renamed to **Network Function**.

Activation information

Install Network Inventory Advanced plugin (sn_ni_adv) by requesting it from the ServiceNow Store. For installation details, see Install Telecommunications Network Inventory . Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements

- You must install Telecommunications Alarm Management Open API (sn_ind_tmf642) and Customer Service Problem Management (sn_sprb_mgmt) plugin to view incident and alert details.
- You must install the Indoor Mapping plugin (sn_map_core) to create and manage floor maps for data centers.

Related ServiceNow applications and features

Configuration Management Database (CMDB)

With the CMDB application, build logical representations of assets, services, and the relationships between them that comprises the infrastructure of your organization. Details about these components are stored in the CMDB, which you can use to monitor the following infrastructure, helping promote integrity, stability, and continuous service operation.

Telecommunications, Media, and Technology (TMT)

The Order Management for Telecommunications, Media, and Technology (TMT) product suite brings together customer care, operations, order management, and partner ecosystems so that service providers can scale their business to capitalize on the fast-growing “everything-as-a-service" opportunity.

Indoor Mapping

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Indoor Mapping Map Studio provides building visualization and wayfinding capabilities to workplace users within a campus, building, floor, and work spaces. Indoor Mapping Map Studio is the interface where you visualize and design your maps to create digitalized interactive locations within workplaces and buildings.

MetricBase

The MetricBase application stores time-series data, which is data that is sampled at regular intervals. You can graph the stored data or use it with triggers to execute Workflow Studio flows.

Telecommunications Service Operations Management (TSOM) release notes

The ServiceNow® Telecommunications Service Operations Management (TSOM) application provides visibility into network infrastructure and enables service providers to streamline data accuracy across systems. It supports proactive issue detection, reduces downtime risk, and enables faster, data-driven decisions. Telecommunications Service Operations Management (TSOM) was enhanced and updated in the Zurich release.

Telecommunications Service Operations Management (TSOM) highlights for the Zurich release

- Simplify connector build and data transformation by leveraging the reusable, standardized Telecom Discovery Builder Framework across multiple telecom data sources.
- Discover logical network elements from Nokia Altiplano using the enhanced Service Graph Connector for unified network visibility on the ServiceNow AI Platform.
- Detect discrepancies in both logical and physical entities, including attribute value mismatches, and improve audit accuracy using targeted filters.

See Telecommunications Service Operations Management for more information.

Important: Telecommunications Service Operations Management (TSOM) applications and plugins are available in ServiceNow Store. For details, see the "Activation information" section of this release notes.

New in the Zurich release

Telecom Discovery Builder framework

Leverage a standardized Extract, Transform, Load (ETL) framework to streamline the processing and storage of telecom network data on the ServiceNow AI Platform.

This reusable framework simplifies implementation by removing the need to manually build ETLs. It enables you to focus on connectivity logic while confirming consistent and reliable mapping of network elements such as equipment, cards, ports, LAGs, logical ports, and logical connections into predefined CMDB structures.

Use Telecom Discovery Builder Framework to do the following:

- Simplify data transformation tasks by duplicating the common ETL and configuring essential fields and settings for specific connector applications.
- Deploy new Service Graph Connector (SGC) using existing ETLs to maintain consistent data transformation practices.
- Help to ensure data integrity and support the automatic creation of TNI Entities through configured Before and After scripts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The standardized CMDB/TNI data model enables ETL reusability across multiple connectors.
- Allocate predefined storage locations for both physical and logical inventory elements.
- Maintain consistent data model hierarchies across connectors to support unified network inventory management.
- Improve Discovery SGC quality by providing an OOTB Data Source Validation tools.

Telecom Discrepancy Identification and Reconciliation

Use enhanced discrepancy identification and reconciliation features to keep your discovery data accurate and up to date on the ServiceNow AI Platform. These features give you better control over detected changes and improve overall audit performance.

- Identify attribute value mismatches during discovery, such as bandwidth changes on ports (for example, from 10 Mbps to 100 Mbps).
- Display previous and current attribute values, enabling you to decide whether to accept the new value, retain the old one, or manually raise a remediation task.
- Detect discrepancies in logical entities alongside physical entities for comprehensive discrepancy management for newly discovered logical network elements.
- Generate audit results using filtering conditions—such as specific IP ranges, device vendors, or port types—to focus on relevant subsets of data and significantly enhance audit performance and usability.

Fault Management: Events and alerts

You can monitor your SD-WAN network health and resolve issues faster with automated alerts and event detection.

- Detect and resolve SD-WAN network issues faster with automated alerts and event monitoring.
- Configure customizable event rules to detect SD-WAN device issues in real time.

Added Service Graph Connector for Cisco Meraki and Fortinet

The following capabilities have been added to Cisco Meraki and Fortinet:

- Provides a centralized management of physical infrastructure and logical network relationships within the ServiceNow AI Platform®.
- Supports automated, telecom-aware discovery and real-time CMDB synchronization, along with visual network mapping, guided setup, and a dashboard for monitoring integration health.

Granular admin roles

The granular admin role enables developers and administrators to complete administrative configuration tasks for TSOM without requiring the full admin role.

Changed in this release

Telecom Discovery via Nokia Altiplano

Nokia Altiplano SGC enables you to do the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Discover logical inventory for Nokia Altiplano such as logical ports, LAGs, and logical connections.
- Enable customers to manage both physical infrastructure and logical network relationships on the ServiceNow AI Platform.
- Store logical elements in the CMDB, improving visibility and traceability across the network.
- Use the generic Extract, Transform, Load (ETL) framework provided by ServiceNow to integrate with Nokia Altiplano, significantly reducing development effort.

Discrepancy identification

Use the enhanced audit and reconciliation logic to do the following:

- Detect mismatches in logical elements such as logical ports, LAGs, and connections.
- Filter audit results by IP range, device type, or vendor to focus on relevant subsets of data.
- Enhance audit performance, usability, and customer satisfaction by reducing unnecessary processing.

Deprecations

- The two previous Extract, Transform, Load (ETLs) for Optical Line Terminal (OLT) and Optical Network Unit (ONU) have been merged into a unified ETL that supports both physical and logical data and have been deprecated and phased out.
- The previous Service Operation CMDB Compliance Audit has been deprecated and replaced by the Telecom Discrepancy Audit.

Activation information

Install Telecommunications Service Operations Management applications and plugins by requesting them from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Plugin information

The following plugins are new in Zurich:

- TSOM Event Management Connectors (sn_tsom_em_connectors): TSOM Assurance Connectors for events and metrics
- TSOM Event Management Core (sn_tsom_em_core): TSOM AssuranceCore features
- Service Graph Connector for Fortinet (sn_tsom_fortinet_connector): Service Graph Connector for Fortinet
- Service Graph Connector for Meraki (sn_tsom_meraki_connector): Service Graph Connector for Meraki

Release notes summaries for Zurich features

Consolidated release notes information for new and updated Zurich features.

Learn about specific themes for multiple Zurich products

In the Zurich family, ServiceNow® features and products were introduced or updated. Every new or updated feature and product has its own individual release notes topic, which includes information such as upgrade tasks, new features, changed features, browser requirements, and other specifications. These product-specific release notes are listed in Features and changes by product.

To help users look over different classes of information at a glance, each release notes section has its own summary topic. For example, the aggregates all browser requirements for features that were introduced or updated in Zurich.

Highlights for all Zurich features and products

Application or feature	Details

AI Control Tower	Zurich Patch 7
	• Use new security metrics to monitor your LLM and AI agent output for security policy violations, PII, and other potential threats.
	• Gain visibility into MCP server access by ServiceNow AI agents on the same instance.
	• AI assets—Including AI models, AI systems, prompts, datasets, and MCP servers can be categorized as either managed or unmanaged. Managed assets benefit from AI Control Tower features such as governance, lifecycle management, value assessment, risk classification, security, and privacy. Unmanaged assets, on the other hand, don’t have access to these AI Control Tower capabilities.
	• AI connections are introduced in AI Control Tower using Service Graph Connectors. AI connections are a combination of hyperscalars, AI apps, and agentic AI frameworks. The AI Service Graph Connectors available from March 2026:
	  ○ AWS
	  ○ Microsoft- Azure Foundry and Copilot
	  ○ Google Cloud Platform (GCP) Vertex AI
	  ○ n8n
	  ○ LangGraph
	  ○ Salesforce
	• Manage the end-to-end life cycles of your agentic AI systems.

Application or feature	Details
	• Define the intended use and purpose of an AI system so that you can determine its benefits and risks. • AI Gateway offers MCP Global Clients, which can be used across all servers. • AI Gateway offers MCP Catalog to choose while adding MCP servers. • MCP server can be added to an AI Asset inventory from AI Control Tower. Zurich Patch 5 Review changes to Now Assist usage measurement. Zurich Patch 4 • Identify ServiceNow® AI assets that impact your security posture using the ServiceNow® AI security score and AI insights. • Access and monitor security for AWS Bedrock agents running as privileged users, autonomous vs. Supervised tools, and dormant agents. • Monitor sensitive data detection, prompt injection, and offensive content metrics to help identify and mitigate AI-driven security and compliance risks before they impact workflows or expose sensitive information. • See more details in the access map about agent access issues to help you troubleshoot quickly. • Audit logs capture configuration changes made on Data, Approvals, and AI model providers categories. • Discover AI assets built and deployed in Google Cloud Platform (GCP) Vertex AI, Copilot Studio, and Azure AI Foundry. • AI Gateway enables enterprises to actively manage, govern, and observe their MCP traffic, ensuring secure operation of agentic workflows across enterprise boundaries. Zurich Patch 1 • Monitor the performance of guardrails enabled through Now Assist Guardian using the **Health** tab. • Measure and improve the quality of interactions with virtual agents using the **Evaluation** tab. • Display data based on the chosen allowed model providers and the status of the fallback in the Impact Summary table on the AI model providers section. • Synchronize AI agents automatically when an AI asset is synchronized.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Enhance the Product Owner experience with a personalized home page, value management tools to manage AI investments, and enhanced visibility into AI assets to simplify task management. • Evaluate AI productivity and adoption across the enterprise using defined value metrics and performance indicators to drive data-informed decisions and maximize AI impact. • Access and security monitoring for ServiceNow® AI agents, especially around access issues, agents running as privileged users and dormant agents. • Discover AI assets built and deployed in AWS Bedrock and Azure Foundry. • Enable choice for third-party model providers powering ServiceNow® skills and agents. • Access to aggregated risk scores to improve decision-making, manage risks, and help to promote ethical and transparent AI practices. • Monitor performance, track progress, and make informed decisions related to your AI strategies, goals, targets, and the associated work from the **AI strategy** tab. • Track costs of your AI projects, epics, demands, and track key project risks, issues, decisions, actions, and changes from the **AI strategy** tab. See AI Control Tower for more information.
AI Risk and Compliance	• Use entity-based access to limit AI asset data access to authorized users, maintaining core entity visibility. • Perform assessment on multiple risks for an AI asset by creating a risk assessment project. • Activate and manage pre-configured content packs using the unified content hub. • Report AI cases or raise AI inquiries by emailing a dedicated address, which automatically creates a new, trackable record in the system. • Retire and replace AI assets with structured workflows that prevent compliance gaps and security risks. • Aggregate system-level AI risk scores by embedding heatmaps and residual score widgets within your AI asset overview records. You get visibility into your cumulative risk across the AI inventory and support for continuous risk monitoring. • Get the dedicated AI risk and compliance views for your AI models and dataset records. With these views, you have a centralized interface where you can assess, monitor, and manage the risk and compliance attributes that are specific to your AI assets. • Enforce role-based access controls, enable employee-initiated AI asset requests, and maintain consistent life-cycle state tracking across all your AI assets and dashboards. This capability helps you

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	to ensure security, transparency, and governance throughout the asset life-cycle. • View and manage your AI asset's risk and compliance cases more efficiently by accessing the new **AI cases** tab on the AI Risk and Compliance home page. • Monitor and track the risk and compliance posture of your AI assets to ensure that your organization aligns with organizational and regulatory standards. You can also gain real-time insights into the emerging risks and compliance gaps across your AI portfolio. See AI Risk and Compliance for more information.
AI Search	Zurich Patch 4 • Improve search precision and contextual relevance with hybrid search, available for customers with Now Assist in AI Search installed. • Gain insights into search behavior with a refreshed and updated Search Preview UI. Zurich Patch 1 • Search more intuitively with an updated, consumer-grade user experience in search portals, global search, and workspace search. Zurich Early Availability • Improve search precision by displaying external content search results in languages configured for the user's search session. • Increase search recall by indexing searchable content and metadata from Multiple Choice and Select Box variables in records on the Catalog Item table and its child tables. See AI Search for more information.
AIOps LEAP	Use Google Gemini, Azure OpenAI, and Anthropic LLM in AIOps LEAP in addition to Now LLM Service. See AIOps Learning Enhanced Automation Platform (LEAP) for more information.
API	• Use server-side JavaScript APIs in scripts to change the application functionality. • Run client APIs whenever a client-based event occurs, such as when a form loads, a form is submitted, or a field value changes. • Use inbound REST APIs to interact with various ServiceNow functionalities within your application. • Client Next Experience APIs include client APIs compatible with the Next Experience UI. See API implementation and reference for more information.

Application or feature	Details
Access Management	• Enforce access to data via REST or SOAP endpoints using the Machine Identity Access Controls, which helps improve security, governance, and auditability. • Target all table columns of a given data type with a single ACL using Datatype ACLs. • Govern scripting permissions with the Scripting Governance tool, a new base system deny-by-default behavior. See Access Control List Rules for more information.
Accounts Payable Operations	• Leverage Accounts payable document classification skill to classify email attachments into invoice, credit memo, or supporting documents based on the AI recommended confidence score resulting in error free invoice data extraction. • Validate supplier provided tax against a system-calculated tax by integrating an enterprise-grade tax engine resulting in straight-through processing of invoice while improving accuracy, compliance, and operational efficiency. • Process your invoice more effectively and accurately with the new missing tax code invoice exception and currency mismatch. • Handle various AP related inquiries and tasks through a single entry point by using the Universal Request (UR) as a multi-purpose request form. • Leverage AI-powered agentic workflow to recommend the appropriate business owner for non-PO invoices based on historical patterns. • Automate cost allocations in the invoice lines using distribution sets. See for more information.
Advanced AI Search Management Tools	Zurich Patch 4 • Review performance metrics and trends more easily with an updated and refreshed dashboard UI. • Analyze performance metrics and trends for search applications used in Recommended Actions. Zurich Patch 1 • Analyze search trends from the preceding six months using the AI Search Analytics dashboard's **Date range** interactive filter. • Understand your mobile search traffic with support for the Mobile Platform search application in the AI Search Analytics dashboard's **Search application** interactive filter. See Platform Analytics Solution for Advanced AI Search Management Tools for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Advanced Risk	**Some Now Assist skills, agents, and agentic workflows are turned on by default** The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive. • Use the Risk Suggestion AI Agent to discover potential risks for an entity, giving risk managers better insights for informed decision-making. • Use the risk reporting view to view all assessments under a specific Risk Assessment Methodology (RAM), including factor responses, scores, issues, and risks. • Use generative AI to generate risk event summary to quickly understand the risk event key details for faster decisions. • Assess multiple risks and controls side-by-side, make bulk edits, and prioritize entries efficiently using the spreadsheet-style layout. • Use matrix report in the Risk Workspace to assess and analyze the risk posture of your organization. • Use large language models (LLMs) from the third party providers to generate the risk assessment summary. See Advanced Risk Assessment for more information.
Advanced Work Assignment (AWA)	Use AWA with an inbox card in Workspace without an existing interaction or work item. See Advanced Work Assignment for more information.
Agent Chat	Integrate and use Agent Chat with third-party chat apps. See Using Agent Chat for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Agent Client Collector	• Discover TLS/SSL certificates using Agent Client Collector for Visibility - Content certificate Discovery. • Enhance data collection by disabling only those checks with high resource usage, allowing data collection to continue for other checks. • Improve troubleshooting capabilities by viewing errors that occur before and after the registration process in the ServiceNow instance. • Use file-based Discovery in a macOS environment. See Agent Client Collector for more information.
Agent experience for CSM	• Provide front-line agents with an updated chat interaction user experience that puts the chat component front and center. • Use the callback component to return customer calls and create interaction records at the time of the callback. • Provide agents with visibility to all previous customer activity and the ability to filter and search to find specific activities. • Initiate a comment, work note, or email in the activity stream in CSM Configurable Workspace and then open the text in a modeless dialog. See CSM Configurable Workspace for more information.
Agentic Desktop	Zurich Patch 7 • Execution workspace now supports smart sizing with **Fit to window** and **Original resolution** options. • Enable AI agents to securely access SSH parameters by setting up Parameter records in the ServiceNow instance. • Test specific screens within desktop actions without running the entire flow. • The recorder toolbar is now floating, making it easier to access application controls during recording. • Improved Agentic Desktop installer experience for configurations that are essential for seamless execution of desktop actions. Zurich Patch 4 • Desktop actions now run reliably on machines with different screen resolutions. • Design desktop actions of type UI block (UI actions) by capturing user interactions, adding details, and activating them in Design workspace. • Use default desktop actions of type non-UI block (non-UI actions) that include pre-built connectors to interact with various applications and system components.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Add desktop actions as tools to AI agents in AI Agent Studio. • Enable AI agents to interact with legacy systems, thick client applications, and business applications on Windows operating system to perform repetitive tasks. • Monitor desktop actions being executed by AI agents in Execution workspace in the Desktop-in-Desktop session. See Agentic Desktop for more information.
Alumni Center	• The application name Alumni Service Center is now called Alumni Center. • As an alumni, you can see the revamped Alumni Center with Employee Center Pro experiences such as My Active Items, Proactive Prompts, and Content Widgets. • As an alumni, you can use improved alumni services available out-of-the-box. • As an alumni, you can securely access your documents directly from your profile. • As an alumni, use the **Register as alumni** option to create an account with the Alumni Center and login to the Alumni Center website. • As an alumni registering in the Alumni Center portal, you can enter details like first name, last name, personal email address and employee number which can be used to verify and match the ex-employee records. • As an alumni, you can maintain and update your personal details directly within your profile. • As an alumni, you can enter your legacy employment details and latest employment details to maintain your employment history. • As an alumni, your can enable or disable notifications for recommended job opportunities, and news/event updates in your profile. • As an alumni admin, you can configure the customer specific termination conditions using the HR profile fields to trigger alumni creation process automatically on employee termination. • As an alumni admin, you can configure the Alum Self-registration form based on the organization needs. • As an alumni admin, you can highlight and showcase the recommended job opportunities. See for more information.
App Engine Management Center	• Manage deployments using the new ReleaseOps integration in AEMC. ReleaseOps enables the deployment of update sets via a pipeline and leverages the automation capabilities of ServiceNow Playbooks for deployments that are less manual and error-prone.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Migrate your existing App Engine pipelines to ReleaseOps. • Oversee application development, deployment, and insights using AEMC. See App Engine Management Center for more information.
Applicant Center	• As an applicant, log in with a magic link without the hassle of a password. • Learn more about the role that you've applied for, the company, and its culture even before the interview stage, helping you better understand the opportunity from the start. • View the hiring team, job description, and track multiple applications in one place. Communicate seamlessly with your recruiter for updates, questions, or support during the hiring process. • Manage your interviews and related activities, such as selecting your preferred time slot or submitting reschedule requests, all within the portal. • Experience a connected pre-hire journey by receiving and reviewing key notifications that keep you informed and aligned at every step of the application process. See Applicant Center for more information.
Application Manager	Zurich patch 4 • Reduce potential runtime errors by installing and updating Now Assist applications with suites of interdependent versions. • View all ServiceNow Store applications that are licensed or available for procurement from the **Available for you** tab. • Gain insights about application installation requirements and blockers with application state indicators. See Application Manager for more information.
Application Vulnerability Response	• If you are currently using Application Vulnerability Response and you want to upgrade to Unified Security Exposure Management (USEM), see Unified Security Exposure Management release notes for more information about USEM and the Unified Security Exposure Management migration. • Monitor your penetration test requests and findings, as well as your team's overall progress in the Penetration Test Workspace. • Reevaluate the risk score, assignments, remediation target date, exceptions, and remediation task for a specific set of application vulnerable items in the Vulnerability Manager Workspace. • Integrate with supported third-party scanners to import vulnerability data.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Compare application vulnerability-related data and determine if application vulnerabilities are found in an application. • Prioritize, remediate, and manage application vulnerable items (AVIT)s. Each application vulnerability represents a vulnerability entry in the Common Weakness Enumeration (CWE) or third-party libraries. • With the sn_vul.app_sec_manager role, create application remediation tasks manually in the Vulnerability Manager Workspace. • With the sn_vul.app_sec_manager role, create application remediation tasks manually in the Vulnerability Manager Workspace. See Application Vulnerability Response for more information.
Asset Audit Response	• Enable asset managers to fulfill evidence requests for your financial regulatory audits through the Asset Response Guided Experience. • Track and manage responses to evidence requests for your financial regulatory audits in the Asset Governance Workspace. • Manage financial regulatory audit engagements and create corresponding evidence requests in the Audit Workspace. • Help asset managers respond to financial regulatory audits more accurately and efficiently by accessing predefined reports and financial regulatory context. • Identify gaps in your asset data by using remediation rules and tasks. See Asset Audit Response for more information.
Audit Management	• Set audit time frames within engagements using new audit date fields. Filter indicator results by specific periods, independent of the overall engagement time frame. • Access pre-configured content packs through the new Content Accelerator icon in the Audit Workspace. This includes the Digital Operational Resilience Act (DORA) pack with citations and authority documents. • Create evidence responses quickly with a simplified process. • Access engagements, add existing entities to an engagement, and create activities in the Lite Audit workspace, which is a simplified version of the Audit Management workspace. If the advance core store app is installed, evidences can also be associated with the engagement. See Audit Management for more information.
Authentication	Zurich Patch 7 **Knowledge-based factor enhancement for AI voice service**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Following are the knowledge-based authentication (KBA) enhancements: • Voice input support for KBA questions: Configure KBA questions to support Voice as an input type, allowing users to provide spoken responses during identification and authentication. When Voice input is enabled, you can configure the expected format, provide examples, and optionally define a validation pattern using regular expressions. • Script-based validation for external systems: Configure KBA answers to validate that are created against external systems using custom scripts through the Script Configuration field. When set to Identification mode, you can write scoped scripts that validate caller identity against external authentication systems instead of internal ServiceNow AI Platform tables. **OAuth enhancements** Following are the OAuth enhancements: • Use **Opaque** or **JWT** token option for your inbound integration endpoints. • Use the **Allow access only to APIs in selected scope** option to enable access to the APIs that are explicitly listed in the selected scopes for your inbound integrations. • Use the OAuth Entity Resource tab for outbound integrations to configure resource parameters so they flow into the OAuth token request and are reflected in the token from your OAuth provider. Zurich Patch 4 **Authentication factors for AI voice service** Enable caller access to AI voice agents by configuring the required identification and authentication factors. **OAuth enhancements** Following are the OAuth enhancements: • Use **Opaque** or **JWT** token option for your inbound integration endpoints. • Use the **Allow access only to APIs in selected scope** option to enable access to the APIs that are explicitly listed in the selected scopes for your inbound integrations. • Use the OAuth Entity Resource tab for outbound integrations to configure resource parameters so they flow into the OAuth token request and are reflected in the token from your OAuth provider. Zurich Patch 3 **Provider name for Inbound integrations**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Use the Provider name field to enter the details of your inbound integrations to distinguish between different inbound integrations on your ServiceNow AI Platform®. Update the Provider name in your API integrations to improve monitoring capabilities: • For OAuth integrations, update the provider name using the Provider name field. To know more, see OAuth inbound. • For Basic authentication integrations, update the Provider name in the integration registration form. To know more about the integration registration form, see View Inbound API Integration Usage dashboard. Zurich Patch 1 **OAuth token enhancement** Use Opaque or JWT token option for your inbound integration endpoints. Zurich • Experience the new Inbound integration configuration in the Machine Identity Console. • Use the new MFA Dashboard to understand insights such as MFA user enrollment, privileged admins who haven't opted in to MFA, and compliance. • Use the FIDO factor policy to enforce FIDO-based authentication. • Use the enhanced SSO login and logout experience. • Configure the authentication policies to restrict access, reduce roles, or enforce MFA based on Identity Provider (IdP) attributes that are received from the OIDC response. See Authentication for more information.
Automated Test Framework	• Reduce upgrade and development time by replacing manual testing with automated testing. • Design tests once and reuse them in different contexts and with different test data sets. • Keep test instances clean by rolling back test data and changes made after each test run. • Create and schedule test suites to organize and run tests in batches. • Reduce test design time by copying quick start tests and test suites. You can also create custom test steps to expand test coverage. See Automated Test Framework (ATF) for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Business Continuity Management	• Set up phases in recovery tasks and event tasks for recovery event management. • Calculate more accurate RTO and RPO with the finalized RTO and RPO columns in BIAs, BCPs, and events. • View plans from the enhanced BCM Mobile application. • Manage templates and generate Microsoft Word reports for business impact analyses (BIAs), business continuity plans (BCPs), and events by using the Document designer add-in. • Avoid duplicate event tasks by identifying and grouping similar tasks in exercises and crises. • Create action items and send out threat assessments by leveraging Smart Assessment during exercises and crises. See Business Continuity Management for more information.
CPQ Configurator	• Provides sales agents and customers with an intuitive interface for attribute-based configuration in addition to product-based configuration of customizable products. • Enables agents and customers to select valid product options during product configuration and view real-time updates that show how their selections affect associated pricing. • Enables product catalog admins to generate and update product offering blueprints that guide the accurate configuration of customizable products by agents and customers. See CPQ Configurator for more information.
Card data security	• Ensure Payment Card Industry (PCI) compliance and the secure handling of sensitive card data with an integrated tokenization solution for Financial Services Operations disputes. • Integrate with major core systems and third-party systems, including (but not limited to) Visa, Mastercom, Mastercom Extended, Ethoca, Verifi, and Visa Stop Payment Service. Visa and Mastercom are predefined integrations. See Card Data Security for more information.
Care Team Mobile	• Create support requests based on installed Healthcare Operations case types directly from your mobile device. • Scan asset tags on IT and medical assets and be redirected to the asset's record, where you can view its history, status, and associated cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• View requests for specific locations, such as patient rooms or supply closets. • Access relevant details and preconfigured workflows for reporting issues like sanitation requests or facility repairs. See Care Team Mobile for more information.
Care Team Operations for Biomed	Assign roles and responsibilities more efficiently with an updated user configuration process. See Care Team Operations for Biomed for more information.
Care Team Operations for Environmental Services	• Automate healthcare operations by enabling environmental support request creation and fulfillment. • Create environmental services support requests from directly within the Care Team Portal or Care Team Mobile. • Gain full visibility into reported environmental services support cases while enabling environmental service support teams to manage and fulfill them as work orders or work orders tasks when Field Service Management is installed. • Assign roles and responsibilities more efficiently with a streamlined user configuration processes. See Care Team Operations for Environmental Services for more information.
Care Team Operations for Facilities	• Automate healthcare operations by enabling facilities support request creation and fulfillment. • Create facility support requests from directly within the Care Team Portal or Care Team Mobile. • Gain full visibility into reported facilities support cases while enabling facilities teams to manage and fulfill them as work orders or work orders tasks when Field Service Management is installed.] • Assign roles and responsibilities more efficiently with a streamlined user configuration process. See Care Team Operations for Facilities for more information.
Care Team Operations for Healthcare IT	Assign roles and responsibilities more efficiently with an updated user configuration process. See Care Team Operations for Healthcare IT for more information.
Career Conversations	Zurich Patch 7

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• As an admin, create reusable feedback templates using the ServiceNow AI Platform Surveys tool. • As a manager, select and preview feedback templates when requesting feedback. • As a manager, review a summarized view of an employee's recent feedback on the feedback page in Manager Hub. Zurich Patch 2 • Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. • Make career conversations easy to create and track using the growth conversations agentic workflow. • As a manager, find and share relevant resources to conduct meaningful conversations using the Manager resource recommendation AI agent. • As a manager, you can now edit a series, and also specify when a series should end while creating the growth conversation. See Career Conversations for more information.
Case management for CSM	• Sharing task plan templates ensures that only authorized users can access, edit, or share templates based on their role and location, preventing misuse and maintaining operational integrity. • View the most relevant services that are available for customers when creating customer service cases. • View and select from the available entitlements that are associated with the customer, product, and contract information to associate multiple entitlements with customer service cases. • Filter the service definitions that are displayed to agents based on such criteria as the assigned role or group, or entity criteria. See Case management for Customer Service Management for more information.
Change Management	• Review and authorize change requests and review recently implemented changes in the Change Advisory Board Workbench in the Service Operations Workspace (SOW). • Track conflict detection using the Change - Conflict Detection flow and the Change Management Worker table instead of Progress Workers. • Limit the number of conflict records for each conflict type through the *change.conflict.max_count* system property. • Coral is the new default theme for Next Experience and Core UI, offering a more modern experience.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	See Change Management for more information.
Classic Workflow	• Added the snc_required_script_writer role to all Workflow tasks. • Deprecated support of Workflow. • Removed the legacy workflows created and published by ServiceNow, Inc. from new customer installations. See Classic Workflow for more information.
Clone Admin Console	• Configure the update set preservation up to 12 minutes before the clone executes. • Preserve your in-progress update sets, regardless of when the scope was created in the specified time frame. See Clone Admin Console for more information.
Cloud Cost Management 9.0	• Retrieve cost and usage data faster from the Azure billing download by using the Azure Export method. • Leverage Azure Microsoft Customer Agreement (MCA) to optimize spend reporting and recommendations for potential savings. See Cloud Cost Management for more information.
Cloud Exposure View	• Monitor and act on all your cloud-related security findings from multiple vendors across your cloud environments. • Configure widgets that display interactive visualizations and filter assets by category for findings, assets, and exceptions. • View panels that link you to lists for more details about your findings. • View aggregated security data imported from third-party vendors. • Aggregated data from the Cloud Exposure View can be viewed in the Unified Cloud workspace that is supported by ITOM Cloud Accelerate. See ITOM Cloud Accelerate release notes for more information. See Exploring Cloud Exposure View for more information.
Code Signing	Zurich Patch 4 **Code Signing OOB Apps Signatures plugin** Use this plugin (`com.glide.code_signing.oob_apps_signatures`) to install build time signatures for all relevant records in trued-up ServiceNow® Store application versions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Use Code Signing Guardrails to improve checks during the signing process to create more secure workflows. • Use the Code Signing Migration workflow to identify the signatures that are created with expired or inactive certificates and re-assign them to the appropriate records automatically. • Revoke Code Signing certificates securely using a quorum-based approval policy to prevent unauthorized use. • Monitor and manage your Code Signing environment with the new Health and Status dashboard. • The restructured navigation panel and the renamed pages provide improved accessibility and streamlined functionality.
Collaborative Work Management	• Plan, track, and manage team work in Agile methodology with sprint planning in the CWM workspace. • Streamline task management for teams by integrating various work items across ServiceNow applications into CWM Boards. • Filter and group work by vertical and horizontal swimlanes in the Kanban view for a specific work item type. See Collaborative Work Management for more information.
Common Core	• Use the report a GRC issue AI agent in the Employee Center to report issues through a guided conversational experience. • Ensure seamless access for users and groups referenced in user fields on records by leveraging entity-based access restrictions through record attribute user access configuration. Minimize manual effort, reduce administrative overhead, and enable entity-based access with minimal disruption. • Configure which task and tab settings appear in My Tasks by marking them Active or Inactive in the applicable table for easier management. Use the Active/Inactive flag in the GRC choice table to control visibility. • Automatically sync and maintain entity names in GRC with associated CI names to improve data consistency and reduce manual effort. • Authenticate users with the MCP Server to add a Model Context Protocol tool to AI agents using the Model Context Protocol Client. • Create ACLs for AI agents and agentic workflows to customize who can discover and trigger AI agents and agentic workflows. • Generate control recommendations for each regulatory alert to address compliance requirements. Use these suggestions to save time, minimize manual effort, and ensure a consistent response to regulatory changes. • Apply access restrictions at the record level by using the record access update utility in guided assistance. You can also preview the impacted record counts before updating and review the results and execution logs after the update.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Apply access restrictions automatically to newly created or modified records using entity-based record access rules. • Deactivate the entity-based access configurations. • Enable entity-based access on custom GRC tables. For detailed documentation, see Common Governance, Risk, and Compliance features.
Configurable Workspace	• See who is active within a form with live presence and user avatars that display a contact card. • Use the Record List component bundle to create lists for all list types and the Predicate Builder component to create conditional statements. • Create emails, work notes, and comments while working on other tasks with a pop-out, modeless dialog in the Compose editor. • Rename and reorder the **Emails**, **Work notes**, and **Comments** tabs in the Compose editor. • Send emails with a digital signature that verifies you as an authentic sender and an email encryption that certifies authentic recipients. See Workspace UI for more information.
Configuration Compliance	• If you are currently using Configuration Compliance and you want to upgrade to Unified Security Exposure Management (USEM), see Unified Security Exposure Management release notes for more information about USEM and the Unified Security Exposure Management migration. • Import Wiz issues and configuration test results from the Wiz scanners into test results in the Configuration Compliance application with the Vulnerability Response Integration with Wiz. • With the sn_vulc.remediation_owner role, create remediation tasks manually in the IT Remediation Workspace. • With the sn_vulc.admin role, create remediation tasks manually in the Vulnerability Manager Workspace. See Configuration Compliance for more information.
Configuration Management Database (CMDB)	• Access a centralized location with a comprehensive view of the configuration item (CI) details by using the new CI form in CMDB Workspace. You can view and edit the CI attributes, relationships, and data, such as the CMDB Health report for the CI, CMDB 360 data that is associated with the CI, and the CI resources, activities, and related services. • Access the Data Certification dashboard in CMDB Workspace to gain insights about the data certification activities and progress, examine policies and tasks, and see the reports about the

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	certification instances, charts of the aging certification tasks, and group and individual workloads. • Add or remove CIs directly from a map in Unified Map. You can also add, modify, or delete CI relationships in CMDB. • Configure the system to use Identification and Reconciliation Engine (IRE) identification rules to uniquely identify CIs in a payload, instead of using the *source_name* and *source_native_key* attributes. • In zbooted instances, the itil user role no longer contains the sn_cmdb_editor user role, and the itil_admin user role no longer contains the sn_cmdb_admin user role. However, the sn_cmdb_admin and the sn_cmdb_editor user roles now have full (create, update, delete) access to the Configuration Item [cmdb_ci] class. See Configuration Management for more information.
Container Vulnerability Response	• If you are currently using Container Vulnerability Response and you want to upgrade to Unified Security Exposure Management (USEM), see Unified Security Exposure Management release notes for more information about USEM and the Unified Security Exposure Management migration. • Import container image vulnerability data from the Wiz scanners into container vulnerable items (CVITs) with the Vulnerability Response Integration with Wiz. • With the sn_vul_container.vulnerability_analyst or sn_vul_container.vulnerability_admin role, create container remediation tasks manually in the Vulnerability Manager Workspace. • With the role sn_vul_container.remediation_owner, create container remediation tasks manually in the IT Remediation Workspace. See Container Vulnerability Response for more information.
Continual Improvement Management	See Continual Improvement Management for more information.
Continuous Authorization and Monitoring	• Simplify Governance, Risk, and Compliance processes by enabling admins to create, version, and manage custom workflows, define state models, configure approvals, assess risks, and standardize with NIST RMF migration. • The CAM workspace homepage now features card-based containers with headers, sidebars, and overviews for a more organized and modern experience. • Authorization boundaries and package layout are now vertical. New **Boundary Type** and **Classification** records are included in OSCAL export file. • Add a **Child Boundaries** to create one-to-many relationships between boundaries. You can view the parent-child boundary

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	mapping of a authorization boundary in the **Highlighted details** panel under the **Boundary hierarchy** section. • Select the **Dynamic Filter** option to make boundary filters update system elements automatically based on conditions, enhancing filter flexibility. • Boundary operational status now automatically syncs with the package life cycle. • Generate and download Open Security Controls Assessment Language (OSCAL) System Security Plans (SSP) and Plan of Action and Milestones (POA&M) files directly from within a package. • The OSCAL import playbook now supports importing single POA&M JSON files, automatically maps users and groups by exact names to ServiceNow, and populates package roles and responsibilities for a streamlined import experience. • CAM overlays new capability has been introduced to perform various operations like addition, subtraction, custom while applying a policy overlay to an authorization package. • Import OSCAL models using a user-friendly playbook that guides you through preview and customization steps. See Continuous Authorization and Monitoring for more information.
Contract Management Pro	• Send contracts for signature using Adobe Sign without having to sign in to the electronic signature portal. • Compare two revisions of the contract document and view the redlined compared document. • Initiate and manage amendment requests for existing contracts. • Generate summaries, FAQs, or retrieve specific information from contract documents, supporting documents, and signed contracts. • Link parent contracts during drafting and negotiation phases to inherit parent contract terms. • Pause and resume an in-progress signature process when updates to the signatory list are required. See Contract Management Pro for more information.
Contract Management Pro for Legal Service Delivery	• Initiate and manage amendment requests for existing contracts. • Record producer to initiate an amendment request from the Employee Center. See Contract Management Pro for Legal Service Delivery for more information.

Application or feature	Details
Conversation Improvement Themes	• Use automated theme detection with a domain-specific large language model (LLM) theme classification framework to tag Knowledge Base articles, catalog items, Virtual Agent (VA) topics, and agents into themes. • Receive thematic insights by breaking down poor and good-quality conversations into top underlying themes. • Compare themes based on whether they lead to good or bad conversations. See Conversation Improvement Themes for more information.
Conversation Insights	• Augment conversations with insights based on the Inferred CSAT score. The Inferred CSAT framework provides an estimated score computed using AI in real time by analyzing the entire sequence of the conversation. • Use underlying factors like Resolution, Confusion, Effort, Empathy, Next Steps, Frustration, Transfers, and Escalations to provide explainability to the Inferred CSAT scores. • Leverage the Inferred CSAT framework and Conversation Insights [sn_aci_insights] table linked to the Conversation [sys_cs_conversation] table to create adhoc dashboards and workflows for conversational analytics applications. See Conversation Insights for more information.
Creator Studio	• Create customized email notifications that are sent by the apps that you build. • Add playbooks with a new activity that automatically updates some fields on the app's generated record. • Augment forms with the new Duration and Attachment question types. See Creator Studio for more information.
Customer Contracts and Entitlements	• Initiate renewals from contracts at the contract or contract line level. • Add new line items to an existing contract. • Initiate modification from the contract header. • Add or reduce quantities on a contract line. • Define pricing and quantity schedules in contracts across specific time periods. See Customer Contracts and Entitlements for more information.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Customer Engagement Sequences	• Design sequences to initiate workflows from multiple record-based events, with outcome-based decision nodes between stages, and runtime permissions. • Control access to various features and capabilities using the new granular roles. • Enable click-to-call for agents by configuring the Schedule Call activity and integrating with platforms such as Amazon Connect. • Automate and personalize customer journeys with a no-code playbook interface and guided task flows. • Drive high-impact telesales scenarios such as product surveys, lead qualification, and proactive engagement campaigns. See Customer Engagement Sequences for more information.
Customer Service Problem Management	• Run the diagnostics from the contextual panel in the Customer Service Problem Management playbook. • As an agent, use the Test group to help group test definitions. The Test group contains multiple test definitions. • Enables your customer to modify the visibility of the **Diagnose** tab and run diagnostics from the contextual panel in the Decisions table. See Customer Service Problem Management, Setting up a test group, and Setting up test definitions for more information.
Customer Success Management	• Account Lifecycle Events has been renamed to Customer Success Management. • Enable managers to see a high-level aggregate view of their entire customer portfolio. • Monitor adoption scores for sold products and track implementation progress for customer engagements. • View the engagement hierarchy and timeline of events. • Use the new metrics data source to calculate metric values dynamically based on the weighted sums of other metrics. • View the detailed information of risk level records in the risk occurrence timeline. • The activity stream component displays a list of the activities occurring on a risk signal and issue record. • The **Related Items** tab provides access to the Risk Signal and Issue related lists. • Determine the engagement health score from the Calculated data source. • Retrieve data from internal and external tables with the Table type data source.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	See Customer Success Management for more information.
Customer self-service for Sales and Order Management	• Enable B2B customers to request for quotes (RFQ) from the Business Portal, improving customer autonomy and reducing sales cycle time. • Provide a persistent shopping cart experience to your B2B customers. • Enable your customers to download and share their cart summary with other stakeholders. • Provide seamless order checkout and an easy order creation process to your customers. See Self-Service for Sales and Order Management for more information.
Data Loss Prevention Incident Response	• Improved response to Data Loss Prevention (DLP) incidents through the initiation of SLA triggers. • Introduced SLA Definition functionality that outlines the conditions and duration for responding to data breaches. • Configured DLP Proofpoint to generate Client ID and Client Secret to enable secure access to proofpoint. See Data Loss Prevention Incident Response for more information.
Data Management	• View insights into storage consumption on your instance and manage data usage in the redesigned Data Management Console. • Monitor data usage in a logical table view. • View data usage for individual tables and their associated tables. • View a summary of the data management rules on a table. See Data Management for more information.
Data Management for CSM	• Simplify your experience in viewing and applying protections to sensitive data by identifying, categorizing, and securing sensitive customer relationship management (CRM) data. • Streamline access management through an enhanced UI-based configuration, using the declarative framework enhancements in Customer Access Management (CAM). • Integrate Service Model Foundation with Order Management and Quote Management to enable enterprises to track orders and quotes that are generated by channel partners. • Add pricing fields based on sales agreements to capture base prices for sold products and verify consistent pricing.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Improve traceability with serial numbers on Install Base items and direct links to model categories for industry-specific configurations. • Enable partial sync using `allowedContextTypes` to sync specific sections with preserved structure and recursive filtering, and deliver clear, actionable error messages with consistent API responses. See Data management for Customer Service Management feature for more information.
Data Privacy	• Use a revamped Data Discovery interface, enhancing your Data Discovery experience with intuitive widgets, a streamlined user experience, and a guided setup for first-time users. • Target scans on specific table columns for discovery using column-level discovery and expanded support for Field Encryption. • Discover PII in Microsoft Excel and CSV files with expanded file support. • Generate regex patterns using prompts with the text-to-regex feature, which leverages Now Assist and supports all large language models (LLMs) approved by ServiceNow. See Platform Privacy for more information.
DevOps Change Velocity	• Improve instance efficiency by skipping step-level pipeline processing. • Improve load balancing and failover protection by selecting a MID Server cluster during tool connection. See DevOps Change Velocity for more information.
Developer Sandboxes	• Enable your administrators and delegated developers to request, access, and manage the isolated development environments on top of the same underlying development instance. • Provide developer isolation and parallelism for customer development environments and instances. • View the total, available, and allocated sandboxes in your instance by using the Sandbox Management home dashboard. The dashboard also displays information about each sandbox, including the status, data utilization, owner, when it was last accessed, and when the sandbox was allocated. See Developer Sandboxes for more information.

Application or feature	Details
Digital End-User Experience	• Track and analyze call performance for a particular user in Microsoft Teams with DEX for Microsoft 365. • View the consolidated alerts related to devices and applications in the Alerts section of the Device health page. • View the new DEX landing page, which includes an updated Devices world map and an enhanced Impacted Devices card. • View real-time data for alerts, change requests, and incidents that are impacting a device in the Device events section of the Device health page. • Create a remedial action from a check definition, link an existing remedial action to a check definition, and execute a remedial action on multiple impacted devices for a DEX alert simultaneously. • Manage device and application configurations and monitor key DEX components in the new DEX Administration workspace. • Gain deeper visibility into performance with enhanced metrics analysis and non-persistent Virtual Desktop infrastructures (VDIs) monitoring, including device, application, and web page insights for faster troubleshooting. • Use the Metrics analyzer to view metrics collected for a given device or application during a specific period. • Monitor non-persistent VDIs with Digital End-User Experience (DEX) to track performance issues and troubleshoot efficiently. • Gain insights into Zoom call quality and Zoom rooms performance across your organization with DEX for Zoom. • Empower service desk agents to diagnose and resolve incidents on DEX monitored devices quickly and efficiently by using the#DEX issue diagnosis and resolution agentic AI workflow. • Enable service desk agents to diagnose and resolve issues on DEX monitored devices directly from the Investigation tab in incident records within the Service Operations Workspace. See Digital End-User Experience for more information.
Digital Portfolio Management (DPM)	• Configurable Info tab allows customers to configure the Info tab of the solutions pages, similarly to how they can configure the Plan, Build, and Run tabs. ○ This includes showing or hiding sections of the tab. • DPM users with the dpm_admin role can now create and edit portfolios directly within DPM, and three portfolio templates are included ("EDUCAUSE", "IT Service Portfolio", and "Sample Organization Structure"). • DPM users can now send an email to any users with the dpm_manager role that includes the first key performance indicator (KPI) group data and a link back to the solution they're sending an email from.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	○ This feature is off by default and can be activated in the DPM Admin Center under a new 'Email properties' section. • DPM admins can turn on a scheduled job that will automatically send the top KPI group data in an email to the solution owners. ○ The schedule is configurable and will only send KPI data for the 'top level objects' that a user owns. For example, if they own a taxonomy node, it won't send data on sub nodes or services. ○ DPM users can now view more than one KPI group in the Enterprise Portfolio preview. • DPM users with the dpm_admin role can use the Active flag to hide or show the portfolio and taxonomy node branches in the Enterprise Portfolio Module. ○ DPM admins can set an enterprise portfolio's **Status** to Active or Inactive. ○ DPM managers will only see enterprise portfolios that are active. See Digital Portfolio Management for more information.
Dispute Rules Content Pack for Mastercard	• Developed and refined chargeback eligibility rules to validate dispute cases against Mastercard core rules. • Updated the intake questionnaire for various dispute categories. See Dispute Rules Content Pack for Mastercard for more information.
Dispute Rules Content Pack for Nacha	• Run chargeback eligibility rules and derive ACH dispute categories and reason codes based on Nacha guidelines. • Determine chargeback eligibility using an integrated KB article that contains rules and conditions. See for more information.
Dispute Rules Content Pack for Visa	Applied Visa Resolve Online (VROL) release 25.2 revision changes to Dispute Rules Content Pack for Visa questionnaire. See Dispute Rules Content Pack for Visa for more information.
Document Intelligence	• Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. See Document Intelligence for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Document Services	• Compare any two document versions and track changes by using document comparison. • Connect and manage external cloud documents by uploading files, storing URLs, and syncing metadata with your records. • Authenticate with your personal accounts on an external cloud, Microsoft OneDrive, or Google Drive. • Control public sharing by using document classification to ensure document security. • Accelerate documents insights with instant summaries for highlights and quick insights, interactive Q&A, and FAQs. See Document Services for more information.
Domain Separation	• Changes to the domain table are queued sequentially and batched into a single background job. This helps simplify domain table updates. • Domain Admins can delete by domain to efficiently manage domains and reduce storage overhead. See Domain separation for service providers for more information.
Dynamic Translation	With the new Test Exclusion Rule module you can check what your exclusion pattern matches during a test translation, then create an exclusion rule based on the pattern you tested. See Dynamic Translation and Exclusion Framework in Dynamic Translation for more information.
ERP Semantic Mining	The name of the ERP Customization Mining application has been changed to ERP Semantic Mining. See ERP Semantic Mining for more information.
Employee Center	Zurich Patch 1 • Enable employees to check their latest company news and upcoming events using Now Assist in Virtual Agent with the **Company News & Events AI Agent** in the Now Assist for Employee Experience. The AI Agent displays a list of all the latest news and planned events in the company. For more information, see Check latest company news and events. • Employees can check all their to-do tasks and pending approvals using Now Assist in Virtual Agent for Microsoft Teams. • Enable a summary of the request, requested item, or case for approval task using Now Assist for Employee Experience. The skill provides a summary of the selected item from the available list that you want to work on. For more information, see Now Assist for Employee Experience Summarization skill.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Zurich Early Availability • Use the Now Assist for Employee Experience application so that your employees can have a seamless conversational interaction with Now Assist in Virtual Agent. • View and manage content and other company resources through the Browser Extension for Employee Center. • Improve the My Requests experience with adoptive and scalable enhancements. See Employee Center for more information.
Employee Center Pro	• Configure features flexibly and submit detailed feedback using enhancements for the Integrated experience and Service feedback. • Get the Notifications in Employee Center feature in Content engagement for improved employee involvement while engaging with news content. • Experience an enhanced performance with improvements to calender widgets, news and events, and publishing communications to browser websites. See Employee Center Pro for more information.
Encryption	• Use row conditions for Field Encryption to define encryption rules for rows within a specific column, based on dynamic conditions. • Use any of the three Field Encryption APIs to encrypt attachments. See Encryption for more information.
Encryption Key Management	• See the changes to the Key Management and Field Encryption records that are now logged on the Sys Audits [sys_audit] table. • The GlideEncrypter API has been updated and now uses AES256-GCM encryption via the Key Management Framework. • Enable or disable GlideEncrypter by using the **glide.security.glideencrypter.allow** system property. See Key Management Framework for more information.
Enterprise Architecture	• Define and track data certifications using the Data Certification workflow in the Enterprise Architecture Workspace to ensure the accuracy, completeness, and reliability of critical data within your organization. • Design the future-state cloud modeling using the standardized AWS components in the Enterprise Modeling and Visualization to reflect AWS infrastructure and services.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Perform end-to-end modeling with full alignment to CSDM (Common Service Data Model)5.0 standards including standardized shapes, colors, and relationships. • Group business application bubbles on the Application Rationalization Bubble chart page whose X and Y-axis values are within the value range of +/-0.25 of each other. • Export the TRM catalog data and Business Portfolio data to Microsoft Excel or CSV format. • Apply filters to the Application Rationalization bubble chart and list views pages, using the new filter options to filter for specific business applications. Also, select a fiscal period on the Application Rationalization pages using the new fiscal period filter option. • Evaluate the technical debt score for business applications using the Technology Reference Model (TRM) technical debt indicator. This helps you to identify high-risk business applications and enables you to prioritize modernization and rationalization. See Enterprise Architecture (formerly Application Portfolio Management) for more information.
Enterprise Asset Management	• Organize related assets into hierarchical asset groups and subgroups to enable consolidated reporting, streamline maintenance workflows, and provide clear dependency mapping. • Create scalable templates to evaluate the condition of enterprise assets, which helps to detect issues early, optimize maintenance planning, and maximize asset lifespan. • Achieve operational efficiency by evaluating how effectively your assets are functioning and being used, through reports based on asset key performance indicators in the Asset analytics view. • Manage supply and demand originating from service locations or other stockrooms through local stock or distribution channels using the Inventory insights tab in the stockroom record. You can also compare multiple stockrooms at the same time. • Gain insights into asset failure reasons and resolution actions using the failure and resolution codes in the Enterprise Asset Workspace. See Enterprise Asset Management for more information.
Event Management	• Combine the strengths of CMDB-based and tag-based strategies to create mixed alert groups that reduce noise and reveal clearer, actionable insights. • Effortlessly extract event field content into alert fields with automated regex generation, reducing manual effort and improving accuracy. • Gain actionable insights with AIOps 360-degree overview dashboard to showcase product value.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Accelerate integration setup with seamless installation via the Unified Launchpad store app, guided support for creating integrations, and enhanced observability with the new Service Observability filter. See Event Management or Service Operations Workspace for ITOM for more information.
External Content Connectors	Zurich Patch 7 • Expand your search experience with external content connectors for Adobe Acrobat Sign, Aha! Roadmaps, Cornerstone, Fluid Topics, ManageEngine, and Workvivo source systems. • Retrieve content and links from URLs found in sitemaps defined for your web source system when running content crawls for the Webcrawler external content connector. • View a content crawl's start point via links in the content crawl list and in content crawl history entries. Zurich Patch 4 • Expand your search experience with external content connectors for Adobe Experience Manager as a Cloud Service, Asana, Docusign, Dropbox, GitHub Enterprise Cloud, HubSpot, Lucidchart, Miro, monday.com, Notion, SAP DMS, Smartsheet, Trello, WordPress, Workday, and Zoom source systems. • Customize user permission settings, choosing the fields you want to compare when mapping source system users to ServiceNow AI Platform® users. • Make external content connector crawl results searchable by linking connector search sources to search profiles from the connector editor. • Monitor connector behavior on individual crawl runs and over time with improved crawl statistics and analytics. Zurich Patch 1 • Expand your search experience by indexing searchable content from your Amazon S3, Box, GitLab, Microsoft OneDrive, Microsoft Viva Engage, and Zendesk Guide source systems. • Search KB articles from your ServiceNow instance. • Make web content locally searchable by indexing pages from predefined or custom public web sites with the Webcrawler external content connector. • Configure connector settings and schedule crawls as part of connector creation using the revamped UI. See External Content Connectors for more information.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Field Service Management	• Use the aggregated agent schedule to optimize the allocation of resources for a territory up to the specified cut-off date. • Flag a task or use assignment assistance directly from the Work Order Task page to streamline task management. • Configure Schedule Optimization to instantly adjust technician schedules in response to real-time events, like new priority 1 tasks, task cancellations, paid time off requests, or delays. See Field Service Management for more information.
Field Service Management for Telecommunication	Manage your work order using the TMF 697 Open API. See Field Service Management for Telecommunications for more information.
Financial Services Card Operations	• Resolve disputes with a new dispute life cycle for Mastercard dispute transactions. • Leverage a new workspace page in Financial Services Card Operations to resolve Mastercard disputes. • Integrate Mastercard's Mastercom APIs into the Dispute Management workflow to resolve card disputes faster and more efficiently. • Resolve ACH disputes faster with a guided, end-to-end workflow that unifies intake, investigation, and resolution—built on a framework ready for any non-card transaction. • Streamline operations with a single, consistent intake process that applies across all dispute workflows. See Overview of the Dispute Management workflow for more information.
Financial Services Operations Core	• Leverage a payment card data model application in FSO workflows, such as disputes, which can be used across an entire card life cycle, from issuance to servicing. • Support multiple payment card types, including credit and debit cards. See Payment card for more information.
Financial Services Operations Integration with Mastercard	• Enable dispute agents to efficiently handle the full dispute life cycle, including transaction searches, claim creation, chargeback creation and updates, pre-arbitration, arbitration, and fraud reporting. • Accelerate dispute resolution and reduce manual effort using predefined subflows.

Application or feature	Details
	See Financial Services Operations Integration with Mastercard for more information.
Financial Services Operations Integration with Visa	#Enable system administrators to control settings for features in the Financial Services Operations Integration with Visa application, such as, integration with specific APIs. See Financial Services Operations Integration with Visa for more information.
Flows, subflows, and actions in Workflow Studio	• Create a scheduled trigger that you can use across your flows. • Save flows, subflows, and actions automatically as you work on them. • View and manage the history of flows and subflows to copy, restore, or remove past configurations. • Create multiple skills for conversational subflows and actions from the conversational settings. • Configure a default LLM for generating metadata for conversational subflows and actions. See Exploring flows, Exploring subflows, and Exploring actions for more information.
Generative AI Controller	Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Access the Gen AI log for debugging insights, with HR-related records remaining restricted. • Promote stability with the Long-Term Stable (LTS) model for generative AI. • Identify third-party LLM information, including model, version, and language. • Restrict LLM usage based on domain. See for more information.
Goal Framework	• Categorize your strategic priorities and goals as Artificial Intelligence to track and monitor their progress from the AI Control Tower workspace. • View only active goals in reference fields when creating a goal relationship or defining a parent goal. See Goal Framework for more information.

Application or feature	Details
Goal Framework for SPM	Use the sn_gf_goal_admin role to update the goal-specific system properties. See Goal Framework for SPM for more information.
HR Multi Instance Integration	• Collaborate with service providers and consumers through bidirectional workflows. • Increase the security of records in consumer instances and provider instances by limiting access based on user roles. • Enable an employee to place an HR service request from a consumer instance and fulfill the request from provider instance, making it easy to raise and fulfill HR requests while working in their own ServiceNow instance. • Create HR tasks, approval tasks, and document tasks from a provider instance for users in a consumer instance. • Enable consumer users to complete the assigned tasks via magic links. Magic links enable consumer users to directly access the linked resource in the provider instance without having to manually log in. • Use Universal Task as the remote tasking medium in both provider instance and consumer instance. See HR Multi Instance Integration for more information.
Hardware Asset Management	• Benefit from enhanced Asset Attestation features, including a guided attestation creation process, a mobile-friendly interface for confirming assets, and automated remediation tasks to address non-compliant assets. • Achieve real-time tracking of assets that are in transit and maintain asset data accuracy by enabling employees to confirm receipt of assets through the Employee Center portal. • Receive shipment assets at a stockroom from any workflow through the streamlined and unified receiving process. • Track asset movement from the receiving bay to an aisle and space in the stockroom using the Asset put way task. • Evaluate how effectively your assets are functioning and being used through reports based on asset key performance indicators in the Asset analytics view. Also, manage supply and demand in your stockrooms effectively with inventory demand reports. See Hardware Asset Management for more information.

Application or feature	Details
Health Log Analytics	• Use the Cribl integration to streamline Health Log Analytics data ingestion with Cribl. • Leverage additional information presented on the integration's Overview screen, such as the ITOM Gateway in the processing pipeline and the log streaming rate per minute. • Map log data to service instances and components for alerts in context. • Monitor ServiceNow instance logs with the ServiceNow Log Export data input. See Health Log Analytics for more information.
Healthcare Operations Core	• Leverage the streamlined launch context when embedding Care Team Portal into electronic medical record (EMR) systems. • Assign roles and responsibilities more efficiently with an updated user configuration process. See Healthcare Operations Core for more information.
Hermes Messaging Service	• Monitor Hermes data usage over time. • Verify that topics are synchronized between Hermes clusters. See Hermes Messaging Service for more information.
Hiring	• Manage all your hiring needs efficiently with a seamless unified experience. • Track job requisitions and applications and save the time required to hire with an intuitive hiring flow. • Effortlessly collaborate with the recruiters to speed up the hiring process. • Get a unified overview of your responsibilities with clear insights into what needs your attention and when. See Hiring for more information.
ITOM AIOps	Health Log Analytics highlights: • Streamline Health Log Analytics data ingestion with Cribl by using the Cribl integration. • Leverage additional information presented on the integration's Overview screen, such as the ITOM Gateway in the processing pipeline and the log streaming rate per minute.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Map log data to service instances and components for alerts in context. • Monitor ServiceNow instance logs with the ServiceNow Log Export data input. Service Operations Workspace for ITOM highlights: • Control how alerts are grouped, which ones are included, and the order of grouping methods through Mixed Alert Grouping, which combines CMDB-based and tag-based strategies. • Starting in version 26.9.0, investigate mixed alert groups and Log Analytics-based alert groups by using Express List®. • Starting in version 26.9.0, view connections between alerts in Link View for mixed alert groups and Log Analytics-based alert groups. See ITOM AIOps for more information.
ITOM Cloud Accelerate	• Ability to monitor, track, and analyze cloud assets across providers in Cloud Account Management. • Compliance visibility and account insights in Cloud Account Management. • Improved asset-level filtering and visualization in Cloud Account Management. • Ability to view cloud assets and access detailed information about associated configuration items (CIs). • Migrated legacy workflows to subflows in Cloud Provisioning and Governance. See Cloud Governance for more information.
ITOM Visibility	• Cloud-based scheduling available in Discovery Admin Workspace (store version 1.11.0). • AWS EC2 VMs discovery using AWS Systems Manager (SSM). • Tag-based Service Mapping experience in the Service Mapping Workspace (store version 1.16.3). • Application service maps for containers via Kubernetes Visibility Agent (KVA) (store version 3.11.0). • 25 cloud patterns shipped via Discovery and Service Mapping Patterns (store version 1.28.0) • Certificate Inventory and Management TLS Certificate request flows that support Keyfactor EJBCA (store version 3.7.0) and Certificate Inventory and Management Automated TLS Certificate renewal workflows (store version 3.8.2). See IT Operations Management for more information.

Application or feature	Details
Identity	Zurich Patch 4 • Configure AI Agents or AI users by selecting the `AI` option from the **Identity type** drop-down menu. • Use the `ai_user_admin` role for creating, editing, and role management of AI users. Using the role you can view, create, edit, assign roles to, and delete users with the identity type as `AI`. • Use role masking for AI agents and agentic workflows to limit the inherited roles during tool execution, verifying that AI agents run with restricted privileges, minimizing potential security risks and helping prevent unintended actions. To learn more, see Role masking in Now Assist AI agents. • Access Analyzer v.6 supports agentic workflows and AI agents in the Analyze Permissions feature. **Important:** Access Analyzer is available in the ServiceNow Store. For more information, visit ServiceNow Store. • Use Federated ID to uniquely identify roles across multiple instances. Federated ID provides a unique identifier for roles, making it easier to manage and track them across instances. To know more, see Explore Federated ID. • View the Inbound API Integration Usage dashboard under the Machine Identity Console's Unique API calls page to access statistics for requestors and their API calls. To know more, see Metrics and View Inbound API Integration Usage dashboard. Zurich • Manage your non-human identities (NHIs) using the Machine Identity Console. • Support security data filter functionality in Applied or Undefined status and Controlled by Refs functionality during access control list (ACL) query. **Important:** Access Analyzer is available in the ServiceNow Store. For more information, visit ServiceNow Store. See Identity for more information.
Impact	• Manage health checks, findings, and remediation workflows with AI-powered tools directly on-platform to accelerate insights and remediation with the new Platform Health Scan Engine for the Impact Store Application. • Use the automated setup method to simplify the Impact Store Application configuration. • Deploy the AI Control Tower Accelerator to help customers configure governance for AI investments and demonstrate strategic value.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Incident Management	• Help prevent changes to closed incident tasks to promote data integrity and to maintain a clear audit. • Manage and resolve incidents effectively with the incident and problem workflow enhancements. • Coral is the new default theme for Next Experience and Core UI, offering a more user-friendly experience. See Incident Management for more information.
Industrial Process Manager	• While mapping OT devices to equipment model entities, view both unmapped and all devices in separate tabs for a more organized view of your OT devices. • Visualize your OT network using the OT Network Map. • Automatically create a location for equipment model entities to visualize your location hierarchy. • Use the updated Automated Mapping Across Zone-based IP Network Groups (AMAZING) feature to uniquely identify OT devices during equipment model entity mapping. • Identify sites on your equipment model entity that aren't in use with a new **Operational Status** field value in the Industrial Workspace. • Filter out **Not in use** or **Retired** equipment model entities in the Industrial Workspace using the **Operational Status** field value. • Sort equipment model entities for a Site using the new value **Processing Order**. • View the **Daily Activity** tab for a summarized version of the previous day's activities on the Operational Technology (OT) devices. See Industrial Process Manager for more information.
Instance Data Replication	• Monitor the progress of all your scheduled replication sets. • Track the progress of scheduled replication requests within a scheduled replication set. • Access details of scheduled replication requests within a scheduled replication set. See Instance Data Replication for more information.
Instance Scan	• Scan your instance, update set, scoped application, or specific record using specified checks. • Run custom checks against your existing configurations. • Use as a tool in your development operations, release management, as well as pre- and post-upgrades.

Application or feature	Details
	See Instance Scan for more information.
Integration Hub	• Streamline the setup process for REST-based Data Stream actions by automatically generating the parsing and output components. • Use load-balancing MID Server clusters in Stream Connect message replication. • Enable testing of connection aliases directly from configuration templates. See Integration Hub for more information.
Intelligence for CSM	• Get enhanced visibility of knowledge base articles by marking and displaying a lock icon for articles that aren't accessible to the case requester within the CSM Configurable Workspace. • Gain insights to the root causes of case service level agreement (SLA) breaches and view the suggested improvements to optimize process performance. See Intelligence for CSM for more information.
Interview management	• Save time by using structured workflows to schedule and manage interviews. • Configure interview phases and use them to schedule interviews in a more organized and planned manner, minimizing manual effort and inconsistency. • Schedule interviews using workflows that support both self-scheduling and direct scheduling options. Consider multiple data sources, including calendar availability and declared scheduling preferences, to minimize rescheduling and eliminate off-platform coordination. Monitor interview health centrally to manage all interviews efficiently, with built-in reminders and notifications keeping everyone informed. • Manage interviews by updating statuses, viewing or providing feedback, sending reminders, and rescheduling, completing, or canceling interviews as needed. • Streamline feedback sharing and tracking, enabling hiring managers to effectively compare applications. See Recruitment workspace for more information.

Application or feature	Details

Journey designer	• Usability enhancements:
	  ○ Use the option to cancel Journey Accelerator journeys from the portal.
	  ○ See higher performance in sync between the **Opened for** and **Journey Owner** fields.
	  ○ Configure the Journey overview page using the widgets option to hide or show Task Templates and Create a Journey for Your Team widgets.
	• The pre-hire onboarding experience enables a seamless journey for an applicant transitioning from an onboarding pre-hire to a full-time employee.
	
	See Journey Designer for more information.

Knowledge Center	• Use Knowledge Center to manage and distribute organizational knowledge through a centralized and organized interface. • Enhance productivity, reduce redundant work, and help ensure that users have access to the latest and most accurate information. • Format your content within a knowledge article using editing tools in the article editor. • Improve the quality and health of knowledge articles with article optimization, ensuring that the information is latest and relevant. See Knowledge Center for more information.
Knowledge Graph	Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Users can use the new Enterprise Graph Knowledge Graph schema to map all instance tables and their relationships, enabling natural language queries across the entire database. It simplifies setup by eliminating custom schema creation and supports enhanced query accuracy. • Admins can create and use tags to prioritize relevant tables for specific use cases. • Users have the option to select Enterprise Graph(small) mode to restricts queries to tables in specified tags for narrower use cases, improving runtime speed and requiring tag specification. • Knowledge Graph now supports aggregate queries. Zurich Patch 2

Application or feature	Details
	• Admins can create Knowledge Graph schema with Workflow Data Fabric tables that enables users to retrieve data from different systems without moving them. This ensures efficiency and security when working with external tables. This enables Knowledge Graph functionality to external tables Zurich Patch 1 • Supports nodes from parent and grandparent nodes in the hierarchy. • Supports Configuration Management Database (CMDB) queries in Now Assist panel. Zurich EA • Use Google Gemini and Anthropic Claude on AWS as AI model providers for Knowledge Graph in addition to Now LLM Service and Azure OpenAI. • Select your preferred large language model (LLM) provider for Now Assist platform. Apart from Now LLM Service, the platform supports Azure OpenAI GPT-4.1 and GPT-4.1 mini, Google Gemini 2.0 Flash and 2.5 Pro, and AWS Anthropic Claude 3.7 Sonnet LLM providers with ServiceNow® third-party model strategy. See Knowledge Graph for more information.
Knowledge Management	• Experience seamless navigation and viewing experiences across various devices, with the incorporation of responsive design in the workspace that enables pages to adapt to different screen sizes and orientations. • Upgrade your Knowledge and article viewing experience with an enhanced view and access to key components on the workspace. • Enhance operational efficiency with migration from legacy Knowledge Management workflows to the latest low-code flow designers. See Knowledge Management for more information.
Lead-to-Cash Process Management	• Define and monitor sales entities tied to specific business processes such as order-to-cash. You can add custom processes and related entities managed in disparate ERP systems using a unified view in a node map. • Optimize revenue recognition and drive operational efficiency throughout the order-to-cash process by tracking key milestones, identifying potential delays early, and ensuring on-time delivery. See Lead-to-Cash Process Management for more information.
Legal Conflict of Interest	Disclose conflicts of interest using natural language from Now Assist in Virtual Agent rather than having to fill out intake forms. The risk

Application or feature	Details
	assessment utility then automatically evaluates each submission and routes it to the appropriate approval workflow, enabling faster resolution. See Legal Conflict of Interest for more information.
Legal Hold Notification	• Streamlined legal hold life cycle: Streamline the legal hold workflow by enabling you to create legal hold matters, assign custodians, issue notices, track acknowledgments, and ensure compliance throughout the process. • Enhance custodian engagement by sending them legal hold notifications and reminders to ensure timely acknowledgment and accountability throughout the legal hold process. • Reduce legal risk compliance with a controlled closure process. When the legal hold is officially closed, the Legal Hold Notification application stores detailed information about the preserved data. See Legal Hold Notification for more information.
Legal Matter Management	Help ensure that sensitive information remains confidential with stakeholder controls through attorney-client privilege (ACP) protection for legal requests and matters. See Legal Matter Management for more information.
Legal Request Management	Help ensure that sensitive information remains confidential with stakeholder controls through attorney-client privilege (ACP) protection for legal requests and matters. See Legal Request Management for more information.
Lifecycle Events	• Enable logging and use it as a tool to diagnose problems or to acquire pertinent information about the processes that ran in a Lifecycle Events case. • Effectively troubleshoot the root cause of an issue that is adversely affecting a Lifecycle Events case. See Lifecycle Events for more information.
Localization Workspace	• Dynamic artifact detection enables Localization Workspace to identify all translatable content, including your custom artifacts. From version 1.1.0. • With status synchronization, translation requests in Localization Workspace reflect the same status as the Localization Framework projects. From version 1.1.0. • A Configuration hub and two new Guided Setups are available to help admins configure Localization Workspace. From version 2.0.2.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Optional due dates and language groups enhance the efficiency of creating translation requests. From version 2.0.2. • When selecting specific documents to translate, translation requestors can take advantage of a bulk select/deselect option as well as text search of document titles. From version 2.0.2. See Localization Workspace for more information.
MCP Server Console	• Get started with the preconfigured Quickstart Server for looking up and summarizing incident and case records. • Create MCP servers and tools based on Now Assist skills for different use cases. • Connect to any MCP client using OAuth 2.0 authentication. See MCP Server Console for more information.
MID Server	• MID Server smart workload manager continuously evaluates load and assigns jobs in a cluster to ensure that no server is overloaded. • MID Server logging has been improved with log backups that are preserved in a compressed format on a local host with an option to fetch to the instance. See MID Server for more information.
Manufacturing Commercial Operations	• Create recall campaigns and claims to manage recall campaigns and streamline collaboration with dealers to resolve claims. • Create repair claims to streamline collaboration with dealers to submit and resolve claims for repairs performed under warranty. • Create sales promotions and claims to manage sales promotion campaigns and to streamline collaboration with dealers to resolve claims. • Create phases and sub phases in the recall campaign to enable the manager to launch it for selected assets, and notify the targeted dealers. • Submit pre-authorization requests to confirm whether certain parts, fees, or repairs are covered under a warranty or service contract. • Create non-conformance (NC) and quality investigation (QI) cases to capture quality problems, coordinate investigations, and collaborate with stakeholders throughout resolution. See Explore Manufacturing Commercial Operations for more information.

Application or feature	Details
Mastercard Spoke	• File pre-arbitration and arbitration cases directly through Mastercard's API. • Handle tasks such as searching transactions, creating claims, and processing chargebacks, pre-arbitration, and arbitration case filings efficiently. • Enable dispute agents with real-time data exchange and embedded Mastercard dispute life cycle workflows. • Accelerate time to value with a predefined Mastercom Extended spoke that reduces development effort and speeds up deployment. See Mastercard Spoke for more information.
Mentoring	Enable Mentoring to configure multiple mentoring programs.
Mobile Platform	• Access Mobile App Builder and Mobile Card Builder inside ServiceNow Studio. • Use enhanced capabilities within the input form screen. • Engage with the improved error handling when working with uploads. • Add customized client-side translations to extend language support on your mobile device. See Mobile Platform for more information.
Model Risk Management	• Maintain a centralized repository of all models, capturing key details such as ownership, status, model tier, and risk rating. • Manage the complete model life cycle by tracking models from initiation to monitoring through defined governance stages. • Evaluate model risks based on their usage, complexity, and impact. • Perform validation of model design, performance, and implementation. • Capture, track, and resolve validation findings or performance issues, ensuring timely remediation and continuous risk mitigation. See Model Risk Management for more information.
Next Experience	• Customize the visual experience of the Now Assist menu by using the new toggle to switch between standard or wide view. • Manage the visibility of page alerts with a new accessibility user preference. • Access usage analytic data for applications and web pages directly with the new Usage Analytics utility menu.

Application or feature	Details
	See Next Experience UI for more information.
Next Experience Developer (NED) Tools	• View traces as a full-screen waterfall with an enriched root span list that has more actionable metadata. • Access cache buster details to view how service workers impact page performance. See Next Experience Developer Tools for more information.
Notifications	• Use email diagnostics dashboard to monitor email delivery metrics, track bounce management, and overall health associated with email sender and reader jobs. • Control the preferences page to display relevant notifications. • Support multiple target records for email digest. • Use the standard forms for system notification preference. • Handle incoming email requests intelligently with the new email agentic workflow by identifying intent, executing actions, and drafting appropriate email responses. See Notifications for more information.
Notify	• Build Notify subflows according to your requirements by using the default subflows provided in new instances. • Coral is the new default theme for Next Experience and Core UI, offering a user-friendly experience. See Notify for more information.
Now Assist	Zurich Patch 7 • Explore revamped **Manage AI models** option within Now Assist Admin for managing and configuring model providers, and updating model provider versions. • Select a record from the Now Assist Context Menu inline citation to navigate directly to the record page, where the referenced section will be highlighted for easy identification. • View all AI-generated content, now visually highlighted for easier recognition. • Set the minimum word count required for the Now Assist icon to appear, allowing you to control when the icon is displayed based on content length. Zurich Patch 5

Application or feature	Details
	• Create a custom model to meet your specific needs and control behavior. • Customize ServiceNow skills by modifying the prompt, inputs, and providers. Zurich Patch 1 • Set up a security access control list to verify user authentication for Now Assist Skill Kit. • Use Document Intelligence as a tool when you create a skill. • Use UI Builder to deploy custom skills. • Use a custom data generator to create synthetic datasets. See Now Assist Skill Kit for more information.
Now Assist for App Engine	Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Generate summaries for records in custom applications using the generative AI capabilities of Now Assist. Zurich release notes • Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. See Now Assist for App Engine for more information.
Now Assist for CMDB	Zurich Patch 7 • Get AI-powered answers your questions on CI classes and attributes to help you work in CI forms, dashboards, home pages, and other views on the workspace. • Search queries can now span multiple tables and relationships between CIs. Zurich Patch 5 • Review changes to Now Assist usage measurement Zurich Patch 4 • Some Now Assist skills and agentic workflows are now turned on by default. • Agentic workflows and AI agents included with Now Assist applications now require additional security configuration. • Reduce the debugging time and effort when you resolve issues with Service Graph Connector import sets.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Find and resolve de-duplication tasks. • Speed the process of manually creating CIs. • Methodically work through the process of improving CMDB data governance. • Search for CIs by specifying any of several attributes of the CI of interest. • View a concise summary of the key CI data on a CI form in a workspace page or on any list view. Zurich Patch 3 Zurich Patch 2 Zurich Patch 1 See Now Assist for Configuration Management Database (CMDB) for more information.
Now Assist for Collaborative Work Management (CWM)	Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • In Zurich Patch 4, some Now Assist are now turned on by default. • Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. • Help increase the efficiency of your teams using the generative AI capabilities of Now Assist for CWM. See Now Assist for Collaborative Work Management (CWM) for more information.
Now Assist for Configure, Price, Quote (CPQ)	Summarize quote for immediate, comprehensive insights into quote details (product, pricing, and terms) to improve quote accuracy, help teams align, reduce manual review, catch issues early, and accelerate quote turnaround. See for more information.
Now Assist for Creator	Zurich Patch 7 • Generate themes and color palettes from brand images using the new theme generation workflow in Theme Builder. • Edit published or live catalog items directly through conversations with Now Assist. • Configure UI policies, location, access, fulfillment, and portal settings for catalog items with the catalog item generation skill. Zurich Patch 5

Application or feature	Details
	• Review changes to Now Assist usage measurement. Zurich Patch 4 • Some Now Assist skills are now turned on by default. • Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications. • Expedite the troubleshooting process by using the ATF troubleshooting agent store application. • Learn about how to use UI Builder and modify UI pages with the UI Builder agent. • Plan your application development with the Build Agent planning tool. • Generate catalog items conversationally and preview them during the creation process with Now Assist in Catalog Builder. Zurich Patch 3 • Accelerate the transition from application design to development by connecting the Build Agent to the Figma Model Context Protocol server. Zurich Patch 2 • Try the Build Agent for free with the Build Agent (Trial). Zurich Patch 1 • Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. • Create, edit, and deploy fully functional ServiceNow applications using the Build Agent in the ServiceNow IDE. • Enable security implementation to execute AI agents and agentic workflows through access control lists (ACLs) and user identities. See Now Assist for Creator for more information.
Now Assist for Customer Service Management (CSM)	Zurich Patch 7 • Enhance the Complaint Case playbook to align playbook activities with agentic workflows, introduce AI-driven summarization and drafting capabilities, and remove legacy components that are no longer part of the complaint experience. • Monitor how users engage with genAI skills in Now Assist for CSM. • Get a case status and manage cases through natural voice conversations. Zurich Patch 5

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Enable the Recall manager to create corrective actions and charges for the recall campaign using the create recall corrective actions AI agent. See Now Assist for Manufacturing Commercial Operations for more information.
Now Assist for Operational Sustainability Management Management	Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 Accelerate carbon reporting with AI-powered calculations, validation, and insights for Scope 3 emissions. Automate metric data collection from utility invoices by extracting key information using the AI-driven document intelligence for utility invoices. See Now Assist for Operational Sustainability Management for more information.
Now Assist for Operational Technology Manager (OTM)	Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Some Now Assist skills, agents, and agentic workflows are now turned on by default. • Find OT Configuration Management Database (CMDB) records more quickly by using the OT CMDB search function. • Simplify the upload, validation, and import of your OT device data by using the Import OT device spreadsheet into OT CMDB agentic workflow. See Now Assist for Operational Technology Manager (OTM) for more information.
Now Assist for Operational Technology Service Management (OTSM)	Australia • Quickly understand the OT incident context and respond to user inquiries by using the OT incident summarization skill. • Help save time by automatically updating the resolution notes for an OT incident. • Generate a KB article when an OT incident is resolved by using an agentic workflow. See for more information.
Now Assist for Order Management	Zurich Patch 7

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Enable business-to-business (B2B) customers to create invoice dispute cases through AI-powered chat and voice assistants that guide them through conversational dispute intake on the Business Portal. • Provide uninterrupted handoff to human agents to support complex use cases, with full conversation context transferred to the CSM/ FSM Configurable Workspace. • RMA AI agent for automated RMA entitlement and intelligent case handling. Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Enable B2B customers to submit order cases autonomously from the Business Portal by simply describing their needs in natural language using the manage order operations agent. • Summarize complex orders across products, services, and fulfillment tasks, enabling agents to quickly understand status, take the right actions, and avoid navigating fragmented views to make the next steps easier and improving productivity. See Now Assist for Order Management for more information.

Now Assist for Retail Service Management (RSM)	Zurich Patch 5
	• Review changes to Now Assist usage measurement.
	
	Zurich Patch 4
	• Enable retail store support agents to use the store inquiry AI agent to:
	  ○ Search multiple knowledge sources to generate clear, traceable responses and flag uncertain cases for human review.
	  ○ Improve with every resolved query and seamlessly fit into HQ workflows with tailored suggestions.

Now Assist for Sales Force Automation (SFA)	Zurich Patch 7 • Now Assist for Sales and Order Management (SOM) is now known as Now Assist for Sales Force Automation (SFA) to align with our updated product taxonomy. There is no change to functionality or existing customer configurations. Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 2

Application or feature	Details

	• Enable sales agents to use the Help nurture new leads agentic workflow to:
	  ○ Proactively engage with initial leads
	  ○ Book an appointment/demo to qualify a lead
	  ○ Identify opt-outs and disinterest for lead disqualification
	
	See Now Assist for Sales Force Automation (SFA) for more information.

Now Assist for Sales and Order Management for Telecommunications (SOMT)	Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Collects the customer order information, identifies if the order needs enrichment, and creates the enrichment tasks. On closure of the enrichment task, it invokes the order fulfillment agent. • Uses the historic order tasks to create the order tasks. If the historic data doesn't return any results, the large language model (LLM) is used to get the response. • Checks the automation flow and fulfill order tasks. • Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications. See Now Assist for Sales and Order Management for Telecommunications (SOMT) for more information.
Now Assist for Security Incident Response (SIR)	Zurich Patch 7 • Help enhance incident resolution plan generation by adding your existing runbooks to the AI runbooks section within the Security incident resolution plan skill. The existing runbooks provide additional context to the plan generation skill. • Use the Sightings search and Isolate host capabilities in the Resolve security incident workflow to help resolve security incidents. Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Some Now Assist skills are now turned on by default. • Use generative AI to create a quality assessment report of a security incident. • Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications. Zurich Patch 1 • Help analysts to add security incidents details to the Shift Handover report by chatting with AI agents in the Now Assist panel.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Zurich Early Availability • Help your analysts to gain insight into security incident record metrics with an agentic workflow. Chat with AI agents in natural language from the Now Assist panel. • Help your analysts to resolve security incidents by chatting with AI agents in the Now Assist panel where the AI agent can assist in providing a resolution plan.
Now Assist for Software Asset Management (SAM)	Zurich Patch 7 • Automate the process of assigning available licenses to the Microsoft 365 Admin Portal by using an agentic workflow. Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Some Now Assist skills, agents, and agentic workflows are now turned on by default. • Automate user resolution with AI for SaaS license management to support efficiency and accuracy in subscription management. Zurich Patch 1 • Automate and streamline the software asset request process by using an agentic workflow. • Automate the process of creating reclamation rules by identifying software products suitable for reclamation using an agentic workflow. • Automate the evaluation of unused and underused software installations for potential reclamation by using an agentic workflow. • Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications. See Now Assist for Software Asset Management (SAM) for more information.
Now Assist for Source-to-Pay Operations	Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Some Now Assist skills are now turned on by default. • Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications. Previous Patch releases

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Some Now Assist skills are now turned on by default. • Create purchase requisitions faster by uploading vendor quote files directly through Now Assist's AI-powered chat interface in the Employee Center. • Use the improved AI search in Shopping Hub, powered by the Retrieval Augmented Generation (RAG) framework, to get more accurate and relevant results. • The Help fulfill procurement requests agentic workflow has been renamed to Conversational intake for sourcing and procurement to better reflect its expanded scope and capabilities. • Use enhanced AI agents for the Conversational intake for sourcing and procurement agentic workflow in Now Assist for SPO to improve usability and operational efficiency. • Use enhanced AI agents for the Coordinate supplier onboarding agentic workflow in Now Assist for SLO to automate the registration of external suppliers and companies and streamlines the onboarding process. • Use the Field extractor skill to automate the extraction of invoice number or supplier invoice number from the inquiry case generated through various channels (emails, virtual agent chats, or web content). Automating the extraction of invoice and supplier numbers enhances Accounts Payable agents' efficiency, leading to faster and more accurate resolutions. • The Enhanced Inquiry resolution provider AI agent uses more data sources to suggest resolution to supplier inquiries. See for more information.
Now Assist for Strategic Portfolio Management (SPM)	Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • All Now Assist for SPM skills are activated by default. • Use the identify similar records skill to find similar demands based on contextual similarity. • Enable the project task monitor AI agent to autonomously monitor project tasks on the critical path of a project. • Use the **Send preview** button to share a project insights email instantly. • Generate measurable targets from goals information and optional context with the target generation skill. Zurich Patch 1 • Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Application or feature	Details
	See Now Assist for Strategic Portfolio Management (SPM) for more information.
Now Assist for Telecommunications, Media and Technology (TMT)	Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Address voice quality issues and validate tickets with RADCOM. • Summarize the risk signal and issues records along with respective risk solution and occurrence records. • Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications. Zurich Patch 1 • Manage and resolve billing inquiry case requests using a team of AI agents. • Analyze network incidents, correlate associated cases, and provide resolutions. • Summarize Knowledge Graph service details, success initiatives, internal plays, customer plays, and Zoom meeting details. • Analyze account health, trigger renewal flows, schedule, and manage touchpoint meetings. • Use agentic AI to quickly create consumer registrations. See Now Assist for Telecommunications, Media and Technology (TMT) for more information.
Now Assist for Third-party Risk Management (TPRM)	Zurich Patch 7 • Use generative AI to recommend TPRM issues for reviewer validation. Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Use Now Assist for Third-party Risk Management (TPRM) to generate concise, AI-powered summaries of TPRM that can help with interpreting complex issue records. • Some Now Assist skills, agents, and agentic workflows are now turned on by default. See Now Assist for Third-party Risk Management (TPRM) for more information.

Application or feature	Details
Now Assist for Vault	Zurich Patch 4 The generate custom data pattern skill now uses the Now LLM Service as the default provider. You can switch to another provider as needed. Zurich release notes The Now Assist for Vault application generates custom data patterns from text descriptions to streamline your workload, checks role access for an encrypted column to monitor your instance's encryption access posture, and schedules data discovery jobs to detect sensitive data. See Now Assist for Vault for more information.
Now Assist for Vulnerability Response	Zurich Patch 5 • Review changes to Now Assist usage measurement. See the "Changed in this release" section below. • Retrieve host (Vulnerability Response) and Application Vulnerability Response (AVR) data with the Retrieve VR Data agentic workflow. • The Retrieve VR Data agentic workflow is supported in the Unified Security Exposure Management (USEM) and legacy Vulnerability Response workspaces. Zurich Patch 4 • Some Now Assist skills are now turned on by default. • Use generative AI to help you build custom API connectors in the Security Posture Control workspace. • Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications. Zurich Patch 1 • Help analysts identify and remove duplicate host vulnerable items. • Help analysts resolve remediation tasks with preferred vulnerability solutions from third-party vendors. **Zurich Early Availability**: Help your vulnerability managers and analysts to resolve remediation tasks, assess your exposure to vulnerabilities, and analyze metrics for remediation targets. Chat with AI agents in natural language from the Now Assist panel. See Now Assist for Vulnerability Response for more information.
Now Assist for Workplace Service Delivery (WSD)	Zurich Patch 7: Summarize workplace cases by using Now Assist for WSD. Zurich Patch 5: Review changes to Now Assist usage measurement. Zurich Patch 1

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Help map admins configure the map during bulk updates to Indoor Mapping using the automate map updates agentic workflow. • Optimize a maintenance case based on the space utilization rate of the location where a maintenance case is created using the optimize cleaning activities agentic workflow. See Now Assist for Workplace Service Delivery (WSD) for more information.
Now Assist in AI Search	Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Simplify setup with automatic activation of Now Assist Multi-Content Response Genius Results for search profiles when you use Guided Setup to activate the Now Assist panel. • Increase search precision and contextual relevance for knowledge article, Catalog Item, external content, and topic retrieval searches with hybrid search. • Improve the enhanced chat experience by configuring the system to use AI Search as the source for Ask Now Assist suggestions. • Provide more focused auto-complete suggestions for enhanced chat that honor the search user's domain restriction and the exclusion list for unwanted suggestions. Zurich Patch 1 • Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. • Improve search recall and accuracy with semantic vector indexing of Catalog Item short descriptions. • Prompt users to log in to Microsoft SharePoint Online as needed to see files shared with them when viewing Knowledge Graph user citations in Now Assist Multi-Content Response Genius Result answers See Now Assist in AI Search for more information.
Now Assist in Contract Management	Zurich Patch 7 • Provide feedback on Now Assist contract analysis results to help improve the AI accuracy. • Navigate directly to non-standard clause locations in a document when reviewing Now Assist suggestions in the Microsoft Word add-in.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Configure use case mappings to extract metadata and obligations from a signed contract that is uploaded directly on a contract record. • Use Now Assist powered conversational search to query contract documents using natural language and dialogue-driven queries, making it easier to find relevant information. Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Some Now Assist skills are now turned on by default. • Use AI-powered obligation extraction to automatically identify and capture key obligations from signed contracts, and then review, edit, approve, or reject them within the contract playbook to create obligation records automatically. • Activate the Contract obligation extraction skill in the Now Assist Admin console to enable automatic obligation extraction. • Use Now Assist powered conversational search to query contract documents using natural language and dialogue-driven queries, making it easier to find relevant information. • Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications. Zurich Patch 1 • Use the contract playbook to review and update the AI extracted metadata and reminder date for contract renewal or termination. • Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. See Now Assist in Contract Management for more information.
Now Assist in Document Intelligence	Zurich Patch 7 • View citations for multiple attachments using the document and visual insights AI agent. • Create skills with data extraction, question answering, and summarization capabilities using document and visual intelligence in Now Assist Skill Kit. • Now Assist in Document Intelligence skills are now turned on by default. Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• View a test document in a larger workspace on a separate browser tab during use case setup. • Use the document and visual insights AI agent to upload files, extract information without a predefined use case using a selected LLM, and display the results in a dedicated document view. • Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications. Zurich Patch 1 • Leverage document data extraction and document Q&A capabilities in a single Extract information from documents skill. • Create skills with data extraction, question answering, and summarization capabilities by using document and visual intelligence in Now Assist Skill Kit. • Choose the language for a use case to help the optical character recognition (OCR) model better detect the text to extract from your files. • Extract information from files with text written in Simplified Chinese or Japanese. • Extract information from documents for Operational Sustainability Management (Operational Sustainability Risk Management) workflows. Early Availability • Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. See Now Assist in Document Intelligence for more information.
Now Assist in Platform Analytics	Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4 • Some Now Assist skills are now turned on by default. • Create "explorations"—editable documents where you analyze data with the help of AI. Refine responses, add your own input, and collaborate with others to make data-informed decisions faster. Previous Patch releases • Generate and export Platform Analytics artifacts from conversational interactions in the Now Assist panel. • Benefit from a single, smooth experience in asking questions across all Now Assist for Platform Analytics skills, as well as other applications that incorporate Platform Analytics and AI, through a shared backend.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	See Now Assist in Platform Analytics for more information.
Now Assist in Virtual Agent	Zurich Patch 5 • Review changes to Now Assist usage measurement. • Japanese language support for voice assistants enables Japanese-speaking users to experience natural, culturally appropriate interactions with AI voice agents. Zurich Patch 4 • Some Now Assist skills, agents, and agentic workflows are now turned on by default. • Create and manage LLM-based chat and voice assistants within Assistant Designer, a centralized assistant administrator experience. • View a people citation's org chart in the interactive view. The interactive view opens to the right of the chat conversation area. • Notice several UI improvements to enhanced chat and enhanced chat's full-page experience, including an updated input bar, gradient borders, copy message icon for received messages, and more. • Enable voice input to allow users to use a microphone to type the input. Voice input is only available for Now Assist panel Platform assistant. Zurich Patch 1 • Use Google Gemini and Anthropic Claude on AWS as AI model providers for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. • Use agentic conversations and view agentic conversational processing flow steps. • View extended entities and records in standard and enhanced chat conversations if they’re associated with the Knowledge Graph Natural Language Query (NLQ) schema. • View suggested search queries previously performed in the portal's search bar within enhanced chat conversations. • Work with the simplified subheader of enhanced chat. • Delete closed enhanced chat conversations. • Expand the fallback options. • Enter into web search mode manually via the input bar. See Now Assist in Virtual Agent for more information.
On-Call Scheduling	• Build on-call escalation notification configurable flows by using subflows that are available by default in new instances. • Add new custom providers as channels for on-call escalation notifications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Configure the on-call notification message and response keywords to send the escalation notifications to the stakeholders. • Send the on-call escalations notifications to all the stakeholders when any of the configured record fields are modified. • Use Coral, which is the new default theme for Next Experience and Core UI. See On-Call Scheduling for more information.
Operational Resilience	• Set up the nexus map configurations and use the interactive node map view to define dependencies and relationships between records. • Generate a Microsoft Word document for the action tasks in Digital resilience incident reporting. • Create DIR cases for multiple regulations from either an incident or a security incident report. You can map entities to regulations and configure the Smart Assessment Engine (SAE) template for each regulation within the regulatory agency profile. • Generate and validate regulator-ready Register of Information (RoI) packages for EU DORA compliance. • Use the enhanced fix scripts in the Common Service Data Model for improved Operational Resilience metrics. • Evaluate the importance and impact tolerance of services and self-attest their status by using Smart Assessment. See Operational Resilience for more information.
Operational Sustainability Management	• Enable organizations to provide estimated data using pre-defined methods like average when actual data isn't available. • Enhance data accuracy and governance by adding a review process for automated metric definitions. • Integrate real-time energy consumption data from DEX into the ESG Sustainable IT Dashboard for more accurate and reliable sustainability reporting, especially for desktops and laptops. • Enabled tracking and reusing narratives or statements for disclosures, making it easy to highlight specific achievements or commitments. • Enable creating claims directly from Microsoft Word to ServiceNow via the Microsoft 365 plugin. • Use enhanced entity-based access for metric definitions, metrics, metric data tasks, and metric data, enhancing data security and granular access control. • Create and synchronize claims automatically when uploading disclosures from Word via the ServiceNow add-in. This streamlines ESG reporting and confirming traceability across templates.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Avoid calculation inconsistencies caused by missing operand values. The Calculated Metric Definition Settings table enables specifying default values for operands, confirming smooth execution and flexible configuration. • When renaming a metric definition, there's an option to apply the updated name to its child metrics and their associated metric data tasks. • Enabled audit tracking for emission factor tables and all changes are automatically logged for compliance and traceability. • Removed the unit restrictions between calculated metric definitions and emission factors, enabling any emission factor to be applied regardless of unit. See Operational Sustainability Management (formerly Environmental, Social, and Governance) for more information.
Operational Technology Incident Management	Report an OT incident without an OT incident role using the Employee Center for OT. See Operational Technology Incident Management for more information.
Operational Technology Manager	• Get a deeper look into your OT network with the OT network map in the Industrial Workspace, where you can view a site, its subnets, and the OT devices in each subnet. • View the Operational Technology Manager (OT) device-to-device connections with additional information such as port and protocol values. • Review the OT applications and versions that you have installed on the About Industrial Workspace page. • Keep your OT device data updated by using the Configuration Management Database (CMDB) OT class model updates and UI enhancements. • Improve the processes for importing and classifying your OT device data with updates and UI enhancements for the Pre-import OT Worksheet Entry Review (POWER) tool. See Operational Technology Manager for more information.
Operational Technology Vulnerability Response	• Configure Operational Technology Vulnerability Response from the Security Exposure Management Workspace (SEM Workspace). • Access the Operational Technology Vulnerability Response Risk Calculator plugin directly without loading the demo data. • View all vulnerable items that have been created from the OT Vulnerable Items list in the Industrial Workspace. • View all remediation tasks that have been created from the OT Remediation Tasks list in the Industrial Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• View all vulnerability exceptions that have been created from the OT Vulnerability Exception Approvals list in the Industrial Workspace. • Hardware Vulnerability Assessment is available for firmware discovery models without normalized data.
Opportunity Management	• Enhance visibility and flexibility in pricing amendments for existing contracts or services through Move, Add, Change, Delete (MACD) actions on Sold Products (SP), Product Instances (PI), or Contracts. • Identify multiple stakeholders and accurately qualify opportunities with opportunity associated contacts and their defined roles. This is vital for streamlining sales processes and gaining clarity on how each contact influences the outcome of a deal. • Drive structured collaboration among multiple stakeholders involved in closing a deal using Opportunity Teams. The teams verify collaboration across various roles such as Account Executives, Sales Engineers, Customer Success Managers, and Partner Managers. See Using Opportunity Management for more information.
Order Management	• Handle move orders support. • Enhance the Order management (OM) integration with Strategic Portfolio Management (SPM) to enable projects for site and maintain program project and sub-project hierarchy. • Enables agents to change the location for product inventory at the order line level. • Support for nested objects, arrays, and custom attributes to model complex products. • Support for order header discounts. See Order management for more information.
Partner Relationship Management	Use the CSM Configurable Workspace to enable your enterprise administrators to view all the details that are related to their partners. See Partner Relationship Management for more information.
Password Reset	Coral is the new default theme for Next Experience and Core UI, offering a more modern experience. See Password Reset for more information.
Performance Analytics	• Track critical process metrics and trends. • Measure process health and behavior against organizational targets.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Identify process patterns and potential bottlenecks before they occur. • Continually visualize historical and real-time process statistics in role-based dashboards. The dashboards enable individual stakeholders to make informed decisions. See Performance Analytics (Indicator data sources) for more information.
Performance Analyzer	• View a waterfall or request flows displayed as executions sequences in a structured tree-like timeline. • Receive page load time data directly on the instance. • Access aggregated metrics by application and routes. See Performance Analyzer for more information.
Platform Analytics experience	• Collaborate on data-informed decisions through an AI-assisted, interactive explorer that serves as a centralized workspace, where you can create and share data visualizations on the fly. • Manage Performance Analytics indicators more conveniently, with access to editing, creation, and migration from within the Platform Analytics experience. See Platform Analytics experience for more information.
Playbooks in Workflow Studio	• Add permissions for playbook authors and runtime users. • Activate a playbook without a trigger. Set multiple potential triggers for a playbook, or trigger a playbook on a schedule. • Enable AI agents to complete activities without human intervention during runtime. • Set child variants to evaluate later in a playbook. • Create decision branches for stages. See Exploring playbooks for more information.
Policy and Compliance Management	• Association of citations to controls feature enables users to associate controls with citations directly to avoid duplicated controls and ensure accurate compliance reporting. • Multiple enhancements to control objectives rationalization process, including improvements including automatic rationalization process creation, simplified two-step workflow for recommendations, skipped approvals for owner-reviewers, comment capabilities, and improved UI.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Now Assist for IRM includes skills and AI agent to identify affected control objectives when citation descriptions change and to provide suggested updates for review and approval. • Enhancements to control objectives and controls, including control objective requirements for granular statements, automatic control requirement generation, and attestation at control requirement level. • Enhancements to policy exception and extension requests, including approver pop-ups with key details, no indicator tasks for exempt controls, Send Information button for requesters, and expanded linking requirements for issue-based policy exceptions. See Privacy Management for more information.
Portfolio Planning	• View the planned costs of your planning items for the past fiscal periods. • Use **Display mode** to switch between different views of the financials record page. • Experience consistent roadmap bar colors for choice list attribute values across all portfolio plans. View the roadmap-level milestone row while scrolling down the Roadmap page. Use different icons to distinguish item-level milestones. • Apply filters using string-type and Boolean field values to view the desired data. • Customize and apply a theme to your roadmap to match your organization's standards. • Create and manage monetary benefit plans to capture and track projected and actual benefits. • Manage and run projects in various global currencies besides the functional currency using multicurrency. • Generate labor cost on sub-projects based on the resource assignments. See Portfolio Planning for more information.
Predictive Intelligence	• Predictive Intelligence errors are logged in a new, dedicated table. The PI - Observability Dashboard leverages this table to provide analytics on prediction errors. • New advanced options for Classification models are available, including new parameters and a new algorithm. • Validation logic ensures that Predictive Intelligence models have ACLs to access data tables. See Predictive Intelligence for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Privacy Management	• A new external Personal data rights (PDR) request form enables customers, ex-employees, and third parties to submit PDR requests from a website with email verification. • Access Control by Legal Entity feature enables teams to access only processing activities relevant to their legal entity, maintaining privacy by design principle. • Now Assist for Privacy Management plugin uses Generative AI to streamline privacy workflows by summarizing assessments, condensing issues, and merging control objectives. • Reporting privacy incidents through email feature enables employees to report privacy incidents directly through email. • Impacted and related areas configuration allows privacy case managers to add custom business area types to privacy cases for better context. • Revamped Processing Activity overview page provides a unified dashboard showing key compliance and risk metrics for processing activities. See Privacy Management for more information.
Proactive Service Experience Workflows	• Diagnose the incidents and change requests in the Proactive Service Experience Workflows. Create a resolution task manually to resolve the issue. • Run the diagnostics from the contextual panel in the Proactive Service Experience Workflows, Incident, Change request, and Product Support for Technology playbook. • Execute tests for a Configuration Item (CI) in the Proactive Service Experience Workflows, Change request, and Product Support for Technology playbook. For Configuration Items (CIs), run related tests directly from the CI form view. • Enables your customer to modify the visibility of the **Diagnose** tab and run diagnostics from the contextual panel in the Decisions table. • Technology Product Support Case application is renamed to Product Support for Technology • Technology Product Support Case application is renamed to Product Support for Technology. See Proactive Service Experience Workflows for more information.
Process Mining	• Generate highlights of the improvement opportunities in the Opportunity details page. • Identify inefficiencies by focusing on the delays in task assignment by using idle time analysis. • Analyze the workload of transitions and cases by using touchpoint analysis.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Enhance data security by marking projects as restricted. • Process Mining is integrated with ServiceNow playbook. See Process Mining for more information.
Product Catalog Management and Pricing Management	• Support AI-powered semantic search queries to find relevant product offerings and service specifications in the product catalog interface. • Generate and update product offering blueprints that guide the accurate configuration of customizable products by agents and customers. • Enable sales agents to create price and quantity ramps, a pricing strategy for increasing product pricing and quantity amounts over specified time periods. • Define pricing on product offers based on the price of other product offers or transaction context variables. • Use product characteristics to adjust product costs, which are then used in margin calculations for sales quotes. See Product Catalog Management and Pricing Management for more information.
Project Portfolio Management	• Synchronize resource assignment dates with the project end dates, and end resource assignments automatically when a project reaches its end date. • Manage all project-specific resource assignments in one place by accessing the resource page directly from Project Workspace. • Identify similar demand records based on contextual similarity in the name, description, and business case content using the identify similar records Now Assist skill. • Convert demands to Enterprise Agile Planning (EAP) entities, such as Epic, Feature, or Capability, directly from Demand Management. See Project Portfolio Management for more information.
Project Workspace	• Guide teams through predefined stages and actions for each process using Playbooks. • Track, modify, and synchronize all resources assignment for a project from the resource assignment list page, which displays all assignments associated with that specific project. • Create and manage monetary benefit plans to capture and track projected and actual benefits.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Manage and run projects in various global currencies besides the functional currency using multicurrency. • Generate labor cost on sub-projects based on the resource assignments. See Project Workspace for more information.
Public Sector Digital Services	• Create funding programs to establish top-level budgets and timelines that flow down to associated grant programs. • Simplify and streamline the grant application decisions with Grants Management: Evaluation & Decision. • Enable merit reviewers to track, score, and monitor grant applications via a dedicated Reviewer Service portal. • Enable applicants to review and download the results letter and merit review summary of their grants application, and accept or decline their award, all within the new **Results** tab of the Grants Management portal. • Define fees for and autonomously assess fee waivers against agency-defined criteria for information requests with the Help manage public information requests agentic AI Agent, part of the Public Sector Digital Services AI Agent Collection application. See Public Sector Digital Services for more information.
Purchase Order Management	• Use a collaborative workspace to coordinate with suppliers and relevant stakeholders simultaneously. • Receive automatic notifications, automatically prioritize them, and assign them to the appropriate person. • Utilize resolution tools to automatically update orders and review order plans for the affected material and location. See Purchase Order Management for more information.
Quote Management	• Support quote header discounts. • View the cost and profit of the entire quote to support informed discounting decisions and avoid unprofitable deals. See Quote Management for more information.
RPA Hub	Zurich Patch 7 • You can now selectively define which actions (components) are handled within a Try-Catch block and which are handled outside it. • Versions of model provider are now supported for RPA bot generation skill.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Zurich Patch 4 • Promote stability with the Long-Term Support (LTS) model for generative AI. • Only the sn_rpa_fdn.rpa_admin role can create, update, and delete records in the Robot License Distribution table. Zurich Patch 1 • Use Google Gemini and Anthropic Claude on AWS as AI model providers for RPA bot generation skill in addition to Now LLM Service and Azure OpenAI. • Use the Python connector to execute custom Python scripts or files as part of an automation workflow. • Use a Smart Card authentication for enhanced security. • Enhanced access controls for RPA bot generation skill. See Robotic Process Automation (RPA) Hub for more information.
Recommended Actions for Operational Technology Service Management (OTSM)	• Use the AI Enhanced Recommended Actions for OTSM feature to access external sources related to an OT incident and review why the document is relevant to the incident. • Display relevant actions to users based on the context of an OT incident record. See Recommended Actions for Operational Technology Service Management (OTSM) and AI Enhanced Recommended Actions for Operational Technology Service Management (OTSM) for more information.
Recruitment workspace	• Plan your work efficiently with better visibility through KPI dashboard and list views. • View and track job requisitions, applications, interviews, feedback, and more, all in one place. • Collaborate with, send reminders to, and track the actions of all internal and external stakeholders directly within the application. • Do all your work, such as managing job requisitions, interviews, talent pools, and more, in one centralized workspace, with streamlined sourcing capabilities included. • Monitor and improve hiring efficiency by tracking key metrics and applicant feedback. See Recruitment workspace for more information.
Regulatory Change Management	• Add multiple regulatory tasks or source document import tasks to a regulatory alert to manage the associated compliance activities efficiently. You can help to ensure that each task aligns with the

Application or feature	Details
	regulatory requirements to maintain structured tracking and accountability. • Close a regulatory task during the Implementation state after you verify that all required actions and documentation are complete. You can also confirm that no pending activities remain before you close a task. • Change the workflow of a regulatory task to reflect the updated compliance procedures or organizational processes. • Create action tasks when a regulatory task is in the New, Work in Progress, or Implementation states to drive progress. You can also assign responsibilities to help ensure that the compliance actions are executed in a timely manner. • Close regulatory alerts manually when all associated tasks and compliance obligations have been successfully addressed. You can verify that each related item meets the closure criteria before confirming that the alert is resolved. See Regulatory Change Management for more information.
ReleaseOps	• Use ReleaseOps guided setup to simplify initial configuration. • Customize ReleaseOps pipelines to move changes from development to production through as many instances as needed for your ReleaseOps ecosystem. • Schedule releases or deploy changes on-demand. • Automate the testing and validation process with ReleaseOps to ensure that the proper checks, tests, scans, and approvals are completed before releasing changes to production. See ReleaseOps for more information.
Request Management	Coral is the new default theme for Next Experience and Core UI, offering a more modern experience. See Request Management for more information.
Resource Management Workspace	• Move an assigned or unassigned resource assignment to a different start date to align the work with your organization's prioritization cycle. • View the type of operational work assigned to a resource in the resource board drill-down view. • Allocate effort from unassigned resource assignments using the following ways — auto-assign work among all the available resources, or partially assign work among for selected resources. See Resource Management Workspace for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Retail applications	• Use the store inquiry AI agent to help retail store support agents quickly find clear, traceable answers, flag uncertain cases for human review, and benefit from tailored suggestions that improve with every resolved inquiry. • Simplify frontline staff access for faster response times and improved accuracy with the Retail Mobile application. • Initiate and coordinate large-scale actions across multiple stores with the HQ Communications case type. • Standardize the reporting, tracking, and resolution of in-store issues with the Retail In-store Operations case type. • Resolve customer complaints quickly and accurately with the Retail Customer Complaint case type. • Bridge the gap between stores and HQ with an intuitive request and support system using the Store Inquiry case type for stores. See Retail for more information.
Return Merchandise Authorization	• Streamline sales return by enabling agents to manage RMA cases in Agent Workspace and bridging self-service with full support. • Handle product cases efficiently to streamline the return process and enhance the customer experience. See Return Merchandise Authorization for more information.
Sales Forecasting	• Confirm and finalize forecast values for a specific time period and category. • Modify and adjust forecast items. • Create and assign sales territories for improved sales planning and tracking. See Sales Forecasting for more information.
Sales Territory Management	• Allocate sales regions efficiently to align with business complexity and distribute the sales teams for optimal performance. • Verify the fair distribution of sales among sales representatives to reduce internal conflict, enhance accountability, and consistent performance across the sales organization. • Verify that only authorized users access specific records, maintaining security and compliance. • Manage large sales teams efficiently with a structured, rule-based method that verifies clarity, consistency, and scalability. See Sales Territory Management for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Security Center	• Use the new Identity and Access Management (IAM) section in Security Center to access IAM tools. • Use the overview summary pages for each IAM tool to get a summary of which utility each tool provides. • See all the platform security tasks that need your attention in Security Center. You can see notifications outside Security Center so that you're aware of these tasks without having to monitor the task list constantly. See Security Center for more information.

Security Incident Response	• Integrate Cortex XSIAM by Palo Alto Networks with ServiceNow Security Incident Response platform to turn SIEM insights into actionable incidents, thus accelerating response from detection to closure.
	• Use Advanced Work Assignment (AWA) to automatically assign incidents to your security analysts, based on their availability, capacity, and skills.
	• Ingest third-party risk scores in Security Incident Response to factor these scores when calculating risk scores.
	• Starting in version 13.9.33, you can do the following:
	  ○ Fetch closed offenses from IBM QRadar into Security Incident Response.
	  ○ Set the batch size for correlation rules during IBM QRadar offense polling to optimize performance.
	  ○ Use the Now Assist LLM-powered integration builder to rapidly build integrations for Security Incident Response using auto-code generation.
	  ○ Ingest MITRE D3FEND data and visualize attack–defense relationships through an interactive graph directly within a security incident.
	• Starting in version 13.9.21, you can do the following:
	  ○ Integrate CrowdStrike Next-Gen SIEM integration with ServiceNow Security Incident Response platform to retrieve detections and convert them into security incidents, thus enabling automated response actions.
	  ○ Improve incident classification and enable efficient retrieval of historical data and alerts through enhanced Splunk ES integrations.
	  ○ Configure and use on-call scheduling to prevent gaps in coverage and ensure analysts are available to address security incidents by configuring shifts for analysts.
	
	See Security Incident Response for more information.

Application or feature	Details
Security Posture Control	• Create and publish your own API connectors with a step-by-step process in the Connector builder module in the Security Posture Control workspace. You can use generative AI to automate some steps. See the Now Assist for Security Incident Response (SIR) release notes for more information about the Now Assist skill. • Get insights into your overall security posture and configuration gaps in your security tools using new policies and asset profiles that are included with the Security Posture Control application. • Use the policies included with the application or custom policies that you create to monitor your assets for overall security tool coverage, compliance with internal configuration standards, critical combinations of security gaps and vulnerabilities, and possible internet exposure. See Security Posture Control for more information.
Self-service and omnichannel engagement for CSM	• Integrate Amazon Connect with Interaction Controls Component (ICC) voice call features to allow agents manage phone interactions directly within their Workspace. • Allows agents to select a queue when making outbound calls to improve routing, reporting, and compliance. • Integrate WhatsApp Cloud API with CSM to enable rich media messaging, interactive controls, Virtual Agent automation, and Agent Workspace support without third-party dependencies. • Enable external routing of email interactions to reduce administrative effort. • Improve agent callback transfers for smoother handovers and support customers to request scheduled callbacks. See Omnichannels for communicating with customers and Interaction Controls Component (ICC) for voice calls for more information.
Service Catalog	• Enable catalog item creators to create complex catalog items in Catalog Builder with ease. They can create, edit, or delete client scripts, or create advanced reference qualifiers. • Help requesters complete catalog item forms faster on portals and Next Experience UIs using caller-provided key-value pairs that pre-fill catalog item forms. • Ease the work of catalog item requesters by letting them drag one or more attachments directly onto the form for faster submissions. • Use the Catalog browse component for an enhanced catalog item browsing experience on the Next Experience UI for catalog users. See Service Catalog for more information.

Application or feature	Details
Service Exchange	• Streamline data replication from provider to consumer instances with foundation data sync. • Enable seamless collaboration between provider and consumer with enhanced journal entry support. • Enable consumer users to access linked resources in the provider instance using magic links. See Service Exchange for more information.
Service Graph Connector for Microsoft Defender for IoT (Azure)	• View the class mappings available for the Service Graph Connector using the new Class Mappings menu • Use the Firmware Installation [cmdb_firmware_install] table to capture the firmware version. • Avoid OT entity update issues by using the new *ire_criterion_attribute* attribute on the OT Entity [cmdb_ot_entity] table. • Extend capabilities of the Service Graph Connector to import devices actively scanned by Microsoft Defender for IoT. • Ingest actively scanned devices from Microsoft Defender for IoT and assign them to a site in your ServiceNow instance automatically using the **Site Map** table. See Service Graph Connector for Microsoft Defender for IoT (Azure) for more information.
Service Level Management	• Coral is the new default theme for Next Experience and Core UI, offering a more modern experience. • SLA Timer Configuration supports target-based First to Breach SLA and advance condition-based First to Breach SLA. See Service Level Management for more information.
Service Observability	• Integrate with a number of new application performance management (APM) vendors. • Add service-scoped ServiceNow AI Platform charts to Service Observability dashboards, including charts from MetricBaseand as of 1.10, Health Log Analytics (HLA). • Customize your Service Observability dashboards to add more advanced charts using full vendor queries and template variables. As of 1.10, you can directly import charts from AWS and Azure. • Create dashboards for additional service types. • Connect to data sources efficiently with an improved flow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• As of 1.10, test your data mappings before using them to create charts and dashboards. • As of 1.10, use any field on a service as a tag key value in a data mapping and then use that tag as a variable in your chart queries. See Service Observability for more information.

Service Operations Workspace for ITSM	• Propose a standard change template from a change record in Service Operations Workspace (SOW).
	• Experience enhanced meeting and pagination controls in the Change Advisory board (CAB) workbench.
	• Configure the Microsoft Teams integration with Notify in SOW Admin Center.
	• Use visual indicators like colors and icons on chat session tabs to notify agents about unread messages to maintain the Service Level Agreement (SLA) for the chats in SOW.
	• Optimize your viewing experience by resizing the modals in SOW.
	• Find similar incidents and add them as child incidents to a major incident record.
	• Support subflows in the On-Call trigger rule configurations.
	• Configure the alerts and notifications in SOW to automatically dismiss within the specified time.
	• View the dependency map for reference fields in a separate tab within the workspace.
	• Starting in version 8.2, you can do the following:
	  ○ Analyze the metrics for configuration items (CIs) in the Digital End-User Experience (DEX) and Service Observability (SO) UI dashboard view on the Investigate tab of an incident record.
	  ○ Access and configure SOW from the Admin Center using granular feature admin roles.
	  ○ View the recent task records to which the knowledge article is attached.
	  ○ Manage user actions on the reference fields with the glide list action.
	  ○ Perform DEX actions on a Configuration Item (CI) using the Action library from the contextual panel of the record page.
	  ○ View the details of conflicts detected, and manually run conflict detection in the change request form.
	  ○ Configure monthly roster rotation for an on-call schedule.
	  ○ As an on-call shift administrator with the rota_admin role, access Teams, Schedules, and Home pages in SOW.
	
	See Service Operations Workspace for ITSM for more information.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Service Portal	• Use the support for Service Portal in the iOS Google App. • As an admin, configure the widget load order on Service Portal pages. • As an admin, defer the loading of AI Search assets to enhance page performance. See Service Portal for more information.

Service Portfolio Management	• Edit your service portfolios to comply with the new Digital Operational Resilience Act (DORA) standards:
	  ○ The Service portfolio record view includes the following key fields that are important for DORA compliance: **Managed by**, **Department**, and **Company** fields.
	  ○ Select multiple contracts in the **Contracts** field.
	• Delete the service portfolio or taxonomy node from the Digital Portfolio Management (DPM) scope.
	
	See Service Portfolio Management for more information.

Service Reliability Management	• Auto-generate service level objectives (SLOs) to help teams track service reliability in SRM. • Starting in version 6.5.0, remove unneeded services from SRM to keep your monitoring data relevant. • Starting in version 6.5.0, track real downtime and customer impact with outage-based service level indicators (SLIs). • Get timely error budget updates that reflect the impact of ongoing, open alerts. • Track, manage, and visualize service performance with the Service reliability dashboard. See Service Reliability Management for more information.
ServiceNow AI Lens	Zurich Patch 7 • Upload files, and then analyze and extract information from them. • Auto-map Microsoft Excel sheet headers with the columns of a ServiceNow® table. Zurich Patch 5 • Review changes to Now Assist usage measurement. Zurich Patch 4

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Trigger ServiceNow AI Lens from the Now Mobile® application to extract data from artifacts and auto-fill fields in a form. • Fill the Catalog Item form fields by triggering ServiceNow AI Lens from Service Portal. Zurich Patch 1 • Use the Lens actions to define default instructions, trigger options, custom context, transform response logic, and post processing instructions for ServiceNow AI Lens execution. • Configure Lens actions to launch ServiceNow AI Lens from any part of the ServiceNow AI Platform, such as a workspace form or a portal. • Trigger ServiceNow AI Lens from a Virtual Agent conversation on a mobile device or in a portal. • View captured images that are attached to an auto-filled record using ServiceNow AI Lens. • Use Google Gemini and Anthropic Claude on AWS as AI model providers for ServiceNow AI Lens in addition to Azure OpenAI. See ServiceNow AI Lens for more information.
ServiceNow AI Platform core feature	• Simplify and build queries with fewer conditions by leveraging hierarchical relationships in a condition builder. • Use additional scripting features, including Promises and Async await, with the ECMAScript 2021 (ES12) JavaScript mode. • Define dynamic categories and dynamic attributes once and reuse them using dynamic namespaces across multiple tables and dynamic attribute store fields. See Administer the ServiceNow AI Platform for more information.
ServiceNow IDE	• Clone a Git repository that contains multiple applications. • Use light and dark developer themes. • Use the ServiceNow IDE in any supported left-to-right language. See ServiceNow IDE for more information.
ServiceNow SDK	• Develop a user interface (UI) with React to build a full-stack application in source code. • Define flows, service catalogs, UI pages and more in source code with ServiceNow Fluent APIs. See ServiceNow SDK for more information.

Application or feature	Details
ServiceNow Studio	• As of version 28.2.1, simplify the app creation process by using Creator Studio, Now Assist for app generation, or by gaining inspiration from the App Gallery. • As of version 28.2.1, elevate your access to security_admin from within ServiceNow Studio to make changes to roles and ACLs. • As of version 28.2.1, several new granular admin roles enable developers to complete administrative configuration tasks without requiring the full admin role in ServiceNow Studio. • As of version 28.2.1, for file types that open in a builder, decide whether you want to edit the file in the builder or in the classic UI16 view. • As of version 28.2.1, access your favorite lists in ServiceNow Studio by bookmarking them. See ServiceNow Studio for more information.
ServiceNow Vault	Zurich Patch 4 • Manage and monitor cloud encryption metrics. • Get AI guidance using the Ask Now Assist panel in Vault console. • Use guided setup to begin autoclassifying sensitive data within Financial Services and Customer Service Management applications. • Monitor and review critical sensitive data metrics from the centralized ServiceNow Vault Console dashboard. • Navigate between security tools efficiently using the ServiceNow Vault Console dashboard. See ServiceNow Vault for more information.
Sidebar	Prevent Sidebar discussions from becoming cluttered by using threaded replies when responding to messages. See Sidebar for more information.
Skills Foundation	• The Skills Intelligence application name has been changed to Skills Foundation. • The skills ontology, which contained skill structure with categories and definition, is no longer provided. Supply your own skills data and import it into the Skills Foundation application. • Efficient skill search mechanism is provided by replacing machine learning models with AI search and AI search with RAG configuration for Pro Plus License (i.e. LLM Integration) customers. • Automatic HR job profile and Talent job profile synchronization when a new employee joins the organization, or an existing employee

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	changes position. You must have Human Resources Scoped App (sn_hr_core) installed for this feature to work. • Integration between SAP SuccessFactors and ServiceNow enables customers to import skills and user skills into ServiceNow, unlocking Growth Experiences features and driving higher adoption. The integration feature will only work for the customers who are using Job Profile Builder and will not work for those who are using Talent Intelligence Hub. See Skills Foundation for more information.
Smart Assessment Engine	• Collaborate on assessments in real time with multiple contributors. • Normalize assessment question scores to a common scale for fair comparison. • Capture data from physical documents quickly and accurately with barcode and QR code scanning. • Migrate question dependencies with an improved migration utility. • Simplify your workflow by combining assessments from different templates in a single and unified view. See Smart Assessment Engine for more information.
Software Asset Management	• Streamline Adobe integration with the Software Asset Management application using the Adobe Guided Setup. • Integrate SAP HANA Database with the Software Asset Management application to monitor the memory allocations and licensing costs for your SAP HANA Database measurement. • Track and optimize licensing for Microsoft Server products on Microsoft Hyper-V virtualization technology by using the Software Asset Management publisher pack for Microsoft. • Track and optimize licensing for VMware vSphere Standard (VVS) and VMware vSphere Essentials Plus (VVEP) by using the Software Asset Management publisher pack for VMware. • Gain the flexibility to retrieve both subscription and consumption data at the organization level using the enhanced Docusign integration with the Software Asset Management application. See Software Asset Management for more information.
Source-to-Pay Operations Integrations	• Send purchase orders, receipts, and invoices created in SAP ECC and SAP S4 HANA from your ServiceNow instance using the Source-to-Pay integration with SAP ECC and S4 HANA. • Handle sales orders, procurement, finance, and so on, in Oracle EBS from your ServiceNow instance using the Source-to-Pay integration with Oracle EBS.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Handle business spends and automate approvals, contracts, inventory, purchase orders, requisitions, suppliers, and user management in Coupa from your ServiceNow instance using the Source-to-Pay integration with Coupa. • Handle sales orders, procurement, finance, and so on, in SAP Ariba from your ServiceNow instance using the Source-to-Pay integration with SAP Ariba. See Source-to-Pay integration with third-party applications for more information.
Sourcing and Procurement Operations	• Enable shoppers to view and select their local currency throughout the Shopping Hub experience, including supplier cards, product detail pages, cart, checkout, my purchases, and request tracker. • Enable procurement admins to configure and render unique question types for quick and full checkout experiences for each product or service line. • Use dashboards and tabs in the Source-to-Pay Workspace to view spend, savings, and pipeline projects, identify savings opportunities, and create pipeline projects directly from filtered lists. • Enable requesters to submit sourcing requests with multiple products in a single sourcing intake form, automatically generating individual sourcing events for each product. • Allow requesters to view and manage third-party RFx tasks in the Employee Center and navigate to the third-party sourcing tool to review, publish, and award RFx. • Initiate catalog and off-catalog procurement workflows from the IT Asset Management (ITAM) workspace using the ITAM-SPO better together feature. • Enable decimal quantities for service items when creating purchase requisitions using quick or full checkouts in Shopping Hub and Employee Center. • Enable requesters to accept or reject case resolutions through email or Employee Center before closure, reducing premature case closures. See Sourcing and Procurement Operations for more information.
Strategic Planning	• Categorize your strategic priorities, goals, planning items, and execution items—projects and demands as Artificial Intelligence to track and monitor their progress from the AI Control Tower workspace. • Experience consistent roadmap bar colors for choice list attribute values across all portfolio plans. View the roadmap-level milestone row while scrolling down the Roadmap page. Use different icons to distinguish item-level milestones.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Apply filters using string-type and boolean field values to view the desired data on the Planning and Scoring pages. • Work on financial planning for various planning items such as Capabilities, Features, and so on. • View the planned costs of your planning items for the past fiscal periods. • Use Display mode to switch between different views of the financials record page. • Create and manage monetary benefit plans to capture and track projected and actual benefits. • Manage and run projects in various global currencies besides the functional currency using multicurrency. • Generate labor cost on sub-projects based on the resource assignments. See Strategic Planning for more information.
Subscription Management	• Manage custom applications and table mapping through the custom application list and custom table inventory list. • View and filter subscribers by domain for user-based subscriptions in domain-separated instances. • View and filter Now Assist usage by domain in domain-separated instances. • Monitor Workflow Data Fabric usage and view token use rate of each capability. See Subscription Management for more information.
Supplier Lifecycle Operations	• The plugin Supplier Operations (com.snc.sn_so) **must** be installed after upgrading to Supplier Lifecycle Operations Zurich release. For more information, see Install Supplier Operations. • The Supplier Lifecycle Operations plugin (com.snc.sn_supplier_mgmt) is renamed to Supplier Case Management. For more information, see Supplier Case Management. See Supplier Lifecycle Operations for more information.
Synthetic monitoring	• Run synthetic monitors from the MID Server. • Create monitors without needing to leave SOW to create an HTTP endpoint. • Assign a support group to synthetic monitoring alerts for easy investigation. • As of 1.4, view alerts associated with monitors and navigate to those alerts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• As of 1.4, use tags on a monitor's alerts. • As of 1.4, use synthetic monitoring with endpoints that support OAuth credentials. See Synthetic monitoring for more information.
Talent profile	• Make faster hiring decisions with a unified view of all talent types (applicants, employees, contingent workers, and alumni) in one place. • Improve talent visibility for hiring by creating talent profiles and pools. • Make better sourcing, screening, and interview management decisions across all talent types by tracking their past interactions with the organization. See Talent Profile for more information.
Telecommunications Network Inventory	• The Logical interfaces (such as VLANs) and physical interfaces (such as Gigabit Ethernet ports) are now related to their parent equipment or card to help prevent duplicate CI creation. • Get converged experience for Network Inventory workflows using Service Operations Workspace. • Upload and manage CAD/PNG of floor maps to view the datacenter layout with physical asset placements over the floor. • Ingest operational data and show time series metrics on the datacenter floor map to monitor health. • Capture an inventory of operational facilities and define their relationships to respective network hardware such as the power chain. See Telecommunications Network Inventory for more information.
Telecommunications Service Operations Management (TSOM)	• Simplify connector build and data transformation by leveraging the reusable, standardized Telecom Discovery Builder Framework across multiple telecom data sources. • Discover logical network elements from Nokia Altiplano using the enhanced Service Graph Connector for unified network visibility on the ServiceNow AI Platform. • Detect discrepancies in both logical and physical entities, including attribute value mismatches, and improve audit accuracy using targeted filters. See Telecommunications Service Operations Management for more information.
Theme Builder	Zurich Patch 7

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• As of Zurich Patch 7, use Now Assist to automatically create brand-aligned themes, then refine and publish them in Theme Builder. • Publish the new Next Experience Coral theme from Theme Builder. • Add custom fonts to your theme for enhanced branding. • As of Theme Builder version 6.1, configure modal, tile icon, banner, and card colors, and override these default illustrations with your own custom imagery. • As of Theme Builder version 6.1, enable dark mode to improve usability of Theme Builder in low-light conditions. See Working with themes in Next Experience for more information.
Third-party Risk Management	• Use the Document Management system in TPRM to centralize third-party documentation in a searchable repository with metadata, and versioning, access controls. • Use vertical navigation in the Vendor Management Workspace through a customizable panel grouped by related lists for improved access to third-party records, assessments, and performance pages. • Configure risk areas with weighted questions and scored responses for internal assessments using the Smart Assessment Engine in the Vendor Management Workspace. • Use the latest Smart Assessment Engine questionnaire templates to perform internal and external assessments. • Use the enhanced Digital Resilience Third-party Information Register features in the Vendor Management Workspace. See Third-party Risk Management for more information.
Threat Intelligence Security Center	• External sharing is now generally available, allowing secure and automated sharing of threat intelligence in STIX 2.1 and MISP formats. • Redesigned the Investigation Canvas with activity timelines, added internal intelligence, improved node design and interactions, enhanced related records to retrieve all the associated records, and upgraded the MITRE card with filter capabilities for a smoother experience. • Introduced the ability to import events directly from the MISP server. • Implemented a unified mapping experience for the text based feeds such as TEXT, CSV, and JSON import formats. • Implemented confidence mapping for the CrowdStrike (CS) Feed as part of additional settings. You can now map the malicious confidence levels of CrowdStrike indicators to the observable confidence values.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	See Threat Intelligence Security Center for more information.
UI Builder	• Assemble components in a low-code editor by dragging and dropping content from the UIB toolbox onto the stage. • Add Now Assist skills to enhance your page, component, or controller with generative AI capabilities. • Get instant conversational help within UI Builder through the Now Assist Panel. See UI Builder for more information.
Unified Security Exposure Management	• Experience a standardized data model and modular workflows for Vulnerability Response applications with Unified Security Exposure Management. This transformation and architectural design ensures consistent features across all modules, simplifies configuration, and enables flexible, role-based experiences. The modular approach allows faster updates and seamless integration, creating a scalable and future-ready platform. • Manage security exposures with Findings and Remediation views with a centralized platform in the Security Exposure Management Workspace. • Configure all USEM apps, including rules, email templates, email notifications, and severity mapping for integrations with the Administration console. • Enhanced exception management: Streamlined exception request and approval workflows with comprehensive tracking and audit trails. • Use generative AI with features in the SEM workspace that are included with the Now Assist for Vulnerability Response application. See the Now Assist for Security Incident Response (SIR) release notes for more information. See Unified Security Exposure Management (USEM) for more information.
Upgrade Console	• Enable a smooth upgrade experience on your production and sub-production instances by completing essential tasks before, during, and after the instance upgrade. • Access Upgrade Console and Guided upgrade by experiencing the new and updated options. See Upgrade Console for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
User Experience Analytics	• Access the analytics overlay faster via the new utility icon and then redirect to the analytics dashboard by selecting **Analyze with User Experience Analytics** on the overlay. • Experience enhanced analytics with UXA filters on dashboards, configurable session metrics, Pages in User Experience Analytics, drill-down in inline dashboards, and a condition builder for Events. See User Experience Analytics for more information.

Virtual Agent	Zurich Patch 4
	• Create and manage LLM-based chat and voice assistants within Assistant Designer, a centralized assistant administrator experience.
	• Assistant Designer Asset library:
	  ○ View an updated UI for Virtual Agent Designer topics in the new Assistant Designer Asset library page.
	  ○ Navigate between Assistants, Asset library, and Analytics tabs in the Assistant Designer UI.
	  ○ Disconnect an LLM Assistant from a given asset with the Actions on Row icon ⋮ in the Asset library.
	  ○ See descriptions of each LLM asset type when selecting **Create asset** in the Asset library.
	  ○ Read a tooltip that appears when you edit an LLM assistant under the Assistans tab and try to promote more than 6 topics associated with an LLM assistant.
	
	Zurich Patch 1
	• Google Workspace chat now works with the ServiceNow® conversational interface features, including Virtual Agent, Natural Language Understanding (NLU), Notifications, and live agents.
	• Start the create flow for all supported conversational assets directly from Virtual Agent Designer.
	
	See Virtual Agent for more information.

Visa Spoke	Apply Visa Resolve Online (VROL) release 25.2 revision changes to some Visa Spoke actions. See Visa Spoke for more information.
Vulnerability Response	• If you are currently using Vulnerability Response and you want to upgrade to Unified Security Exposure Management (USEM), see Unified Security Exposure Management release notes for more information about USEM and the Unified Security Exposure Management migration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Import host vulnerability data from the Wiz scanners into Vulnerability Response VITs to help vulnerability managers assess your over-all cloud security posture. • With the sn_vul.vulnerability_analyst or sn_vul.vulnerability_admin role, create host remediation tasks manually in the Vulnerability Manager Workspace. • With the sn_vul.remediation_owner role, create host remediation tasks manually in the IT Remediation Workspace. See Vulnerability Response for more information.
Walk-up Experience	Coral is the new default theme for Next Experience and Core UI, offering a more modern experience. See Walk-up Experience for more information.
Workflow Data Fabric Hub	• Access enterprise data from external data warehouses including Snowflake, Google BigQuery, and Amazon Redshift, data lakes such as Databricks, and databases, including Oracle. • Retrieve data from external sources in real time without copying any data to your instance using zero copy connections. • Enrich AI agents and workflows on the ServiceNow AI Platform with external data using data fabric tables. See Workflow Data Fabric Hub for more information.
Workforce Optimization for Customer Service CSM	• Decoupling Channel Management from the core Workforce Optimization (WFO) modules supports modular deployment, enabling independent updates or scaling of Channel Management without impacting other workforce engagement. • Enable managers to view the team calendar in the month view on the Schedule page within the Manager Workspace, providing a broader overview of staffing and shift details. • Enable agents to view the team calendar in the month view within the Configurable CSM or FSM Workspace for better planning and engagement with your work commitments. See Exploring Workforce Optimization for Customer Service for more information.
Zero Copy Connector for ERP	Zurich Patch 4 • Obtain ERP information and explore ERP data products using generative AI and agentic AI in ERP models. • Control data access and permissions for Zero Copy Connector for ERP AI agents to ensure that users can only interact with data they are authorized to obtain.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Retrieve IDOC information from SAP to create and update a greater number of SAP business entities. • Additional role configuration is required for agentic workflows and AI agents included with Now Assist applications. • Some Now Assist skills are now turned on by default. Zurich Patch 1 • The name of the ERP Canvas application has been changed to Zero Copy Connector for ERP. • The name of the ERP Contact Packs application has been changed to ERP Data Products. • Accelerate your adoption of Zero Copy Connector for ERP using new and updated ERP Data Products. See Zero Copy Connector for ERP for more information.

Upgrade information for all Zurich features and products

Cumulative release notes summary on upgrade information for Zurich features and products.

Before you upgrade to Zurich, review the upgrade information for any products you may have. Some products require you to complete specific tasks before you upgrade.

Application or feature	Details
AI Search	After you upgrade to Zurich from an earlier family release, run full document crawls in all your external content connectors to update their semantic vector indexing field mappings.
Application Manager	Application Manager is active by default on instances on the Zurich release. Upgrade your instance to Zurich patch 4 or later to use the latest features. For information about upgrading your ServiceNow AI Platform instance, see Prepare your upgrade.
Application Vulnerability Response	• If you are currently using Application Vulnerability Response, and you do not intend to upgrade to Unified Security Exposure Management (USEM), install a version below v30.x of Application Vulnerability Response and for upgrades to supported third-party integration applications. • For information about the new features of Vulnerability Response, see the Vulnerability Response release notes. • For more information about the released versions of the Application Vulnerability Response application as well as the third-party and ServiceNow applications that are compatible with the Zurich release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the Now Support Knowledge Base.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Automated Test Framework	Copy and customize quick start tests provided by the ServiceNow AI Platform® to validate that your instance works after you make any configuration changes. For example, if you apply an upgrade or develop an application. The tests can produce a pass result only when you run them on a base system without any customizations and with the default demo data that is provided with the application or feature plugin. To apply a quick start test to your instance-specific data, copy the quick start test and add your custom data. For more information, see Available quick start tests by application or feature.
CPQ Configurator	If you used the legacy product configurator previously and want to use the CPQ Configurator, after upgrading, you must set the *sn_prd_pm.enable_advanced_configuration* system property to true to be able to use the configurator in Sales and Order Management workflows.
Change Management	As part of the update to use Flow instead of Progress Workers for conflict detection, the Conflict Checker Progress UI Formatter record references a new UI macro, change_conflict_worker_progress_gate. This macro checks the *change.conflict.useprogressworker* system property to determine the conflict detection mechanism and then displays the corresponding UI macro to work with either Progress Workers or the Change Management Worker table. For more information, see Conflict detection.
Cloud Cost Management 9.0	The Cloud Cost Management platform support is available beginning with the Xanadu release. For instructions on upgrading Cloud Cost Management to Zurich, see Upgrade Cloud Cost Management.
Cloud Exposure View	The Cloud Exposure View is a workspace in the Cloud Security for Cloud Workspace application that is supported by the Unified Security Exposure Management application. Unified Security Exposure Management (USEM) and the Cloud Security for Cloud Workspace applications are required. USEM is available to all customers who are entitled to Vulnerability Response. See Unified Security Exposure Management release notes for more information.
Configuration Compliance	If you are currently using Configuration Compliance, and you do not intend to upgrade to Unified Security Exposure Management (USEM), install a version below v30.x of Configuration Compliance and for upgrades to supported third-party integration applications. The Missing Assets [sn_vul_wiz_missing_asset] table used for storing assets imported by the backfill integrations for the Vulnerability Response Integration with Wiz is deprecated. If you are currently using the Vulnerability Response with Wiz integrations, after updating to version 1.1, you must backdate any of your existing Wiz primary integrations by three days and run them. Please review more

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	information about the Wiz integration at SecOps articles on the Security Operations Community. For more information about the released versions of the Vulnerability Response application as well as the third-party and ServiceNow applications that are compatible with the Zurich release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the Now Support Knowledge Base.
Configuration Management Database (CMDB)	Due to the removal of the **Design** value for the operational status attribute in a CI, after an upgrade, you must review all CIs that have the discovery source attribute set to *`Manual via IRE`*. Review the operational status attribute of those CIs and set it to a supported value in CMDB for your environment. For example, you can set the attribute to *`Non-Operational`*. For more information about the operational status values, see Life cycle of tangible/physical CIs. On an upgraded Zurich instance, to configure the sn_cmdb_admin and the sn_cmdb_editor user roles with the necessary permissions to perform some CMDB Workspace tasks, you must manually run the scheduled job *`Remove CMDB Roles from ITIL roles and Add CUD access to sn_cmdb_admin/sn_cmdb_editor roles`*. This scheduled job modifies the user roles as follows: • Updates the itil user role to no longer contain the sn_cmdb_editor user role, and updates the itil_admin user role to no longer contain the sn_cmdb_admin user role. • If those permissions don't exist, updates the sn_cmdb_admin and the sn_cmdb_editor user roles with create, update, and delete access to the Configuration Item [cmdb_ci] class. For more information about the *`Remove CMDB Roles from ITIL roles and Add CUD access to sn_cmdb_admin/sn_cmdb_editor roles`* scheduled job, see Remove sn_cmdb_admin from itil_admin and sn_cmdb_editor from itil, and then add create/update/delete access to cmdb_ci table for sn_cmdb_admin / sn_cmdb_editor [KB2290506].
Container Vulnerability Response	If you are currently using Container Vulnerability Response, and you do not intend to upgrade to Unified Security Exposure Management (USEM), install a version below v30.x of Container Vulnerability Response and for upgrades to supported third-party integration applications. The Missing Assets [sn_vul_wiz_missing_asset] table used for storing assets imported by the backfill integrations for the Vulnerability Response Integration with Wiz is deprecated. If you are currently using the Vulnerability Response with Wiz integrations, after updating to version 1.1, you must backdate any of your existing Wiz primary integrations by three days and run them. Please review more information about the Wiz integration at SecOps articles on the Security Operations Community. For more information about the released versions of the Container Vulnerability Response application as well as the third-party and ServiceNow applications that are compatible with the Zurich

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the Now Support Knowledge Base.
Customer self-service for Sales and Order Management	The new order checkout experience and improved cart capabilities are delivered through a new Sales Cart plugin (sn_sales_cart). As an admin, you must perform the Post-upgrade order migration for the Business Portal to continue providing a seamless experience for your customers. Failing to perform the upgrade steps can result in your customers losing products added to their carts.
Digital End-User Experience	For details on DEX data migration, refer to the DEX data migration to allocated, last logged in user, last logged in location column of Dex device table [KB2144029] and DEX data migration to CI type column of Alert Metadatas table [KB2141007] articles in the Now Support Knowledge Base.
Encryption	For the GlideEncrypter API, NIST 800-131A Rev 2 has recommended against using the Triple Data Encryption Standard (3DES) encryption. The following changes are taking place in the Zurich release with the official removal of 3DES encryption for GlideEncrypter. • The GlideEncrypter API defaults to using the Key Management Framework (KMF) based algorithm, Advanced Encryption Standard (AES), for encryption and decryption operations for upgraded instances only. • For instances created with the Zurich release or later, this API isn't supported. • Learn more about 3DES deprecation in KB1704481. In the Zurich release, Column Level Encryption has received a required upgrade to Key Management Framework Column Level Encryption (KMF-CLE) due to the platform-wide deprecation of 3DES. For more information about this upgrade, see KB1700704.

Encryption Key Management	• In previous releases, the GlideEncrypter API used the three-key Triple Data Encryption Standard (3DES) encryption standard, which NIST 800-131A Rev 2 has recommended against using after 2023. The following changes are taking place in the Zurich release in preparation for a full deprecation of GlideEncrypter/3DES in the future:
	  ○ New Zurich instances can't use GlideEncrypter. All base system scripts have been changed to use alternative encryption processes.
	  ○ if you're upgrading your Zurich instances, you can still GlideEncrypter, which has been updated to use AES256-GCM encryption via the Key Management Framework.
	  ○ Learn more about 3DES deprecation in KB1704481.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Enterprise Asset Management	Starting with Zurich release, a new menu, Asset put away, has been added to the ServiceNow Agent app navigation bar. When upgrading to the Zurich release, a fix script identifies whether the ServiceNow Agent app navigation bar was customized and takes the necessary action. • If the navigation bar wasn't customized before the upgrade, a new Asset put away icon () is included in the navigation bar • If the navigation bar was customized before the upgrade, two navigation bars appear: Customized old IT Asset Management and IT Asset Management. The new icon appears in the IT Asset Management navigation bar.
External Content Connectors	Beginning with version 2 of the External Content Connectors application, external content connectors implement semantic vector indexing for crawled items. When you upgrade to a version that supports semantic vector indexing, your existing connectors will reindex all previously retrieved items the next time they're visited by a crawl, even if those items' content is unchanged. To force semantic vector indexing of your external content items as soon as possible after upgrading, cancel any running crawls, then restart the canceled crawls manually. When you upgrade to version 4 of the External Content Connectors application from an earlier version, searches may not show all previously crawled content until you've completed both a content crawl and a user mapping crawl for each upgraded connector. The first content crawl run after the upgrade will reindex all searchable content from the source system, and the user mapping crawl will reindex all security principals from the source system. All crawled content should be shown in searches after both of these crawls are complete.
Field Service Management	Effective March 1, 2025, the Google Places API, Directions API, and Distance Matrix API have been designated as legacy services. The newer versions of these services are Places API (New) and Routes API. Google Maps APIs for Field Service capabilities uses the latest version of the APIs in the Zurich release and Dispatcher Workspace version 8.0. To help avoid issues with the Google Maps APIs, enable Places API (New) and Routes API from Google Cloud Platform Console.
Flows, subflows, and actions in Workflow Studio	An earlier version of the save as you go feature was released and withdrawn from the Washington DC release. If you're upgrading from the Washington DC release, you might have manually turned off the save as you go features by setting a system property. To restore the save as you go features, see Restore save as you go functionality.
Generative AI Controller	Generative AI Controller is installed or updated when you install or update a Now Assist application. If you have issues installing or updating applications, see this knowledge article or open a support case.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Hardware Asset Management	• Starting from the Zurich release, a few workflows have been migrated to Workflow Studio as flows. **Note:** The migration of workflows to Workflow Studio applies to Asset Management, Procurement, and Contract Management applications. ○ The following workflows have been migrated to Workflow Studio as flows: ▪ Procurement Process Flow – Hardware ▪ Transfer Order ▪ Transfer Order Line ▪ Source Request ▪ Contract Approval ○ When upgrading to the Zurich release, a fix script identifies whether the workflows were customized and takes necessary action. ▪ If the workflows weren't customized before the upgrade, the legacy workflows are deactivated from the instance, and Workflow Studio flows are installed and executed post-upgrade. ▪ If the impacted workflows were customized before the upgrade, the Workflow Studio flows are installed but aren't executed for any of the impacted flows post-upgrade. You can view and access the impacted workflows in the instance after the upgrade. However, the deprecated workflows are considered custom code and aren't supported for maintenance. • After upgrading to the Zurich release, if an approval history record exists for a contract that is no longer required, reject the record instead of deleting it. If the approval history record is deleted, Workflow Studio doesn't support updating the contract's **Substate** field value to display the correct state. • Starting with Zurich release, a new menu, Asset put away, has been added to the ServiceNow Agent app navigation bar. When upgrading to the Zurich release, a fix script identifies whether the ServiceNow Agent app navigation bar was customized and takes the necessary action. ○ If the navigation bar wasn't customized before the upgrade, a new Asset put away icon () is included in the navigation bar ○ If the navigation bar was customized before the upgrade, two navigation bars appear: Customized old IT Asset Management and IT Asset Management. The new icon appears in the IT Asset Management navigation bar. • A new role, sn_itam_recomm.recommendations_read, helps ensure that only valid users can execute APIs related to the Important Actions menu in the Asset Workspace. The following roles, which have access to the Asset Workspace, now include the sn_itam_recomm.recommendations_read role:

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	○ procurement_user ○ inventory_admin ○ inventory_user ○ model_manager ○ contract_manager ○ itil ○ catalog_manager ○ catalog_admin ○ sam ○ ham_user ○ asset • Control sensitive data leakage from range queries accessed by unauthenticated users through the following access control lists (ACLs): ○ Contract [ast_contract] table: Only users with the contract_manager role can perform the query_range operation on the Start date, Contract number, PO number, and Vendor columns. ○ Contract user M2M [clm_m2m_contract_user] table: Only users with the contract_manager and asset roles can perform the query_range operation on the Contract and User columns. ○ HAMP Success Activity [sn_hamp_success_activity] table: Only users with the ham_admin and asset roles can perform the query_range operation on the Description, Short description, and Success goals columns. • Only users with the admin role can update the following system properties: ○ glide.sg.voice_search.enabled ○ glide.ui.sn_hamp_asset_reclaim_task_activity.fields ○ glide.ui.sn_hamp_loaner_asset_order_activity.fields ○ glide.ui.sn_hamp_ztr_task_activity.fields ○ sn_hamp.enable_shipping_carrier_validation_asn ○ sn_hamp.model_lifecycle_phase_order ○ sn_hamp.update_assets_norm_model_name
Impact	The Impact Store Application configuration requires a sequence of tasks in a unified registration process. See Configure the Impact Store Application.
Instance Data Replication	• Improve the performance and processing efficiency of Instance Data Replication (IDR) by upgrading your replication sets to V2, which uses Hermes Messaging Service. For details, see Upgrading legacy replication sets to V2 in Instance Data Replication.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Log rotation is automatically enabled for the Replication Payload Error [idr_replication_payload_error] table after the upgrade. By default, the log rotation schedule is composed of seven shards, with five days for each shard. All log entries in this table created before the upgrade are automatically truncated.
MID Server	For the latest MID Server system requirements, see MID Server system requirements. The minimum JRE version supported is 17.0.10 and the recommended version is 17.0.12. If you have installed your own JRE, the upgrade process takes the following actions to verify that the MID Server uses a supported JRE: • If a MID Server is using an unsupported version of the JRE when it upgrades, the upgrade process displays a warning message with the minimum and recommended JRE version. • If a supported JRE is running on the MID Server host, the upgraded MID Server uses that version. All MID Server host machines require access to the download site at `install.service-now.com` to enable auto-upgrades. For additional details, read how the system manages MID Server upgrades. Only one Windows MID Server service is permitted according to the executable path. Upgraded Windows MID Servers that have multiple services pointing to the same installation folder can't start. See MID Server fails to start for more information. For more information about MID Server upgrades, see the following topics: • MID Server pre-upgrade check: Describes how the AutoUpgrade monitor tests the ability of the MID Server to upgrade on your system before the actual upgrade. • Upgrade the MID Server manually: Describes how to upgrade your MID Servers manually.
Notify	Starting with the Zurich release, Notify uses subflows instead of workflows. For existing users in Zurich, your current workflows are still supported. For new users, your Notify plugin installations use subflows. As part of this transition, the following workflow activities are available as flow actions and can be used when creating subflows: • Join conference call • Call • Send SMS • Forward call • Input • Hangup • Play

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Record • Reject • Say • Forward to notify client • Queue Maintain, build, and modify your own custom subflows in Workflow Studio with subflows for new instances. The following base system workflows have been migrated to subflows: • (Re)join Conference Call • Join Conference Call with muting • Join Conference Call with SMS Your existing workflows continue to function after the upgrade. **Note:** All workflow-related artifacts have been moved to a new plugin, which is maintained in a support-only mode and isn't available for new installations.
Now Assist	If you customized UI actions or other items that are associated with Now Assist skills, confirm that your customized code is updated with the new skill releases. Otherwise, certain functions might not work as expected. If you run into issues when you're upgrading a Now Assist product, see the Issues and mitigation for Now Assist (Generative AI) Applications and Plugin updates [KB1637452] article in the Now Support Knowledge Base. You might need to log in to view the article. The Zurich release introduces enhanced protections for read-only fields across the ServiceNow AI Platform. These changes include a new “read_only_option” field with granular control levels, including “strict_read_only” and “client_script_modifiable". The changes occur in the backend and maintain backward-compatible behavior. This update helps strengthen your instance security while preserving the flexibility you need. If you have custom client scripts that modify ServiceNow-owned read-only fields using `g_form.setValue()` or `g_form.clearValue()`, refer to KB2718122. This article provides additional technical details on how to identify affected fields and adjust their settings. The existing Access Control Lists (ACLs) will be updated to replace the 'admin' role with specific, purpose-driven granular roles within scripts or security attributes. As part of this update, the `getRoles()` API will be replaced with the `hasRole()` API for authorization purposes. Additionally, all references to the 'admin' role in the code will be substituted with the new feature-specific granular roles for authorization use cases. Read https://www.servicenow.com/docs/r/platform-security/granular-admin-roles.html to learn more.

Application or feature	Details
Now Assist for CMDB	The installation (activation) process has changed for the Now Assist for CMDB v2.1 plugin. See Configuring Now Assist for CMDB for the new instructions.
Now Assist for Hardware Asset Management (HAM)	If you have the procurement_user user role, you can access the help manage hardware asset requests agentic workflow, which includes the following AI agents: • Hardware asset management sourcing AI agent • Transfer order creation AI agent • Purchase order creation AI agent
Now Assist for IT Service Management (ITSM)	When you upgrade to the Zurich Patch 4 release, any customizations you may have made to the Now Assist context menu (NACM) won't be preserved. For more information, see the Community article Upgrade information for the NACM support in Now Assist for ITSM.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Note: Upgrading the Now Assist plugins activates any designated skills that were previously untouched by the customer. • If you installed the plugins for a skill but never configured it, meaning you never activated it nor adjusted associated roles, any skill on by default is activated on a per skill basis when upgrade. • If you previously toggled a skill from active and then back to inactive, or updated any roles for that skill, that skill remains inactive when upgrading. • You maintain full control over deactivating individual skills at any time after activation. When you update the Now Assist for Security Incident Response (SIR) application, the dependency applications are automatically updated. For more information about required applications for Now Assist for Security Incident Response, see Supporting information for Now Assist for Security Incident Response. The AI Search application must be enabled so that the recommended actions skill works for security incidents with Now Assist for Security Incident Response. To verify that AI Search is enabled on your instance, navigate to **All** > **AI Search** > **AI Search Status**. Contact support if the page indicates that AI Search isn't enabled.
Now Assist for Vulnerability Response	The following Now Assist skills for Now Assist for Vulnerability Response are activated by default. • Recommend preferred solution for VIT (VR) • Vulnerable item de-duplication (VR) • Approval Recommendation (VR)(USEM) • Security Exposure Management (SEM) Insights (VR)(USEM) • SPC Setup Connector (Security Posture Control) When you update the Now Assist for Vulnerability Response application, the dependency applications are automatically updated. For more information about required applications for Now Assist for Vulnerability Response, see Supporting information for Now Assist for Vulnerability Response.
Now Assist in Contract Management	If you're upgrading to Now Assist in Contract Management from Yokohama (Patch 2 and lower) or Xanadu (Patch 8 and lower), and you have customized use cases, run a fix script to migrate the existing data to the Now Assist Admin console. **1.** Navigate to **All** > **System Definition** > **Fix Scripts**. **2.** In the **Name** field, search for `Upsert DI skill config`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	3. In the script, add the use case IDs that you want to migrate to the Now Assist Admin console. 4. Select **Run Fix Script**. For more information, see Post-upgrade steps for Now Assist in Contract Management.
On-Call Scheduling	Starting from the Zurich release, On-Call Scheduling uses subflows, not workflows. You must transition from workflows to subflows, because the workflows are considered as legacy workflows. For existing users in Zurich, your current workflows continue to be supported. However, for new users, the On-Call Scheduling plugin installations on Zurich and later instances only use subflows. Maintain, build, and modify your own custom on-call scheduling flows in Workflow Studio with subflows for new instances. The following subflows are available for configuration:
Operational Resilience	After upgrading to Operational Resilience version 21.0.x, rerun the *`Update CSDM and other dependencies`* scheduled job to populate the additional metadata that was introduced in this release.
Performance Analyzer	Starting with the Zurich release, Performance Analyzer is available on your instance automatically. For access to Performance Analyzer on earlier instances, install Performance Analyzer from the ServiceNow® Store.
Platform Analytics experience	On upgrade, any homepages on your instance that have been opened are migrated to Core UI dashboards, which are visible in the dashboard library. For more information, see Homepage deprecation. Simple lists are all converted to the new List element on upgrade.
Playbooks in Workflow Studio	After you upgrade to Zurich, update the Workflow Studio application in the ServiceNow Store.
Product Catalog Management and Pricing Management	Pricing Management v15.0.0 provides a default pricing plan that includes new steps to support pricing strategies introduced in this release. If you're using a custom pricing plan from an earlier release, review the default pricing plan, which is in a Retired state after you upgrade. Determine whether you want to publish the default plan or customize the default pricing plan for your needs. The default plan contains new steps for calculating net pricing and roll-up values for configurable products in quotes and orders: Net Price Calculation, Line Rollup, and Header Rollup steps. This pricing functionality existed in previous releases for quotes and orders but wasn't included in the default pricing plan. To retain this previous functionality for quotes and orders, you must add the Net Price Calculation, Line Rollup, and Header Rollup steps in your custom pricing plan before you publish it for use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	If you used the legacy product configurator previously and want to use the CPQ Configurator, after upgrading set the *sn_prd_pm.enable_advanced_configuration* system property to true. When set to true, this property enables the CPQ Configurator. If you want to use AI Search for product catalog searches, before upgrading install Now Assist for Sales Force Automation (SFA), which includes the plugins needed for AI Search functionality. After upgrading, complete various steps to implement AI Search. These steps include running a scheduled job to set up AI Search and enabling AI Search in the product catalog interface by setting the *enable_ai_search_in_catalog* system property to true. For details on these configuration steps, see Configuring AI Search for product catalog search.
Public Sector Digital Services	After the upgrade, certain public sector menus and menu items in CSM Configurable Workspace revert to their original CSM label names. You can relabel these items for public sector use by updating the labels for the Customer, Accounts, and Service Organizations UX list category records. For more details on relabeling, navigate to **All** > **Constituent Service** > **Administration** > **Guided Setup**, and select **Configurable Workspace for Public Sector Digital Services** > **Customize Workspace Labels Manually**.
RPA Hub	Upgrade any of these currently installed Microsoft Software Installers (MSIs) by downloading the RPA applications: • RPA Desktop Design Studio • Attended Robot • Unattended Robot • Unattended Robot Login Agent For more information, see Download the RPA applications from RPA Hub. The following upgrade information is applicable only when you're upgrading from San Diego or Tokyo to Zurich. Based on the number of records in the application file table, you may experience a delay while upgrading the RPA Hub applications from Tokyo or earlier releases to Zurich. Before upgrading RPA Hub to Zurich, you must set the value of the *glide.rollback.blacklist.TableParentChange.change* system property to **false**. If this property doesn't exist in the System Property [sys_properties] table, add the property and set its value to false. For more information on how to add a property, see Add a system property. After you upgrade to Zurich, the bot process definitions change to the new structure, which is the bot process configuration.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Although the bot process configuration doesn't replace the bot process completely, most fields are moved from the bot process to the bot process configuration. If you upgrade to Zurich without updating the system property value, the tables don't extend the Application File [sys_metadata] table. To update the table changes manually, see the Restructuring RPA Hub tables to sys_metadata in Utah and beyond release [KB1223629] article in the Now Support Knowledge Base.
Retail applications	Starting with this release onwards, the retail base case has been made abstract. (An abstract case or abstract case type is a base configuration of a case that is intended to be extended by specialized case types rather than used directly.) After upgrading to the Zurich release and for any version updates beginning with the Yokohama release, if you are using the retail base case table you will no longer be able to create new cases or update existing cases. Use the following case types instead: • Store Inquiry • Retail Customer Complaint • In-store Operations • HQ Communications You can also extend your own case types. For more information on these changes, see the Impact analysis and guidance: Retail case table updates [KB2216547] article in the Now Support Knowledge Base.
Security Posture Control	For a complete list of the applications that are required to implement Security Posture Control, see Install Security Posture Control.
Service Exchange	• Service Exchange version 2.x.x: Which was first released with the Xanadu release, doesn't support migration of Service Exchange (Legacy) versions. Service Exchange (Legacy) version: Before you upgrade to the Zurich release, follow instructions in the Service Bridge for Providers (Legacy) - Migration Utility [KB1499823] article in the Now Support Knowledge Base to migrate your configuration data. • Service Exchange version 1.x.x: When upgrading, follow the steps in the Upgrade Guide - Service Bridge for Providers and Consumers application (v2.x.x release) [KB1700387] article in the Now Support Knowledge Base to migrate your Service Exchange applications. • Service Exchange version 2.x.x: Due to the introduction of mismatched version support, new entitlements can't be activated until both the consumers and providers upgrade to Service Exchange version 2.x.x. Older active entitlements continue to work but new ones can't be activated. • When you upgrade to Service Exchange version 2.0.55 with Sales and Order Management plug-in version 1.0.4, before upgrading the platform to the Zurich release, new Deny ACLs aren't installed. To

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	ensure the Deny ACLs get installed, after upgrading to Zurich, select Repair to reinstall the Service Exchange application. • When using Service Exchange for Providers and Service Exchange for Consumers in a single instance, you must upgrade both applications simultaneously to the same version to maintain compatibility. • When you install the Service Exchange application, the Service Exchange Global Script Include is automatically installed or updated on the following platform versions: ○ Washington DC patch 9 ○ Xanadu patch 4 ○ Yokohama ○ Zurich
Service Observability	If you have the snc_sow_svcobs.manager role, you must belong to a user groups with a type of `srm`.
Service Operations Workspace for ITSM	Ensure that the following applications have compatible upgraded versions: • Service Operations Workspace ITSM Applications application (sn_sow_itsm_cont) • Service Operations Workspace ITOM Applications application (sn_sow_itom_cont) For more information on compatible versions, see Version compatibility between Service Operations Workspace for ITSM and Service Operations Workspace ITOM.
ServiceNow AI Platform core feature	The dynamic schema application framework has been revised in the Zurich release. If you implemented dynamic schema in Xanadu or Yokohama, the application is automatically migrated to a new framework as part of the upgrade to the Zurich release. For details on the migration, see the Dynamic Schema Zurich Migration Guide [KB2146133] article in the Now Support Knowledge Base.
ServiceNow IDE	ServiceNow IDE version 2.1.2 is active by default on instances on the Zurich release. Update to ServiceNow IDE version 3.0 or later to use the latest features. For information about updating ServiceNow IDE, see Install or update the ServiceNow IDE.
ServiceNow SDK	To upgrade to the latest version of the ServiceNow SDK globally or within an application, see Upgrade the ServiceNow SDK. ServiceNow SDK version 4.0 supports integration with ServiceNow instances beginning with the Washington DC release. On Windows systems, after upgrading to ServiceNow SDK version 4.3 or later, existing stored credentials aren't supported due to the

Application or feature	Details
	deprecation of Keytar. Users on Windows systems must add their user credentials again using the `now-sdk auth --add` command to authenticate with instances. For more information, see Authenticating to a ServiceNow instance with the ServiceNow SDK. **Note:** For more information about minor releases of the ServiceNow SDK, see the ServiceNow SDK repository on GitHub.
ServiceNow Studio	ServiceNow Studio no longer has to be downloaded from the ServiceNow Store. It's available on the ServiceNow AI Platform by default.
ServiceNow Vault	To install ServiceNow Vault, the following must be installed: • Data Discovery • Data Privacy • Data anonymization • Field Encryption • Zero Trust Access (ZTA)
Skills Foundation	You cannot download industry skills data as part of the guided setup.
Software Asset Management	Starting from the Zurich release, the following workflows are migrated to Flow Designer as flows: • Reclamation workflow • Procurement Process Flow - Auto allocation enabled When upgrading to the Zurich release, a fix script identifies whether the workflows were customized. If you haven't customized the workflows before the upgrade, the fix script deactivates the legacy workflows from the instance and deploys the Flow Designer flows on the instance post-upgrade. If you have customized the impacted workflows in the previous release, the fix script doesn't deploy the Flow Designer flows on the instance post-upgrade. You can view and access the impacted workflows in the instance after the upgrade. However, the deprecated workflows are considered as custom code and ServiceNow doesn't support those workflows. Starting from the Zurich release, the Software Asset Workspace plugin (com.sn_sam_workspace) is moved from the family release to the Software Asset Workspace store application. After upgrading to Zurich, the Software Asset Workspace plugin (com.sn_sam_workspace) is inactivated and the Software Asset Workspace store application (sn_sam_workspace) is enabled in the instance. When upgrading to the Software Asset Management – SaaS License Management plugin (sn_sam_saas_int) version 16.0.6 or later in the Zurich release, verify that the Software Asset Workspace store app (sn_sam_workspace) is updated to version 9.0.4.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Source-to-Pay Operations Integrations	**Important:** Due to a performance issue identified with the upgrade fix script, the sourcing fix script has been modified. This script will no longer execute automatically during the upgrade process. Instead, it is now delivered as an on-demand job. Administrators must manually execute this job outside of business hours after the upgrade is complete.
Strategic Planning	After upgrading to Strategic Planning v4.8.0, the existing **Investment type** and **Investment class** fields will appear as **Investment type (Deprecated)** and **Investment class (Deprecated)** respectively across the Planning page including in the Prioritization and Roadmap views and in the Scenario Planning page. The values from these deprecated fields will be automatically copied to the new **Investment type** and **Investment class** fields. If you previously applied filters or personalized your view using the deprecated fields, you must update those configurations to use the new **Investment type** and **Investment class** fields across the workspace—including in the Prioritization and Roadmap views on the Planning page, as well as in the Scenario Planning page.
Subscription Management	Subscription Management version 5.0 is active by default on all instances of the Zurich release. Update to Subscription Management version 6.1 or later to use the latest features. For more information about updating Subscription Management, see Update an application or plugin.
Synthetic monitoring	If you want to run monitors using a MID Server as a location, you must restart the MID Server after upgrading.
Third-party Risk Management	If you're a VRM user upgrading to TPRM and upgrading to Vancouver or a later release from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. For example, you must upgrade from Utah to Vancouver, Vancouver to Washington DC, and so on. If the scripts don't run in the correct order, you can get data inconsistencies, broken functionalities, and conflicts. After upgrading to version 21.0.x, you can enable the Smart Assessment Engine (SAE) by setting the Smart Assessment Engine enabled (**sn_vdr_risk_asmt.sae_enabled**) property. After setting this property, Smart Assessment Engine (SAE) becomes the default assessment engine and replaces the legacy experience. The transition isn't reversible. **Warning:** Set this property in your non-production instances and conduct thorough testing before changing your production instances. Failure to do so may result in unexpected issues.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	For more information on upgrading from VRM to TPRM and the differences between the Smart and Classic Assessment engines, see Third-party Risk Management upgrade information. For existing TPRM customers, after upgrading to version 21.0.3, data from the Industry column in the Company [core_company] table is automatically migrated to the tprm_industry column. Migration can take several hours depending on the number of records in the Company [core_company] table. After migration, a system log message confirms that the migration is complete. Review the Company [core_company] table content and update any customizations referencing the Industry field to use tprm_industry. After verifying the migration and updating customizations, you can drop the Industry column.
Unified Security Exposure Management	Unified Security Exposure Management is available to all customers who are entitled to Vulnerability Response, however, migrating to USEM is a major upgrade that introduces a unified architecture for improved performance, scalability, and streamlined workflows. Before upgrading, leverage the Migration assistant for Unified Security Exposure Management that is available as an update set. See the Migration Guidance to Unified Security Exposure Management [KB2556844] Knowledge Base article for more information. This tool provides a guided experience for plugin installation, data mapping, rule migration, and post-migration validation, reducing risk and manual effort. Ensure that all integrations and workflows are reviewed for compatibility before initiating migration. For more information, see Migrating from Vulnerability Response to Unified Security Exposure Management (USEM) and Migrate to Unified Security Exposure Management (USEM) from Vulnerability Response.
Vulnerability Response	If you are currently using Vulnerability Response, and you do not intend to upgrade to Unified Security Exposure Management (USEM), install a version below v30.x of Vulnerability Response and for upgrades to supported third-party integration applications. The Missing Assets [sn_vul_wiz_missing_asset] table used for storing assets imported by the backfill integrations for the Vulnerability Response Integration with Wiz is deprecated. If you are currently using the Vulnerability Response with Wiz integrations, after updating to new version 1.1, you must backdate any of your existing Wiz primary integrations by three days and run them. Please review more information about the Wiz integration at SecOps articles on the Security Operations Community. For more information about the released versions of the Vulnerability Response application as well as the third-party and ServiceNow applications that are compatible with the Zurich release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the Now Support Knowledge Base.
Zero Copy Connector for ERP	If you have existing scheduled extractions and have upgraded to Zurich, run the *Scheduled Extraction V2 Move* fix script

Application or feature	Details
	to place scheduled extractions in a new table where scheduling is done by the scheduled scripts engine. For detailed steps, see Run fix scripts.

New features and products in Zurich

Cumulative release notes summary on new Zurich features and products.

New products were introduced in Zurich, and additional features were added to existing products.

Application or feature	Details
AI Control Tower	**Zurich Patch 7** **Security & privacy tab in AI Control Tower** • Measure whether your model's output or behavior violates predefined security policies using the secure policies violations chart. • Review potential threats in AI agent output in output deviation, output with PII detected, and high-risk output charts. • Monitor MCP server access by AI Gateway with these new charts: Clients connecting to MCP servers, authorized access attempts, and failed access attempts. **Data section on Configurations page** Enable and set up secure policies violation, output deviation, and output screening metrics to measure the integrity of your data model and potential threats in LLM output. **Manage agentic AI system life cycles** Create AI system assets to track and manage the complete life cycles of your agentic AI systems, from onboarding to deployment. Gain comprehensive insight into each agentic AI system and take any necessary actions to successfully complete each life-cycle stage. By managing the life cycles of your agentic AI systems, you can extend their lifespans, reduce downtime, and optimize licensing costs. **Define the use and purpose of an AI system** Specify the intended use and purpose of an AI system. Provide insight into who is using the AI system, what the AI system is being used for, and how the AI system works and provides value. This information can help you determine the benefits and risks that are associated with the AI system. **Associate additional related AI asset types with AI systems**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Associate the following additional related AI asset types with your AI systems: • If an AI system has an Asset type of Generative AI or Agentic AI, you can associate it with any of its supported components or subsystems. • If an AI system has an Asset type of Agentic AI, you can associate it with any of its integrated AI tools. **Create change and offboarding requests for additional AI asset types** Create change requests for the following additional AI asset types: • AI systems with an Asset type of Agentic AI • Datasets In addition, create offboarding requests for the following additional AI asset types: • AI systems with an Asset type of Agentic AI • AI models • Datasets • MCP servers **Zurich Patch 4** **Security & privacy tab in AI Control Tower** • Identify ServiceNow® AI assets that impact your security posture using the ServiceNow® AI security score and AI insights. AI insights highlight key metric changes, recommend next steps, enabling you to quickly understand the impacts and take action. • Access and monitor security for AWS Bedrock agents running as privileged users, autonomous vs. supervised tools, and dormant agents. • Monitor sensitive data detection, prompt injection, and offensive content metrics to help identify and mitigate AI-driven security and compliance risks before they impact workflows or expose sensitive information. AI security tasks are created automatically from Dormant AI systems metrics to streamline your workflow and quickly resolve issues. You can also create AI security tasks directly from more areas, such as access issues and privileged AI agents metrics. • Review Autonomous vs. supervised systems metrics based on AI tools. Previously, the metrics were based on workflows. • Show Access issues metrics for only those agents with issues. Previously, agents with issues and no issues were shown.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• See more details about agent access issues in the access map to help you troubleshoot quickly. For example, you can see the user ID of the user who executed the agent and the workflow and tool associated with the access issue, if applicable. **AI Gateway tab in AI Control Tower** The **AI Gateway** tab shows the metrics at the MCP server level, listing all connected MCP servers along with the total number of transactions for each server and its success rate. **Data section on Configurations page** See a read-only view of your data privacy configuration for sensitive data patterns in the Data privacy page. Use this page as a quick reference when troubleshooting sensitive data charts. **AI Task section on AI assets page** Review all AI security tasks for your instance in the All Security Tasks page. You can also create an AI task on this page. **Enhance control of AI asset life cycle through change and offboarding requests** Enhance the management of deployed AI assets by using the change request workflow to make necessary edits to AI assets that have already undergone review and onboarding. Furthermore, facilitate the retirement of AI assets by submitting an offboarding request, ensuring a structured and controlled process for removing assets that are no longer needed or have been superseded. **Zurich Patch 1** **Health tab in AI Control Tower** Monitor and evaluate the effectiveness of offensive content and prompt injection guardrails active on your AI assets. **Zurich Early Availability** **AI strategy with Strategic Planning(Requires SPM)** • Monitor and track your AI strategies and associated goals and targets. • Track the costs of your AI projects, epics, and demands. • Monitor key project risks, issues, decisions, actions, and changes. **AI strategy with Goal Framework (Requires SPM)** Monitor and track your AI strategies and associated goals and targets. **Enterprise AI discovery: Unlock Visibility, Governance & Value**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Discover and add AI agents and related models and tools to the AI inventory through integration with AWS Bedrock. • Discover and add AI agents and related models and tools to the AI inventory through integration with Azure AI Foundry. • Configure AI discovery setup and visibility of connections. **Value tab in AI Control Tower** • Gain insights into the value realized from AI skills and features. The Value insights dashboard page gives you insights into the estimated productivity gains as a result of using AI systems. • Define and measure value relevant to your AI systems using customizable value templates. • Perform calculations and approximations for the read and write time saved by users using AI systems by using data points and timestamps from the invoking records. • Understand the key usage and performance indicators that help you evaluate the adoption of Now Assist in your organization. • Provide insights on success rate visualization by department, country, and AI assets along with the indicators for task closure efficiency. **Value templates** • Create, manage, and use templates from a Global Template Repository across multiple AI assets, so that you can standardize and streamline your AI experience, and track usage of AI systems, use cases, and skills more effectively. • Enable users to edit, view, and create customized value templates by enabling a value template assignment experience in inventory records. • Provide transparency to value calculations of each AI system through value templates. • Perform calculations and approximations for the read and write time saved by users using AI systems by using data point and timestamps from the invoking records. **Risk and compliance tab** Display the risk classification of AI assets and the compliance posture for selected authority documents and policies through the **Risk and compliance** tab. This tab provides visibility into AI systems, models, and

Application or feature	Details
	datasets. The Risk overview section uses visual charts to categorize AI assets. Review adherence to frameworks in the Compliance overview section. For example, adherence to the NIST AI Risk Management Framework or the EU Artificial Intelligence Act, presenting scores based on citations and control attestations that are set by the customer. You can filter data by authority documents or policies, view overall compliance percentages, and identify critical issues and AI cases tied to items deemed non-compliant by the customer. • Build trust in the AI asset inventory to effectively manage AI-related risks across the enterprise. • Drive enterprise-wide risk visibility by aggregating individual scores into a consolidated AI risk profile to support informed mitigation decisions. • Display real-time residual risk scores on the home page to help practitioners identify high-risk AI assets and prioritize mitigation actions. • Use enhanced impact assessment templates to help manage and oversee compliance with regulatory requirements. • Perform bulk control attestations using Core UI to validate multiple controls across AI assets, improving efficiency for large-scale assessments. • Adopt a proactive approach by leveraging comprehensive AI risk and compliance scoring across the entire AI asset inventory. **AI cases tab in AI Control Tower** Gain a centralized overview of all your AI asset cases and inquiries by using the AI cases. On the **AI cases** tab, you see a list of records that include the case details such as the status, priority, owner, and timeline of your AI cases. You can monitor the progression of a case, stay informed about ongoing investigations, follow up on pending actions, and help to ensure timely resolutions. On this tab, you can also find filtering and sorting options that help you to prioritize cases that require immediate attention. • Use the enhanced home page to access a single, unified view of all AI-related cases and inquiries. • Track, manage, and respond to AI-related cases more efficiently through centralized case visibility. **Security & privacy tab in AI Control Tower** Review your AI security health metrics in the **Security and Privacy** tab. Use the access map for a comprehensive overview of agentic workflows, tools,

Application or feature	Details
	and agent details. The map helps to show how AI agents interface with workflows and tools to accomplish a task. Additionally, you can analyze current AI access, investigate ongoing access issues, and review your AI usage metrics. Control which third-party models OEM by ServiceNow are enabled for Now Assist AI implementation and how they're used. **Specify additional details during AI asset creation** Use the following fields to specify additional details about your AI systems, AI models, prompts, and datasets when you create AI assets: • AI systems: ○ Managed by ○ License details ○ Supported locations • AI models: ○ Managed by ○ License details ○ Supported locations • Prompts: Managed by • Datasets: ○ Managed by ○ Creation type ○ Department ○ Dataset creation date
AI Risk and Compliance	**Assess multiple risks and controls for AI assets simultaneously** Create a risk assessment project to perform bulk assessments on multiple risks for an AI asset, enabling assessors to evaluate them in a single project. This approach reduces time and effort, confirms consistency across multiple assessments, and provides a more comprehensive view of risks and controls within the same project. You can scope multiple risks related to the assessable entity within the project and perform assessments. AI Risk and Compliance team can determine inherent risks, control effectiveness, residual risks, and target risks in the risk assessment project. They can also reassess completed assessments or reassign in-progress assessment projects to another assessor. **AI asset data segregation with entity based access**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Enhance data segregation and security to ensure that only authorized users can access sensitive AI Risk and Compliance data while maintaining visibility into core entities. AI Risk and Compliance managers can control access risks, controls, related entities, issues, indicators, AI asset tasks, risk assessments, attestations, and AI assets data through entity-based access. Entities themselves stay visible to all users, while visibility of linked records is limited to authorized users. **AI Risk and Compliance content accelerator** Use the AI Risk and Compliance content accelerator icon on the AI Risk and Compliance workspace to activate the pre-configured content packs. Content Accelerator includes regulatory packs such as the EU Artificial Intelligence Act and NIST AI Risk Management Framework, offering citations, control objectives, and risk statements. The unified content hub helps to streamline scoping, reduce manual navigation between frameworks, and promote consistent use of regulatory content accelerator packs. This feature supports AI Risk and Compliance team in meeting relevant business requirements, maintaining team consistency, and speeding up the activation and management of global regulatory frameworks. **Automatic creation of AI cases and inquiries from an inbound email** Report AI cases or raise AI inquiries by sending an email to a dedicated email address. Your email automatically creates a new AI Case or AI Inquiry record in the system. This feature remove manual work and scattered reporting methods, ensuring every case or inquiry is automatically captured, categorized, and tracked. **360° Relationship Visualization of an AI asset** Use the 360° AI asset view in the AI Control Tower to explore the relationship between your AI assets and all its associated records in a distinctive visualization. This visualization provides valuable insights into how these objects interact and relate to each other within the AI asset. You can view related records such as, datasets, AI model, risks, controls, and assessments. **AI asset offboarding workflow** Manage AI asset changes and retirements through structured workflows that ensure compliance and reduce operational risk. Track and approve modifications to models, datasets, and systems while automatically identifying impacts on dependent assets. Initiate formal offboarding processes that remove access, close documentation, and update related controls when retiring underperforming or deprecated AI assets. Maintain complete audit trails integrated with your policy and risk frameworks to demonstrate governance continuity during lifecycle transitions.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Deliver system-level AI risk score aggregation and visualization Aggregate AI system-level risk scores by integrating heatmaps and residual risk score widgets directly within your AI asset overview records. These visual tools help you to see the cumulative risk exposure and track the residual risks across the entire AI asset inventory. With this feature, you get clear, data-driven insights into the overall AI system risk posture. **Enable AI risk and compliance views with updated content packs** Get the dedicated AI risk and compliance views for your AI models and dataset records. With these views, you get a structured and comprehensive overview of the related risks, controls, and compliance obligations, including the refreshed content packs that feature the updated assessment questionnaires and templates that align with the latest governance frameworks and regulatory standards. Your organization can perform accurate and timely risk assessments while maintaining compliance with evolving AI governance requirements. **Implement robust access control and AI asset management capabilities** Apply role-based access controls across AI assets and dashboards to ensure that data access is based on user roles. You can enable employees to request access to AI assets through a governed process and enforce consistent tracking of life-cycle states (such as development, deployment, monitoring, and retirement) across all AI assets. **Use the AI cases tab to monitor and manage AI case activity** Gain a centralized overview of all your AI asset cases and inquiries by using the **AI cases** tab in the AI Risk and Compliance workspace. On this tab, you see a list of records that include the case details such as the status, priority, owner, and timeline of your AI cases. You can monitor the progression of a case, stay informed about ongoing investigations, follow up on pending actions, and ensure timely resolutions. On the tab, you can also find filtering and sorting options that help you to prioritize cases that require immediate attention. **Filter the risk heatmap by Risk Assessment Methodology for targeted risk analysis** Apply the Risk Assessment Methodology filter to customize the display of the risk heatmap that is based on the specific risk evaluation frameworks from the AI risk and compliance home page. You can segment and analyze the AI risks according to the risk assessment models that your organization adopts, such as the internal standards, regulatory frameworks, or industry benchmarks, so that you can understand how different risk factors are identified, scored, and distributed.

Application or feature	Details
	Group control attestations Group control attestations by such predefined criteria as the control objectives, frameworks, or assessment cycles so that you can more efficiently manage and review attestations, reduce redundancy, and improve your visibility into the compliance status across related controls for the AI Risk and Compliance team. **Scan and analyze updates from global regulators** Enable the AI Risk and Compliance team to scan and interpret regulatory updates that are issued by global authorities. Your organization can stay informed about emerging compliance requirements, assess their potential impact, and take timely action. **Manage reporting compliance posture insights on key regulations or policies** Control the reporting of compliance posture insights that are related to key regulations and internal policies by using a setting to determine which insights are shared, their level of detail, and the reporting cadence. Your organization can align reporting outputs with regulatory obligations and internal governance requirements.
AI Search	**Zurich Patch 4** **Improve search precision and contextual relevance with hybrid search** Beginning with Now Assist in AI Search 15.0, customers with Now Assist in AI Search installed can enable the new hybrid search mode. Hybrid search combines keyword-based search with semantic understanding to deliver more accurate and relevant search results, with fewer zero-result searches. **Zurich Patch 1** **Improve semantic search with third-party embedding models** Use custom and third-party embedding models supported by the AI Search RAG application to generate more accurate and relevant semantic search results. **Zurich Early Availability** **Filter external content search results by language** AI Search filters external content search results, displaying only results that contain content in languages relevant for the user's search. These languages include: • The search user's session language • The fallback language for the user's session language (if configured) • The language of the global fallback locale (if configured)

<table>
<tr><th>Application or feature</th><th>Details</th></tr>
<tr><td></td><td>
<table>
<tr><th>Application</th><th>App Version</th><th>Release month</th><th>API</th><th>Endpoints</th></tr>
<tr><td></td><td></td><td></td><td></td><td>• PATCH /sn_tmf_api/work_order_manageme workOrder/{id}
• POST /sn_tmf_api/work_order_manageme workOrder</td></tr>
</table>
</td></tr>
<tr><td>Access Management</td><td>Machine identity access controls
Enforce fine-grained access to data via REST or SOAP endpoints using Machine Identity Access Controls. This feature enables you to define which integrations can access specific data, confirming that the integrations only have access to the resources they need.
Scripting Governance Tool tool and role
Review and help reduce the number of users with scripting privileges using the Scripting Governance Tool. This tool helps improve platform security with scripting governance based on user role.
A new deny-by-default behavior is enforced for scripting unless you have the snc_required_script_writer_permission role. After an upgrade or zBoot, this role is automatically assigned via the Conditional Script Writer group.
Datatype ACL
Simplify and help reduce redundant ACL definitions with Datatype ACLs. Create a single ACL to target all table columns of a specific data type, streamlining access control configurations.</td></tr>
<tr><td>Accounts Payable Operations</td><td>The tax engine integration framework validates supplier-provided tax against system tax at invoice line level, maintains compliance with regional and global tax regulations. This integration triggers automatic tax validation, handles exceptions for tax variance and missing data, enables manual revalidation and rolling up of system tax.
Enable your accounts payable specialist to manually change the invoice type, which results in improved accuracy and compliance. For example, changing a non-purchase order (PO) invoice to a PO invoice type.
Process your invoices more efficiently, adhere to compliance, and provide financial accuracy across processes by using new exceptions such as the Missing</td></tr>
</table>

Application or feature	Details
	tax code invoice and currency mismatch between invoices and purchase orders. Confirm that ITAM receipts are available and the received quantity is updated in the purchase orders through the integration between the IT Asset Management and Accounts Payable Operations applications. The recommend invoice owner AI agent auto-suggests and fills in the appropriate business owner based on historical patterns. This process sets up auto-confirmation from suppliers, resulting in shorter invoice processing cycles. Employees and suppliers can raise general case requests and track case activity updates from their respective portals by using the ServiceNowUniversal Request (UR) application. Universal requests eliminate confusion about which department to contact for assistance. Apply predefined distribution sets to split invoice amounts across multiple cost centers or GL accounts without having to do manual entry for each invoice line in PO invoices and non-PO invoices. This process helps distribute costs to multiple cost centers automatically, reducing manual work for Accounts Payable specialists.
Advanced AI Search Management Tools	**Zurich Patch 4** **AI Search analytics dashboard** The **Search application** interactive filter now allows analysts to review performance metrics and trends for search applications used in Recommended Actions. **Zurich Patch 1** **AI Search analytics dashboard** The **Search application** interactive filter now allows analysts to review performance metrics and trends for the Mobile Platform search application.
Advanced Risk	**Identify risks for an entity** If you're a Workspace user with the sn_grc_sharegenai.risk_suggestion_aiagent_user role, you can use the Risk Suggestion AI Agent to identify risks related to an entity. The AI agent analyzes the entity and suggests relevant risks from various sources, consolidating them into a reviewable list to verify for accuracy. Risk managers can then confirm and promote these risks to the risk register for further assessment. This feature automates risk discovery, helping identify potential risks and prepare for compliance requirements. **Reporting views from Risk Assessment Methodology** The reporting view provides an overview of all assessments under a specific Risk Assessment

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Methodology (RAM). It consolidates assessment data such as factor responses, scores, issues, controls, and associated risks into a single structure. When a RAM is published, the system automatically creates this view, which you can use to review assessments and build custom reports. It simplifies report and dashboard creation for risk assessments. **Note:** Automatic creation of Reporting views is not supported on Xanadu. For instructions on creating them manually, refer to KB2547071 **Risk event summarization** Generate risk event summary using the Now Assist for IRM application. Risk event summarisation is a Generative AI driven capability that generates clear and consistent summaries automatically. It reduces the need for manual effort, helps risk managers save time, and enables approvers to quickly understand the key details for faster decisions. Check your entitlements to confirm whether you have access to risk event summarization. **Grid based risk and control assessment** Gain efficient control over risk assessments with the new grid-based Risk and Control Self Assessment (RCSA). Quickly compare, edit, and prioritize risks and controls using the flexible, spreadsheet-style interface. Use side-by-side views and bulk editing to complete assessments faster. **Matrix report in Risk Workspace** Access and analyze the risk posture of your organization using entity-related data, such as risks, controls, KRIs, and events in a centralized, configurable grid-based view. This feature reduces time spent switching views and helps risk managers assess data more easily, leading to more proactive and streamlined risk management. **Support third party large language models** Risk assessment summarization and Risk event summarization support the LLMs from the third party providers, such as Anthropic Claude, Google Gemini, and OpenAI, in addition to Now LLM. This enhancement gives you greater flexibility to choose the model that best fits your organization's needs for generating risk assessment and risk event summaries.
Advanced Work Assignment (AWA)	**Use AWA without existing interaction or work item** Use AWA with an inbox card in Workspace without an existing interaction or work item. **New interaction record field** A new interaction record field was added to indicate whether this interaction is related to a third-party provider.

Application or feature	Details
Agent Chat	**Third-party chat integrations** Use the new customer message area for third-party chat integrations to see these features: • Third-party chat providers can update messages in real time. • Individual messages from third-party bots are correctly attributed to the appropriate customer and agent. • Agent and queue transfers to third-party chat systems are supported. • Show or hide capabilities for specific Contact Center as a Service (CCaaS) chat integration requirements can be configured.
Agent Client Collector	*Agent Client Collector Framework* **Upgrade MID-less agents** Starting in version 6.0.0, perform selective and high-volume upgrades on ACC agents when not using a MID Server by using products such as DEX and ACC-VC. Starting in version 6.0.0, verify that an agent is functioning properly by performing a self-test on the agent. Starting in version 6.0.0, view a list of agents and their statuses on the ACC Workspace dashboard. **Use improved debug logging** Starting in version 6.0.0, benefit from enhanced debug logging by sending all debug statements to a log file **Manage Agent Client Collector certificates** Starting in version 5.0, configure a schedule by which to rotate Agent Client Collector certificates which enable communication between agents and ITOM Cloud Services. Rotating certificates ensures that when a certificate expires, a new certificate is in place. **Perform high-volume Agent Client Collector upgrade in a macOS environment** Starting in version 5.0, upgrade large numbers of Agent Client Collector agents at a time that are running on macOS. This extends the existing high-volume upgrade capabilities available for Windows and Linux in the 4.3.0 release. **Use an IMDSv2 endpoint for metadata discovery** Starting in version 5.0, the IMDSv2 endpoint for metadata discovery is invoked when using Agent Client Collector in an AWS EC2 environment. **Use enhanced errors and diagnostics to troubleshoot issues with servers and endpoints**

Application or feature	Details
	Starting in version 5.0, view errors that occur before or after the registration process when Agent Client Collector connects to the instance. This provides enhanced debugging capabilities by enabling you to view issues in the instance, without requiring direct access to the agent logs. **Disable checks using heavy system resources while in CPU protection mode** Starting in version 5.0, disable only those checks that are causing high CPU usage while in CPU protection mode. It is still possible to disable all checks and completely stop data collection while in CPU protection mode. In a Windows environment, Agent Client Collector has improved the accuracy of how check CPU usage is monitored. **Configuration data files size limit** Starting in version 5.0, configuration data files have a maximum size of 10MB. **Configure Agent Client Collector with proxy auto-configuration (PAC) files** Starting in version 5.0, enable easier connection of Agent Client Collector to a proxy server by using a proxy auto-configuration (PAC) file. *Agent Client Collector Monitoring* Starting in version 3.15.0, GCP checks provide added support to configure metrics through a configuration file in JSON format. **Monitor Linux events** Starting in version 3.15.0, monitor Linux events using Linux event checks. *Agent Client Collector for Visibility - Content* **Discover MSSQL components using ACC-VC** Starting in version 1.5.0, use ACC-VC to discover MSSQL components in your environment. **Discover software information with ACC-VC using SWID tags** Starting in version 1.5.0, gather software information with ACC-VC using software identification (SWID) tags on an agent and a ServiceNow® instance. **Run certificate Discovery using Agent Client Collector for Visibility - Content** Starting in version 1.3.0, use the Agent Client Collector for Visibility - Content to discover TLS/SSL certificates used by the ports running on the server's configuration items (CIs). Certificate Inventory and Management uses the certificate data to manage the TLS/SSL certificate life cycle.

Application or feature	Details
	File-based Discovery is supported in a macOS environment Starting in version 1.3.0, use File-based Discovery in a macOS environment. **Collect metrics using non-osqueryd data collection** Starting in version 1.3.0, collect data more efficiently by invoking non-osqueryd data collection.
Agent experience for CSM	**CSM centered chat interaction record page** Includes a chat component in the center of the record page that provides front-line chat agents with a modernized interaction page layout. **Callback component on the CSM voice interaction record page** Provides agents with the ability to return customer calls and to create interaction records at the time of callback. **Task SLA cards component** Use the Task SLA cards component as a standalone component on the Front-line case page. Visual updates to the Task SLA cards component enable agents to see where they are in the lifecycle of multiple task SLAs at a glance. **Task activity timeline preset and controller** Use the Task activity timeline preset and controller to add the Timeline component as a standalone component on task record pages such as case or incident. **Notifications for agent mentions in records** Receive workspace notifications when agents are mentioned using @ in comments or work notes. Notifications include record details and a direct link for quick access. **Quick start tests for Customer Service Management** After upgrades and deployments of new applications or integrations, run quick start tests to verify that Customer Service Management works as expected. If you customized Customer Service Management, copy the quick start tests and configure them for your customizations.
Agentic Desktop	**Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Support for different screen resolutions and scaling**

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Desktop actions now run reliably on machines with different screen resolutions and scaling. Screen resolution and scaling are consistent across all screens of a desktop actions during creation, saving, and publishing. **Zurich Patch 4** **Design UI block desktop actions in Design workspace** Design, configure, and manage desktop actions in the Design workspace that enables: • Auto-recording or manually capturing screens and defining UI interactions, such as clicking buttons, typing into text boxes, and selecting from drop-down menus. • Adding details such as name, description, input and output parameters. • Testing desktop actions before activating them. • Publishing desktop actions to AI Agent Studio as tools for AI agents to execute. Example: Filling out fields and submitting a form. **Use non-UI block desktop actions** Add default desktop actions of the type non-UI block as tools to AI agents in AI Agent Studio. The non-UI block actions include pre-built connectors that enable your agentic workflows to interact with various applications and system components. These connectors streamline automation by offering pre-built actions for common tasks, reducing the need for complex scripting. Each connector focuses on a specific application or system area, providing a collection of related actions. For example, the Microsoft Outlook connector offers actions for email management, while the File and Directory connector provides actions for file system operations. The following connectors are supported: • Microsoft Excel • Microsoft Outlook • Microsoft Word • PDF • PowerShell • SQL • SSH • SystemAction Example: Reading data from Microsoft Excel or emails from Microsoft Outlook.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Adding desktop actions to AI agents in AI Agent Studio Seamless integration with AI Agent Studio has enabled effortless configuration of desktop actions to automate repetitive tasks on applications without APIs. AI agents can reason, plan, and execute desktop actions autonomously and semi-autonomously across legacy systems and desktop applications without complex setups. **Monitor desktop actions in Execution workspace** Trigger desktop actions from the Now Assist panel that are executed by AI agents in the Execution workspace. Interact with the automation when human input is required. These automations run in the background and listen for instructions dispatched from the ServiceNow instance. You can continue working on other desktop applications outside Execution workspace. **Leverage core desktop capabilities** Automate form filling, application clicks, and Windows OS file handling. Create workflows across legacy systems, thick client applications, and business applications on Windows operating system to perform repetitive tasks.
Alumni Center	**Alumni Center revamp** The revamped alumni home page is a central hub where former employees can update their details, manage preferences, and access personalized job recommendations. It also provides quick access to alumni services, news, resources, and tasks to stay connected and engaged. Alumni can maintain their employment history with legacy & latest employment details. Alumni can view the existing job opportunities and also get personal job recommendation based on your job preferences. **Alumni Self-registration** A former employee can sign up on the Alumni Center and provide details to register as an alumni. The personal email provided by the employee is validated to verify the employee status ensuring accurate identification and preventing impersonation or duplication. **Configure automatic alumni user creation** Alumni user creation is streamlined with a configurable process that allows organizations to generate alumni accounts automatically during an employee offboarding. Configurable termination conditions can be used to create the alumni and admins can restrict automatic creation with approvals if needed.

Application or feature	Details
	Personal Details Verification Employees in the offboarding stage can review and confirm their personal details such as email, phone number, and shipping address to facilitate effective communication post offboarding and ease alumni onboarding. The offboarding task is available in the Employee Center to-dos and offboarding journeys.
App Engine Management Center	**Use AEMC to manage app delegation, development, and deployment** AEMC is a centralized tool for IT admins and developers to manage the entire app development life cycle, from idea submission to deployment and monitoring. AEMC enhances efficiency and governance, and provides clear insights into custom app usage and developer productivity. **ReleaseOps integration** Starting with version 28.2.1 of AEMC, you can deploy using ReleaseOps. ReleaseOps enables the deployment of update sets via a pipeline and leverages the automation capabilities of ServiceNow Playbooks. **Migrate App Engine pipelines to ReleaseOps** Starting with version 28.2.1 of AEMC, migrate your existing App Engine pipelines to ReleaseOps to take advantage of ReleaseOps features without disrupting your existing pipeline and deployment process.
Applicant Center	**Applicant Center home page** The Applicant Center home page is the dedicated and personalized space for applicants that provides them with a complete hiring experience. **View a job application** As an applicant, open a job application and view the details. **Share scheduling preferences** As an applicant, when requested by recruiters, share your scheduling preferences to help them schedule interviews accordingly. **Select an interview slot to self-schedule your interview** Select an interview time slot from a list of proposed slots shared by the recruiter to automatically schedule your interview. **Request to reschedule interview** Request the recruiter to reschedule a proposed or scheduled interview. **Tasks in Applicant Center**

Application or feature	Details
	View, track, and complete all your assigned hiring tasks from the Applicant Center home page. **Applicant survey** Provide feedback about your hiring experience in Applicant Center. **Set accessibility preference** Enable keyboard accessibility for your profile to navigate through Applicant Center using keyboard tabs. **Configure pre-hire experience on applicant center** Start your onboarding journey from Applicant Center even before your first day. Complete all your pre-hire tasks easily and seamlessly.
Application Manager	Zurich patch 4 **Now Assist suites for version compatibility** Use the Application Manager to install and update Now Assist applications with suites of compatible application versions. Now Assist suites help verify that new Now Assist applications and versions remain compatible with the ones already installed to your instance. **Application state indicators** Review information about any applicable installation considerations, requirements, and blockers in the header of application details.
Application Vulnerability Response	**Enhancements to Application Vulnerability Response** The Unassign workflow is supported for application vulnerable items (AVITs) and remediation tasks (AVULs). • Streamline application vulnerability assignments with the **Unassign** UI action from the more actions menu on an AVIT. • Reassign incorrectly assigned AVITs, clarify ownership for reassessment, and maintain accurate triage records in workspace views. • You have the option to send unassign requests for approval prior to clearing the Assigned to and Assignment group fields on records. **SBOM document upload via Github Action** Upload valid Software Bill of Material (SBOM) documents to ServiceNow platform with the help of GitHub Action. **Create application remediation tasks manually in the Vulnerability Manager Workspace** With the sn_vul.app_sec_manager role, you can create application remediation tasks manually by selecting some or all the records in the Application vulnerable items' lists in the Vulnerability Manager Workspace.

Application or feature	Details
	These records are grouped into one or more remediation tasks according to the grouping criteria selected while creating application remediation tasks. **Create application remediation tasks manually in the IT Remediation Workspace** With the sn_vul.app_security_champion role, you can create application remediation tasks manually by selecting desired records in the Application vulnerable items' lists in the IT Remediation Workspace. These records are grouped into one or more remediation tasks according to the grouping criteria selected while creating application remediation tasks. **Tenable Web Application Scanning Vulnerability Response Integration** The Tenable.was integration now supports on#demand execution of both application and vulnerability imports, allowing you to quickly ingest web applications, findings, and scan metadata into ServiceNow. Imported data automatically populates Discovered Applications, Vulnerability Entries, Scan Summaries, and AVITs, with full visibility through integration run tracking. **Manual Ingestion of Vulnerabilities for Application Vulnerability Integration** Import AVITs from external sources via a standardised template (e.g., CSV, Excel) and manage Penetration test findings lifecycle. Now, you can ingest vulnerability data, including details such as affected application, vulnerability description, severity, remediation recommendations, including other necessary details. This enhancement allows you to simplifies the process of consolidating vulnerability data from diverse sources into a centralised Penetration test workspace. **Penetration Test Workspace** Monitor your penetration test requests and findings as well as your team's overall progress in the Penetration Test Workspace. Prioritize tests that need your attention, track findings, and view assignments with the following data visualizations on the dashboard: • Important items. • Penetration test requests that are critical and by state. • Reported findings. • Overall remediation progress based on assignment. **Enhancements to Penetration Test Assessment Requests** Along with Full Penetration, Focused, and Re-test, the following assessment types are included for Penetration Test Assessment Requests forms in the Penetration Test Workspace:

Application or feature	Details
	• Emergency Release - Supports emergency releases that are required for rapid software updates to address critical issues like security vulnerabilities. • Bug Bounty Program - Rewards ethical hackers to find and report security vulnerabilities. • Release Approvals - Ensure that all necessary checks are completed before deploying new software. • One-off reviews - Assess specific projects outside regular development and release cycles to evaluate performance and implement improvements. • Executive Interest - Report on senior management's engagement and support for critical projects within the organization. Enhancements to the Release Approval and Release Notes fields help you ensure quality and security for your pen test findings. The following states have been added to the Release approval field: • **Not Applicable** (Default). • **Approved**. • **Denied**. You can add details to justify your release approvals in the Release notes field. **Associate CWEs for manual AVIT creation from Penetration Test Assessment Requests** On the Penetration test findings tab on Penetration Test Assessment Requests, you have the option to associate Common Weakness Enumerations (CWE)s or Common Vulnerabilities and Exposures (CVE)s in the **Vulnerability** field for manually created AVITs. **Create change requests in Application Vulnerability Response** Users with the sn_vul.app_sec_manager and sn_vul.app_sec_champion roles as well as users with the sn_vul.app_developer role who have the ITIL role can create change requests from remediation tasks in the Application Vulnerability Response application. Create change requests to expedite your investigation for application vulnerabilities (AVIT)s that require manual intervention. • Create change requests with prepopulated information for scanned applications that are classified as configuration items (CI)s. • The change request workflow in Application Vulnerability Response is similar to the workflow supported in Vulnerability Response. For more

Application or feature	Details
	information about the Vulnerability Response change request workflow, see Change management for Vulnerability Response. **Note:** Change requests are supported for Application Vulnerability Response only if the discovered application is associated with a configuration item (CI). You must set `Product model` to **False** in the Use Product Model [sn_vul.use_product_model] system property to associate a discovered application with a CI. **Enhancements to the Software Bill of Materials Workspace** • You can delete multiple BOM entity records and their related components with bulk edit from the Software Bill of Materials SBOM SBOM Workspace. • Any Application Vulnerable Items (AVIT)s that are associated with deleted BOM entities automatically transition to **Closed**. **View risk score details of a vulnerable items in the Work notes section** Starting with v25.0.3 of Application Vulnerability Response, the system property *sn_sec_cmn.risk_score_changes_add_worknotes* is inactive by default. If you enable it, only then you can see all the changes related to the risk score of an application vulnerable item in the Work notes section. Additionally, the work notes are updated only if there's a change in the risk score.
Asset Audit Response	**Manage evidence request responses in the Asset Governance Workspace** Track and manage responses to the evidence requests for your financial regulatory audit engagements by using the Asset Governance Workspace. You can also gain insight into critical audit data such as due dates, statuses, and remediation tasks, which can help streamline the audit engagement process. **Fulfill evidence requests through the Asset Response Guided Experience** Fulfill and respond to evidence requests for your financial regulatory audit engagements by using the Asset Response Guided Experience. It provides step-by-step guidance on generating, reviewing, and submitting the required evidence for each evidence request. You can also create remediation rules and corresponding remediation tasks to identify and resolve any gaps that are discovered through your evidence. **Manage financial regulatory audit engagements and evidence requests in the Audit Workspace**

Application or feature	Details
	Enable your compliance managers and asset managers to collaborate in managing the financial regulatory audit engagement process and requesting corresponding evidence from asset teams through the Audit Workspace in the ServiceNow® Audit Management application. Managers can scope, plan for, and prioritize each engagement to resolve any regulatory risks and compliance issues before they lead to audit failures. They can also use the requested evidence to formulate audit opinions and complete these engagements. **Streamline the fulfillment of evidence requests by using financial regulatory context in the Audit Workspace** Associate your evidence requests with important financial regulatory requirements and guidelines, such as key financial standards from the Federal Financial Institutions Examination Council (FFIEC), by leveraging the Audit Workspace in the ServiceNow Audit Management application. By aligning each request with the relevant requirements and guidelines, you can help your asset managers better understand the compliance obligations that are associated with the requests. They can then use this information to fulfill each request more accurately and efficiently.
Audit Management	**Audit Period Start and End Dates** Set audit period start and end dates directly on Engagement records to focus audits on specific time-frames. The system displays only indicator results that fall within your defined audit period, keeping the audit time-frame separate from the overall engagement time-frame. This helps you audit past or future periods without affecting the broader engagement timeline. Simplify the installation of pre-configured content packs with the new Unified content management icon in the Audit Workspace. Content Accelerator includes the Digital Operational Resilience Act (DORA) content pack, offering citations and authority documents for DORA compliance. Audit shared manager and Audit WS supervisor roles can access Content Accelerator. **Enhancement to evidence request** Create evidence response directly in one step. This bypasses the step involved in creation of evidence request and collection details. Evidence response is enhanced with additional data of source and context. To leverage evidence capabilities, feature roles have been introduced: • sn_grc_advanced.evidence_reader • sn_grc_advanced.evidence_requester

Application or feature	Details
	• sn_grc_advanced.evidence_responder • sn_grc_advanced.evidence_admin **Integration with ITAM** Leverage Audit Management support as an ITAM customer through dedicated feature roles. A lightweight version of the Audit Management workspace is available, which includes the following features: • On the Audit Management home page, you can track **Timeline**, **Engagements**, **Tracking**, **Create evidence request**, and **.** • The lightweight Audit Management also includes the key capabilities, such as Engagement, Entity Scoping, Activities, and Evidence when Advanced Core is installed.
Authentication	**Machine Identity Console** Manage your inbound integration with ServiceNow's Machine Identity Console. Inbound integration in Machine Identity Console provides a simplified configuration experience for your inbound integrations. **Multi-factor Authentication dashboard** Use the new MFA Dashboard to understand insights such as MFA user enrollment, privileged admins who haven't opted in to MFA, and compliance. You can verify that all users have MFA enabled for enhanced security with the help of the MFA Dashboard. **Multi-factor Authentication Guided Setup** Use the new MFA Guided setup to configure multi-factor Authentication (MFA) for users who currently log in to ServiceNow with only a user name and password. This update enhances security by guiding administrators through the MFA setup process and verifying that all users are protected with an additional layer of authentication. **Identity Provider attributes for OpenID Connect** Use the Identity Provider (IDP) Attributes received from the OIDC response from the Identity Provider as a filter criteria for authentication.
Automated Test Framework	**ATF failure insights** Reduce the time to resolve your ATF test failures with actionable support from the new ATF failure insights feature. **Configurable Workspace** Enable simplified test creation through direct component interaction on Configurable Workspace pages via the Page Inspector.

Application or feature	Details
Business Continuity Management	**Map recovery tasks and event tasks to the phases** Set up phases for plans and events using the administrative setup. The base version of the application includes a set of default active phases, provided as seed data. The logical grouping of tasks into phases enables clear progression tracking for exercises and crisis events, offering flexible execution and task completion requirements for phase transitions. **Exclude non-recovery tasks from time calculation** Exclude specific recovery or event tasks from time calculations by using the **Do not include in time calculation** field within recovery or event tasks. **View and generate PDFs of approved plans** View the continuity and recovery plans directly from your mobile devices. BCM managers can generate PDFs of the approved plans, which BCM planners can then view and download, streamlining access to critical information on the go. **Verify asset recovery levels** Track event assets and verify the achieved recovery level of the impacted assets of a task in the **Asset recovery level** field. Completing specific tasks now automatically updates the corresponding event asset state. Assets are marked as **Partially Recovered** when they're operational enough to support dependent assets, and **Recovered** when they're fully functional. This change improves visibility into operational readiness and enables coordinators to identify when dependent assets can safely start their recovery process. Color-coded recovery levels of the assets offer visual cues for various recovery progress levels. **Use finalized RTO and RPO in BIAs, Plans, and Events** Use the **Finalized RTO** field to calculate an accurate Recovery Time Objective (RTO) for comparison, using values from the **Recovery time objective** and **Adjusted RTO** fields. Similarly, use the **Finalized RPO** field to calculate an accurate Recovery Point Objective (RPO) values for comparison, using values from the **Recovery point objective** and **Adjusted RPO** fields. A fix script now populates finalized RTO and RPO values in existing Business Impact Analyses (BIAs), ensuring consistency across all records. **Configure recovery tasks for exercises, events, or both**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Configure recovery tasks with event-specific scopes (exercises, actual crises, or both). When a recovery event is initiated, the system automatically filters tasks by event type: ensuring exercises include necessary setup and validation, and actual crises focus exclusively on actionable recovery work. **Auto-calculate the Planned end date on activated plans and event tasks** Enter the Planned start date for exercises and events. The system then calculates the Planned start and end dates for activated plans and event tasks automatically based on the **Planned duration** field and dependencies. **Use hierarchical structure in the associated plans** Use the hierarchical structure in the associated plans, establishing clear upstream-downstream relationships. This hierarchy confirms that only relevant downstream plans are brought into scope. The system automatically handles cyclic dependency checks, confirming that tasks from downstream plans aren't added as dependencies in the upstream plans. **Use Gantt chart in the Hierarchy view** Use the Gantt chart in the Hierarchy view to visualize the planned and actual timelines of event tasks. Task dependencies can now be created directly on the Gantt chart, provided the dependency points to a task scheduled ahead in time. Plans are automatically sorted based on the planned start time of their earliest event task, verifying a clear chronological view. **Generate reports in a Microsoft Word format using Document designer** Create standardized reports for business impact analyses (BIAs), business continuity plans (BCPs), and events by using predefined Microsoft Word templates. To use these templates, first establish a template relationship registry and install the necessary add-in to design and configure the templates. Then, import the relevant documents and customize their content, including the table of contents, details, impact assessments, dependencies, and attachments, to be included in the reports. Finally, generate the reports and save them to the corresponding application records. You can control whether to retain or replace the existing report attachments by configuring the *sn_bcm.retain_report_attachments* system property. **Avoid duplicate event tasks by grouping similar event tasks** Group similar event tasks during recovery events. The system automatically designates the first event task as the original task. When the original task is in progress, the

Application or feature	Details
	remaining tasks are placed in the **On Hold** state. After the original task is closed, the other tasks in the group are automatically marked in the **Closed duplicate** state. Tasks with internal dependencies can't be part of the same group. You can also unlink the tasks from their groups, so that the system helps to prevent cyclic dependencies within a group. **Manage action items for ad-hoc tasks and threat assessments** Create action items for ad-hoc tasks and send out threat assessments that leverage Smart Assessment during exercises and crises. You can create action items for tasks that support recovery efforts, such as communicating with stakeholders, leadership, or vendors, without directly restoring an asset. Use these action items to conduct threat assessments with the Smart Assessment Engine before, during, or after a recovery event. To enable task creation during an ongoing event, the Smart Assessment template must include both an event and an action item within its scope. **Revert an archived BIA or BCP to the Draft state** Revert an archived business impact analysis (BIA) or business continuity plan (BCP) to its **Draft** state by selecting the **Edit** button on the form. By revising previously completed BIAs, you save time by using a BIA that's already been created. **Optimized Crisis map interface** The Crisis map interface has been optimized to handle over 10,000 resources and more than 1,000 alerts without performance issues. Customize the display of impacted areas for alerts by using custom shapes or specifying a custom radius. To edit an impacted area, simply select its corresponding card and make the necessary adjustments to the shape. If needed, you can also revert the changes made to an impacted area directly within the map interface.
CPQ Configurator	**Configurable product offerings and associated blueprints** Create configurable products and generate the associated product offering blueprints that contain the product attributes, product relationships, product and pricing rules, and child products defined for configurable products. The blueprints also contain configuration rules for inclusion, exclusion, and determination. Catalog admins can review and update an offering blueprint in the CPQ Configurator and then publish the product offering to the product catalog. **CPQ Configurator interface**

Application or feature	Details
	Enable agents and customers to configure customizable products using the CPQ Configurator embedded in Sales and Order Management workflows. The configurator is used in both the CSM Configurable Workspace and the Business Portal.
Card data security	**Card Data Security** Tokenize secure card data in FSO dispute workflows by integrating with a tokenizer service through Card data security. You can configure which values to tokenize, establish connections to core systems and third-party systems like Visa and Mastercard, and manage tokenizer resource configurations.
Care Team Mobile	**Create support requests** Use Care Team Mobile to create requests for supporting departments directly from your mobile device. The following plugins are supported by Care Team Mobile: • Care Team Operations for Healthcare IT • Care Team Operations for Biomed • Care Team Operations for Facilities • Care Team Operations for Environmental Services **Scan assets** Scan tags on medical equipment and be redirected to the asset's record, where you can view its history, status, and associated cases. **Browse locations** Browse locations in Care Team Mobile to view healthcare locations and create support requests for specific locations as needed.
Care Team Operations for Biomed	**Setting up roles and responsibilities in Care Team Operations for Biomed** Roles and responsibilities are updated to allow for more selective user access. The following responsibilities were added: • Support department agent • Support department manager Users can be assigned these responsibilities in the Edit member related list within healthcare organizations.
Care Team Operations for Environmental Services	**Healthcare Environmental Services case**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Application or feature	Details
	Expand Healthcare Environmental Services cases to support custom support requests for your organization's environmental services support department. **Create environmental services support requests** Request support from your organization's environmental services department with pre-configured catalog items. **Healthcare Environmental Services case and work order synchronization** Care Team Operations for Environmental Services automatically syncs environmental services cases with work orders. **Setting up roles and responsibilities in Care Team Operations for Environmental Services** Roles and responsibilities are updated to allow for more selective user access. The following responsibilities were added: • Support department agent • Support department manager Users can be assigned these responsibilities in the **Edit member** related list within healthcare organizations.
Care Team Operations for Facilities	**Healthcare Facilities case** Expand facilities cases to support custom support requests for your organization's facilities support department. **Create facilities support requests** Request support from your organization's facilities department with pre-configured catalog items. **Healthcare facilities case and work order synchronization** Care Team Operations for Facilities automatically syncs Healthcare Facilities cases with work orders. **Setting up roles and responsibilities in Care Team Operations for Facilities** Roles and responsibilities have been updated to allow for more selective user access. The following responsibilities were added: • Support department agent • Support department manager Users can be assigned these responsibilities in the **Edit member** related list within healthcare organizations.

Application or feature	Details
Care Team Operations for Healthcare IT	**Setting up roles and responsibilities in Care Team Operations for Healthcare IT** Roles and responsibilities are updated to allow for more selective user access. The following responsibilities were added: • Support department agent • Support department manager Users can be assigned these responsibilities in the Edit member related list within healthcare organizations.
Career Conversations	**New third-party AI model provider options available for all Now Assist applications** Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. Zurich Patch 7 **Streamline feedback collection and review using the Employee feedback collection AI agent** As an admin, create reusable feedback templates using the Platform Surveys tool allowing managers to select and preview templates when requesting feedback, and help them quickly view a summarized snapshot of a reportee's recent feedback with easy navigation to the feedback page in Manager Hub. Zurich Patch 2 **Create a growth conversation with the help of an agent in Now Assist** As a manager, use the growth conversations preparation AI agent to schedule and prepare for employee growth discussions. The agent provides a clear summary of employee activity and career journey, with data-driven talking points to make conversations more focused and impactful. **Note:** This feature is available when you have both Now Assist for HR Service Delivery (HRSD), which will install Now Assist for Talent and HR Talent AI Agent Collection **Edit a conversation series** As a manager, you can now edit a conversation series based on your requirements. **End a conversation series** As a manager, you can now specify a date on which a growth conversation series should end. **View upcoming conversations based on status**

Application or feature	Details
	As a manager, you can now filter upcoming conversations based on the status of the conversation.
Case management for CSM	**Task plan templates** Create templates that define the repeatable tasks and records that need to be created for business processes. Define the tasks, set the task order, and create conditions that determine when these tasks and records are created. **Add multiple entitlements to a case** View the available entitlements on a customer service case and associate the multiple entitlements to the case. Available entitlements are associated with the account or consumer, product, and contract selected on the case record. **Recommend service definitions based on case context** Recommend the most relevant services to an agent based on the record context, such as the short description or description of the interaction. **Customer Service Case Types - Enable the service selector to launch record producers** Use the Service Portal record producers when your agents are creating cases in CSM Configurable Workspace. Agents can select the service definitions from the case type selector and launch the record producers. **Quick start tests for Customer Service Management** After upgrades and deployments of new applications or integrations, run quick start tests to verify that Customer Service Management works as expected. If you customized Customer Service Management, copy the quick start tests and configure them for your customizations.
Change Management	**Control opening of CAB meetings** Control the opening of a CAB meeting from the CAB Meeting calendar in the CAB Meeting workbench in Service Operations Workspace or in the Core UI through the *sn_change_cab.com.snc.change_management.cab.use_sow_mee* system property. For more information, see Change Management properties. **Track conflict detection** Track the progress of conflict detection using the Change - Conflict Detection flow (that runs as a system user) and the Change Management Worker table instead of Progress Workers. You can choose between the Flow and Progress Worker options by updating the *change.conflict.useprogressworker* system property.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	A new UI formatter *change_conflict_worker_progress_gate.xml* has been introduced to the change request form to replace the existing *change_request_conflict_progress.xml*. This update supports the *change.conflict.useprogressworker* system property when you upgrade to Zurich. The new formatter displays the same Conflict tab but selects the macro version to render the form according to the value of the new system property. **Define the maximum records for conflict detection** Limit the maximum number of conflict records that can be generated for each conflict type when conflict detection runs through the *change.conflict.max_count* system property; create this system property if it is not already present.
Classic Workflow	**Restrict access to Workflow Editor with a new role** Grant access to the Workflow editor by giving users the snc_required_script_writer role.
Cloud Cost Management 9.0	**Achieve better efficiency with faster retrieval of cost and usage data with the Azure Export method** Manage cost and usage datasets in Azure billing downloads efficiently by using the Azure Export method. With this feature, you can retrieve larger cost datasets faster. **Manage MCA contracts with the enhanced support for Microsoft Azure MCA** Gain access to the spend reporting and recommendations for Azure based MCA contracts. This feature helps you to visualize cost and usage data from Azure MCA accounts and optimize your cloud spend with recommendations for potential savings.
Cloud Exposure View	**Enhancements to the Wiz Vulnerability Response Integration** • The Universally Unique Identifier (UUID) that identifies detections for the Wiz Host Vulnerability integration will be mapped to a detection key. **Note:** This enhancement is supported for new customers only. For existing customers, the detection key for the Wiz Host Vulnerability integration is created using the combination of vulnerability, asset_id, and proof.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details

	• Added the source_id column to the Container Image Finding table (sn_vul_container_image_findings) and mapped the id attribute from the Wiz import to this field on findings records.
	
	Note: Perform a full import after upgrading to view the enhancement on container image findings, container image, and container image vulnerabilities records.
	
	• The image repository name format for new and existing discovered container images has been updated to align with the discovery format. The supported format is registry/repository. A separate finding is created for a repository present in each registry.
	• Appended all repositories that are associated with an image to the Repository field on the Discovered Container Image [sn_vul_container_image] table, which can help you see images from specific repositories.
	• You can configure the **First** parameter for the Wiz Asset Integration to help you resolve 504 errors. You can reduce the page size if you are having memory issues or generating errors. The default value is 500.
	• The default integration instance parameter for configuring finding keys for the Container Vulnerability Integration includes src_ci, vulnerability, package, image_layer, and image_repository.
	
	The Cloud Exposure View module provides a single location for cloud security teams to monitor and act on all their cloud-related security findings from multiple vendors across their cloud environments.
	• Configure widgets that display interactive visualizations and filter assets by category for findings, assets, and exceptions.
	• View panels with links on a single page that direct you to the following detailed lists:
	  ○ Needs Attention
	  ○ Cloud resources with active findings
	  ○ Top Accounts/Assets by Risk
	  ○ Toxic combinations
	  ○ Compliance scores
	• View aggregated security data imported from third-party vendors.
	
	See Unified Security Exposure Management release notes for more information about Unified Security Exposure Management.

Application or feature	Details
Code Signing	**Code Signing Installation using Plugin** Customer administrators can now install the Code Signing plugin directly from the ServiceNow Plugin portal without the need to contact the Customer Service and Support team to enable the Code Signing framework. This enhancement supports self-service deployment and simplifies the installation process. **Quorum Controlled Certificate Revocation** Revoke Code Signing certificates using a quorum-based control policy. Revoke certificates to help prevent them from being used to verify signatures. A quorum-based approval flow promotes added security by requiring approvals from multiple stakeholders, to help prevent unintended or unauthorized certificate revocations. **Code Signing Health and Status Dashboard** The new **Code Signing Health and Status** dashboard provides a centralized, user-friendly interface to monitor the overall health and configuration of your code signing environment. It highlights configuration settings, displays the status of essential components, and offers actionable guidance to help resolve issues effectively.
Collaborative Work Management	**Enterprise Agile Planning (EAP) integration with CWM** Enhance visibility and streamline planning for your teams with EAP integration into CWM. For Agile teams managing non-agile work items like incidents and change tasks, this integration bridges the gap by automatically creating a dedicated Space and Board in CWM. Agile work is seamlessly brought over via Connected Work, while EAP sprints are reflected directly in CWM's Sprint planning view, thus enabling unified planning across all work types. Teams can plan work for their sprints and update work status directly from the CWM Board, with performance reports in EAP dynamically reflecting these changes. This integration enables teams to manage their full scope of work from a single, connected workspace. **Board preferences** Reduce cognitive load and focus on the most relevant and actionable tasks by filtering work items on CWM boards based on their last updated date and hiding those items marked as Closed complete. From the Board preferences menu on the Board header, you can choose to show items last updated within 7 days, 30 days, 90 days, 120 days, or 1 year. **Kanban card layout settings**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Surface the information that's most relevant to you using Card Layout settings for Kanban view of a CWM Board. You can now personalize Kanban cards by selecting up to five fields to display on them. For a cleaner, distraction-free view, you can enable the Compact layout, which shows only the work item name on the card. Alternatively, the Full view shows all selected fields, offering better context directly on the card. Based on your workflow needs, tailor your workspace to enhance the way you track tasks. **Dynamic data linking in CWM Docs** Keep record information in your documentation always current and reduce manual effort with the Dynamic data linking feature in Docs. You can now reference any ServiceNow application record and Docs will automatically reflect the latest updates from those records. For example, if you add a reference to a Project record, the reference will show the latest field information of the project in Docs without requiring manual edits. Clicking the project reference opens up the project form so that you can view the full details of the project record and make any necessary changes. Dynamic linking also enables adding references to a particular field of a record, such as Assigned to of an Incident record. You can add references from any ServiceNow table you have access to, with no setup or configuration needed, thereby eliminate the hassle of switching between applications to copy and paste data from various records into Docs. **Agile sprint planning in CWM** Plan, track, and manage work for your teams by using Agile sprint planning in the CWM workspace. You can use CWM to manage tasks in multiple methodologies including ad hoc, waterfall, and Agile practices. • View such details as the backlog, current sprint, and future sprints at a glance from the Sprint planning view of the CWM Board. • Add Agile item types, such as stories, with other CWM tasks to the backlog. • Create sprints with a custom duration and sprint capacity. **Connected work in CWM** Streamline team collaboration and planning by enabling your teams to view and plan all their work in one place by connecting work across multiple ServiceNow applications. By defining the type of work you want to connect to CWM, you can bring in records from other applications into CWM Boards.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	After the records are added to a CWM Board, your teams can update their status and other details from within CWM, or perform sprint planning for all the work on the Board. This unified experience improves efficiency because your teams don't have to switch between multiple workspaces. **Navigation panel enhancements** Move Spaces, Boards, and Docs around in the navigation panel of the workspace by using the drag and drop functionality. **Enhancements to Kanban view** • Quick filters: Filter the tasks based on the work type that you would like to see in the Kanban view of a CWM Board. You can select single or multiple work item types based on the swim lanes selected. Any filters that you apply to the Kanban view are specific to this view and aren't applied to List or Gantt views. • Horizontal lanes: Group the cards on the Kanban view by using a vertical and horizontal lane for improved visibility into the type and progress of work. You can save horizontal lane preference into Board views and templates. **Copying and pasting content within Docs** Copy and paste the content such as text, images, lists, and tables from one Doc page to another. The following content is supported for the copy and paste action: • Text blocks with existing formatting • Bulleted and numbered lists • Tables • Images • Single and multiple paragraph blocks into a table cell • Lists into a table cell • Images into a table cell **New keyboard shortcuts** • Create Space: ○ macOS: Option + S ○ Windows OS: Alt + S • Create Board: ○ macOS: Option + B ○ Windows OS: Alt + B • Create Doc:

Application or feature	Details
	○ macOS: Option + D ○ Windows OS: Alt + D **Keyboard shortcut enhancements within CWM Docs** • Insert a URL in the Doc: ○ macOS: Cmd + K ○ Windows OS: Ctrl + K • Insert a new row in a table after the last row: Enter • Move to adjacent cells within a table: Arrow keys • Create a new list item within an existing list in a table or paragraph: Enter • Create a new line in the same bullet point: Shift + Enter • Indent a list item: Tab
Common Core	**Entity based record access update utility guided experience** Apply entity-based access (EBA) restrictions at the record level by using guided assistance in the entity based record access update utility. Guided assistance consists of a four-step process: **1.** Define the scope for the relevant entities **2.** Scope the record types **3.** Apply the conditions to each record type to refine the scope **4.** Review the selected records before you execute and initiate the update See the execution logs for a status after each update. You can get the details about the impacted records, applied scopes, and outcomes. The report a GRC issue AI agent is now available in the Employee Center, enabling employee users to report issues through a guided conversational experience. As users respond to prompts, the agent structures the issue and recommends relevant controls, entities, and policies based on the input provided. The AI agent helps ensure that the issue is well-defined and enriched with contextual information before it's submitted. **Entity based record access rules to secure new records** Configure entity-based record access rules on record types to ensure that access restrictions are applied automatically to secure new records or modified records related to entities with active EBA configurations. Maintain seamless access for users and groups referenced in record fields when entity-based access restrictions are applied. This feature enables users and

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	groups referenced in a record's user or group fields to access the records they are associated with. By configuring record-level user access at the table or record type level, it reduces administrative overhead and streamlines EBA adoption with minimal disruption. **Deactivation of entity-based access configuration** Deactivate the entity-based access configuration, enabling the system to automatically assess the records that it impacts. If entity-based access configuration is restricting a record, the access restrictions are removed. If other configurations also apply to the record, the restrictions remain in place and only the selected configuration is deactivated. Apply or remove domain-specific tags across multiple records at once. This streamlines workspace management by letting you quickly filter and organize records, for example, you can exclude non-privacy-tagged items in the Privacy Workspace for a more focused, efficient view. **Entity record page enhancements** The Entity type and Downstream Risks (now renamed as Risks) related lists on the Entity record page have been converted to UIB pages, providing a more intuitive and modern interface. The Downstream Risks related list has been moved to the dedicated Risks page, featuring organized tabs for Directly related risks, Suggested risks, and All risks. **Note:** You may experience issues with custom actions that emit events on the Risks or Entity type related lists on the Entity record page. To ensure a smooth transition and adopt these changes, refer to KB2593527 for detailed guidance. **Model Text Protocol (MCP) Client** Enable users of the ServiceNow® AI Agent Studio to access tools that are hosted externally and published using an MCP Server via the Model Context Protocol Client application. Authenticate users with the MCP Server to add the MCP tool to an AI agent. **Create an AI agent** The **Add** button on the **AI agents** tab is added as a drop-down providing different agent types for AI agent creation: • Chat • External **Configure ACLs for AI agents and agentic workflows**

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Configure the Access Control Lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available. Easily manage which configurations appear on the My Tasks page by marking them Active or Inactive. This gives you flexibility to enable or disable configurations without manual intervention, simplifying administration and improving control. An Active/Inactive flag has also been introduced in the My Choice table for enhanced configuration management. Entity names in GRC now automatically update when the associated CI name changes. This enhancement improves data consistency, reduces manual effort, and ensures alignment between CI and Entity records without requiring custom automation.
Configurable Workspace	**Activity stream compose with modeless dialog component bundle** Open the Compose editor as a pop-out, modeless dialog to draft comments, work notes, and emails while working on other tasks.
Configuration Compliance	**Enhancements to the Vulnerability Response Integration with Wiz** The Missing Assets [sn_vul_wiz_missing_asset] is deprecated. After updating to version 1.1, you must backdate your existing primary Wiz integrations by three days and run them. The backfill integrations are activated by default. After you backdate and run your integrations, the following backfill integrations are no longer required: • Host Vulnerability Backfill Integration • Test Results Backfill Integration • Host Test Results Backfill Integration • Issues Backfill Integration The [is_ignored] column is deprecated for the Host Test Results and Test Results Integrations. This column was replaced by the [is_result_ignored] column. Source severity is mapped to the Priority column on the Test Results [sn_vulc_result] table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Resource type filters are on the Test Results, Issues, and Host Test Results configuration tabs on the Wiz Configuration page. You can add any of the resource types listed. **Note:** If you configure resource types on the Resource Type Configuration tab, and you choose to configure parameters on the integration instance records, your configurations on integration instance take precedence over your settings on the Resource Type Configuration tab. See Identify Wiz Resource types for more information. Additional attributes imported from Wiz that are not stored in the Discovered items [sn_sec_cmn_src_ci] table are stamped with `Asset Attributes` in this table. Test results from the Host misconfiguration integration are classified as result type 'host_misconfiguration'. Data for resources that have the validated_at_runtime flag set to 'yes' is imported and populated on detections. The is_ignored column is deprecated on the Host Test Results and Test Results Integrations. This column was replaced by the is_result_ignored column. The CMDB internet-facing field on the discovered item is mapped to Limited Internet Exposure on findings. Column length for the descriptions in the Host Vulnerability import table has been increased. **Qualys parameter to ignore passed test results** Starting with v15.2.5 of Configuration Compliance, the ignore_passed_result integration instance parameter for the Qualys Integration for Security Operations has been added. This parameter is set to `false` by default so that passed test results imported by Qualys are not ignored. Set the parameter to **true** to ignore passed test results on import. **Note:** If activated, this parameter does not impact closure of the test results. For example, if you activate the parameter, and a failed test result from a previous import has since passed, it will be closed correctly. **Identify Wiz Resource Types for import** Identify the Resource Types (assets) reported by Wiz in your environment on the Wiz Integration Resource

Application or feature	Details
	Type configuration page in your ServiceNow AI Platform instance that you want to import. The Resource Types that you select apply to all the primary Wiz vulnerability and compliance integrations except the Wiz Container Vulnerability Integration. **Wiz Backfill Integrations** Retrieve and process data stored on the Wiz Missing Assets [sn_vul_wiz_missing_asset] table for missing assets that were not processed by the primary compliance integrations with specialized Wiz Backfill Integrations. • Test Results Backfill Integration • Host Test Results Backfill Integration • Issues Backfill Integration The Wiz Backfill Integrations are activated by default. **Wiz Host Test Result Vulnerability Integration** Import test results associated with the resource type, `VIRTUAL MACHINE` with the Wiz Host Test Result Vulnerability Integration. This integration is activated by default. **The Wiz Configuration Compliance (Test Results) and Issues Integrations** • Import configuration test results with the Wiz Configuration Compliance Integration (Wiz Test Results) to detect non-compliant cloud configurations. Findings are mapped to cloud test results (CTRs) in the Configuration Compliance application to help you enforce security policies and standards across your cloud environment. • Import data with the Wiz Issues Integration that can help you identify assets that are involved in toxic combinations of vulnerabilities and misconfigurations. These findings are also mapped to CTRs with `Wiz Issues` labeled as the source to help you track and remediate assets that may pose complex multi-vector risks.
Configuration Management Database (CMDB)	**CMDB Workspace v8.0:** You can now use the Create CI experience in CMDB Workspace to create a CI with a lookup identifier entry that contains mandatory attributes. When you select a lookup identifier entry on the Required attributes page, those mandatory attributes now appear and you can set their values for proper IRE processing. For more information, see Create a CI manually in CMDB Workspace. **CMDB Workspace v7.6:**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Access a centralized location with a comprehensive view of CI details by using the new CI form in CMDB Workspace. The form shows the attributes (key attributes are highlighted on a Summary page), tags, resources, activities, relationships, related services, health state, performance indicators, and CMDB 360 data that is associated with the CI. While viewing, you can also modify many of those CI details. For information about all the details on a CI form, see Manage CI details in CI Form. • Access the Data Certification dashboard in CMDB Workspace. The Data Certification dashboard provides the insights about the data certification activities and progress, policies and tasks, reports about certification instances, charts that show the aging certification tasks, and group and individual workloads. For more information, see Data Certification Dashboard. • Create or manage a shared preset. Save Unified Map filter settings as shared presets that any user on the team can access. This task requires the sn_cmdb_admin, sm_admin, or admin role. • Access Unified Map from the main navigation panel. Access Unified Map from the main navigation panel by navigating to **All** > **CMDB Workspace** > **Unified Map**. • Archival and destroy processes of certification policy related records, are now separated from those processes for records of all other policy types. This separation facilitates the extension of the retention period of certification policy records as follows: ◦ The table cleanup rule for the CMDB Data Management Policy Executions [cmdb_data_management_policy_execution] table, which is stored in the Auto Flushes [sys_auto_flush] table, now excludes certification policy execution records from recurring cleanups. Retaining certification policy execution records instead of deleting them after 7 days is useful in situations where those records are needed for audits and are also useful for the Data Certification Dashboard, which is populated by these records. ◦ The Archive CMDB Data Management Tasks archive rule, that applied to all CMDB Data Manager policy execution records, now excludes certification policy records. At each archive run, this archive rule is configured to also automatically archive its related records in the CMDB Data Management Certification Task To Document [sn_cmdb_ws_dm_certification_task_to_document] table (Archive Related Records).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	○ The archive rule, Archive Certification Instances, is added to specifically archive certification policy execution records from the CMDB Data Management Policy Execution [cmdb_data_management_policy_execution] table. This new archive rule is configured to archive certification policy execution records 2 years after creation, and to destroy those records 7 years after they are archived. ○ The archive rule, Archive Certification tasks, is added to specifically archive the certification task records from the CMDB Data Management Task [cmdb_data_management_task] table. ○ The archival of related records in the CMDB Data Management Certification Task To Document [sn_cmdb_ws_dm_certification_task_to_document] table is now moved as an Archive Related Records entry from the Archive CMDB Data Management Tasks archive rule to the new Archive Certification tasks archive rule. The Zurich release includes an installation of CMDB Workspace. However, you can download a newer version of CMDB Workspace so that you can use its latest features in your Zurich instance. For more information, visit the ServiceNow Store. **Quick start tests for CMDB** After upgrades and deployments of new applications or integrations, run quick start tests to verify that CMDB works as expected. If you customized CMDB, copy the quick start tests and configure them for your customizations.
Container Vulnerability Response	**Enhancements to the Vulnerability Response Integration with Wiz** • The Universally Unique Identifier (UUID) that identifies detections for the Wiz Host Vulnerability integration will be mapped to a detection key. **Note:** This enhancement is supported for new customers only. For existing customers, the detection key for the Wiz Host Vulnerability integration is created using the combination of vulnerability, asset_id, and proof. • Added the source_id column to the Container Image Finding table (sn_vul_container_image_findings) and mapped the id attribute from the Wiz import to this field on findings records.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Note: Perform a full import after upgrading to view the enhancement on container image findings, container image, and container image vulnerabilities records. • The image repository name format for new and existing discovered container images has been updated to align with the discovery format. The supported format is registry/repository. A separate finding is created for a repository present in each registry. • Appended all repositories that are associated with an image to the Repository field on the Discovered Container Image [sn_vul_container_image] table, which can help you see images from specific repositories. • The default integration instance parameter for configuring finding keys for the Container Vulnerability Integration includes src_ci, vulnerability, package, image_layer, and image_repository. **Enhancements to the Vulnerability Response Integration with Wiz** The Missing Assets [sn_vul_wiz_missing_asset] is deprecated. After updating to version 1.1, you must backdate your existing primary Wiz integrations by three days and run them. The backfill integrations are activated by default. After you run them after updating to v1.1, the following backfill integrations are no longer required: • Host Vulnerability Backfill Integration • Test Results Backfill Integration • Host Test Results Backfill Integration • Issues Backfill Integration Data for resources that have the validated_at_runtime flag set to 'yes' is imported and populated on detections. The CMDB internet-facing field on the discovered item is mapped to Limited Internet Exposure on findings. Fix information that includes 'Fix available', 'Partial fix available', 'No fix available', and 'Fix version' from the [fix_available] and [fix_version] columns is rolled up to CVITs from findings. Note: If there are two or more findings on a CVIT, the fixed version might only apply to one. In that case, 'Partial fix available' is rolled up to the CVIT. The Wiz vendor severity attribute is mapped to the 'Source severity' column on findings

Application or feature	Details
	records in the Container Image Findings [sn_vul_container_image_findings] table. The cluster and namespace is evaluated for all the following entity Types: DEPLOYMENT, DAEMON_SET, STATEFUL_SET, POD. **Import container vulnerability data with the Vulnerability Response Integration with Wiz** Import configuration test results from Wiz to detect non-compliant cloud configurations. Findings are mapped to cloud test results (CTRs) in the Configuration Compliance application to help you enforce security policies and standards across your cloud environment. **Enhancements to imported scanner results** Enhancements support more scanner data on imports. Namespaces and hierarchy cluster are considered and populated in the discovered container image [sn_vul_container_image] table if this data is imported.
Continual Improvement Management	**CIM roles** Implement and monitor improvement initiatives as a Continual Improvement Management (CIM) coordinator or manager without any ITIL role-related restrictions. **Applications integrated with Continual Improvement Management** As a CIM manager or coordinator, create change records from CIM tasks. If you have not been assigned the required ITIL or change_write roles, contact your system administrator.
Continuous Authorization and Monitoring	Streamline governance, risk, and compliance processes with the CAM Workflow Configuration. This feature allows administrators to: • Create and manage multiple workflows within a package. • Define GRC State Models for custom workflows. • Configure and version workflows. • Evaluate workflow version impacts to retrieve baseline controls. • Set up workflow-specific approval configurations. • Perform risk assessments across CAM objects. • Migrate the NIST RMF flow to workflow configuration for improved standardization. Introducing a new Child Boundaries list that enables a one-to-many boundary hierarchy, allowing you to create relationships between boundaries. This hierarchy is visualized in both the sidebar and diagram view, showing

Application or feature	Details
	one parent boundary with multiple child boundaries. OSCAL export and import now include the parent boundary relationship if present. **Dynamic Boundary Filters** **Dynamic boundary filters** Select the **Dynamic Filter** option in boundary filters to update system elements according to filter conditions. When disabled, the system elements remain unchanged. This update enhances the flexibility of boundary filter management. **Boundary operational status automation** Linking boundary operational status to the package life cycle ensures seamless integration. Key changes include: • Automatic update of boundary status to Operational when a package moves to the Monitor state. • Transition of Boundary status to Reauthorize as the Package Authorization date approaches. This update maintains synchronization between package and boundary states, enhancing overall system coherence. Generating and downloading OSCAL SSP and POA&M files is supported directly from within a authorization package. The supported file types include: • Catalog • Overlay Catalog • Profile • SSP • POA&M **OSCAL import enhancements** Enhancing the OSCAL import experience, the OSCAL import playbook now allows you to: • Import individual POA&M JSON files. • **User Mapping**: Automatically map users to existing ServiceNow users based on exact name matches, with the option to manually adjust mappings. • **Group Mapping**: Automatically map groups to existing ServiceNow groups based on exact name matches, with the option to manually adjust mappings. • **Roles and Responsibilities**: Populate relevant package fields with roles and responsibilities. **Overlay enhancement** Apply policies as an overlay in an authorization package to determine how the control objectives in the policy impact the baseline. This can be done in the following ways:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details

	• Addition: Create control objectives to address specific requirements not covered in the baseline.
	• Subtraction: Move existing control objectives to **Not Applicable**.
	• Customization: Create, move existing control objectives to not applicable, or skip control objectives.
	
	OSCAL enhancements
	
	Use the OSCAL import playbook to follow a user-friendly, step-by-step approach for importing OSCAL models. Using the playbook, you can:
	• Add multiple Catalog overlay files.
	• Preview OSCAL data before importing them to confirm accuracy. You can preview the following:
	  ○ Authorization boundary
	  ○ Authorization package
	  ○ System elements
	  ○ Information types
	  ○ Baseline controls
	  ○ Inherited controls
	  ○ Hybrid controls
	  ○ Not applicable controls
	  ○ Policies
	  ○ Control objectives
	  ○ Control objectives requirements
	• Skipped objects in the preview, such as control objectives, policies, authorization boundaries and packages can be individually overridden.

Contract Management Pro	**Better visibility of undelivered signature requests for a contract** When an electronic signature request is not delivered, the contract state is updated to Signature delivery failed and the signatory status to Delivery failed, clearly indicating the state of signature request. Contract fulfillers are also notified through in#product and email alerts. This capability is supported for both Docusign and Adobe Sign. **Contract amendments** Formally change, add, or remove terms in an existing contract through contract amendments without having to replace the entire agreement. The Amendment feature enables you to initiate, track, and finalize amendments to existing contracts and provides an audit trail. The signed contract and its amendment documents are stored in a centralized repository under the parent contract, which

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details

	enables you to manage all related documents from a single location.
	
	• Use the **Request type** field to distinguish between contract and amendment requests.
	
	• View the amendment history directly from the contract request.
	
	• View amendment details within the contract repository record through related lists:
	  ○ Contract Requests: View all contract and amendment requests associated with the contract.
	  ○ Amendment Field Changes: Track modifications over time by accessing a detailed log of all field changes made through amendments.
	  ○ Contract Documents: Access all documents related to the contract, including those generated or updated as part of amendment processes.
	
	Compare contract revisions in Contract Management Pro
	
	Compare a contract document in .docx format with its revised version from your workspace by using the **Compare documents** option.
	
	Document comparison is not supported for contract documents stored in external storage.
	
	Contract summarization
	
	Generate a summary of contract documents, supporting documents, and signed contracts in Contract Management Pro. You can also generate FAQs from the document or ask questions in the Now Assist panel to retrieve specific information from the document.
	
	Link parent contract requests
	
	Establish a hierarchical relationship between the parent and child contract requests during the drafting and negotiation phases. You can choose to have the child contract request automatically inherit the configured fields from the parent request. The contract repository records associated with the parent and child contract requests are automatically linked after the contracts are signed.
	
	Perpetual contracts
	
	Classify a contract with no end date as a perpetual contract by using the **Perpetual** option.
	
	Perpetual contracts must be initiated from Sales and Order Management and Source-to-Pay Operations.

Application or feature	Details
	Help Center Access help information directly from your workspace through a help icon  that accesses the Help Center for the landing and list pages of Contract Workspace.
Contract Management Pro for Legal Service Delivery	**Contract amendments** Contract amendments enable you to formally change, add, or remove terms in an existing contract without replacing the entire agreement. The Amendment feature enhances contract lifecycle management by enabling you to initiate, track, and finalize amendments to existing contracts with audit trail. A new field, **Request type**, has been added to clearly distinguish between contract and amendment requests. Each amendment is linked to its parent contract, and you can easily view the amendment history directly from the contract request. Additionally, a record producer is available in the base system, allowing you to submit and monitor amendment requests efficiently. The following related lists are now available within the contract repository record to provide amendment details: • Contract Requests: Displays all contract and amendment requests associated with the contract. • Amendment Field Changes: Shows a detailed log of all field changes made through amendments, enabling easy tracking of modifications over time. • Contract Documents: Provides access to all documents related to the contract, including those generated or updated as part of amendment processes. The signed contract and its amendment documents are stored in a centralized repository under the parent contract for easy access and managing all related documents from a single location.
Conversation Improvement Themes	**Determine effective and ineffective conversations** Analyze conversation quality data over time and classify them into effective and ineffective conversations. **Categorize conversations into themes** Identify recurring patterns linked to low or high conversation quality and categorize user requests into actionable themes.
Conversation Insights	**Inferred CSAT** Inferred CSAT provides an estimated score computed using AI in real time by analyzing the entire sequence of the conversation. **CSAT factors**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	The following CSAT factors provide explainability to the Inferred CSAT score. • Resolution • Confusion • Effort • Empathy • Next Steps • Frustration • Transfers and Escalations **AI Agent Analytics dashboard** The AI Agent Analytics dashboard includes visualizations with Inferred CSAT scores and factors by default.
Creator Studio	**Customizable email notifications** Promote consistent branding by having admins create custom email notifications and templates, which are sent when users request something from an app or the request was changed or closed. In support, several of the standard email notification activities are now in the public scope, and a new Configure email notifications item is available in Guided Setup. **New playbook activity to update record fields** Enable apps to change several fields automatically on the submitted record using the new Update submission playbook activity. In support, a new Configure playbook activities item is available in Guided Setup. **New question types for forms** Two new question types are available for forms: Duration and Attachment. • Duration enables users to specify a length of time. • Attachment enables users to upload an attachment as a question. The **Attachment** field differs from the **Add attachment** option for the form, because the Attachment question type can be used in dynamic behavior questions. **Granular configuration admin roles** Several new granular admin roles enable developers to complete administrative configuration tasks without requiring the full admin role. **Delete unpublished forms** You can now delete unpublished forms from Creator Studio, which completely removes the record for the form from the ServiceNow AI Platform.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Customer Contracts and Entitlements	**Renew a service contract** Initiate renewals from contracts at either the line level or the contract level. The resulting renewal quotes and orders generate a new contract that is associated with the original contract in the renewal history. **Add contract lines to a service contract** Add new line items to an existing contract by initiating the flow from contract. You can also add new line items to an existing contract while modifying a quote or contract. **Modify a service contract** Initiate a modification from the contract header to generate a quote or order containing all contract lines. You can also select specific contract lines and initiate a modification, resulting in a quote or order that includes only the selected lines. **Upsell or Downsell a service contract line** Select one or more root contract lines to adjust quantities. You can add or reduce quantities on a contract line by selecting the Upsell or Downsell feature. After updating the quantities of the contract lines, a single quote or order is generated with the updated quote lines. **Support Price Ramps in contract** Enable customers to specify price ramps for a product or service in a single quote. When the quote is completed and the order process is finalized, the contract captures the new pricing details. **Enhancements in Renewals workflow** • Configure renewal opportunity and quote generation dates on separate dates. • Renewed quotes automatically update when new products are added to auto-renewed contracts. **Non-Standard Renewals** Renew customer contracts outside the standard renewal cycle. You can perform early renewals to generate new contracts with updated pricing terms or late renewals to extend contracts after the expiry date. **Modify line item quantities** Swap an existing subscribed product or service with another product, either partially or fully.
Customer Engagement Sequences	**Multi-trigger sequences with decision branches for stages** Configure the sequences playbook to start based on multiple conditions across entities, eliminating the need for separate sequences for similar workflows. Add a decision node between stages to determine which stage to run next, based on the outcome of the previous stage.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Schedule call activity for telesales workflows Design sequences with the new Scheduled call activity to automate structured call attempts, including delays and outcome-based branching, directly from the playbook interface. This helps agents follow a repeatable, optimized process for engaging prospects or customers in telesales workflows. **Runtime permissions and fine-grained access control** Enforce runtime permissions to control access to sequence records such as sequence tasks and steps. **Granular role framework** Assign role-based access for sequence admins, writers, executors, and readers. Sequence admins have full control, writers manage their own sequences, executors (formerly viewers) have read-only access to sequences and sequence task records, and readers view sequence records. For more information, see Compatibility information for Customer Engagement Sequences. **Review sequences in Workflow StudioView sequences** Enable the sales operations teams to optimize and share the high-performing sequences across territories to promote best practices across the organization. **No-code interface for admins to configure sequences** Configuring multi-step sequences that define specific activities using a no-code playbook experience reduces dependency on developers. **Sequence tasks with predefined activities for agents** Predefined activities provide the following advantages to your agents: • Ensure consistent messaging and effective objection handling using clearly defined steps that dynamically adapt to customer responses. • Follow a repeatable, optimized process for engaging prospects or customers. • Avoid communications from sounding generic and improve engagement rates by customizing a prospect's name, company, and other details. • Reduce the chance of missing a follow-up, promoting consistency in outreach and reduction in manual effort.
Customer Service Problem Management	**Components installed with Customer Service Problem Management** The granular admin role enables developers and administrators to complete administrative configuration tasks for Customer Service Problem Management without requiring the full admin role. **Setting up a test group**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Enables the system to trigger the required tests for service problem cases, incidents, and change request, helping to identify the root cause of the problem. Test group includes test definitions. **Diagnose and resolve a service problem case** Review, diagnose, resolve, and close a service problem case for the service-related issue experienced by the customer.
Customer Success Management	**Calculate health score** Starting with Customer Success Management 5.3.11, you can use the **Calculated** metric data source to determine the health score for an engagement. If you are upgrading from Customer Success Management 5.3.10 or earlier versions, you must run the `Set health migration status` script to enable the health score calculation using this data source. **Define a table data source** Starting with Customer Success Management 5.3.11, you can use the **Table** type data source to retrieve and analyze data from internal and external tables. To retrieve data from external sources, you must install the Workflow Data Fabric Hub application and create data fabric tables. **Risk and issues page** Use the risk timeline visualization to manage the risk occurrences. **Granular admin roles** The granular admin role enables developers and administrators to complete administrative configuration tasks for Customer Success Management without requiring the full admin role. **Read-only field enhancements** Read-only field protections have been moved from the client side to the server side. This move prevents users from updating read-only fields through client-side methods. **Success report dashboard** Use the Success report dashboard to see the overall view of all the engagements under your hierarchy and manage your entire customer portfolio. Monitor engagement metrics, risk indicators, and get insights into onboarding and adoption status, risk indicators, onboarding and adoption insights, and expansion and renewal metrics. **Product adoption and usage** Measure product adoption trends and proactively guide users to achieve desired outcomes using products and services that have been purchased. Identify active and power users and areas where additional training or support is required due to low engagement.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Implementation record Track the progress of a partner or customer implementing a product or a service. Get a centralized view of the implementation status, identify risks, and run playbooks to mitigate issues. **Engagement hierarchy** View aggregate hierarchical data for an engagement. Make informed decisions, improve customer satisfaction through detailed tracking, identify risks early, and help prevent escalations. **Engagement timeline** View a chronological list of critical events related to an engagement. Review timelines to recall past events, customer interactions, and identify any issues. **Contextual color bands** Associate thresholds and visual representations to health metric data. View product adoption and usage information relative to a specific product.
Customer self-service for Sales and Order Management	**Customer-initiated RFQs** Request quotes for products and services without relying on manual outreach. The RFQ feature in the Business Portal streamlines the quoting process by enabling customers to: • Submit quote requests from within their portal experience • Specify the overall budget and cumulative target price for each top-level product • Track RFQ status and quotes in real time • Accelerate sales response time with seamless quote-to-order conversion **Generate quotes from RFQs** View all RFQs submitted through the Business Portal in the CSM/FSM Configurable Workspace, eliminating the need for managing and tracking them offline. Convert RFQs into quotes with a single action, accelerating the quote-to-order process, improving turnaround times, and enabling scalable quote management. **Create orders from the Business Portal** Deploying the Sales Cart plugin provides the following advantages to your B2B customers when they order products using the Business Portal: • Preserve products and configurations added to the cart across sessions and devices so customers can review or update their selections without placing an order. They don't have to start their shopping process all over

Application or feature	Details
	again if they get interrupted, leave the site, or decide to come back later. • Enable better collaboration and decision making by downloading a cart summary in PDF format and reviewing products to be purchased and terms and conditions with business stakeholders. • Sign the acknowledgment section and share the cart summary PDF with the seller to place an offline order. • Provide the flexibility to select or modify billing and shipping addresses during the checkout process.
Data Loss Prevention Incident Response	**Create a Data Loss Prevention Incident Response SLA trigger** Enable prompt and efficient responses to incidents by creating SLA triggers. **Create a Data Loss Prevention Incident Response SLA definition** Outline the conditions and duration for responding to data breaches by creating Data Loss Prevention Incident Response SLA definitions. **Create an Application in Proofpoint and Obtain Client Credentials** Create an application in Proofpoint and configure the required settings to obtain client credentials. These credentials enable secure access to the Proofpoint API for seamless integration and automation. **Install and configure the Proofpoint integration for Data Loss Prevention** Install and configure the Proofpoint integration to use the#Proofpoint DLP incident data to investigate DLP incidents.
Data Management	**Data Management Console** View a summary of data usage on your instance and manage the growth of data directly from the Data Management Console. **Monitor data usage at the table level** View a summary of data usage for an individual table and monitor data usage in associated tables that store attachments, audit records, and journal entries. **View data usage for logical tables** Monitor data usage for logical tables, including the Incident [incident], Problem [problem], and Change Request [change_request] tables. **Identify which tables are driving the most growth in other tables** View tables contributing the most growth to the tables that store attachments, audit records, and journal entries. **Rule summary**

Application or feature	Details
	Track the number of records in the backlog and view the execution history of a table's data management rules.
Data Management for CSM	**Naming customer relationship records for Consumer team member relationship tables and Household team member relationship tables** Use the **Type** field through related party configurations to name records in the consumer team member and household team member relationship tables. This functionality enables you to label relationships based on the purpose of the association and relevant industry use cases. **Migrating legacy workflow to low code** Added an **Escalation Approval Flow** field to the Escalation Template [sn_customerservice_escalation_template] table where existing customers can continue using their current escalation workflows or migrate to the new flows, depending on their customizations. As part of this update: • The legacy Escalation-Approval workflow has been migrated to the low-code flow designer. • The Escalation Master–Approval workflow has been converted into a business rule. **Account address enhancements** Enable contacts to access the account addresses that permit contacts to view both account-address records and the associated location information for accounts they're authorized to access. **Using CSM Data Classification application** Use the new CSM Data Classification (com.snc.csm_data_privacy) Store app that delivers base system classifications for CRM data, categorizing it as internal, personally identifiable information (PII), confidential, and more. The solution uses the ServiceNow AI Platform data privacy capabilities, such as data classification, to apply protection measures and enhance data security. **Support indirect sales through Business Locations with Order Management for business location, Quote Management for business location.** Use the Sales and Order Management capabilities for both internal and external business organizations to enable Order Management, and Quote Management systems for business locations. Support channel sales and indirect sales by enabling business location staff to collaborate with an enterprise in managing customer orders, quotes, and performing the following actions:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Permit enterprise sales agents to associate business locations as channel partners to create and fulfill customer orders and quotes. • Enable self-service order tracking for internal and external business location staff through the Business Location Service Portal to track and manage customer orders. • Support the tracking of multiple business locations for a single order or quote, either at the order line item level, order related party, quote line item level, or the quote related party. • Improve the indirect sales cycle efficiency by converting approved channel quotes into customer orders. **Support indirect sales through Business Locations with Opportunity Management for business location.** Use the Sales and Order Management capabilities with both internal and external business organizations using Opportunity Management for business locations. Support channel sales by enabling business location staff to create and modify business opportunities and to track end-to-end life cycle of opportunities. **ServiceNow CPQ integration with MACD workflows** Introduced new data model changes to enable ServiceNow CPQ configurator usage for MACD workflows. **Sales and Service API Core and Lead to Cash Core** Granular admin roles introduced in Lead to Cash Core and Sales and Service API core. **Explore Partial sync** Synchronize only specific sections of your data structure using the new partial sync capability in the create instance flow. This enhancement introduces the `allowedContextTypes` parameter, which enables you to specify exactly which types should be processed during synchronization operations. This leads to the following benefits: • Improved performance: Reduction in processing time for targeted updates. • Reduced resource consumption: Lower database queries, memory usage, and network bandwidth. • Faster response times: Users experience quicker synchronization operations. • Better scalability: System handles higher volumes with lower resource requirements. • Flexible configuration: Adapt sync behavior to your specific use case.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Improved error handling for synchronization operations The partial sync enhancement includes improved error handling that provides clear, actionable error messages when mandatory fields are missing from synchronization requests. Benefits: • Faster troubleshooting with clear error messages. • Reduced configuration errors through validation. • Improved system stability with graceful handling. • Better developer experience with helpful guidance. **Recursive filtering and structure preservation** The partial sync enhancement implements advanced filtering logic to maintain data integrity while optimizing performance. • Consistent API responses across all operations • Predictable data structure for client applications • Reduced integration errors from missing fields • Simplified error handling in consuming systems **Granular roles in Install Base Management** Added new granular roles with the sn_install_base.install_base_admin admin role, which is installed with Customer Service Install Base Management [com.snc.install_base] plugin. • sn_install_base.install_base_read • sn_install_base.install_base_write • sn_install_base.install_base_create • sn_install_base.install_base_delete • sn_customerservice.customer_data_viewer • sn_customerservice.case.viewer These roles provide you with more control over administrative tasks like read, write, create, delete, data view, and case view related to install base and sold product related entities. **Billing account store application** Install the new CSM Billing Account Core store application, which introduces a foundational data model and hierarchy for managing billing accounts. It enables you to define billing relationships, establish account hierarchies, and track financial responsibility across your organization. **Sold product form** The following enhancements are added for the Sold Product in this release:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Billing Account: Enables direct reference to the associated Billing Account on the Sold Product entity within ServiceNow® CRM allowing agents to access financial information instantly during service delivery. This provides visibility into payment terms and conditions linked to the product, builds customer trust through transparent and predictable billing, and supports accurate revenue recognition for businesses. • Start and end Dates: Provides full lifecycle state-transition support (**In preparation, Active, Expired, Cancelled**) with automated date-driven updates.
Data Privacy	**New Data Discovery experience** Use the new Data Discovery experience, which simplifies the experience of discovering and anonymizing PII. **Column-level discovery** Select a specific column of a table for granular scanning during data discovery jobs. **Anonymization of encrypted field** Anonymize encrypted columns to help you achieve compliance with data privacy regulations and defense-in-depth data protection.
DevOps Change Velocity	**Import based evidence collection** Improve instance efficiency by skipping step-level pipeline processing for accelerated change management and evidence collection for GitHub Actions, Azure DevOps (ADO), GitLab and#Jenkins orchestration tools.
Developer Sandboxes	**Exploring Developer Sandboxes** View the total, available, and allocated sandboxes in your instance by using the Sandbox Management home dashboard. The dashboard also displays information about each sandbox, including the status, data utilization, owner, when the sandbox was last accessed, and when the sandbox was allocated. **Create a sandbox template** Enable your delegated developers to reuse the data so that they can test their changes without manually inputting the data every time. **Create a Data Generation Profile** Enable your customers to generate the data for testing within the context of developer sandboxes, but also independently of sandboxes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Note: Developer Sandboxes can't copy all the instance data. Data generation profiles enable a statistical sampling of data from selected tables with curated mappings to populate the sandbox with the data needed for building an application. **Allocate a sandbox** Allocate the sandboxes that were created to your development teams. **Retire Developer Sandboxes** Retire outdated sandboxes to make room for the new sandboxes in your instance. **Automatically backed up update sets** If you install Developer Sandboxes on an instance after Zurich Patch 5, update sets are automatically backed up when the instance is upgraded.
Digital End-User Experience	**View collected metrics with Metrics analyzer** Using the DEX Metrics analyzer, explore and analyze various metrics for Configuration Items (CIs) through selecting metrics by application, device, location, and OS. **Monitoring non-persistent VDIs** Set up monitoring of non-persistent VDIs to identify performance issues and to troubleshoot. **Set up page-level monitoring** Monitor a Web application performance at a specific page level and view the collected metrics in the Metrics analyzer. **Assign ITIL-related roles to DEX users** Exercise tighter control over the role management system and role delegation. Control who has access to Express list, Alerts, and Incident records after the ITIL-related roles have been removed from the dex_user or dex_engineer roles. **Monitor Microsoft Teams call quality** View detailed metrics for the Microsoft Teams calls of a particular user, including call quality, network metrics, and session data, with DEX for Microsoft 365. **Create a remedial action** Access the Create Remedial Action page from the DEX Administration workspace. DEX admins can create a remedial action or link to an existing remedial action to a check definition. To enhance the end-user experience, you can also run the remedial action on multiple impacted devices at once. **Device health page**

Application or feature	Details
	View real-time data from the past 24 hours for alerts, change requests, and incidents impacting a device in the Device events Timeline chart on the Device health page. **DEX issue diagnosis and resolution agentic workflow** Service desk agents can use the DEX diagnosis and resolution agentic AI workflow to resolve issues on DEX monitored devices through a structured process that includes diagnosis of the cause, a resolution plan with actionable steps, and documenting the resolution in the incident record. **DEX issue diagnosis and resolution agentic workflow** Service desk agents can diagnose and resolve Zoom call quality issues using the DEX issue diagnosis and resolution agentic workflow, which integrates Zoom-specific diagnostics that correlate device, network, and application data. **Incident investigation with DEX** Service desk agents can diagnose and resolve common issues on DEX monitored devices from the Investigation tab in incident records within the Service Operations Workspace. View the health status of the device and related metrics, review the suggested resolutions, and execute remedial actions or follow self-help instructions to resolve the incident. Monitor the status of actions after they're completed. **Customize themes for Desktop Assistant, Customize Desktop Assistant home page, and Create a hyperlink card in Desktop Assistant** DEX Desktop Assistant administrators can customize the theme for Desktop Assistant by modifying specific CSS variables. You can also customize the logo, add hyperlink cards, and map these cards to sections on the home page. **Monitor Zoom call quality using DEX** Admins can view detailed metrics for Zoom calls made by users assigned to this device or who logged in within the past 15 days. The metrics include call quality, network performances, and call details enabling faster troubleshooting and improved end-user experience visibility. **View Zoom room metrics** Using DEX for Zoom, admins can monitor Zoom Room performance across their organization, view issues in each room, and analyze root causes to promote consistent meeting experiences. **Added new remedial actions** The DEX base system includes the following new remedial actions:

Application or feature	Details
	help instructions, and knowledge articles to resolve boot performance problems quickly. **View GPU device metric details** Monitor GPU and VRAM (Video Random Access Memory) usage on the Device page to assess graphics performance and identify bottlenecks. GPU usage shows the percentage of graphics processing capacity in use, while VRAM usage highlights memory consumption for graphics intensive workloads. These metrics help detect rendering issues, memory intensive applications, and performance degradation enabling faster investigation and resolution of GPU related device problems.
Digital Portfolio Management (DPM)	**Configure the Info tab in the DPM Admin Center** Show or hide various sections of the **Info** tab for your solutions in DPM. **Create enterprise service portfolios using a template** Create enterprise portfolios from scratch or by using a template. Enterprise portfolios are structured in a nesting tree format to facilitate navigation of service-related items and taxonomy nodes. Similar to personal portfolios, you can see key metrics to assess the portfolio performance. **Configure scheduled email reports in DPM Admin Center** Send periodic emails of KPI metrics to the DPM solution owners. This feature is off by default and can be activated in the DPM Admin Center under a new 'Email properties' section.
Dispute Rules Content Pack for Mastercard	**Decision tables for Mastercard dispute processing** Streamline dispute processing by validating Mastercard transaction details and questionnaire answers against the eligibility rules in this application's decision tables.
Dispute Rules Content Pack for Nacha	**Decision tables for ACH dispute processing** Streamline dispute processing by validating ACH transaction details and questionnaire answers against the eligibility rules in the decision tables included in this application. **Supporting Knowledge Base article** Verify chargeback eligibility with the included Knowledge Base article that contains a table of reason codes and chargeback rules.
Document Intelligence	**New third-party AI model provider options available for all Now Assist applications** Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Application or feature	Details
Document Services	**Document comparison** Compare two versions of the document side by side. **Guardrails for PDF generation and accessibility** Use static and dynamic guardrails to help maintain stability during PDF generation and accessibility. **Smart Documents** Accelerate insights with quick summaries, dynamic Q&A, and FAQs that reduce time spent searching for information
Domain Separation	Domain Admins may now delete by domain to efficiently manage domains and reduce storage overhead. The tool also includes data recovery and retention, enabling rollbacks and retention policy setting. Changes to the domain table are now queued sequentially and batched into a single background job. This helps simplify domain table updates. Users are notified when a job needs to be delayed as well when a job needs to start.
Dynamic Translation	**Test Exclusion Rule** Use the new Test Exclusion Rule module to check your exclusion pattern in Dynamic Translation's Exclusion Framework. You can manually test either exact matches or pattern (regex) matches. See what your exclusion pattern matches when translating your input into target languages. When you are satisfied with your exclusion pattern, you can create an exclusion rule based on it with just one step.
Employee Center	Zurich Patch 1 **Check latest company news and events** Use the **Company News and Events AI Agent** to enable employees to check their company-related news and any upcoming events using the Now Assist in Virtual Agent. **Now Assist for Employee Experience Summarization skill** Enable a summary of the request, requested item, or case for approval task using Now Assist for Employee Experience. The skill provides a summary of the selected item from the available list that you want to work on. Zurich Early Availability **Now Assist for Employee Experience plugin** Enable employees to resolve and approve tasks easily through chat conversation using the Now Assist for Employee Experience plugin with Now Assist in Virtual Agent.

Application or feature	Details
	Browser Extension for Employee Center View and manage content and other company resources through the Browser Extension for Employee Center. Access the extension as a pop-up window, or select the Browser Extension for Employee Center icon on the portal to open it in a new page. **Enhanced Requests Experience** Enhance the My Requests experience with features like easy segmentation, filtering, and keyword search. These features create a dynamic and scalable experience on the Employee Center portal for your admins, service, process, and experience owners. **Portal performance optimization** Control how your portal pages load, such as all at once or as needed, by using the new deferred and lazy load preferences. Lazy loading is enabled by default and displays content dynamically, reducing page load time. **High-traffic experience** Communicate the information about heavy usage and slower network conditions during high usage scenarios, such as live events and major announcements. **Taxonomy and connected content** Streamline the cleanup and syncing of outdated or invalid content, helping admins maintain a high-quality, well-performing portal with less manual effort. **Mega menu load** Load the Mega Menu in the background to speed up home page interactivity and enable your users to engage with visible content faster during first-time visits. **Notifications for Employee Center enhancements** Get Notifications for Employee Center in Content engagement that is available with Employee Center Pro. For more information, see Employee Center Pro release notes. **Quick start tests for Employee Center** After upgrades and deployments of new applications or integrations, run quick start tests to verify that Employee Center works as expected. If you customized Employee Center, copy the quick start tests and configure them for your customizations.
Employee Center Pro	**Portal performance optimization** Communicate information about heavy usage and slower network conditions during high usage scenarios, such as live events and major announcements. **Notifications for Employee Center enhancements**

Application or feature	Details
	Get the Notifications for Employee Center feature in Content engagement. Add reactions and comments to published news articles to help improve user involvement. **Integrated experience and service feedback** Configure features flexibly as an admin and submit detailed experience feedback as an employee with the Integrated experience and Service feedback enhancements. With the enhancements, you can do the following: • Use new themes for experience feedback. • Add comments in addition to a rating when submitting experience feedback. • Review submitted feedback on the Feedback Analytics Dashboard. **Quick start tests for Employee Center Pro** After upgrades and deployments of new applications or integrations, run quick start tests to verify that Employee Center Pro works as expected. If you customized Employee Center Pro, copy the quick start tests and configure them for your customizations.
Encryption	**Encrypt data using Row Conditions** Use row conditions for Field Encryption to define encryption rules for rows within a specific column, based on dynamic conditions.
Encryption Key Management	**Keep track of Field Encryption and Key Management changes** By default, the changes to the records on these tables are now logged to the Sys Audits [sys_audit] table: • Encrypted Field Configurations [sys_platform_encryption_configuration] • Module Access Policies [sys_kmf_crypto_caller_policy] • Cryptographic Modules [sys_kmf_crypto_module] For details on accessing the Sys Audits [sys_audit] table, see Viewing Sys Audit and Audit Relationship Change tables.
Enterprise Architecture	**Application rationalization page enhancements** • View business application bubbles whose X and Y-axis values are within the value range of +/-0.25 of each other as a grouped bubble. The grouped bubble displays the total number of business application bubbles that it contains. This grouping helps in clearing the clutter on bubble chart when there are too many

Application or feature	Details
	business applications with similar values. For details, see Bubble chart view of application rationalization. • Zoom in, zoom out, or pan on the Bubble chart page using either on-screen buttons or by using a mouse device or trackpad interactions. For details, see Bubble chart view of application rationalization. • View the calculation logic behind the total number of business applications displayed on the Bubble chart page. For details, see Bubble chart view of application rationalization. • Select a single bubble on the Bubble chart page to view the associated business application details. Select a grouped bubble to view the list of business applications that are part of that grouped bubble. For details, see Bubble chart view of application rationalization. • View actual scores of business applications and compare them with their normalized scores. For details, see List view of application rationalization. • Increased maximum number of bubbles displayed on the Bubble chart to 500. • Apply the fiscal period filter to filter and view business applications for a specific fiscal period. • Apply the application rationalization filters to filter and view specific business applications on the bubble chart or list view page. An indicator is displayed on top of the filter icon to show the number of filters currently applied. • View the business application technical debt indicator score on the application rationalization list view page. On the application rationalization bubble chart view page, you can use the TRM technical debt indicator to form the bubble size based on the indicator score. • Export the list view of application rationalization data to Excel or CSV file format. You can use the data to obtain insights, share with stakeholders, and prepare for analysis. • Business applications with Retired or End of Life lifecycle stage aren't displayed on the Application Rationalization bubble chart page. **Data certification in Enterprise Architecture Workspace** • Use the Data Certification workflow in Enterprise Architecture Workspace to ensure the accuracy, completeness, and reliability of critical data within your organization. For details, see Exploring data certification in the Enterprise Architecture Workspace. • Create a data certification policy directly from the Enterprise Architecture Workspace using the Data

Application or feature	Details
	certification workflow. For details, see Create a certification policy. • Run certification on demand for published policies to generate a new certification instance for an active policy. For details, see Run certification for a policy. • Activate a certification policy to add it to the active certification runs. This process ensures that the policy is active and can be used for certifications. You can deactivate a policy to remove it from active certification runs. For details, see Activate a certification policy. **Enterprise Architecture Workspace home page enhancements** Apply the Portfolio Overview and Health filters to filter and view specific business applications and business capabilities information. An indicator is displayed on top of the filter icon to show the number of filters currently applied. **Manage Enterprise Modeling and Visualization** • Create a diagrams using CSDM shapes to ensure consistency in how services, applications, and infrastructure are represented. Aligning with CMDB 5 standards, helps you in accurate reporting, impact analysis, and compliance across the enterprise. For details, see Common Service Data Model (CSDM) shapes. • Use the modified Enterprise Architecture shapes that are aligned with CSDM 5 standards for better modeling, accurate impact analysis, and reporting. For details, see Create a diagram using CSDM shapes. • Create diagrams using AWS shapes. The AWS shapes enable you to visualize AWS cloud components, model hybrid architectures, support cloud migration planning. For details, see Amazon Web Services (AWS) shapes and Create a diagram using AWS shapes. • Group or ungroup a general shape object. You can combine multiple related shapes into a single container for better organization and clarity in diagrams. For details, see Convert a shape to a group shape. • Expand or collapse a group shape to simplify visualization, improve focus, and supports hierarchical modeling. For details, see Expand or collapse a group shape. • View Business Process details for which the BPMN diagram is being created. Modify details such as name, parent, and description. For details, see Modify BPMN diagram details. • Reorder shape categories within the Shapes panel to customize the panel for faster access to frequently

Application or feature	Details

	used shapes. For details, see Reorder shapes categories.
	• Show or hide the Shapes panel to optimize your workspace for different tasks. For details, see Show or hide shapes panel.
	• Switch between List view and Grid view in the shapes panel according to your modeling needs. For details, see Switch to list or grid view of shapes panel.
	• Download a diagram as an image to share it with other stakeholders with offline access or use it in the presentations. For details, see Download a modeling diagram as an image.
	• Select and delete diagrams from the Diagrams page.
	• Select upstream or downstream entities when adding related records for shapes. The upstream entities appear as a parent for the selected shape in the diagram while the downstream entities appear as a child for the selected shape in the diagram.
	• Add version label, version description, and planned rollout date details for diagram versions.
	• On duplicating a business process map, you can choose to associate the duplicated process map with a new or an existing business process.
	• Added support for shapes that enable AI governance. The shapes are added under the Enterprise Architecture category in the shapes palette. The shapes are:
	  ○ AI Dataset Digital Asset
	  ○ AI Model Digital Asset
	  ○ AI Prompt Digital Asset
	  ○ AI System Digital Asset
	• Perform undo and redo actions using buttons on the diagram page or using keyboard shortcuts.
	• Resize the shapes added to a canvas.
	• Drag shapes from the **Shapes** palette on to the canvas.
	• Add labels on the connector lines between shapes in a diagram.
	• Create diagrams for business process maps using the specific shapes related to the business processes.
	• Search shapes within the shape libraries.
	• Reorganize the order of shapes in a shape library according to your requirement.
	• Show or hide shapes in different diagram types.
	• General shapes can be rotated.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details

	• Enhanced the overall appearance of the diagram by hiding the connector ports and displaying them only when hovering over the shapes.
	• Open the Enterprise Modeling and Visualization diagrams from the following sections:
	  ○ From the Architectural Artifacts related list of a business application, business capability, or a business process record.
	  ○ From the **My approvals** tab of the Needs Attention section on the EA Workspace home page.
	  ○ From the Architectural Artifacts section of the Portfolio page.
	• Added support for all ArchiMate shapes.
	• Model Value stream diagrams.
	
	TRM catalog enhancement
	Export the TRM catalog data to Microsoft Excel or CSV format.
	Business Portfolio enhancement
	Export the Business Portfolio data to Microsoft Excel or CSV format.
	TRM category enhancements
	Assign an owner to a TRM category to ensure clear accountability and improved governance standards. The owner is responsible for maintaining consistent technology compliance standards for that TRM category.
	TPM lifecycle record enhancements
	• TPM lifecycle records are now assigned unique identifiers are automatically,while creating the TPM lifecycle record. These identifiers serve as clickable links that provide direct access to full record details.
	• Run the Populate Number field in TPM Discovered Technologies scheduled job to populate the TPM lifecycle record identifiers of existing records created using previous versions (before version 1.9.0) of the TPM plugin. For details, Run a scheduled job to populate Technology Portfolio Management lifecycle record identifier.
	
	Working with Portfolio list viewAI Portfolio section enhancements
	The following AI product models added to the AI Portfolio section:
	• AI System Product Models
	• AI Model Product Models

Application or feature	Details

	• AI Dataset Product Models
	• AI Prompt Product Models
	
	Business application related list enhancements
	
	Added the AI Product Models as a related list. In the tab, you can:
	• Select **Add** to associate an existing AI system product model to the business application.
	• Select **Remove** to remove a AI system product model from a business application.
	
	For details, see Add AI systems to business applications.
	
	• Added the **Product capability** tab as a related list. In the tab, you can:
	  ○ Select **New** to create a new product capability and associate it with the business application.
	  ○ Select **Add** to add an existing product capability to the business application.
	  ○ Select **Remove** to remove a product capability from a business application.
	• Added the TRM products tab as a related list. In the tab, you can:
	  ○ Select **New** to create a new TRM product and associate it with the business application.
	  ○ Select **Add** to add an existing TRM product to the business application.
	  ○ Select **Remove** to remove a TRM product from a business application.
	• In the **Architectural Artifacts** tab of the business application related list, selecting the **New** button displays a modal to create an architectural artifact.
	
	TRM product related list enhancements
	
	• Added the **Product capability** tab as a related list. In the tab, you can:
	  ○ Select **New** to create a new product capability and associate it with the TRM product.
	  ○ Select **Add** to add an existing product capability to the TRM product.
	  ○ Select **Remove** to remove a product capability from a TRM product.
	• Added the **Business Applications** tab as a related list. In the tab, you can:

Application or feature	Details
	into Data Manager Certification policies and Publish a draft Data Manager policy in CMDB Workspace.
Enterprise Asset Management	**Organize your assets into hierarchical asset groups to manage your complex asset ecosystems** Organize assets into logical groups and subgroups to represent their dependencies and operational relationships. Use a dependency map to visualize the entire structure of the asset hierarchy, making it easy to see all the subgroups and assets within each asset group. **Inspect the condition of enterprise assets to determine their health and ensure reliability** Define condition attributes for enterprise models and assets and associate these attributes with templates to identify any potential issues throughout the asset life cycle. Enable scoring in the templates to calculate asset condition scores to determine whether an asset passes or fails the evaluation. Schedule asset condition evaluations via maintenance plans or work orders. View comprehensive reports on the asset condition outcomes on dashboards across your organization. **Optimize your operations with asset performance reports** Track the past performance of assets and get notified about trends, threshold breaches, or anomalies based on their location, model category, model, or classification. This tracking helps improve asset availability according to ISO standards. **Monitor supply and demand of assets in a stockroom with detailed inventory reports** Track and manage stockrooms efficiently by evaluating the inventory reports in the Inventory view of the Enterprise Asset Workspace. These reports help you: • Find replacement options or spare part availability for assets that are in use, being repaired, or in maintenance • Quickly identify shortages and align current demand in your stockroom with both current and incoming supply • Analyze the supply to meet open demand across all stockrooms or locations **Achieve faster diagnostics and enhanced maintenance efficiency with standardized failure and resolution codes** Enable technicians to record predefined failure reasons and resolution steps with configurable codes. You can create, update, and import these codes through spreadsheets in the Admin center of the Enterprise Asset Workspace. In the Repair flow, these codes help technicians record the reason for the specific issue with the asset and the appropriate solution for repairing it.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Manage OT hardware models and assets in the OT Asset Workspace Enable OT asset managers to view and fulfill requests for OT hardware assets in the OT Asset Workspace. The reports and dashboards in the OT Asset workspace include OT hardware models, assets, and requests. The following OT Asset Management workflows and features now provide support for OT hardware assets and models, in addition to the workflows and features that continue to support them from the Yokohama release: • Bulk import • Asset reclamation • Advanced Shipment Notification (ASN) • Asset audits • Total Cost of Ownership (TCO) • Lease contract • Risk • Resale • Loaner • Move • Recall • Stock rule **Remediate unsuccessful enterprise asset calibrations** Remediate failed calibration events by initiating new work orders and corresponding work order tasks for those events. When you select the option to remediate a failed calibration event, you can choose an appropriate work order template to generate a new work order with at least one work order task. The work order and work order task are auto-populated with the asset that you want to calibrate, the location of that asset, the original work order, and all mandatory fields. In addition, the original and new calibration events and their corresponding tasks are linked together through the **Parent** field for full traceability. **Measure calibration tolerance conformance by using additional value types** Use the following additional value types to compare your calibration measurements against the corresponding tolerances that you define: • Range • Less than • Greater than

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	In addition, use the True/False value type to assess the qualitative elements of your calibrations. **Manage unique identifiers for enterprise assets using CI identification rules** Define required and unique fields on asset records by creating identification rules on associated CI classes in the Identification and Reconciliation engine (IRE). When you create an asset whose model category is linked to a CI class with an identification rule, you should provide details for at least one of the fields, such as Asset tag, Serial number, and MAC address, that uniquely identify the asset. **Drop off and receive assets at a stockroom by using the ServiceNow Mobile Agent application** Return the assets that you have in your personal stockroom to a different stockroom by creating a Drop off task using the ServiceNow® Mobile Agent application. The asset manager of the destination stockroom receives the assets that you dropped off through a Receive task. The asset manager then verifies the received assets and closes the Drop off task using the Mobile Agent application. **Note:** Starting with the Xanadu release, you could create Drop off and Receive tasks in the Enterprise Asset Workspace. However, now you can also use the Mobile Agent application for the same purpose. **Receive shipment assets at a stockroom through the streamlined and unified receiving process** Receive assets from any workflow directly at the stockroom using the unified receiving functionality in the following workspaces: • Enterprise Asset Workspace • OT Asset Workspace • Medical Asset Workspace • Facility Asset Workspace This standardized receiving process reduces the time spent on receiving assets. By requiring each asset to be assigned a unique identifier when received at the stockroom, the quality of asset data also improves. You can receive assets in bulk by using a template. Additionally, you can view the results and validation comments in the staging table. During this process, the system handles existing assets, creates new ones as needed, and performs comprehensive validations. **Track asset movement from the receiving bay to an aisle-space in the stockroom**

Application or feature	Details
	Move assets from the receiving bay to their designated aisle and space and improve asset tracking and inventory management by using the Asset put away feature. This task can be performed via the Enterprise Asset Workspace or ServiceNow Agent application.
Event Management	**Mixed alert grouping** Combine CMDB-based and tag-based alert grouping strategies into cohesive groups that reduce noise, enabling faster and more effective response. **AIOps 360 overview dashboard** Gain actionable insights with a 360-degree dashboard that showcases product value, tracks operational efficiency, and highlights automation impact. Monitor alert handling, service health, and AIOps outcomes to drive smarter, faster decisions across IT operations. **Mixed alert grouping in Service Operations Workspace** Choose how you want to group alerts from the **Criteria Type** field. Use the **Related CIs** option to combine CMDB-based and tag-based alert grouping. **Application services for impact calculation** Filter the application services to be considered in impact calculation for focused and accurate results. **Metric connector in Integrations Launchpad** Configure metric pull connectors to automate data retrieval and seamlessly integrate external metrics for efficient monitoring. **View links between alerts in new alert groups in Express List®.** Starting in version 26.9.0, investigate alert group details and visualize connections through Link View in Express List®, now available for log analytics-based alert groups and mixed alert groups. **Anomaly information for log analytic based alerts and metric intelligence alerts in preview panel in Express List®.** Starting in version 26.9.0, review visualizations for anomaly information in log analytic-based alerts and metric intelligence alerts in the preview panel in Express List[var.express-reg-tm]. **Configure new property for automatic resume of the live list updates following a pause, and configure time ranges in Express List®** Starting in version 26.9.0, admins gain the ability to configure the amount of time until the live list updates resume, after being paused in Express List®. Admins are also able to customize the time range options displayed in Express List®, such as the default time range. **Centralized management with the ITOM AIOps configuration center**

Application or feature	Details
	Starting in version 26.11.0, the ITOM AIOps configuration center provides a centralized hub to manage AIOps settings, helping you integrate monitoring tools, optimize alerts, metrics, and logs, and manage services, dashboards, teams, and authorizations for improved visibility and operational efficiency. **Added Recommended category for AIOps 360 Overview dashboards** Starting in version 26.11.0, added a **Recommended** category to all officially released dashboards such as AIOps 360 Overview dashboard, AIOps Value Realization dashboard, to help you easily identify and access ITOM-approved dashboards. **Add a delay for incident creation from alerts** Starting in version 26.11.0, you can add a delay in Respond Automation before incidents are created from alerts, allowing alerts to auto-close if resolved and helping reduce unnecessary incident creation. **Added support for multiple subscriptions of AWS account** Starting in version 2.17.1, added support to enable multiple member accounts to forward CloudWatch/ EventBridge events to a centralized account, where a single SNS topic delivers them to the ServiceNow Event Ingestion endpoint, reducing manual setup from multiple configurations to one and cutting onboarding effort by up to 90%. **Configure Dynatrace metric connector from Integrations Launchpad** Starting in version 2.17.1, you can use the Dynatrace metric connector from the Integrations Launchpad to bring metrics from Dynatrace into ServiceNow Metric Intelligence for visualization, enrichment, dynamic thresholds, and anomaly detection. Starting in version 2.17.1, you can use the out-of-the-box Datadog metric connector to integrate Datadog metrics with ServiceNow Metric Intelligence, enabling anomaly detection, metric visualization, enrichment, and correlation of metric anomalies with events and log alerts. Starting in version 2.17.1, you can use the new Kafka connector to stream time-series metric data from Kafka topics into ServiceNow Metric Intelligence for real-time monitoring, anomaly detection, and alerting. **ITOM guided setup** Starting in 27.2.1, introduced ITOM Event Management guided setup, providing a sequence of tasks that help you install and get started with Event Management efficiently. **Live updates functionality has been updated in the Service Operation Workspace Lists.**

Application or feature	Details
	Starting in version 26.11.0, a new toggle switch allows users to enable or disable live updates. When the toggle is set to on, alerts are updated automatically. When the toggle is set to off, a badge displays the number of available updates until the page is refreshed manually. The setting is saved for future logins by the same user. **Explore the new Dependency view for an alert** Starting in version 26.11.0, explore the new Dependency view for an alert. Access maps from the following locations: • in the preview panel, in the Configuration item section for the CI topology • in the Utilities panel of the alert record • in the action drop-down menu • in the Core UI alert form **Respond to multiple alerts in Express List** Starting in version 26.11.0, run response actions on multiple alerts at the same time in Express List.
External Content Connectors	**Zurich Patch 7** Retrieve searchable content and metadata from your Adobe Acrobat Sign source system. Retrieve searchable content and metadata from your Aha! Application or feature	Details
	Retrieve searchable content and metadata from articles in your Zendesk Guide source system's knowledge bases. **Statistics for external content connector content crawls** Review statistics for searchable items retrieved by a content crawl. **Statistics for external content connector user permission crawls** Review statistics for user and group permissions retrieved by a user permission crawl.
Field Service Management	**Using Dispatcher Workspace** Use Dispatcher Workspace to perform the following tasks: • Use the advanced resource filter to sort contractors and equipment. • Add agents to Dispatcher Workspace to see their schedules, or assign them tasks if you manage the assignment group or territory they're a part of. This action can be done without loading the entire assignment group or territory that the agent is a member of. • Set up the calendar to use multiple time zones at once. For more information, see Show multiple time zones at once in Dispatcher Workspace. • Navigate from a work order task to a related list of smart assessments that are associated with that work order. **Assigning work order tasks to agents manually** Use the records page to perform the following tasks that was limited to Dispatcher Workspace before: • Flag a work order task. • Use assignment assistance. **Schedule Optimization** Use Schedule Optimization to do the following: • Initiate immediate optimization to adjust schedules and tasks when an in-day event occurs, like a new priority 1 task, a canceled task, an agent taking PTO, or an agent running late. • Assign the best agent for a work order task based on agent efficiency, which helps schedule and assign tasks more appropriately, using Field Service Agent Efficiency. • Define work, travel, and overtime penalty values for each agent so the optimization engine can either

Application or feature	Details
	schedule a nearby agent with a higher penalty or a distant agent with a lower penalty. • Improve task scheduling by assigning dependent tasks to a single technician within the same shift. **Workforce** Enable managers to show or hide work order tasks from the **Calendars** tab in Workforce. When Workforce Optimization for Field Service is enabled, these tasks can also be viewed in Hybrid and Map views. **Field Service Scheduling** Manage resource attributes for any duration, whether a single day or multiple days. **Appointment Booking** Use Appointment Booking to do the following: • Enable better control over task sequencing using new dependency types, such as 'Finish to Start - Same Day' and 'Finish Together' with lag options, integrated with appointment booking for more precise scheduling. Enhance operational insight for all roles through improved visualizations including dependency trees, conflict alerts, and task indicators, which support dispatcher decisions and technician execution. • Optimize appointment recommendations by allowing radius configuration at the territory level, tailored to diverse areas, such as urban versus rural. This capability includes an extension point for customers to implement custom radius logic with default instance-level values if no specific configuration is set. • Enhance appointment recommendations by allowing grading against user-defined similar services rather than identical ones, resulting in more versatile scheduling options. This feature includes an extension point for customers to specify which services they consider similar, and the system defaults to same-catalog matching if no custom configuration is provided. • Increase scheduling flexibility with new features to support slot overlap and overrides. This capability enables territory-based customization of appointment windows, default schedules, and specific slot-level overrides, giving more control over availability.
Field Service Management for Telecommunication	**Managing work orders for telecommunication services** Manage the work orders for field services to support the installation, activation, and site assessments that are needed for connectivity services. This feature supports the POST, PATCH, GET, LIST, and DELETE operations for work orders via the TMF 697 Open API.

Application or feature	Details
Financial Services Card Operations	**Overview of the Dispute Management workflow** Resolve Mastercard disputes quickly with an enhanced end-to-end workspace that supports all stages of the dispute life cycle, including pre-arbitration and arbitration. Use comprehensive tools to simplify and accelerate the dispute management process. **ACH disputes workflow** Resolve ACH disputes faster with a guided, end-to-end workflow that unifies intake, investigation, and resolution—built on a framework ready for any non-card transaction. The unified intake now features a new dispute reason framework for accurate regulatory mapping and embedded WSUD signature collection for seamless authorization capture. The overall workflow centralizes data, applies real-time regulatory checks, and surfaces next best actions to reduce manual effort and speed decisioning, all on a modular design that can scale to additional non-card dispute types.
Financial Services Operations Core	**Payment card application** Store the details of physical payment cards across the entire card life cycle, from issuance to servicing. You can also store tokenized values for sensitive data, such as the primary account number (PAN). **Deny-Unless ACL** Use Deny-Unless access control lists (ACLs) on FSO tables for non-authenticated users, such as users with public roles. With this minimum-security setting, only your authenticated users can read, write, delete, or create actions on these tables. For more information about the Deny-Unless ACLs, see the Deny-Unless ACL topic in the ServiceNow® Platform Security documentation.
Financial Services Operations Integration with Mastercard	**Mastercom subflows for disputes** An integration layer that provides predefined subflows and a supporting data model to enable seamless execution of Mastercom spoke actions for dispute management. This layer includes the following subflows: • Mastercom - Look up Transaction Details • Mastercom - Look up Clearing Transaction Details • Mastercom - Create Fraud Report • Mastercom - Create Claim • Mastercom - Look up Chargeback Details • Mastercom - Look up Second Presentment Details • Mastercom - Look up Case Filing Details • Mastercom - Validate Claim Response Details

Application or feature	Details
	definition executes one or more flows. You can update or remove external event sources that you create. **Create a domain-separated saved external trigger** Create a domain-separated saved external trigger. Configurations that you make to the trigger are auto-saved. After the trigger is published, you can edit only the **Label** field values. **Create a reusable scheduled trigger** Create a scheduled trigger that starts your flow when you need. Use the trigger across your flows. **Create a skill for conversational subflows and actions** Create a skill for the conversational subflow and action and make the skill discoverable in conversations. You can have multiple skills for the same subflow or action. **Enhancements in the subflow and action conversational settings** To make the error messages more useful in a conversation, you can show specific error messages from the subflow or action rather than showing generic error messages. Additionally, if you override an input with reference, you can apply a filter to limit the number of records in the Reference field. **Make a flow wait for an email reply** Pause a flow until an email reply is received to an outbound email record **Show subflow stages in a parent flow** Show subflow stages as part of the execution details of a parent flow. **Save flows, subflows, and actions automatically** Save flows, subflows, and actions automatically as you work on them. **Support Now LLM Long Term Stable models (LTS) with Flow generation** Support the Now LLM Long Term Stable models (LTS) for Flow generation. **Support Now LLM Long Term Stable models (LTS) with Flow summarization** Support the Now LLM Long Term Stable models (LTS) for Flow summarization. **Use an AI agent action** Use flow data to run an AI agent and configure the expected agent output for use later in the flow. **Use your preferred LLM to generate descriptions for subflow or action skill, input, and output**

Application or feature	Details
	Leverage generative AI to generate descriptions for the subflow or action skill, inputs, and outputs. You can configure a default LLM to generate the descriptions. **View flow history** View and manage the history of a flow. See past configurations of a flow to copy, restore, or remove them. **View subflow history** View and manage the history of a subflow. See past configurations of a subflow to copy, restore, or remove them.
Generative AI Controller	**Zurich Patch 4** **Administrator access to Gen AI log** Access the Gen AI log [sys_generative_ai_log] table to gain insights for debugging purposes. HR-related records remain restricted to HR admins. **Enhanced AI asset inventory** Track the enhanced AI asset inventory through AI Control Tower using new metadata fields in the Model [sys_generative_ai_model_config] and Prompt [sys_generative_ai_config] tables. Gain better visibility into AI asset status and life-cycle details, such as retirement dates. **Long-Term Stable model for generative AI** Promote stability and adoption for entitled users with a Long-Term Stable (LTS) model. The LTS model provides regulatory alignment, predictable behavior, and life cycle stability to integrate GenAI with confidence. **Zurich Patch 2** **AI Model Version Mappings** Review the mappings between AI model versions and their providers in the Gen AI Model Version Mapping [sys_gen_ai_model_version_mapping] table. This table shows the mappings between source and target models, along with associated metadata, such as skill type, model type, resource associations, and provider information. **Identify third-party LLM information** Access the Gen AI Log Metadata [sys_gen_ai_log_metadata] table to identify which LLM model, version, and requested language was used to generate the AI content. **Restrict LLM usage based on the domain** Enable or disable Now Assist for each domain so that you can restrict the use of LLMs and avoid using AI for data processing, if needed.
Goal Framework	**Goal Framework and AI Control Tower**

Application or feature	Details
	Categorize your strategic priorities and goals as Artificial Intelligence to track and monitor strategy progress from the AI Control Tower workspace. Use the **Type** field for strategic priorities and the **Category** field for goals to classify them as Artificial Intelligence and monitor their progress in the AI Control Tower workspace. **Role enhancements** With the sn_gf.goal_admin role, you can edit any goal and target as needed, even when you aren't the owner or contributor of a goal or target.
HR Multi Instance Integration	**HR Multi Instance Integration** Partners and service providers for HR service fulfillment often are running their own instance of HR Service Delivery. HR Multi Instance Integration provides inter-instance communication and hybrid HR services with fulfillment in different instances through the following capabilities: • Ability to control your organization employee's experience and interactions per your organization's culture, branding, and policies. • Ability to outsource services. • Consistent user experience for employees across the entire HR catalog, regardless of whether they are interacting locally or remotely from any third-party provider. • Because HR workflows or business process are not restricted to a single instance, they can flow seamlessly across instances. • Uniformity and standardization for HR agents on the provider instance enables them to work on local cases or remote HR cases from the provider's ServiceNow AI Platform instance with a minimal learning curve. • Managing and controlling access at the remote catalog level to meet security and compliance requirements. • Synchronization of relevant information such as submitted request (provider task) status, comments, and attachments by service providers. • Ability to fulfill an HR case partially by providers and partially by consumers. • Ability to create HR tasks and approval tasks for remote HR cases. **Note:** Only manual approval flow is supported, and not the automatic approval flow.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Initiate document signing tasks for remote users via universal tasks. This feature is available only when the Document Template plugin is installed along with the HR Multi Instance Integration for Provider application. • Enable remote users (consumer users) to complete HR tasks, document tasks, and approval tasks via magic links shared in universal tasks. Magic links route remote users to the provider instance for completing the assigned tasks. • Support the **URL** task type in Universal Task. This task type enables you to specify a URL link that is shared in the universal task assigned to a local or remote user. • Support the **External** field in the HR Profile data. When the HR profile belongs to an employee in consumer company, the **External** field is marked True.
Hardware Asset Management	**Track asset movement from the receiving bay to an aisle-space in the stockroom** Move assets from the receiving bay to their designated aisle and space and improve asset tracking and inventory management by using the Asset put away feature. This task can be performed via the Hardware Asset Workspace or ServiceNow Agent application. **Improve asset data accuracy and usage by tracking and managing unassigned assets through asset attestation** Validate whether assets are in use and confirm asset assignments by initiating the attestation using the Asset Attestation playbook in the Hardware Asset Workspace. Employees can then confirm whether they're using the assigned serialized hardware assets on the go by using the intuitive Now Mobile app. Reports on open remediation tasks in the Hardware Asset Workspace, generated when employees confirm they don't have assets, provide actionable insights for asset managers. **Confirm receipt of hardware and consumable assets through the Employee Center portal** Enable your employees to acknowledge the receipt of assets that are in transit and reserved for them through the Employee Center portal. When employees confirm that they have received the assets, the **State** and the **Assigned to** fields are updated in real time, minimizing the risk of data errors. **Receive shipment assets at a stockroom in the Hardware Asset Workspace** Complete the receive tasks for hardware and consumable assets that you received from any workflow at the stockroom using the unified receiving functionality in the Hardware Asset Workspace. This standardized receiving process reduces the time spent on receiving assets. By requiring each asset to be assigned a unique identifier

Application or feature	Details
	when received at the stockroom, the quality of asset data also improves. You can receive assets in bulk by using a template. Additionally, you can view the results and validation comments in the staging table. During this process, the system handles existing assets, creates new ones as needed, and performs comprehensive validations. **Optimize your operations with asset performance reports** Improve asset availability according to ISO standards by tracking the past performance of assets and getting notified about trends, threshold breaches, or anomalies based on their location, model category, model, or classification. **Monitor supply and demand of assets in a stockroom with detailed inventory reports** Track and manage stockrooms efficiently by evaluating the inventory reports in the Inventory view of the Hardware Asset Workspace. These reports provide the following benefits: • Find replacement options for assets that are in use, being repaired, or in maintenance • Quickly identify shortages and align current demand in your stockroom with both current and incoming supply • Analyze the supply to meet open demand across all stockrooms or locations **Gain expanded insight into the content library information through content dashboard analytics** Gain in-depth information related to various content tables and trends in content change from the enhanced Content Library portal. The introduction of numeric widgets, line graphs, bar charts, and content-specific tabs provides complete visibility to content shipped and analyze content coverage. The expanded search feature with additional filter options enables you to view the records for a particular period or release.
Health Log Analytics	**Facilitate Cribl log data ingestion by Health Log Analytics using the Cribl integration** Starting in version 37.0.15, use the Cribl log data integration to streamline Health Log Analytics data ingestion with Cribl. If your organization uses Cribl for filtering and routing large volumes of log data from various sources, the log format received by HLA is distinct from other types. The Cribl integration enables HLA to detect and separate transport headers from inner log messages in this format, forwarding only the inner message to the source type structure for processing. You can configure the Cribl integration conveniently through the Integrations Launchpad.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Leverage additional information available on the integration's Overview screen Starting in version 37.0.15, take advantage of extra information presented on the Overview screen. The screen now displays the ITOM Gateway in the log processing pipeline and the log streaming rate per minute, aligning it with the metrics for the MID Server and the HLA Engine. The Overview screen also shows the source time of the last processed log. **Export source types to an update set by log source** Starting in version 38.0.16, export all source types related to one or more selected log sources to an update set together. You can then import the update set to the target environment. **Map log data to service instances and components for alerts in context** Starting in version 38.0.16, map your logs to service instances and components so that Health Log Analytics can generate alerts in the correct context. Contextualizing your log data is especially important when the integration processes logs from multiple service instances and components. **Display Integrations Launchpad from the ITOM AIOps configuration center** Starting in version 38.0.16, open the Integrations Launchpad from ITOM AIOps configuration center. The ITOM AIOps configuration center is a centralized workspace that enables you to configure and manage AIOps features from a single place. **Set up a GCP PubSub integration from the Integrations Launchpad** Starting in version 38.0.16, set up an integration from the Integrations Launchpad for receiving log messages that were published to a Google Cloud Platform (GCP) Pub/Sub topic and streaming them to your ServiceNow instance. **Set up a Microsoft Azure Event Hubs integration from the Integrations Launchpad** Starting in version 38.0.16, set up an integration from the Integrations Launchpad for streaming events from Microsoft Azure Event Hubs to your ServiceNow instance. **Set up an Edge Delta TCP or REST integration from the Integrations Launchpad** Starting in version 38.0.16, set up an integration from the Integrations Launchpad to enable Health Log Analytics to process Edge Delta log messages streaming into your ServiceNow instance over the TCP transport protocol or via REST.

Application or feature	Details
	Monitor ServiceNow instance logs with the ServiceNow Log Export data input Starting in version 38.0.16, set up a data input for monitoring ServiceNow instance node logs from both Java code and JavaScript in Health Log Analytics.
Hermes Messaging Service	**Monitor Hermes data usage** Monitor data usage by application and track data usage by topic using the Hermes Usage Dashboard. **Synchronize topic partition count** Verify that the partition count is synchronized between topics in Hermes clusters.
Hiring	**Create a job requisition as a hiring manager** As a hiring manager, request a job requisition for a vacancy in your organization that you want to fill. **Tracking a job requisition in the Hiring tab** View the status and details of a job requisition, compare applications, and perform other actions as needed. **Tracking an application record from the Hiring tab** Track an application on a job requisition, provide recommendations for the application, monitor interviews and feedback, and more. **Collaborate with the recruiter** Engage with recruiters to collaborate and identify what needs your immediate attention, helping you manage job requisitions more effectively. **View hiring content** Refer to the various hiring materials available under the Hiring tab to get a better understanding of the hiring policies and processes.
ITOM AIOps	**Facilitate Cribl log data ingestion by Health Log Analytics using the Cribl integration** Starting in version 37.0.15, use the Cribl log data integration to streamline Health Log Analytics data ingestion with Cribl. If your organization uses Cribl for filtering and routing large volumes of log data from various sources, the log format received by HLA is distinct from other types. The Cribl integration enables HLA to detect and separate transport headers from inner log messages in this format, forwarding only the inner message to the source type structure for processing. You can configure the Cribl integration conveniently through the Integrations Launchpad. **Leverage additional information available on the integration's Overview screen**

Application or feature	Details
	Starting in version 37.0.15, take advantage of additional information presented on the Overview screen. The screen now displays the ITOM Gateway in the log processing pipeline and the log streaming rate per minute, aligning it with the metrics for the MID Server and the HLA Engine. The Overview screen also shows the source time of the last processed log. **Benefit from enhanced Log Analytics alert group and mixed alert group functionality in the Express List** Starting in version 26.9.0, identify connected Log Analytics alerts and mixed alert group correlations faster using the Link View functionality. Utilize enhanced Now Assist Alert Analysis with additional context for Log Analytics alerts. **View visualizations of anomaly information for Log Analytics-based alerts and metric intelligence alerts in Express List®** Starting in version 26.9.0, review anomaly charts for Log Analytics alerts and Metric Intelligence alerts in the preview panel in Express List®. **Configure automatic resume for live updates when the live alert list is paused, and configure time ranges in Express List®** Starting in version 26.9.0, enable admins to configure the amount of time until the active display resumes after being paused in Express List®. Admins are also able to customize the time range options displayed in Express List®. **Map log data to service instances and components for alerts in context** Starting in version 38.0.16, map your logs to service instances and components so that Health Log Analytics can generate alerts in the correct context. Contextualizing your log data is especially important when the integration processes logs from multiple service instances and components. **Monitor ServiceNow instance logs with the ServiceNow Log Export data input** Starting in version 38.0.16, set up a data input for monitoring ServiceNow instance node logs from both Java code and JavaScript in Health Log Analytics. **Live updates functionality has been updated in the Service Operation Workspace Lists.** Starting in version 26.11.0, a new toggle switch allows users to enable or disable live updates. When the toggle is set to on, alerts are updated automatically. When the toggle is set to off, a badge displays the number of available updates until the page is refreshed manually. The setting is saved for future logins by the same user. **Explore the new Dependency view for an alert**

Application or feature	Details
	Starting in version 26.11.0, explore the new Dependency view for an alert. Access maps from the following locations: • in the preview panel, in the Configuration item section for the CI topology • in the Utilities panel of the alert record • in the action drop-down menu • in the Core UI alert form **Respond to multiple alerts in Express List** Starting in version 26.11.0, run response actions on multiple alerts at the same time in Express List.
ITOM Cloud Accelerate	**Configure a custom catalog ID in Cloud Account Management account request** Users with the cw_admin role can set which catalog to use for Cloud Account Management (CAM) requests by updating the *sn_itom_cam.cam_catalog_id* system property. This property is set by default to the base system CAM catalog. **Viewing Cloud Account Management dashboards** Access the Compliance dashboard, Overview page, and Cloud assets dashboard through the Cloud Asset Explorer section in the new **Monitor and Track** tab. • Compliance dashboard: View data across AWS, Azure, Google Cloud Platform (GCP), and OCI accounts in one centralized location. • Overview page: ○ View total discovered assets, grouped by cloud provider and categorized into Compute, Databases, Virtual Machines, and Storage categories on the Overview page. ○ Monitor total accounts by provider, with change tracking since the last update. • Cloud assets dashboard: ○ Governance and operations teams can monitor, track, and act on compliance and asset details through the Cloud assets dashboard. ○ Identify missing ownership information for accounts to support accountability and audit readiness. ○ Asset viewers can drill down to view detailed information for each configuration item (CI). **Viewing the home page in Cloud Account Management**

Application or feature	Details
	• Visualize growth trends across cloud providers with a time-based graph showing account activity. • Leverage direct access to Cloud Discovery Workspace and Cloud Cost Management from the dashboard. • Use filters like cloud provider and business unit to refine the dashboard view for tailored insights. **Cloud Provisioning and Governance** The legacy workflows are no longer supported starting with the Zurich release. You can continue using existing custom workflows and deprecated base system workflows but use the new base system Flows for all future needs. In the Zurich release, the Cloud resource operation request and Blueprint request workflows have been migrated to subflows.
ITOM Visibility	**Discover your Alibaba Cloud resources** Starting with Discovery and Service Mapping Patterns store version 1.29.0, Discovery supports Alibaba Cloud. Discovery enables real-time visibility and automated population of the CMDB with configuration data for cloud resources. **Create a cloud discovery schedule in Discovery Admin Workspace** Starting with version 1.11.0, Discovery Admin Workspace supports creating Discovery schedules for Amazon Web Services, Azure, and Google Cloud Platform cloud providers. This update advances the integration of cloud discovery capabilities into a unified workspace, reducing operational complexity and aligning with the upcoming deprecation of Cloud Discovery Workspace. For the procedural information, see: • AWS • Azure • GCP **Discover AWS EC2 VMs using AWS Systems Manager (SSM)** Perform detailed discovery of EC2 hosts running in AWS without the requirement for a direct SSH or PowerShell connection by discovering AWS EC2 VMs by using AWS Systems Manager (SSM). **Discovery Guided Setup** Starting with version 1.11.0, you can access ITOM Discovery Guided Setup from the Discovery Admin Workspace home page. This setup provides a structured process to configure Discovery and maintain accurate CMDB visibility quickly.

Application or feature	Details
	View command validation-related entries using new role in Pattern Designer Enhancements Starting with Pattern Designer Enhancements version 3.9.0, the new pde_viewer role has permissions to view **Command Validation Tasks**, **Command Validation Tasks Results**, and **Command List**. The pde_viewer role is restricted to viewing the command list modules and doesn't have permissions to modify or edit them. The pde_viewer role can view the following tables only: • Command List [pd_command_list] • Command Validation Task [pd_command_validation] • Command Validation Task Results [pd_command_validation_results] • Pattern Shared Library Mapping [pd_pattern_to_shared_library_mapping] • Temporary Variable Mappings [pd_temp_variable_value_mapping] **Discover new products with Discovery and Service Mapping Patterns** Discover the following products using Discovery and Service Mapping Patterns version 1.29.0: • Alibaba Cloud • OCI GovCloud • 10 addition Azure cloud services • 22 additional AWS cloud services • New AWS API Gateway data model • AWS datacenters with resources only • OLVM templates, disks, and networks • Nutanix Prism using API v4 Discover the following products using Discovery and Service Mapping Patterns version 1.28.0: • 22 additional Azure cloud services • GCP Cloud Function • GCP AlloyDB • GCP Redis Cluster **Receive updates for activated patterns** Starting with Visibility Content version 6.28.0, activating or deactivating a pattern won't be considered a customization, and it will continue to receive updates. Patterns that were previously activated or deactivated will reset to the latest predefined version after upgrading while retaining the last active field value.

Application or feature	Details
	Enhance your resource management with the new Tag Categorization feature from Tag Governance Starting with version 1.7.0, automate the tagging process to promote a consistent, organized way to manage tags by using five predefined tag categories provided by Tag Governance. **Estimate your cloud license count prior to using ITOM cloud solutions using CLE** Cloud License Estimator (CLE) provides an estimated resource count for all cloud resources eligible for licensing.#It validates the#provided cloud#account details and estimates the resource#count#based on the prevailing licensing rules. **Improve admin efficiency with new Actions menu** Discovery Admin Workspace version 1.10.0 introduces a new **Actions** drop-down menu on the **Anomaly Detection** tab of the Diagnostics page, offering quick access to anomaly detection settings and a **Clear all anomalies** option to remove related records from key tables. **Enjoy increased control and improved accuracy in the Automated Service Suggestions feature in Service Mapping.** Ensure that candidates remain relevant and useful through a new property that excludes irrelevant information from Application Service Candidates, such as non-operational or retired servers.
Identity	**Machine Identity Console** Use the Machine Identity Console to see what data integration accounts are accessing and how they're configured. This console helps you make smarter security decisions about setting up these accounts.
Impact	• Implement Scan Engine to enable proactive management of instance quality, compliance, and performance. • Examine ServiceNow instances for violations of the active leading practice definitions and report violations that are stored in the Scan Findings table. • View existing or resolved findings that resulted from the instance scans or from summarized and detailed scan information. • Empower developers to receive real-time, AI-driven recommendations within their workspace to identify and resolve code quality issues, enabling adherence to ServiceNow leading practices and reducing technical debt proactively. **GenAI-powered Root Cause Remediation**

Application or feature	Details
	Identify the cause of performance issues and receive suggestions for corrective actions by implementing root cause remediation (RCR) after generating the root cause summary (RCS). **Performance insights in user-configurable dashboard** Assess the performance status of your ServiceNow instances using the ML-based instance performance widget. **Analyze user experience and monitor application performance in Instance Observer** Monitor response times using operational metrics. **Generative AI-powered Root cause analysis** Generate a structured root cause summary using a large language model (LLM) anomaly detection system that can automate the process and analyze system logs, performance metrics, and alerts. This root cause summary simplifies the analysis process and helps to diagnose the problem before the issue occurs. **Note:** The Generative AI-powered summarization component is not available to users in the regulated market. **Instance Observer alerts for Guided-tier customers** The top six alert cards evaluated to be most important based on alerts that users have used and benefited from in the past are now available to Guided-tier Instance Observer customers in addition to the Advanced-tier and Total-tier customers. **Use popular alerts to receive notifications** View the most popular alerts displayed on the first page of the Configure Alerts page. You can also set up alerts and view notifications. **Triage a ServiceNow instance based on nodes** Triage your ServiceNow instances based on production nodes that are categorized as All, Generic, Worker, and UI nodes. This categorization removes unhelpful irrelevant standby nodes and helps triage useful production nodes. **Custom Performance report** Generate a custom report selecting a maximum of 20 metrics and a minimum of one metric from a wide range of 90 metrics available across the Instance Observer application. This report is almost the same as Performance Trend report, however it offers you the flexibility to choose more metrics from the performance categories in the Performance page and build a dynamic report, and also to customize how charts are displayed in the report.

Application or feature	Details
	• ITOM Maturity Accelerator: Get guidance on fine-tuning IT Operations Management (ITOM) with a base-level understanding of maturity tied to business outcomes. • Stakeholder Path to Value: Get deep qualitative insights into how process owners and key stakeholders utilize the ServiceNow platform to deliver vital services across the organization. • Foundations of AI Governance: Foundational knowledge that will help you start your AI Management journey and take control of your AI deployments. **Outcomes based contextual learning recommendations** • View the recommendations for the most relevant personalized course recommendations based on your performance context to help you strengthen specific skills. • View the recommendation for every capability. Multiple courses are available for some recommendations. **Value management** Value reports • Use value reports to evaluate the impact of improvements in key success metrics over time and translate them into operational and monetary value. • View a report created by your delivery team for a product implemented across multiple ServiceNow instances. This feature is available only to Total-tier and Advanced-tier customers, or Guided-tier customers subscribed to the accelerator-for-value reports. Gen AI based outcome summarization • Collect information from multiple areas like adoption, metrics, and initiatives, and generate key insights. • View the outcome metrics for a positive or negative trend. • Monitor which recommended applications are adopted over time to determine effectiveness. • Track the consumption of related accelerators to support outcomes and identify any gaps or underused accelerators. Install Impact Value Management Data Collection Content Pack Apps dependent plugins Install at least one dependency plugin to enable data collection jobs in Impact value management data collection apps. For Strategic Portfolio Management, two dependency plugins must be installed to enable data collection functionality.

Application or feature	Details
	• Monitor the overall consumption of the accelerator in your plan. This information could include status details for ongoing, completed, and not yet started accelerators. • View the usage details for the Instance observer and Developer Support seats. • View the overall summary of the active Now Support cases and the enhanced case response time for Impact P1 and P2 support cases for your account.
Industrial Process Manager	**Discovered subnets supported by the AMAZING feature** During OT subnet mapping, the AMAZING feature uses discovered subnets to help identify OT devices and assign them to the correct equipment model entity. **Map OT devices to equipment model entities from the Equipment Model Manager** In the Equipment Model Manager of the Industrial Workspace, map OT devices to equipment model entities using the **Unmapped OT Devices** and the **All Devices** tabs in the Equipment Model Manager. When no locations exist, generate a complete location hierarchy for an ISA equipment model entity tree to establish location references that match the ISA hierarchy. **Use the OT Network Map to visualize your OT network** Use the OT Network Map in the Industrial Workspace to visualize your OT network, subnets, and device-to-device connections. **Set the operational status for equipment model entity sites** Set equipment model entity sites to not in use in the Industrial Workspace by selecting the **Not in use** value for the **Operational Status** field. **Filter out Not in use and Retired equipment model entities from view** Filter out **Not in use** and **Retired** equipment model entities in the Industrial Workspace using the **Operational Status** field value for a site. **Add child equipment model entities to a Favorites view in the Industrial Workspace** Use the Favorite icon (☆) to add a child equipment model entity as a favorite in the Equipment Model Manager on the Industrial Workspace. You can then use the **Show Favorites** toggle to display them. **Assign Processing Order to sort equipment model entities in a site**

Application or feature	Details
	Use the **Processing Order** field to assign values to an equipment model entity that determines their functional importance in a site. **The Daily Activity tab in the Equipment Model view in the Industrial Workspace** View the list of previous day's activities on the **Daily Activity** tab of an OT device. The activities include adding an OT device and changing the field-level attributes for existing OT devices. For example, IP address, Device Criticality, and more.
Instance Data Replication	**Monitor scheduled replication sets** Monitor the progress your scheduled replication sets in the IDR Monitoring Dashboard. **Track scheduled replication requests** Track the progress of scheduled replication requests in the Scheduled Replication Requests related list.
Instance Scan	**Scan cancellation** Cancel or abort an ongoing scan by either selecting **Cancel Scan** in the scan execution modal or the **Cancel Scan** related link in the results record. **Queuing of scans** Leverage the scan queue feature to line up your scans for automatic execution following the current scan.
Integration Hub	**Generate the parsing phase for REST-based Data Stream actions** Automatically configure the splitter step, script parser step, and outputs for REST-based Data Stream actions. The **Test REST step** functionality in REST-based Data Stream actions executes a request to the configured REST endpoint, analyzes the response payload, and automatically sets up the parsing and output components. **Stream Connect enhancements** • Use a MID Server cluster, instead of a single MID Server for message replication. With a MID Server cluster, if one of the MID Servers fails, the other MID Servers can share the load of the failed MID Server. • In the Kafka subscription record, view the estimated time required for a consumer to process the current queue. The subscription record also links to the consumer record, so that you can see which consumer is processing the queue. • Specify a compression format for Stream Connect producers with the

Application or feature	Details
	com.glide.kafka_producer.compression_type system property. Stream Connect supports the GZIP and LZ4 compression formats. **View alerts in the Stream Connect dashboard** Get detailed information about alerts, including their severity level, state, type, and the affected entity in the Stream Connect dashboard. **Test connection aliases directly from configuration templates** For aliases using a configuration template, you can configure a Test Action field. This field enables you to test a connection from within the Action Properties section of actions in Workflow Studio. **Support for PowerShell version 6.0 or later in the PowerShell step** Enable the PowerShell step to use a newer version of PowerShell by adding the MID Server property `mid.property.ihub.prefer_powershell6Plus` and setting it to `true`. **Use WS-Security in a SOAP step on a MID Server** Enable a WS-Security policy in a SOAP step running on a MID Server. **Delay parallel loading in custom (load by script) data sources** Configure a delay for parallel loading in custom data sources. When the data source is called, the parallel loading is scheduled to run after the configured amount of time. **Spoke-specific AI agents** AI agents that implement different agentic workflows are available for various spokes. Use these spoke-specific AI agents to execute agentic workflows. **Save draft, publish, update external trigger definition, and support domain separation** The external trigger definition is updated to match the trigger builder so that the external trigger definition supports the saving of draft, publishing, updating external trigger definition, and supporting domain separation. **Create and manage external event sources** Define and manage custom trigger definitions after creating external event sources.
Intelligence for CSM	**Guided Decisions - Enable Guided Decisions as a Playbook Activity with Inputs and Outputs** Added support for the Guided Decision with Inputs and Outputs activity in Playbook. Use this activity to embed decision trees that accept inputs and generate outputs, guiding users through complex decisions within your playbooks.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Recommended Actions - View the relevancy score of the AI search results View the relevancy score on the search result recommendation cards in the Search tab of the Recommended Actions panel for the default guidance for search results, Attach and share article, Share KB in chat interactions, and all no-code (Link incident to current case, Link problem to current case, and Link change request to current case) guidances. To enable this feature, you must enable the Show relevancy score for results check box in the Context form. **Recommended Actions – Limit the number of search results for more precise output** Limit the number of search results (Top N) that appear in the AI search tab in the Recommended Actions context side panel. To configure top N search results, you must enable the Top N check box in the Context form and then define the Search Results Limit in the Search Application Configuration. **Recommended Actions - Filter search results across multiple sources in the Contextual side panel** Filter search results corresponding to multiple sources in the AI search tab of the Recommended Actions contextual side panel. You can also filter the search results at the facet-level. **Recommended Actions – Track the AI search usage trends with the AI search analytics dashboard** Track and analyze the AI search usage in Recommended Actions using the AI search analytics dashboard. The AI search events and actions performed by the agent are captured in the Search Events, Search Source Events, Search Signal Events, Search Result Event, and Search Result Event Action tables. This data is used in the AI search analytics dashboard. **Recommended Actions - Read-only access to TI solutions for the Resource Generator author role** Access Task Intelligence (TI) solution definitions in read-only mode as a Resource Generator author [sn_nb_action.resource_generator_author] to configure recommendations with Machine Learning (ML) solutions from TI models. In other words, the sn_ti_admin.tia_user role is added to the Resource Generator author role. **Recommended Actions - Filter search results across multiple sources on the Search page** Filter search results corresponding to multiple sources on the Search page. You can also filter the search results at facet-level. **Recommended Actions - Optimize the Recommended Actions refresh behavior by excluding non-critical field updates**

Application or feature	Details
	Exclude the non-critical fields from triggering a Recommended Actions refresh on the record pages by adding the non-critical fields to the **Exclude fields** field on a context record. In a child context, you can also include the field exclusions of the parent context. You can enhance a user's UI experience when you prevent excessive UI updates and still ensure that relevant updates trigger as intended. **Recommended Actions - Trigger Refresh for Recommendations explicitly or based on UI events** Trigger recommendations refresh in the Recommended Actions tab on the contextual side panel when a UI or back-end event update is made. This provides dynamic and more contextually relevant recommendations based on the outcome of UI and back-end events. To trigger a recommendations refresh: • configure UI component's Data Broker in the UI builder for UI events • execute the ForceRefreshRecommendationsscript include for back-end events **Recommended Actions - Configure dynamic JSON-based context inputs** Configure JSON-based context inputs in a context to populate accurate recommendations corresponding to dynamically changing contexts. You can configure parameters associated with the context table along with context table parameters. To support scenarios where a single workflow may leverage multiple active contexts simultaneously to generate recommendations. This uses the context inputs in rule condition builders, resource generators, and recommendation-action mappings, with minimal performance impact and backward compatibility. **Recommended Actions - Enhanced KB article sharing for Agents** Identify the Knowledge Base (KB) articles that are not accessible to the case requester with the help of a Lock icon. In the recommendations on the contextual side panel of the CSM Configurable Workspace, a Lock icon on a recommendation card denotes that the recommended KB article cannot be accessed by the case requester. **Process Mining - SLA breach analysis** Identify and analyze cases where service level agreements (SLAs) have been violated. The SLA breach analysis project provides insights into the root causes of breaches, highlights bottlenecks, and recommends improvements to optimize the performance of your processes. **Quick start tests for Customer Service Management** After upgrades and deployments of new applications or integrations, run quick start tests to verify that

Application or feature	Details
	Customer Service Management works as expected. If you customized Customer Service Management, copy the quick start tests and configure them for your customizations.
Interview management	**Define your interview setup** Configure interview phases with custom names, durations, and other key parameters, and then use them to efficiently schedule interviews, enhancing transparency and saving time. **Request applicant to share scheduling preferences** Request applicants on a job requisition to share their scheduling preferences to plan a seamless interview process. **Request interviewer to share scheduling preferences** Request interviewers on a job requisition to share their scheduling preferences to plan a seamless interview process. **Share scheduling preferences** As an interviewer, when requested by recruiters, share your scheduling preferences to help them schedule interviews accordingly. **View applicant's scheduling preferences** View the scheduling preferences shared by applicants to schedule interviews accordingly. **View interviewer's scheduling preferences** View the scheduling preferences shared by interviewers and schedule interviews accordingly. **Schedule an interview** Schedule interview with applicants on a job requisition to get started with the interview journey. **Manage interviews as a recruiter** As a recruiter or recruitment coordinator, manage interviews for a job requisition as needed. You can update the interview status, view feedback, send reminders, complete or cancel interviews, and more. **Manage interviews as an interviewer** As an interviewer, view the details of all the interviews that you’re a part of and manage them as required. **Provide interview feedback as a recruiter** As a recruiter or recruitment coordinator, provide feedback for interviews that you're a part of. **Provide interview feedback as an interviewer or hiring manager**

Application or feature	Details
	Use the editing tools in the Knowledge Center to format knowledge article content such as text, images, and media. **Potential knowledge gaps** Proactively identify and fill potential knowledge gaps. Identify missing knowledge articles and recurring issues that have incomplete or no knowledge article to refer to.
Knowledge Graph	**Tagging in Knowledge Graph Designer** The Knowledge Graph landing page now includes a dedicated tagging section that allows users to create, edit, and manage tags. **Using Enterprise graph schema** Enterprise Graph is a pre-configured Knowledge Graph schema that eliminates the need for custom schema creation in KG designer. By mapping all tables, the Enterprise Graph schema enhances the breadth of query capabilities, enabling database queries across all instance tables. **Tagging in Knowledge Graph Designer** Tags are lists of key tables that are important for answering natural language questions. They provide hints to Enterprise Graph on which tables to prioritize when retrieving information, thereby improving the accuracy of results. **Test a Knowledge Graph schema** Enter a query and test the Knowledge Graph schema using different LLM options. You can also add previous conversations before you run the query. **Configure LLM for Knowledge Graph** Select and configure between Now LLM Service, Azure OpenAI GPT-4.1 and GPT-4.1 mini, Google Gemini 2.0 Flash and 2.5 Pro, and AWS Anthropic Claude 3.7 Sonnet LLM providers with ServiceNow third-party model strategy.
Knowledge Management	Boost efficiency and simplify operations by replacing the existing Knowledge Management processes built on workflow with the latest and innovative, simple-to-use visual flow designers.
Lead-to-Cash Process Management	**Set up business objects** Create a visual overview of the sales process hierarchy by defining and setting up business object groups of sales entities and their relationship with other entities. For example, an opportunity-to-cash business object group could include business entities such as an opportunity, opportunity line, opportunity task, quote, order, and so on.

Application or feature	Details
	Create sales process records Enable sales managers and contract administrators to create sales process records for individual accounts. **Monitor sales process using sales dashboard** Enable sales managers and contract administrators to view and manage the sales process from a single interface. The dashboard provides the following capabilities: • Visualize the sales process in a node map, showing relationships between different sales entities in a hierarchical format. • Toggle between hard links (actively monitored) and soft links (database relationships) to manage the monitoring scope. • Use checklists to capture the steps and activities required for a sales process. • View details for each of the associated sales entities, such as line items, tasks, emails, activities, and line characteristics. • View, upload, and download files and attachments related to the sales process record or child entities. **Customize the sales dashboard** • Customize the number of levels displayed in the nodal hierarchy by configuring the *sn_12c_cockpit.node_default_levels* system property. • Customize the details you want to display on the node map tiles using decision tables. • Create predefined filters to consolidate and view hard-linked records-related tasks. For example, you could create a new filter option to filter in-progress tasks. **Create business process tasks** Sales managers and contract administrators can create business process tasks and associate them with sales process records or business process records. The linked business process task can be viewed on the Tasks tab of the sales process record.
Legal Conflict of Interest	The risk assessment utility evaluates conflict of interest disclosures against predefined risk factors to calculate a risk score and determine the risk level (Low, Medium, or High). The risk level automatically triggers the appropriate approval workflow. The utility supports three evaluation types: Condition, Subflow, and AI skill.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Note: AI skill evaluation is available once you have installed and configured Now Assist for Legal Service Delivery (LSD). Using natural language to submit a conflict of interest request from Now Assist in the Virtual Agent interface reduces the effort required to fill in form fields because details provided in natural language are automatically populated into the intake form. Achieve faster resolution due to automated risk assessment that routes requests to the appropriate approval workflow based on calculated risk scores. **Note:** The conversational intake functionality is available only once you have installed and configured Now Assist for Legal Service Delivery (LSD).
Legal Hold Notification	**Legal hold matter management** Manage legal hold matters by submitting, updating, tracking, and closing them through a streamlined process that reduces effort and ensures organizational compliance. **Submitting legal hold matter** Submit a legal hold matter to initiate the data preservation process when a legal hold is issued. **Issuing legal hold notice** Issue a legal hold notice to custodians to initiate timely data preservation, ensure accountability, and reduce the risk of data loss. **Legal hold notice acknowledgement** Record custodian acknowledgments of legal hold notices to confirm their responsibility to preserve data and ensure accountability. **Assign new custodians** Assign newly identified custodians to existing legal hold matters to ensure comprehensive and up-to-date data preservation. **Acknowledge reminders** Send reminders to custodians who haven't acknowledged legal hold notices to ensure accountability in data preservation. **Closing legal hold matter** Close a legal hold matter once the hold is lifted to complete the data preservation life cycle.
Legal Matter Management

Application or feature	Details
	Protect sensitive legal information by marking legal matters as Privileged & Confidential, helping to ensure access is restricted to only authorized stakeholders.
Legal Request Management	Protect sensitive legal information by marking legal matters as Privileged & Confidential, helping to ensure access is restricted to only authorized stakeholders.
Lifecycle Events	**Lifecycle Events logging** Capture events that occur in a Lifecycle Events case by enabling logging for the Lifecycle Events application. Give organization administrators the ability to view the event logs that are generated to identify errors or to acquire information about the processes that ran in a Lifecycle Events case.
Localization Workspace	**Guided Setups for Configuring Localization Workspace** Two Guided Setups are available in the interface to assist admins with configuration of Localization Workspace. Guided Setups provide an outline and actionable steps for the configuration process. From version 2.0.2. **Configuration hub** Configuration Hub provides centralized access to the tables and properties often used by admins. You can update the tables and properties of dependent applications such as Dynamic Translation without leaving the Localization Workspace interface. From version 2.0.2. **Language Groups** You can optionally preconfigure language groups. Your users save time and effort by selecting an available language group rather than adding each target language individually to a translation request. From version 2.0.2. **Bulk select or deselect for content items** When users create a translation request, Localization Workspace retrieves and displays all translatable documents for a content type. A bulk select/deselect option is available on the retrieved list to enhance efficiency. From version 2.0.2. **Text search for content items** When users create a translation request, Localization Workspace retrieves and displays translatable content items in a list. You can search for terms in the titles of content items to filter the retrieved list. From version 2.0.2. **Optional due date field for translation requests** Your users can enter a due date when creating a translation request. Translation request due dates can be used to trigger email notifications. From version 2.0.2.

Application or feature	Details
MCP Server Console	**Version 1.2** **Create tools from additional capabilities for use with ServiceNow MCP clients** With this release, Moveworks is shipping a Moveworks Quickstart Server. This server allows users to pilot access to upcoming capabilities like Knowledge graph, Subflow, Action, and scripted REST APIs for use with Moveworks MCP client, and ServiceNow Model Context Protocol Client application. These tools can only be added to Moveworks Quickstart Server. **Version 1.0** **Get started with the preconfigured Quickstart Server** Get started learning about MCP servers and connecting MCP clients to a ServiceNow instance with the preconfigured Quickstart Server. The Quickstart Server includes tools for looking up and summarizing incident and case records. **Create MCP servers** Create MCP servers that expose different tools for different use cases, such as for HR or IT workflows, or for different MCP clients. **Create tools from Now Assist skills** Create tools for MCP servers from Now Assist skills and configure which fields are exposed as tool inputs. **Connect to MCP clients using an OAuth inbound integration** Create an OAuth inbound integration to use when configuring MCP clients to connect to an MCP server.
MID Server	**ITOM Infra Services Workspace** The ITOM Infra Services Workspace provides a concise overview of MID Server activity. The dashboard integrates several previously disparate tables so that issues can be monitored and resolved. The workspace provides real-time monitoring, proactive alerts, automation of common tasks, and centralized diagnostics to reduce downtime and support tickets. **MID Guardian Agent** The MID Guardian Agent is an advanced AI feature within the MID Server ecosystem/ITOM Infra Services workspace, designed to proactively assist users in diagnosing and resolving issues related to configuration, connectivity, upgrades, and operations. By intelligently analyzing logs, signals, and runtime behaviors, it offers guided troubleshooting steps, automated fixes, and predictive insights. This significantly reduces Mean Time to Repair (MTTR) and enhances the reliability and operational efficiency of the MID server.

Application or feature	Details
Manufacturing Commercial Operations	**Quality issue management** The MCO agents portal enables the manufacturers to identify, manage, and resolve product quality issues throughout the entire life cycle, from initial detection through remediation and closure. **Data model** The quality issue management data model facilitates the OEMs to understand the quality issue management tables and their functions. **Phases and Sub-phases** The MCO agents portal enables the manufacturers to create phases and sub-phases within a recall campaign and launch it for selected assets, and notify the targeted dealers. **Pre-authorization request** The dealer portal enables the dealer to initiate the pre-authorization request to confirm whether certain parts, labor fees, or repairs are covered under a warranty or service contract. **Recall campaign** The dealer portal enables the dealer to initiate reimbursement claim requests from the OEM for the work performed on the recalled products. **Repair claims** The dealer portal enables the dealer to raise a reimbursement claim request for the repair of an equipment or product that is under a warranty contract. **Sales promotion** The dealer portal enables the dealers to raise post sales promotion claims from the OEM depending on the claim case. **Dealer portal** The dealer portal helps the agent to manage the day-to-day business activities and monitor the real-time data insight. **Plugins installed with MCO** The new MCO plugin enables you to install the Manufacturing Commercial Operations and other dependent modules.
Mastercard Spoke	**Pre-arbitration and arbitration case filing** Dispute agents (issuers) can create pre-arbitration cases and escalate them to arbitration, or directly create arbitration cases by skipping pre-arbitration, using the new Mastercard spoke actions. New Mastercard Spoke actions include:

Client-side localization

Use the Mobile Custom Localization app, available from mobile client version 20.6, to let mobile users view app content in any language. This feature improves platform consistency and accessibility for global users. The ServiceNow Store app provides a collection of mobile strings that automatically populates the instance with translatable content required for localization. Once these strings are translated into a custom language, the mobile app automatically retrieves and displays them within the app interface.

Improved error handing for uploads manager

Use the improved error handling in the upload manager to confirm that the necessary files are uploaded successfully. This feature is available in all areas of the ServiceNow mobile applications where you can upload attachments. This includes the following:

Application or feature	Details
	• Activity stream • Input form screen with an attachment input type • Input form screen with an attachment input action • Functions of type attachment • Cabrillo JS events within a web page **Option to save videos and photos locally when using ServiceNow mobile apps** Enable users to save and retrieve pictures and videos taken with the camera on their ServiceNow mobile app, directly to their device. By default, these images are saved for 24 hours on the phone's local storage. You can set the storage time to be from 1 to 168 hours (1 week). **Additional descriptive element of type card for input form screens** Add cards created in the Mobile Card Builder as a descriptive element in input form screens. Descriptive elements offer more context to users, making it clearer as to what is required for certain inputs within an input form screen. **Page menu button added to input form screen** Display a page menu button for input form screens with more than two pages, showing users the current page that they are on, such as "Page 3 of 5." Tapping the button opens a page menu that lists all available pages and their level of completeness. This list helps users track their progress in completing an input form. **Complete an input form screen in a non-sequential order** Work on all pages of an input form screen, even if required fields are not completed. Users can use the next and previous buttons at all times, enabling them to complete the form in a non-sequential manner. In addition, users can use the page menu to work on any page of their choosing. **Error indicator for failed submissions in input form screen** View an information icon in the top menu bar in cases where a submitted input form contains at least one error. The icon remains accessible when working through all input form screen pages. Tapping the icon opens a page that lists the validation errors, enabling users to correct these errors and submit an error-free input form. **Slider option for adding numeric values in input form screen** Configure sliders as an additional method for users to add numeric values in an input form screen. Sliders offer the advantage of defining minimum, maximum, incremental, and default values. **New icons added that you can use in your mobile apps**

Application or feature	Details
	Use new icons that have been added to the following font families in your mobile apps: • Actions font icons • Screen font icons • Mobile card font icons • Image icons **Mobile App Builder and Mobile Card Builder Studio integration** Develop and modify mobile applications and cards in ServiceNow Studio. Utilize all your necessary tools within a single, cohesive development environment. **Now Assist in Virtual Agent** The following features have been added to ServiceNow Now Assist in Virtual Agent: • Upload documents and files with Doc QnA to have Now Assist generate summaries or answer questions about them. • Search the internet from within Virtual Agent using web search mode. • Capture and analyze data from a variety of visual sources such as images, emails, handwritten notes, websites, and applications using ServiceNow AI Lens. • View shared files when using people citations. **Now Assist Skill Kit integration** Create and use custom Now Assist skills in your mobile app using Now Assist Skill Kit.
Model Risk Management	**Manage model risks** Manage the risks associated with the use of models using the Model Risk Management application. It offers a structured approach to identify, assess, validate, and address model risks throughout the model life cycle. This approach reduces operational and compliance risks caused by inconsistent or inadequate model oversight. **Model Risk Workspace** Get a comprehensive overview of all items requiring attention from Model Risk Management governance and model validators. The Model Risk Workspace gives model risk governance team and model validators a centralized location to monitor, track, and act on model-related tasks and issues. It organizes information into tabs, making it easier to prioritize tasks. **Request a new model** Request a new model by providing details such as the purpose, owner, model complexity, and expected outputs. It helps streamline the model onboarding process and

Application or feature	Details
	confirms that all required information is captured upfront for the Model Governance team to review. **Perform model risk assessment** Perform model risk assessments initiated by the Model Governance team to identify and evaluate risks associated with quantitative models using the Model Risk Management application. It helps Model Owners to assess potential risks early and supports the Model Governance team in ensuring model compliance and reliability. **Note:** You can perform model risk assessment in the Initiation, Pre-deployment, and Monitor stages of a model. **Perform model validation** Perform model validation to assess and validate models, collect required documents, report issues, and determine whether a model is fit for use. This process confirms that models meet required standards and are ready for deployment. **Note:** You can perform model risk validation in the Pre-deployment and Monitor stages of a model. **Schedule assessment and validation tasks** Schedule assessments and validations for models in the Monitor stage either manually or automatically. • Schedule model risk assessment and validation directly from the model risk record to ensure regulatory compliance and effective risk management. For more information, refer to Schedule assessment and validation tasks. • Configure frequency and filter conditions in model workflow settings to create model risk assessments and validations automatically for models that meet the defined criteria. For more information, refer to Schedule assessment and validation tasks automatically. **Reassign model assessments and validations** Reassign a model risk assessment and validation to another stakeholder from the model risk record when the task is in progress state. It confirms that the task continues without delay when the original assignee is unavailable. **Copy assessment responses** Copy responses from the most recent completed assessment into new assessments. Respondents can review and edit the pre-filled responses before submission to save time and ensure consistency.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Note: You can copy responses only from model risk assessments, not from model validations. **Create an issue for model** Add or create model issues and their remediation actions. Capture validation findings or performance problems and follow them through to resolution. **Override model ratings** Override the risk rating and materiality tier of a model manually at any stages of its life-cycle. This helps maintain data accuracy, transparency, and governance when business context or expert judgment requires adjustments to system-calculated values. **Centralized model documentation** Store and manage all model-related documents in one place with version control, audit readiness, and traceability. Create, share, upload, and track documents throughout the model life cycle.
Next Experience	**Lazy loading of Workspace pages user preference available** Control how your Workspace pages are loaded, either all at once or as needed, by using the new Workspace lazy load user preference. Lazy loading is enabled by default and displays content dynamically, reducing page load times. See the Accessibility information section for additional details. **Use the menu toggle to view the Now Assist menu in wide mode** View the Now Assist menu in wide mode to reduce the need for scrolling and truncating content. **Configure Next Experience accessibility preferences** Use a new accessibility preference to keep page alerts visible. See the Accessibility information section for additional details. **Usage Analytics utility menu available** Obtain usage analytic data for your applications and web pages with the Usage Analytics utility menu. The Usage Analytics menu appears for those users with the analytics_viewer role. **View the number of active calls from the OpenFrame phone icon** View the number of active calls from the numbered badge on the OpenFrame phone icon.
Notifications	**Email diagnostics dashboard** With email diagnostics you can track bounce management, email delivery metrics, email sender, and reader jobs health. **Email agentic workflow**

Application or feature	Details
	With email agentic workflow you can intelligently handle new email agentic workflows by identifying intent, executing actions, & drafting appropriate email responses.
Notify	**Notify workflow activities** Manage the subflows for Notify use cases with the following actions. • Input - Advanced: This action is intended for advanced scenarios where the *Say and Play* activity must be repeated multiple times. • Get Notify Number: This action generates a Notify number by accepting the required type as input —*Voice*, *SMS*, or *both*.
Now Assist	**Zurich Patch 7** Review the summary, alerts, and notifications regarding changes in model provider version states as they are deprecated or retired. Send information from Now Assist panel conversations directly to relevant fields on incident pages using action buttons. This eliminates the need to manually copy and paste content between Now Assist panel conversations and the incident form. Automatically see the most recent Now Assist panel conversation for an incident when you switch between incident tabs. Now Assist panel remembers which conversation belongs to which incident and displays it when you return to that incident. Configure which record types will support Now Assist panel context switching. This enables teams to customize the Now Assist panel experience based on a business unit's workflow and use cases. View your Now Assist panel chat history grouped by incident record. Conversations related to a specific incident are grouped together rather than organized chronologically, making them easier to find. View the correct conversation history when you navigate between different incident records. Send information directly from a Now Assist panel conversation to an Agent Chat conversation. This makes it easier to collaborate and share helpful information during incident resolution. Build custom Now Assist panel integrations that are tailored to specific business needs by passing custom context data in any format when initiating Now Assist panel conversations or executing skills.

Application or feature	Details
	Enhanced content detection with third-party guardrails Now Assist Guardian supports third-party service provider guardrails, such as Microsoft Azure, Amazon Bedrock, and Google Model Armor to ensure any inappropriate content is logged and blocked during content generation. This gives you the flexibility to choose the detection provider that best aligns with your existing cloud infrastructure. **Zurich Patch 6** **Requester Approval Checklist skill** The Requester Approval Checklist skill in the ServiceNow AI Platform® generates a structured checklist by mapping real-time request data against your organization's knowledge articles. **Note:** The skill is always on by default. **Zurich Patch 5** **New system properties for the Now Assist Readiness Evaluation app** • Reduce performance issues when a large volume of data is assessed with the *sn_assess.assessment_limit* system property. • Customize the estimated remediation effort for select efforts with the *sn_assess.effort_visibility* system property. Setting this system property to `true` turns on the **Remediation properties** tab in the Now Assist Readiness Evaluation dashboard. • Decide the maximum number of records to process for the ITSM assessment with the *sn_assess.task_limit* system property. **Zurich Patch 4** Manage the versions of model providers across various skill groups and instance levels in Now Assist. You can modify and update versions for both base system and custom skills. **Now Assist skills** Unlock the benefits of the Now Assist Fulfiller subscription to be able to explore and activate all the skills available in the system from Now Assist Admin. **Role masking in Now Assist AI agents** Define roles within **role restrictions** for individual skills in Now Assist Admin to enforce resource access restrictions when a skill is invoked. This feature promotes precise control over the resources that can be accessed, like data and APIs.

Application or feature	Details
	Share your experience in the Now Assist journey by providing feedback when prompted. **Voice input setting automatically activated** Activate the Now Assist panel to automatically turn on the Voice input setting, which is now located on the Assistants page. **Now Assist panel** Request additional information or clarification by asking a follow-up question in the Now Assist panel. **Synthesized Now Assist responses** View synthesized Now Assist responses from within Google chat to have a richer conversational experience. **Now Assist support in article optimization** Improve the quality and health of your knowledge articles by using Now Assist based Article Optimization in the Knowledge Center. Scan knowledge articles and get instant, actionable feedback. **Use Now Assist to identify knowledge gaps** Identify and fill potential knowledge gaps proactively, including missing knowledge articles and recurring issues that lack or have an incomplete knowledge article. **Agentic workflows from within Google chat** Initiate and view agentic workflows from within Google chat. **Monitor sensitive topic invocations** Access the Gen AI Metrics [sys_generative_ai_metric] table to review the logged invocations of sensitive topics and gain insights into how these topics are being triggered and monitored. **Long term stable models** Long term stable (LTS) models are part of Now LLM Service and provide longer model stability windows for regulated industries. These models can integrate with tools to provide governance, monitoring, and compliance controls. You can now have multiple Now Assist context menu configurations on the same record form and field. You just have to create the required configuration and add to the form or field. Using the Now Assist Context Menu open prompt inline and pop-over variant you can quickly produce high-quality, accurate, and lucid knowledge articles, saving time and improving support in Knowledge Management. **Zurich Patch 2** **Now Assist Readiness Evaluation**

Application or feature	Details
	Use the Now Assist Readiness Evaluation app to help you evaluate your organization's readiness to implement agentic and generative AI Now Assist capabilities. Assessments for agentic AI include: • IT Service Management (ITSM) • Customer Service Management (CSM) Assessments for generative AI include: • AI Search • Virtual Agent (VA) • IT Service Management (ITSM) • Customer Service Management (CSM) • HR Service Delivery (HRSD) The results shown are estimates. You should evaluate results provided by Now Assist Readiness Evaluation for accuracy and appropriateness for your use case. **Zurich Patch 1** **for SPM** Implement the open prompt capability to enhance your ability to add additional context and generate accurate content with Now Assist context menu. This feature enables interactive conversations with both supported ServiceNow® generative AI skills and custom-built skills. **Configure skills with custom prompts for knowledge article templates** As an admin, clone the KB generation skill and update prompts for AI model providers. This feature helps the agent use custom templates and custom prompts to generate knowledge articles with Now Assist from single and multiple knowledge bases. Choose and update your preferred LLM provider at the instance, skill, or skill group level for Now Assist base system skills. Deactivate skills that aren't compatible with any of the LLM providers and access the audit history to view updates by the AI steward in AI Control Tower. Manage the default and supported languages by the different LLM providers under Multilingual service for translation. Access citations to the articles referenced from the Knowledge Base. Explore references and insert the generated reply to your email.

Application or feature	Details
	Use the enhanced Now Assist panel for an intuitive and personalized experience. The updated Now Assist panel can be resized and moved anywhere on the ServiceNow AI Platform. **Now Assist Guardian supports third-party LLMs** Extend guardrail support to third-party LLMs, such as Amazon Bedrock, Google Cloud Vertex AI Studio, Google AI Studio, and Azure OpenAI, to verify that any inappropriate content is logged and blocked during content generation. **Increase the maximum response token limit for custom skills** Increase the maximum response token limit for a Now Assist custom skill beyond the default value of 1000. This ability supports dynamic pricing based on output tokens and calculates the price for each skill executed per assist.
Now Assist AI agents	**Zurich Patch 7** **Evaluate voice AI agents for overall task completion and tool choice accuracy** Automated evaluations support voice AI agents. Get a better picture of overall performance by evaluating previous executions against standardized metrics. **Zurich Patch 5** **ServiceNow AI agents as secondary agents** Enhance user experience for Secondary Agents by displaying the Agent card URL to admins for easy access and management so the admin can view, copy, and consume the URL easily. Additionally, when adding an MCP tool, the name and description of the tool are populated automatically as per the details fetched from the server and the user can update the details. **Zurich Patch 4** **Configure role masking for AI agents and agentic workflows** Role masking restricts access to specific roles based on configuration to verify that agentic workflows, AI agents, and tools run within the boundaries of the roles configured to meet their business needs while reducing the risk of unauthorized access to the agents and the agentic data. **Add AI agent learning** Enhance AI agent learning through episodic memory, enabling AI agents to improve by learning from past successful interactions. **Select channels and access for an agentic workflow** Create and update UI actions for workflow executions and display handling. You can specify conditions for the display of the UI actions.

Application or feature	Details
	Add a desktop action to an AI agent Add Desktop action as a tool to an AI agent to perform desktop automation for repetitive tasks. **Configure Now Assist AI agents** Support multilingual conversations for AI agents across languages. **Manually test the execution of an AI agent and Manually test the execution of an agentic workflow** The testing page on AI Agent Studio has two testing options: • Manual test • Automated evaluation Observe the different versions of an AI agent behavior in manual tests and in automated evaluations using the **Manual tests** and **Automated tests** tabs. **Test user access to an AI agent and Test user access to an agentic workflow** Test how an AI agent or agentic workflow completes a task and if it enables users permission to access it. **Model Context Protocol Client** • Authorization upgrades to support segregation of Resource Server and Authentication Server through Protected Resource Metadata (PRM). • Use the *mcp_guardian_check* property to enable guardian checks for MCP Client when there's an MCP tool call. • Supervise the pagination with mouse device support to show large number of services from an MCP server through the *sn_mcp_client.cursor.max_iterations* system property. • Add a title field for human-friendly display names that can be used as a programmatic identifier. **Use in-product experiences for agentic workflows on forms** In the Core UI and workspaces, you can use UI and declarative actions to run agentic workflows. You can also see the presence, progress, and output of agentic workflows performed on a record. The execution details for each agentic workflow include who is supervising the workflow, estimated and total time taken, processing messages, and step history. **Review and approve requests and tickets with the Approval Assistance AI agent** You can use the new approval assistance AI agent to view all pending approval requests and access detailed

Application or feature	Details
	information about them. You can then approve requests and tickets and make updates to them from Now Assist in Virtual Agent. **View the Approval Info Record widget** The Service Portal Approval Info Record widget shows details about the approval request and a full record for an approval including the activity stream. **Configure email notification alerts for AI agent and agentic workflow executions** Configure alert email notifications for unexpected or undesired behavior from AI agents and agentic workflows. You can configure the thresholds for triggering the alerts on the Agent Properties table, and you can add or update the recipients of the email notifications from the Notifications table. **Create an external AI agent** Create new external AI agents that connect to third-party agentic AI systems. Use Agent2Agent protocol or integrate agents manually to configure them in AI Agent Studio to use in the ServiceNow agentic AI system. **Add a Knowledge Graph to an AI agent** Use Enterprise Graph (Small) as a resource to create a Knowledge Graph tool for an AI agent in the AI Agent Studio. **Zurich Patch 3** **Add an MCP server tool to an AI agent** The Model Context Protocol Client enables guardian checks for offensive content when Notion is selected as the MCP server. **Configure Model Context Protocol Client** The Model Context Protocol Client application supports the latest MCP version. **Add a Knowledge Graph to an AI agent** Use Global Graph as a Knowledge Graph resource when creating a Knowledge Graph tool for an AI agent in the AI Agent Studio. **Zurich Patch 1** **Model Context Protocol Client** Enable users of the ServiceNow® AI Agent Studio to access tools that are hosted externally and published using an MCP server via the Model Context Protocol Client application. Authenticate users with the MCP server to add the MCP tool to an AI agent. **Configure ACLs for AI agents and agentic workflows**

Application or feature	Details
	Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available. **Zurich EA** **Review agentic activity in AI Agent Studio** View and troubleshoot the agentic workflow and AI agent executions on AI Agent Studio via the **Activity** page. **Configure Now Assist AI agents - Dynamic Orchestrator** Maps the appropriate agents for an agentic workflow with Dynamic Orchestrator for better performance and accuracy of the agentic workflow execution. **View analytics for customer satisfaction with AI interactions** Multiple new metrics have been added to the AI Agent Analytics dashboard, accessible from the AI Agent Studio to provide insight into average customer satisfaction and customer satisfaction with the best and worst performing agentic workflows and agents. **New third-party AI model provider options available for all Now Assist applications** Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. **Add tools and information to an AI agent** The output transformation strategy for an AI agent output contains a new option called **Custom**. Using the custom output transformation strategy, the tool output gets transformed according to the LLM instructions. **Configure Now Assist AI agents - AI Agent Background Channel** Invoke the agentic conversations from Workspace or Core UI via the AI Agent Background channel that is associated with the AI Agent Background Provider to execute the AI agents and agentic workflows. **Configure Now Assist AI agents - Interactive and non interactive AI agents** Run AI agents and agentic workflows execution in one of the following ways: • **Interactive Mode**: AI agents reach out to the user for information during fallback. • **Non interactive Mode**: AI agents don't reach out to the user during fallback but send the execution output to the user.
Now Assist Skill Kit	**Zurich Patch 7**

Application or feature	Details
	Use labeling workflows to annotate UI templates Use the labeling framework to create and manage ground truth data. Published data collections can now be turned into labeling projects. Each record becomes a task assigned to labelers who annotate using pre-configured UI templates **sStructured output support for AI responses** Enables consistent parsing in agentic workflows and reduces ambiguity in downstream automation. **Use multi-table data generatorNew multi-table synthetic data generation option** You can generate related records across multiple tables in a single operation. You no longer need to generate each table separately and manually link records. Define your table relationships, set the cardinality and Now Assist Data Kit generates coherent, referentially linked records across all tables in one pass, with foreign key integrity maintained automatically. **Create a modelAI Control Tower integration with custom LLMs.** Improve oversight and compliance for AI deployments with formal approval flows for custom models. **Now Assist Skill Kit rolesUpdate to the abilities of the admin role** The sn_skill_builder.admin role is now broken into smaller, task-specific roles, including a custom LLM-specific admin role. **Zurich Patch 4** **Create a model** When you bring your own model you can keep data in your own environment and fine-tune it to meet your specific needs. **New third-party AI model provider options available for all Now Assist applications** Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. **New skill deployment option** Deploy skills using UI Builder. **Choose a language for data generation** When you create synthetic data, you can select what language you want to receive the data in. **AI-assisted ground truth** Use AI to assist creating ground truth for your data. **Import data with a CSV file** Import data from a CSV file to create a dataset. **Create a custom data generator**

Application or feature	Details
	Create and use a custom data generator to create synthetic data.
Now Assist for App Engine	**Zurich Patch 4** **Custom app record summarization skill** Generate summaries for records in custom applications and tables with the custom app record summarization skill. **Configure the custom app record summarization skill** Configure the custom app record summarization skill so that it generates summaries for the tables and records that you specify. You can add context about the table or tables and describe the purpose of the table, so that Now Assist can use that information when generating summaries. **Summarize a record in-product using Now Assist for App Engine** Select the **Summarize** button on a record in-product to generate a summary. You can also summarize a record through chat in the Now Assist panel. See Summarize a record through chat using Now Assist for App Engine for more information. **Zurich release notes** **New third-party AI model provider options available for Now Assist** Google Gemini 2.0 Flash, Google Gemini 2.5 Pro, and AWS Claude 3.7 Sonnet are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI GPT-4.1 and GPT-4.1 mini.
Now Assist for Collaborative Work Management (CWM)	**Generate acceptance criteria for stories in CWM** Generate clear, consistent acceptance criteria for user stories with the acceptance criteria generation skill. By using story details as context and predefined templates, the skill helps you generate acceptance criteria in a format that aligns with your organizational requirements. **Generate and improve content using open-text prompts** Help improve your content and productivity with the ability to enter custom prompts directly in the Docs, alongside the Summarize, Elaborate, and Shorten options. Generate content with Now Assist for CWM directly in your Docs. In addition, summarize existing sections, elaborate where needed, and refine drafts. **New third-party AI model provider options available for all Now Assist applications**

Application or feature	Details
	Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
Now Assist for Configure, Price, Quote (CPQ)	Zurich Patch 7 Generate a summary of a quote to: • Summarize key quote components during early customer discussions or pre-discovery. • Provide an updated view of the quote after revisions, without requiring review of multiple records. • Provide a single, consolidated snapshot of all actions, tasks, and notes derived from a quote in one place. • Highlight custom pricing, discounts, and negotiated changes made during the quoting process. • Review the quote prior to sending it to the customer to confirm accuracy and completeness. • Support internal handoffs by summarizing the quoted offer for internal teams.
Now Assist for Creator	**Zurich Patch 7** **Generate themes using the new theme generation workflow in Theme Builder** Leverage the new theme generation workflow in Theme Builder to generate themes based on your brand image. After generating a theme, navigate to Theme Builder to publish and apply additional styling. **Edit already published catalog items using Now Assist** Edit and refine published catalog items conversationally using Now Assist in Catalog Builder. **Generate UI policies in Catalog Builder** Use Now Assist to create new UI policies, update existing ones, and deactivate them, all through simple, conversational prompts. Each UI policy can include multiple actions, and Now Assist can create that for you. **Assign catalog item location with Now Assist** When creating or editing a catalog item, you can use plain language to assign values for catalog, category, or topic. If the value you provide matches an existing entry, Now Assist automatically applies it to the item, helping to streamline the process and reduce manual data entry. **Zurich Patch 4** **Configure AI model providers for Now Assist for Code skills** Choose a model provider for Now Assist for Code skills in the script editor. You can choose from the models that are enabled in the AI Control Tower. **Planning tool available with the Build Agent**

Application or feature	Details
	Build a detailed, step-by-step plan for your application development with the Build Agent planning tool. You can refine the plan iteratively by prompting for changes and providing feedback until you reach a final version. **Build Agent supports Azure OpenAI and Google Gemini** Use Build Agent with Azure OpenAI and Google Gemini in addition to Anthropic Claude on AWS. **Use images as prompts in Build Agent** Attach images, such as architectural diagrams or UI wireframes, to provide context for prompts in the Build Agent. **Generate catalog items conversationally with Now Assist in Catalog Builder** Create catalog items and record producers efficiently using the conversational interface within Catalog Builder. Communicate your requirements and specifications for your desired catalog items through guided conversation. Now Assist for catalog generation helps to simplify and streamline the catalog item creation process. **Preview catalog items during the creation process** Preview catalog items during the creation process. Quick previews enable you to verify that catalog items appear and function as intended before publication. **Getting help with the Now Assist panel in UI Builder** Create pages using natural language text prompts with Now Assist in UI Builder. Quickly add layouts, components, and content to your pages without manually configuring each element. You can also quickly analyze page structure and data flow by asking questions using natural language. **Key features of UI Builder agent** Ask your questions about using UI Builder to the UI Builder agent. The UI Builder agent provides an overview of page configuration, such as the structure and interconnections of page elements. You can also use the UI Builder agent to apply different layouts, configure components, and update styling. **ATF troubleshooting agent** Accelerate troubleshooting and resolve test failures quickly by using ATF troubleshooting agent on covered metadata. **Zurich Patch 3** **Application development with Figma MCP server** You can now connect the Build Agent to the Figma MCP server. The Figma MCP server enables the Build Agent to access the structured data within Figma files. This connection accelerates the transition from application

Application or feature	Details
	design to development, helping to make the developer workflow more efficient. **Zurich Patch 2** **New Build Agent (Trial) available** A trial version of the Build Agent is now available with Build Agent (Trial). With Build Agent (Trial), you can explore limited interactions with the Build Agent for free. **Zurich release notes** **New third-party AI model provider options available for Now Assist** Google Gemini 2.0 Flash, Google Gemini 2.5 Pro, and AWS Claude 3.7 Sonnet are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI GPT-4.1 and GPT-4.1 mini. **Build Agent, an autonomous AI agent for ServiceNow application development** The Build Agent, located in a chat panel within the ServiceNow IDE, functions as an autonomous AI agent capable of independently generating a complete ServiceNow application. It can handle various code-related tasks, such as rewriting tables, explaining code, validating and improving existing applications, fixing application errors, and more.
Now Assist for Customer Service Management (CSM)	**Zurich Patch 7** **Metrics to measure genAI skills** Monitor how users engage with genAI and agentic skills in Now Assist for CSM to provide actionable dashboards and reports for workflow optimization. **Navigation to customer 360 insights summary card in cases** Access all relevant case information by navigating to the customer 360° insights page from the summary card. **AI voice agent for CSM** Access a case status and create cases through voice interactions with a unified AI voice agent for case management. **In-product agentic indicators** Identify when agentic AI is active in a record in the **AI Workflows** tab, which includes a presence icon and record indicator. **Zurich Patch 5** **Complaint Case AI agents collection** The Complaint Case AI agent collection automates complaint handling by gathering missing details, analyzing sentiment, categorizing issues, and suggesting resolutions. It streamlines intake, triage, and communication, which helps reduce case closure time.

Application or feature	Details
	Zurich Patch 4 **Enabled the is_template property** Enabled the is_template property for all Now Assist skills to clone consistently. Clone any base system genAI skill and customize it in the Now Assist Skill Kit to set up quickly and simplify skill modification. Applies to all Now Assist for CSM skills. **Access the Sentiment analysis dashboard in Core UI** Locate and access sentiment analysis data without searching through multiple menus with a defined navigation path in the Sentiment analysis dashboard in the Core UI interface. **Sentiment trends analysis dashboard** Get a comprehensive view of customer sentiment across case. The dashboard uses LLM-powered insights to explain sentiment changes and lets you drill down to find root causes and real time insights—helping managers take targeted actions. **Trending topics dashboard** Get a comprehensive view of trending topics across cases along with insights and visualizations to facilitate deeper analysis. This feature helps support teams track trend progression, regional impact, and analyze specific trends using customizable filters. **Provide customer 360 insights agentic workflow** Use the provide customer 360 insights agentic workflow to provide synthesized and relevant customer insights to live agents via conversations. This agentic workflow is designed to support human agents by responding to natural language queries regarding cases, customer history, products, and interactions. This feature expedites access to vital information and case resolution, identifies patterns, and leverages past similar cases for guidance as well as triggers actions from the Now Assist panel. **Activity response generation skill** Use the activity response generation skill to automatically generate recommendations for resolution notes, work notes, and comments. This feature helps agents add meaningful updates to case records, improving efficiency and interactions. **Now Assist context menu configuration for extended tables within resolution notes** Configure output fields for resolution notes through the Now Assist context menu configuration page so skills apply to extended tables without any additional setup. **Zurich Patch 1** **Use the triage cases agentic workflow security directives**

Application or feature	Details
	Business Application Insights skill Learn the details of business applications and gather concise and actionable insights on business applications from the summary that is generated by Now Assist for Enterprise Architecture (EA). The business application insights help you to make informed decisions without manually reviewing large volumes of data. **Implement access control lists for security in AI agents** Enable security implementation to execute AI agents and agentic workflows through access control lists (ACLs) and user identities. ACLs provide you with the capability to run AI agents and agentic workflow executions either as a dynamic user or an AI user. To learn about ACLs for Now Assist for Enterprise Architecture (EA) agents and skills, see Configure Now Assist for Enterprise Architecture (EA) and Enterprise Architecture AI agent generate enterprise architecture diagram agentic workflow. **Generate a summary of the Architectural Decision Records (ADR) document or get a particular information from the document** On the Architectural Decision Records page, use the field option in the Now Assist menu to derive a particular information about the ADR content. **New third-party AI model provider options available for all Now Assist applications** Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
Now Assist for FSM	**AI agent: Parts Manager** Track and validate parts usage when closing work order tasks. The Parts Manager AI agent analyzes activity notes to update parts statuses and automatically adjusts inventory when tasks are closed. The AI agent is available through the Now Assist panel on platform and through the ServiceNow Agent mobile app. **AI agent: Create Work Order from image** Create work orders by uploading photos of equipment issues. The AI agent extracts relevant information from the image to populate work order fields. **Primary action button for Now Assist Virtual Agent** Access Now Assist Virtual Agent from a primary action button in the ServiceNow Agent mobile app navigation bar. Administrators can configure this button to launch Now Assist Virtual Agent or another global function. **Voice-to-text input in Now Assist Virtual Agent**

Application or feature	Details
	Use voice input when interacting with Now Assist Virtual Agent in the ServiceNow Agent mobile app. Tap the microphone icon to dictate messages instead of typing. **AI agent: Create Work Order** You can leverage AI to create work orders from a written description of the issue. The Create Work Order AI agent is available through the Now Assist panel on platform and through the ServiceNow Agent mobile app. **New third-party AI model provider options available for all Now Assist applications** Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. **Custom template and custom prompt support** As an admin, you can clone the KB generation skill and customize the input fields. You can also clone the Work order task summarization skill, then access the skill in the Now Assist skill kit, and update the prompts.
Now Assist for Financial Services Operations (FSO)	**Zurich Patch 4** **Standalone AI agents in FSO** Automate ACH dispute resolution using AI-powered agents to assist in these tasks: **1.** Evaluate merchant analysis **2.** Evaluate Nacha operating guidelines **3.** Review ACH dispute return recommendation **4.** Dispute communication initiation These AI agents provide recommended outcomes along with supporting rationale to assist decision-making. However, the final decision remains entirely with the dispute agent. Dispute agents can now close tasks faster and with confidence using the **Apply Recommendation** option. With one click, the recommended outcome and rationale are applied and the task is closed, saving time, reducing manual effort, and boosting productivity. **Now LLM LTS support for Now Assist for FSO** Long term stable (LTS) models are part of Now LLM Service and provide longer model stability windows for regulated industries. These models can integrate with tools to provide governance, monitoring, and compliance controls. **Early availability** **ACL security implementation**

Application or feature	Details
	Enable security implementation to execute AI agents, agentic workflows, and generative AI skills through ACLs and user identities in Now Assist for FSO. Predefined ACLs are provided for case summarization, Disputes intake via Virtual Agent, and the Help resolve friendly fraud AI agent and agentic workflow.
Now Assist for HR Service Delivery (HRSD)	Zurich Patch 7 **Some Now Assist skills are now turned on by default** The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills are turned on automatically. • Existing customers who are upgrading (starting with Australia Early Access): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive. **ER Interview Summarization** Use the ER interview summarization skill to obtain summary of the ER case interview, which includes details such as quick recap, key assertions and responses. **Self-scheduling option in Schedule interviews agentic workflow** Recruiters and recruitment coordinators can now use self-scheduling to streamline interview scheduling by presenting applicants with available time slots to choose from. This option reduces the time to schedule in the absence of overlapping applicant-declared availability and minimizes the probability of manual handover to recruiter. The workflow recommends self-scheduling when beneficial, offers panelist-compatible slots sorted by confidence level, and automatically schedules interviews once applicants select their preferred time. **Offboarding knowledge transfer plan generation agentic workflow** The offboarding knowledge transfer plan generation agentic workflow captures and organizes critical knowledge when employees leave. AI agents interact with managers to collect requirements, discover documents from the specified time period, categorize content into meaningful work areas, and facilitate employee review before sharing with successors. **Generate onboarding ramp-up plan** The generate onboarding ramp-up plan workflow has been enhanced to create more relevant and personalized ramp-up plans for new hires. The workflow now recommends additional Journey services (catalogs and order guides) based on previously completed

Application or feature	Details
	journeys and services requested by peers in similar roles. Managers can review these recommendations in Now Assist in Virtual Agent and add new services through a conversational experience. **Streamline feedback collection and review using the Employee feedback collection AI agent** As an admin, create reusable feedback templates using the Platform Surveys tool allowing managers to select and preview templates when requesting feedback, and help them quickly view a summarized snapshot of a reportee's recent feedback with easy navigation to the feedback page in Manager Hub for detailed insights. Zurich Patch 4 **Predict service and transfer HR cases agentic workflow** Analyze an HR case and automatically route it to the most appropriate HR service with the predict service and transfer HR cases agentic workflow. **Resolve noncritical HR cases agentic workflow** Use the resolve noncritical HR cases agentic workflow to assess the criticality of HR cases, and automatically respond to noncritical inquiries without human intervention. Human agent intervention is required when the request is identified as critical. **Resolve critical HR case agentic workflow** Resolve critical HR requests efficiently with the resolve critical HR case agentic workflow. This workflow generates a tailored fulfillment plan for an HR case using fulfillment instructions, KB articles, or resolution notes of similar past cases. It helps accelerate the resolution process by providing planning support to HR agents. **Summarize an ER case using Now Assist for HRSD** Use the ER case summarization skill to obtain a comprehensive overview of the ER case, which includes key details, such as allegations, evidences, and interviews. **Help resolve tuition reimbursement requests agentic workflow** Use the policy based HR evaluator skill to automatically compare employee tuition reimbursement submissions against company policies and return a decision of approval, denial, or request for additional information. **HR Voice AI agents** Help employees handle self-service HR issues, such as creating cases, checking case status, and requesting time off, using real-time voice interactions with HR AI voice agents. With advanced speech-to-text and text-to-speech capabilities, configurable caller authentication, and seamless integration with Contact Center as a Service (CCaaS) providers, such as Twilio and Genesys,

Application or feature	Details
	the agents can deliver an efficient and personalized experience for employees. Zurich Patch 2 **Collect employee feedback with the help of an agent in Now Assist** As a manager, collect feedback from employees with the help from an agent in Now Assist. Identify which colleagues to request feedback from through Talent Development applications, journeys, and interaction patterns in Microsoft. Send, track, and manage feedback requests with built-in reminders. Leverage existing to-dos to send and manage feedback requests seamlessly. **Create a growth conversation with the help of an agent in Now Assist** As a manager, use the growth conversations preparation AI agent to schedule and prepare for employee growth discussions. The agent provides a clear summary of employee activity and career journey as well as data-driven talking points for focused and impactful conversations. **Note:** This feature is available when you have both Now Assist for HR Service Delivery (HRSD), which installs Now Assist for Talent and HR Talent AI Agent Collection. Zurich Patch 1 **Implement access control in Now Assist AI agents** Enable security settings to run AI agents and agentic workflows by using ACLs and user identities. You can configure and manage the ACLs in AI Agent Studio. **HCM AI agents** Use AI agents to enable employees to place requests to the HCM system, such as apply for time off or update details. **Resolve HR cases agentic workflow** Generate a fulfillment plan in a series of steps for an HR case by selecting the **Generate Plan** button on the HR case. HR agents can add prompts to further refine the AI-generated fulfillment plan before the plan is published to the work notes of the case. **HR case sentiment analysis** Prioritize cases by the sentiment score and monitor sentiment trends over time. HR agents can review a brief summary to understand the reasoning for the sentiment score for each HR case. **Schedule interviews agentic workflow** Use AI agents to automate the interview scheduling process from the Now Assist panel and use the inputs

Application or feature	Details
	from recruiters or recruitment coordinators to send out interview invites. **Generate onboarding ramp-up agentic workflow** Accelerate onboarding with the generate onboarding ramp-up plan agentic workflow, which creates personalized and team-specific plans for every new hire. Powered by AI agents, it tailors learning paths, team tasks, and 1:1 introductions to help employees ramp up fast, build stronger connections, and reach productivity quickly. **Resolve noncritical HR cases agentic workflow** Evaluate case criticality and retrieve relevant knowledge articles to resolve HR cases, minimizing the need for agent intervention. Generate a fulfillment plan for an HR case, which helps resolve the HR case fast. Zurich Early Availability **New third-party AI model provider options available for all Now Assist applications** Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. **Use AI agents to create job requisition** Use AI agents to automate the process for creating a job requisition from the Virtual Agent chat window by using the inputs from your hiring managers.
Now Assist for Hardware Asset Management (HAM)	**Zurich Patch 7** **Manage your assets with comprehensive and real-time data** View consolidated asset information through AI-generated analysis summary on the asset record. The AI-generated summary dynamically updates based on the asset state and includes context from any active incidents or tasks. The summary displays the asset life cycle, current assignment and location, audit status, financial metrics, and identifies missing data to support asset management activities. **Zurich Patch 1** **Optimize hardware asset repair process with the suite of AI agents** Automate the repair of defective and out-of-warranty hardware assets by using AI agents in the help repair hardware assets agentic workflow. These AI agents validate the repair tasks, provide detailed troubleshooting and repair instructions, and complete the tasks on receiving user confirmation. **Configure ACLs for AI agents and agentic workflows** Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their

	guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.
Now Assist for IT Operations Management (ITOM)	**Zurich Patch 7** Set up the new Dynatrace MCP server agent, which replaces the Dynatrace analysis AI agent, for deeper alert analysis. In the analyze alert impact agentic workflow, you can ask more detailed questions about Dynatrace alerts, such as questions about logs, topology, or recent changes. In the manage alerts autonomously agentic workflow, investigations now pull more comprehensive Dynatrace context based on alert type. **Updates to the manage alerts autonomously agentic workflow** The manage alerts autonomously agentic workflow has been updated to provide additional AI insights in the preview panel and alert record. These updates include: • Summaries of the logic behind automated decisions, such as auto closures of insignificant alerts • A written summary of the Service Observability dashboard Additionally, automated alert groups are now supported across Now Assist features such as alert assist and AI insights. **Analyze log analytics alerts to assess impact and triage urgency** The manage alert autonomously agentic workflow now includes AI-driven analysis for log analytics alerts. The alert hypothesizer skill evaluates historical patterns to assess if triage is required. It also classifies alerts as proactive or reactive, where proactive indicates emerging risk and reactive indicates an active issue. The analysis can include contextual insights such as potential failure scenarios to support an alert investigation. **Analyze Service Observability dashboard skill** The analyze Service Observability dashboard skill uses generative AI to summarize a single Service Observability dashboard and calls out insights found in charts. This summary helps operators quickly orient to and understand a particular dashboard. Once activated, this skill is available on all Service Observability dashboards and runs automatically from Incident Investigation when Service Observability is installed. **Analyze service health** The analyze service health skill uses generative AI to analyze all available Service Observability dashboards for the selected service in the Service Operations Workspace (SOW). It generates a summary of a service's

Application or feature	Details
	health and calls out any found insights. Once activated, this skill is available from the header of a service record in the SOW. **Zurich Patch 5** **Enhance IT operations with AI-driven, autonomous alert management using the manage alerts autonomously workflow** Automate alert triage, impact analysis, and root cause investigation with an AI-driven workflow that replaces manual operator steps with autonomous decision-making. The workflow processes incoming alerts end-to-end and surfaces consolidated insights through Express List, giving operators immediate visibility into what happened, what's affected, and why. **Configure the Datadog and Gemini Cloud Assistant observability skills** Set up the new Datadog and Gemini Cloud Assistant observability skills to get insights from those tools in the manage alerts autonomously agentic workflow. With Datadog and Google Gemini, the workflow now supports five observability tools, including Dynatrace, Kentik, and New Relic, helping you investigate and respond to a wider range of alerts. **AIOps LEAP skill setup** Status information for records grouping job run is available when skills are modified with support KB content. **AIOps LEAP settings page** The new interface for the AIOps LEAP properties includes default configuration to achieve opportunity savings and reporting. **Action Insights panel** The Action Insights panel on the automation opportunity details page provides suggestion to create sub-groups when there are large volumes of records. This helps optimize opportunities and knowledge gaps for architects. **Zurich Patch 4** **View an error analysis by Now Assist in Agent Client Collector** Starting in version 6.0.0, use Now Assist AI agents to gather information about errors occurring on Agent Client Collector agents. For example, you can verify the underlying cause behind a specific error or error code. **Zurich Patch 1** **Configure the Dynatrace analysis AI agent** Set up the Dynatrace analysis AI agent in the analyze alert impact agentic workflow to investigate Dynatrace alerts. With Dynatrace, the agentic workflow now supports three observability tools, including Kentik and New Relic,

Application or feature	Details
	helping you investigate and respond to a wider range of alerts. **Expand the analyze alert impact agentic workflow with four new AIOps agents** Get a fuller view of alert impact with four new AIOps agents in the analyze alert impact agentic workflow. Along with observability data, the agentic workflow now includes information from within ServiceNow to help surface business impact and related issues. Activate the AIOps agents to include them in the agentic workflow. **Enhance your decision-making process with the analyze potential impact agentic workflow** Assess the potential impact of a change using the analyze potential impact agentic workflow. This workflow provides an analysis of the relevant servers and suggested services that might be impacted by your change request, ensuring that you have all the insights needed to make informed decisions before making a change. **Add access control lists for security in AI agents** Enable security settings to run AI agents and agentic workflows using ACLs and user identities. You can configure and manage the ACLs in AI Agent Studio. **Now Assist certificate renewal AI agent** Use the Now Assist certificate renewal AI agentic workflow to automatically renew certificates before they expire. You can perform the following with the Now Assist certificate renewal AI agent: • Renew individual certificates • Find all certificates about to expire • Renew all certificates about to expire in a single prompt **Utilize the triage and analyze alerts agentic workflow in the context of an incident** Initiate the triage and analyze alerts agentic workflow from the Now Assist panel in the context of the incident form to perform all the functions of the workflow. This workflow automatically assigns, acknowledges, and summarizes origin alerts, determines their significance through historical analysis, and analyzes related incidents.
Now Assist for IT Service Management (ITSM)	**Zurich Patch 7** **Creating a catalog item for unlocking accounts using the voice AI agent** Use the demo Submit account unlock catalog with the voice AI agent to create a catalog item to unlock the specified account when a user calls the help desk.

Application or feature	Details
	Enhancements to Troubleshoot Outlook issue with voice AI agent Email relevant troubleshooting articles and instructions to users when you troubleshoot Outlook issues for them. **ITSM Conversational analytics dashboard** Get insights into virtual agent adoption, usage trends, and track metrics in Now Assist in Virtual Agent. **Generate a response to request activity** Automatically generate a response in record activity streams using the activity response generation skills for requests and requested items. **DEX issue diagnosis and resolution agentic workflow** Service desk agents can diagnose and resolve Zoom call quality issues using the DEX issue diagnosis and resolution agentic workflow, which integrates Zoom-specific diagnostics that correlate device, network, and application data. **AI-powered root cause analysis for Zoom call quality issues** Use Now Assist for Zoom call issues to identify the root cause of call quality degradation and review the supporting metric evidence for deeper insight. The analysis highlights the contributing device and network factors directly in the Zoom call quality view. Get the real-time guidance, including device ready remedial actions, contextual self-help instructions, and relevant Knowledge articles to help resolve the issue efficiently. **Get AI driven insights for boot time performance** Monitor device boot time to identify slow start-up issues and use Now Assist to investigate the root cause and get suggested resolutions, including remedial actions, self-help instructions, and Knowledge articles to resolve boot performance problems quickly.
Now Assist for Legal Service Delivery (LSD)	**Zurich Patch 7** Submit a Conflict of Interest (COI) request through a natural language conversation. The conversational intake for Legal Conflict of Interest is available in the base system. **Zurich Patch 4** **Now LLM LTS support for Now Assist for Legal Service Delivery (LSD)** Long term stable (LTS) models are part of Now LLM Service and provide longer model stability windows for regulated industries. These models can integrate with tools to provide governance, monitoring, and compliance controls. **Some Now Assist skills are turned on by default** The new default behavior works as follows:

Application or feature	Details
	• New customers: When you install a Now Assist product, designated skills are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive. **Zurich Patch 1** **New third-party AI model provider options available for all Now Assist applications** Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
Now Assist for Manufacturing Commercial Operations (MCO)	**Zurich Patch 4** **Execute recall campaigns faster** Use the create recall corrective actions AI agent to extract the information available in the repair documents. The AI agent identifies and collects all relevant data contained within the repair documents and generates the corrective action and the corresponding charges. The AI agent sets the asset applicability criteria to determine which corrective actions are applicable to that particular subset of the impacted asset.
Now Assist for Operational Sustainability Management Management	**Zurich Patch 4** **Use agentic AI in Now Assist for Operational Sustainability** The carbon calculations agentic workflow acts as a copilot for sustainability teams, streamlining carbon accounting workflows. It intelligently selects metric definitions and emission factors from the library, generates calculated metric definitions, and enables user review and adjustments before final use. **Zurich Patch 1** **Extract data from utility invoices** Now Assist for Operational Sustainability with document intelligence for utility bills, designed to streamline your ESG metric data collection and reporting. Here are the key highlights: • Extract ESG metric data with Gen AI-Powered Document Intelligence from utility bills, like electricity, gas, and water, with accuracy and efficiency. • Automate data collection by eliminating manual data entry and reducing errors.

Application or feature	Details
	• Integrate extracted data with ESG metric workflows for a seamless experience. • Scale your operations with an enterprise-scale solution that handles large volumes of data. • Confirm compliance and transparency with built-in audit features that support reporting requirements.
Now Assist for Operational Technology Manager (OTM)	**Zurich Patch 4** **Search for related records in an OT CMDB table** Use the OT CMDB search function to find an OT configuration item (CI) and OT device information in an OT CMDB table. **Upload, validate, and import your OT device inventory spreadsheet using the Import OT device spreadsheet into OT CMDB agentic workflow** Use the Import OT device spreadsheet into OT CMDB agentic workflow to begin the process for uploading, validating, and importing your OT device inventory into ServiceNow.
Now Assist for Operational Technology Service Management (OTSM)	**Early Availability** Automatically summarize an OT incident using the **Summarize** UI action to produce a concise summary of the incident. Automatically generate resolution notes for an OT incident using the **Generate resolution notes** UI action to produce a concise summary of the incident. Automatically generate a KB article for an OT incident when the state of the incident is set to **Resolved**. The article contains the following information: • Site • OT Device • Equipment model entity • Summarization • Resolution notes • KB Base • Author
Now Assist for Order Management	Zurich Patch 7 **AI-powered invoice case management for customers** Enable customers to report quantity-related invoice disputes through an AI-powered virtual assistant on the Business Portal. Customers can describe the discrepancies through natural conversation, and the assistant validates details, creates cases, and

Application or feature	Details
	autonomously resolves eligible disputes by issuing credit notes or replacement orders, or connects customers with a human agent when needed. **Invoice dispute intake with voice assistant** Enable customers to report quantity-related invoice disputes using voice commands through an AI-powered voice assistant on the Business Portal. Customers can describe discrepancies through natural speech and the assistant captures dispute details to create invoice cases or connects customers with a human agent. **Human agent handoff with context transfer** Help customers to escalate complex disputes seamlessly to a live agent. The full conversation context, including invoice details, dispute reason, and prior AI actions are transferred to the CSM/FSM Configurable Workspace, enabling live agents to continue without asking customers to repeat information. **Now Assist for invoice case resolution** Help accelerate invoice dispute resolution by surfacing similar cases and common resolution patterns in the Now Assist panel. Agents can request help with an invoice case to view how similar disputes were resolved, reducing research time and improving consistency. **Automated email notifications for invoice cases** Keep customers informed with automated email notifications at key points in the invoice case life cycle, including case creation confirmation, resolution details with credit note or replacement order information, and the next steps for cases requiring human review. **Return Merchandise Authorization** Leverage the RMA AI agent for automated entitlement and case handling with the following features: • Automates entitlement checks with real-time warranty validation • Selects best-fit resolution and sends for customer approval • Generates recommended actions when no valid entitlement is found • Provides proactive case updates and follow-ups • Answers customer queries and handles multi-intent emails Zurich Patch 4 **Enable the manage order operations agent in the Business Portal** Activate the manage order operations agent so that you can make the agent available to your customers on the Business Portal.

Application or feature	Details
	Request order changes using Now Assist Use the manage order operations agent to provide a seamless experience to your customers on the Business Portal, enabling them to create order cases using a virtual assistant effortlessly. The AI agent can intelligently categorize requests for expedited delivery by creating order-related cases linked directly to the specific order, significantly reducing manual case creation and speeding up resolution times. Interaction channels include chat and voice options. **Summarize an order using Summarization for Order Management** Generate a summary of a complex order for a unified view of the order's current state to: • Respond confidently to customer queries with accurate, real-time order status. • Track changes and validate details to maintain consistency and transparency. • Minimize errors and improve communication across suppliers and partners. • Monitor tasks that are at risk of missing deadlines. • Assign tasks to appropriate resources based on priority and skill. • Make rapid prioritization decisions to avoid delays and help ensure timely fulfillment.
Now Assist for Retail Service Management (RSM)	Zurich Patch 4 New tools or scripts have been added to support store inquiry case management, including: • Updating case details: Modifying the current information about a case, such as adding resolution information or updating work notes. • Fetching similar cases: Retrieving past cases that have similar descriptions to the current case. • Retrieving metadata for selectable links: Gathering information about a source (like a case or document) to create a selectable link to it. • Get case details: Retrieving the current information about a case, such as its short description.
Now Assist for Sales Force Automation (SFA)	**Zurich Patch 2** **Use agentic workflows in Now Assist for Sales Force Automation (SFA)** The Help nurture new leads agentic workflow works with a team of AI agents to assist the sales agents to manage the life cycle of leads, either independently or under supervision.

Application or feature	Details
	and fulfills order tasks by checking the historical and applicable tasks. **Configure ACLs for AI agents and agentic workflows** Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available. **Role configuration required for agentic workflows and AI agents** Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they won't execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add. After the roles are configured, users must have the specified role to invoke the agentic workflow or AI agent.
Now Assist for Security Incident Response (SIR)	**Zurich Patch 7** **Resolve a security incident** Help enhance the incident resolution plan generation by adding your existing runbooks to the AI runbooks section within the plan generation skill. The existing runbooks provide additional context to the plan generation skill. **Zurich Patch 4** **Role configuration required for agentic workflows and AI agents** Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they won't execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add. After the roles are configured, users must have the specified role to invoke the agentic workflow or AI agent. **Exploring Security Incident Quality Assessment with Now Assist for Security Incident Response** Use generative AI to create a quality assessment report of a security incident. The reports are generated using a predefined, natural language rule set. The report provides an overall assessment summary followed by the detailed assessment for all the rules. **Zurich Patch 1**

Application or feature	Details
	Generate SIR Shift Handover Report The AI agent helps add security incident details to a shift handover report. The agent populates the different sections of the shift handover with appropriate content by identifying the relevant details from the security incident. The AI agent can fetch details of the security incident and identify if the analyst has access to the shift handover record. The AI agent can generate content for each section of the shift handover record and asks for analysts feedback on the content. The AI agent refines the content based on the feedback and saves the content to the records on approval. **Zurich Early Availability** **Using AI agentic workflows in Now Assist for Security Incident Response** The analyze security operations metrics agentic workflow helps security managers to analyze their teams' performance. • Generate metrics for Security Incident Response (SIR) records for case volume, mean time to assign (MTTA), and mean time to resolve (MTTR) for a date range of your choosing. • Request suggestions for how to improve MTTR, MTTA, and volume based on your metrics. **Enhancements to correlation insights in Now Assist for Security Incident Response** You can generate and view results for correlation insights in the Security Incident Response Workspace. • Correlation insights aren't limited to the primary configuration item (CI) or affected users associated with a security incident. You can base your correlation insights on any CI or affected user for a security incident. • You can generate correlation insights from the **Investigation** tab for a security incident in any state in the Security Incident Response Workspace. • You can generate insights for multiple items simultaneously for Associated Observables, Configuration items, and Affected Users. • Results are displayed in a modeless dialog that you can size and move. **Using the security incident resolution agentic workflow** Use the security incident resolution agentic workflow to close your security incidents. Analysts can chat with AI agents in natural language to resolve the security incidents. The AI agent analyzes the incident details, existing runbooks, Knowledge articles, and past similar security incidents as inputs, and provides a resolution

Application or feature	Details
	plan. The AI agent also assists the analysts to resolve the security incident.
Now Assist for Software Asset Management (SAM)	Zurich Patch 1 **Use an agentic workflow to automate software asset sourcing to improve operational efficiency** Use AI agents in the Help manage software request agentic workflow to automate software asset sourcing, either through automatic license allocation or by creating purchase orders. **Use an agentic workflow to create reclamation rules for enhancing software license utilization tracking and reducing waste** Use AI agents to create reclamation rules automatically for installed or subscription-based software, reducing manual analysis of product use and cost. The AI agent analyzes factors such as spend and utilization to suggest reclamation rules. **Use an agentic workflow to reclaim unused software to minimize compliance risk and optimize savings** Use AI agents to automate the reclamation process for installed or subscription-based software. The AI agent evaluates software removal candidates and provides suggestions for reclamation based on intelligent checks that help ensure safe removal. **Configure ACLs for AI agents and agentic workflows** Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.
Now Assist for Source-to-Pay Operations	**Now Assist for FSC Common** The Field Extractor skill extracts the invoice number and supplier invoice number from the inquiry case that is generated through different channels (emails, virtual agent chats, or web content). The access control lists (ACLs) confirm that only authorized agents can activate or configure the skill. The Supplier summarization skill in Source-to-Pay Operations workspace provides unified view of supplier-related inquiries and pending actions. This feature helps specialists and supplier managers to quickly view a concise summary of supplier-related cases, tasks, and exceptions.

Application or feature	Details
	The Inquiry classifier skill auto-populates the subcategory of an invoice inquiry case by analyzing its description and short description in the Accounts Payable Operations. **Now Assist for Sourcing and Procurement Operations (SPO) skills in a Virtual Agent chat** Requesters can leverage contextual generative AI by using Now Assist for SPO in a Virtual Agent chat to complete self-service tasks, such as purchasing products. **Now Assist for Sourcing and Procurement Operations (SPO)** Upload quotes from vendors to request a purchase using the Procurement product recommendation AI agent. Now Assist automatically extracts supplier information, item descriptions, quantities, and pricing from uploaded vendor quotes to pre-fill purchase requisition forms, eliminating manual data entry and accelerating request submission. Long term stable (LTS) models are part of Now LLM Service and provide longer model stability windows for regulated industries. These models can integrate with tools to provide governance, monitoring, and compliance controls. The Help fulfill procurement requests agentic workflow has been renamed to Conversational intake for sourcing and procurement to better reflect its expanded scope and capabilities. Employees can initiate sourcing and procurement requests conversationally, with the agent automatically applying organizational policies, routing logic, and pre-filling request details for faster completion. To enhance performance and simplify maintenance, the Conversational intake for sourcing and procurement agentic workflow now includes three core AI agents. The Procurement purchasing plan and Procurement sourcing plan AI agents have been consolidated into a single, unified Procurement product recommendation AI agent. • **Procurement request tracking AI agent**: Finds and summarizes request status details to answer employee inquiries. • **Procurement product recommendation AI agent**: Recommends products based on organizational buying criteria, creates purchasing or sourcing plans, and guides employees through the checkout or request process. • **Procurement inquiry analysis AI agent**: Analyzes employee inquiries to determine next steps, routes

Application or feature	Details
	tasks to the appropriate agent, provides knowledge-based answers, and manages fallback handling for unsupported requests. **Now Assist for Supplier Lifecycle Operations (SLO)** Now Assist for SLO includes the Coordinate supplier onboarding agentic workflow to streamline the supplier onboarding process by automating supplier registration. AI agents automate the supplier onboarding process by validating profile data and banking details, checking for duplicate suppliers, task generation, communication with suppliers, and final approvals, streamlining the entire process for faster time-to-activation. To make the workflow more dynamic, the Supplier document strategy generator AI agent creates tasks by referring to a KB article which has all the details about the regions and industry related tasks and documents required for onboarding. The KB article is available as a part of demo data, however, the admin can edit and configure this KB article as required. The following AI agents in the Coordinate supplier onboarding agentic workflow perform the supplier onboarding tasks: • **Supplier data steward AI agent**: Validates supplier data and checks for duplicate records, creates an invitation case for the supplier contact and assigns the necessary supplier tasks. Also, if required, communicates to the supplier about missing information that must be updated. • **Supplier data validator AI agent**: Validates supplier-provided profile information and banking details (like account name, account ID, and bank name) in real time. • **Supplier approval AI agent**: Manages approval or rejection of the supplier onboarding. • **Supplier document strategy generator AI agent**: Generates a plan to create tasks after referring to the dedicated KB article which includes all the details about the tasks required for onboarding based on the region and industry. For more information, see . The Now Assist for APO includes Inquiry resolution provider agent and Recommend invoice owner which resolves invoice inquiries autonomously and recommends business owner for invoices (Non-PO, Non-PO type credit memo). • The Inquiry resolution provider AI agent processes high volumes of repetitive invoice inquiries through various channels (web, email, virtual agent, mobile and manual

Application or feature	Details
	automatically populates key fields in the target creation form, helping teams define clear, measurable outcomes and create targets quickly. **Generate acceptance criteria for stories** Generate clear, consistent acceptance criteria for user stories with the acceptance criteria generation skill. By leveraging story context and predefined templates, the skill helps you align with requirements. **Enhancements to Story generation** Use the upgraded agile story generation skill to convert epics into actionable user stories quickly. Powered by an agentic workflow, the skill analyzes epic details to recommend the optimal number of stories, enables adjustments, refines story content, and creates story records. **Zurich Patch 2** **Improve efficiency and quality using refine records skill with Now Assist Context Menu** Simplify record creation and updates by using the refine records skill with Now Assist context menu. Improve record quality by enabling AI-assisted text refinement in the text fields of Product idea, Demand, Epic, Projects, Capability, Feature, Stories, Project tasks, Risks, Strategic priorities, Goals, Targets, Initiatives, Feedback, Milestones, and Story forms. **Zurich Patch 1** **Configure ACLs for custom roles** Update the ACLs for custom roles that require access to Now Assist skills. **Generate and improve Docs content** Help improve your content and productivity with the ability to enter custom prompts directly in the Docs, alongside the Summarize, Elaborate, and Shorten options. Generate content with Now Assist for SPM directly in your Docs. In addition, summarize existing sections, elaborate where needed, and refine drafts to help improve your productivity. You can interact with Now Assist directly in your Doc to create content, add context, or improve existing sections. **New third-party AI model provider options available for Now Assist** Google Gemini 2.0 Flash, Google Gemini 2.5 Pro, and AWS Claude 3.7 Sonnet are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI GPT-4.1 and GPT-4.1 mini.

Application or feature	Details
Now Assist for Telecommunications, Media and Technology (TMT)	**Zurich Patch 4** **Address voice quality issues** Collect customer details about the voice quality issue, open a service ticket with RADCOM (https://radcom.com/), and generate a resolution plan. **Risk signals and issues summarization** Generate summary details including the record and associated risk solutions and risk occurrences for risk signal and issues records. **Zurich Patch 1** **Help remediate bill issues** Handle billing inquiry case requests, analyze customer invoices, and recommend better plans based on customer usage patterns. **Analyze network incidents** Identify historic incidents and determine resolution plans. The AI agent also has the capabilities to identify field values, estimate resolution time, and create actionable tasks. **Support renewals and expansion** Streamline customer success management by automatically assessing account health, value realization, and adoption trends. Deliver timely, data-driven insights that guide renewal planning and play recommendations. **Trigger risk mitigation touchpoint** Enable customer success agents to optimize meeting schedules within the customer success workflow by creating and managing meetings. Create and manage meetings based on key details such as invitees, agenda, meeting type, and scheduling preferences. **Success summarization** Generate summary details including overview, current status, and open tasks for success initiatives, internal plays, and customer plays. Enhance Zoom meeting summaries by updating key notes, and enabling sentiment tracking. **Analyze metric data trend** Collect and analyze metric data for engagements, identify patterns, and generate a trend chart. **Service summary generation** Generate a service summary for a product inventory. **Knowledge graph schema generation** Use the Knowledge Graph (KG) to create Knowledge Graph schema. **Customize a summary card for service summary**

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Customize the summary card of the service summary and UI actions according to your needs. **Register consumers using Agentic AI** Initiate the consumer registration process using agentic AI to receive step-by-step guidance, including error checks during registration and support for resolving those errors. **Configure ACLs for AI agents and agentic workflows** Configure the access control lists for who can discover and trigger AI agents and agentic workflows in their guided setups in AI Agent Studio. You can determine whether an AI agent or agentic workflow behaves as a dynamic user or as an AI user. You can also specify if an AI agent or agentic workflow can be available to all authenticated users or publicly available.
Now Assist for Third-party Risk Management (TPRM)	**Zurich Patch 7** **Now Assist for Third-party Risk Management (TPRM)** If you have the third#party assessment reviewer role [sn_vdr_risk_asmt.vendor_assessment_reviewer] and have installed the if you have the third#party assessment reviewer role [sn_vdr_risk_asmt.vendor_assessment_reviewer] and have installed the Now Assist for Third-party Risk Management (TPRM), you can use generative AI to automatically identify and recommend issues based on assessment responses. The TPRM issue management recommendation skill recommends issues with rationalized summaries. Recommended issues are presented for review and are created as standard TPRM issues only after user confirmation. **Zurich Patch 4** **Now Assist for Third-party Risk Management (TPRM)** If you have the third-party assessor role [sn_vdr_risk_asmt.vendor_assessor] role and have installed the Now Assist for Third-party Risk Management (TPRM) for TPRM application, you can use generative AI to automatically summarize complex issue records. The TPRM Issue Summarization skill works across all issue states including New, Analyze, Review, Finalize, and Closed and can help reduce manual review time, improve consistency in issue descriptions and remediation guidance, and accelerate triage and reporting for customers managing high volumes of third-party risk data. **Some Now Assist skills are turned on by default** The new default behavior works as follows:

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• New customers: When you install a Now Assist product, designated skills are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.
Now Assist for Vault	**Zurich Patch 4** **Generate a custom data pattern by using Now Assist for Vault** The generate custom data pattern skill now uses the Now LLM Service as the default provider. You can switch to another provider as needed. **Zurich release notes** **Using Now Assist for Vault** The Now Assist for Vault application generates custom data patterns from text descriptions to streamline your workload, checks role access for an encrypted column to monitor your instance's encryption access posture, and schedules data discovery jobs to detect sensitive data. Enable these skills in Now Assist Admin console: • Generate custom data pattern • Check role access for encrypted column • Schedule Data Discovery job
Now Assist for Vulnerability Response	**Zurich Patch 5** **Retrieve Vulnerability Response data** Chat with an AI agent using natural language to retrieve host (Vulnerability Response) and Application Vulnerability Response (AVR) data in the Unified Security Exposure Management (USEM) and legacy Vulnerability Response workspaces. **Zurich Patch 4** **Role configuration required for agentic workflows and AI agents** Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they won't execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add. After the roles are configured, users must have the specified role to invoke the agentic workflow or AI agent. **Create a custom API service graph connector in the Security Posture Control (SPC) workspace**

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Use generative AI to help your developers create SPC API connectors quickly with the Connector builder framework module in the SPC workspace. With a Now Assist skill that is included with the Now Assist for Vulnerability Response application, your developers have the option to automate steps in the Connector builder framework. • Automate the steps for selecting API templates, populating request and header parameters, and response field mapping. • Use your custom API connector to integrate with security tools and import asset data that is based on the unique requirements of your environment. • Help your cybersecurity teams monitor your overall security posture and identify assets that are missing key security tools with the API connectors that you build. See Creating your own API connectors in Security Posture Control for more information and the required applications. **Generate insights to prioritize risks** Use generative AI to provide contextual summaries, actionable recommendations, and quick links in the Security Exposure Management Workspace, helping you prioritize critical risks and accelerate remediation. **Generate recommendation for approval impact analysis** Use generative AI to provide on-demand recommendations to approve or reject a request directly from the Exception Change Approval record, enabling approvers to make fast, consistent decisions while reducing manual analysis effort. **Zurich Patch 2** **Granular roles** The sn_vul_ai.write_rem_insights and sn_vul_ai.read_rem_insights granular roles have been added and are inherited by the sn_vul.vulnerability_admin and sn_vul.vulnerability_analyst roles automatically. These roles provide you with more control over read and write access for the records on the Remediation Compliance Insights [sn_vul_ai_remediation_insights] caching table. The VR.System role also inherits these granular roles so background job execution for the workflow can occur. **Zurich Patch 1** **Identify duplicate vulnerable items with Now Assist for Vulnerability Response** Use generative AI to identify duplicates for your active host vulnerable items that are imported by your vulnerability scanners. Use generative AI reasoning with Now Assist to help your analysts differentiate between

Application or feature	Details
	primary vulnerability items (VITs) and those VITs that are duplicates. Close duplicate VITs and move their associated detections automatically to the primary VIT records. **Identify preferred vulnerability solutions with Now Assist for Vulnerability Response** Use generative AI to analyze available remediation options pulled from integrated third-party products like Red Hat, Tenable for Vulnerability Response, or internal solution management systems. Evaluate each option against the specific configuration item context, for example, the OS version or software version, and get recommendations for the most viable fix for implementation. **Zurich Early Availability** **Using agentic workflows in Now Assist for Vulnerability Response** The assess vulnerability exposure agentic workflow enables vulnerability managers to determine your exposure to vulnerabilities. • Determine your exposure to the most current Cybersecurity and Infrastructure Security Agency (CISA) known vulnerabilities in your environment and assess their potential impact to your configuration items (CIs) and business services. • Identify assets with Common Vulnerabilities and Exposures (CVEs). • Determine the number of active VITs that correspond to CVEs. Create watch topics for VIT remediation. The analyze vulnerability remediation status agentic workflow helps vulnerability managers to monitor and assess remediation target compliance. • Track Service Level Agreement (SLA) compliance - Understand how effectively your organization is meeting remediation goals for vulnerabilities based on your SLAs. • Analyze missed SLAs by severity, assignment group, and configuration item (CI) class - Pinpoint gaps in remediation by categorizing overdue VITs based on severity, assignment groups, and CI classes to enable targeted interventions and smarter resource allocation.
Now Assist for Workplace Service Delivery (WSD)	Zurich Patch 7 Use the case summarization skill to summarize the case context and take appropriate action. Zurich Patch 1 **Optimize cleaning activities agentic workflow**

Application or feature	Details
	Use the optimize cleaning activities agentic workflow to manage cleaning and maintenance schedules of a maintenance case based on the space utilization rate of the location where a maintenance case is created.
Now Assist in AI Search	**Zurich Patch 4** **Automatic activation for Now Assist Multi-Content Response Genius Results** When you use Guided Setup to activate the Now Assist panel, Now Assist Multi-Content Response Genius Results are automatically activated for relevant search profiles. **Hybrid search** Hybrid search blends keyword search and semantic vector search to offer a blend of superior search recall and contextual relevance for knowledge article, Catalog Item, external content, and topic retrieval searches. **Configure AI Search as the source for Ask Now Assist suggestions** Admins can configure the system to use AI Search as the source for Ask Now Assist suggestions, enabling suggestion term highlighting and more flexible search operators in enhanced chat. **Zurich Patch 1** **New third-party AI model provider options available for all Now Assist applications** Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.
Now Assist in Contract Management	**Zurich Patch 7** **Feedback for Now Assist contract analysis** Provide feedback on AI-identified non-standard and missing clauses to help improve AI accuracy over time. When reviewing contracts using Now Assist contract analysis, you can indicate whether the AI suggestions were helpful or not helpful by using the thumbs up or thumbs down feedback options. You can also provide optional qualitative feedback with comments. The feedback option is available in both the workspace and Microsoft Word add-in. The feedback provided on each clause is captured in the **Contracts Gen AI Feedback** table. **Automatically navigate to non-standard clauses in Microsoft Word add-in** Locate non-standard clauses easily in Microsoft Word. The document scrolls to the relevant section using AI

Application or feature	Details
	citations when you select a Now Assist suggestion in the Microsoft Word add-in. **Zurich Patch 4** **Automated obligation extraction** Use the manage contract repository agentic workflow to automatically identify and capture key contractual obligations from signed contracts and create obligation records in the contract repository. The AI agent in the manage contract repository agentic workflow uses the Now Assist Contract obligation extraction skill to extract key contractual obligations from contracts. **Using contract playbook to review AI-extracted obligations** Review extracted obligations in the contract playbook, with options to edit, approve, or reject each obligation. Approved obligations are added as obligation records in the contract repository while rejected obligations are deactivated. **Contract obligation extraction skill in Now Assist in Contract Management** Configure and map use cases for obligation extraction skill in the Now Assist Admin console to automatically extract key contractual obligations from signed contracts. The AI agent in the manage contract repository agentic workflow uses the Now Assist Contract obligation extraction skill to extract key contractual obligations from contracts. **Conversational contract search and insights Workflow** Contract documents are often complex and stored across multiple formats and repositories, making keyword-based search inefficient and error-prone. The new Now Assist powered conversational search feature enables you to search contract documents using natural language and dialogue-driven queries. The conversational search feature does not support searching within contract documents that are scanned PDFs. **Some Now Assist skills are turned on by default** The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive. **Now LLM LTS support for Contract Management Pro**

Application or feature	Details
	Long term stable (LTS) models are part of Now LLM Service and provide longer model stability windows for regulated industries. These models can integrate with tools to provide governance, monitoring, and compliance controls. **Zurich Patch 1** **Using contract playbook to review AI-extracted metadata and contract reminder date** Use the playbook within a contract repository record to review the metadata extracted by the AI agents in the manage contract repository agentic workflow. You can make necessary changes to the extracted information, and submit it to update the contract repository. If the contract end date is available, the **Review contract reminders** tab appears in the playbook, enabling you to review and update the AI-calculated contract reminder date and specify recipients for contract renewal or terminations. **New third-party AI model provider options available for all Now Assist applications** Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. **Select large language models for use cases in Now Assist in Contract Management** Select a large language model (LLM) provider for a contract analysis or metadata extraction use case. The selected LLM is applicable only for the specific use case and overrides the LLM selected for Now Assist in Contract Management skills.
Now Assist in Document Intelligence	**Zurich Patch 7** **Document and visual insights AI agent enhancements** The document and visual insights AI agent can recognize and provide citations for multiple attachments. **Zurich Patch 4** **Open document in a new tab** View a test document in a larger workspace on a separate browser tab during use case setup. **Image captioning in Knowledge Center** Extract information from images to support accessibility captioning in knowledge base articles. **Document and visual insights AI agent enhancements** Leverage features that enable you to use the document and visual insights AI agent with selected LLMs to upload files, extract information without a predefined use case, and display results in a dedicated document view.

Application or feature	Details
	• Select an LLM for the AI agent to use when processing documents and images. • Now LLM Service is not an available option for LLM selection. • Prompt the AI agent to upload a file to process. • View the results of the AI agent actions in a document view screen. **Zurich Patch 1** **Document Intelligence for Now Assist Skill Kit** Use document and visual intelligence to leverage extraction, question answering, and summarization capabilities for a skill created with Now Assist Skill Kit. **Language model selection** Select the language for a use case to help the optical character recognition (OCR) model to detect text in the document and image files. **Image mode selection for use cases** Turn on image mode to process images more efficiently for use cases that use a multimodal AI model. **Model provider flexibility at the use case level** Choose a model provider at the use case level, including a Now Assist default option that uses the instance-level model selected in AI Control Tower. **Information extraction for Operational Sustainability Risk Management** Extract ESG-related information from invoices to support Operational Sustainability Risk Management initiatives and regulatory compliance. **Improved security for the document and visual insights AI agent** Enable access control lists (ACLs) to improve the security for the document and visual insights AI agent. ACLs provide you with the capability to run AI agents and agentic workflow executions either as a dynamic user or an AI user. The document and visual insights AI agent and its skills are classified as a worker or helper agent. A worker can act as an AI user with different privileges than the human user. A helper only has the privileges of a human user. **Early Availability** **New third-party AI model provider options available for all Now Assist applications** Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI.

Application or feature	Details
Now Assist in Platform Analytics	**Zurich Patch 4** **Gather insights, plan, and collaborate in the AI Data Explorer (December 2025)** Ask quick questions, receive tailored recommendations, and collaborate with AI and your colleagues to build long-term analysis. Enable teams to discuss and act on findings instantly. Centralize insights and narratives for better decision making. Guide users with contextual insights and suggestions. Main features include: • Extended analysis generates a deeper level of analysis that can reveal new insights, enabling you to make more informed decisions. • Add a data visualization from an exploration to a dashboard • Share explorations with tagged users • Duplicate an exploration • Duplicate an answer in an exploration • Summarize an exploration AI Data Explorer leverages Query Generation to translate natural language questions into actionable insights. Query Generation enables users of AI Data Explorer to analyze their data and access a broader range of data sets. Key capabilities include: • Ability to add tables to the semantic data layer • Multi-table source support • Workflow Data Fabric table support • Database view support
Now Assist in Virtual Agent	**Zurich Patch 7** Improve the chat greeting and input experience by making it easier for users to start and continue conversations with the Now Assist in Virtual Agent (NAVA) personalized welcome screen. Enable users to ask natural-language questions and receive concise, synthesized answers while maintaining transparency, trust, and efficient task completion. Provide a consistent, reusable building block framework for the NextWave web experience using primitives and widgets. Enable a web search experience that includes a "Include Web results" button in the input box that includes internal and external web results.

Application or feature	Details

	Test voice agents directly in Assistant Designer with live transcription, tool execution tracking, and conversation logs.
	
	Dutch and Thai language support for voice assistants enables users to experience natural pronunciation and culturally appropriate interactions with AI voice agents.
	
	Zurich Patch 4
	
	Assistant Designer
	
	Create and manage LLM-based chat and voice assistants within Assistant Designer, a centralized assistant administrator experience. Assistant Designer is comprised of three main areas: Assistants, Asset library, and Analytics.
	
	Configuring assistants overview
	
	• Access the **Assistants** tab within Assistant Designer by navigating to **All** > **Assistant Designer**. The **Assistants** tab is only available for customers who have the Now Assist license. NLU-only customers don't have access to Assistant Designer.
	
	View assistants
	
	• View chat and voice assistants within the **Assistants** tab of Assistant Designer.
	  ○ The card view is the default view for the assistants.
	  ○ An inactive (gray) or active (green) label is shown for each assistant.
	  ○ Activate, deactivate, test, edit, or delete an assistant.
	  ○ A display experience label is shown on each chat assistant card.
	  ○ A domain label is shown on assistant cards if an assistant is created outside of the global domain. If assistants are only created within the global domain, the label isn't shown.
	  ○ The ability to view or edit an assistant depends on the domain that the admin has access to.
	  ○ The name and date are shown for when the assistant was last updated.
	  ○ Voice assistants show a voice icon and label on the card. Voice assistants can't be tested within Assistant Designer.
	  ○ The map view shows the assistant hierarchy where you can open, turn on or off, or delete an assistant.
	• View the side panel for quick access to **Pick up where you left off**, **Recent activity**, and **Resources**.
	
	Create a voice assistant

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Start creating an AI voice assistant by providing a name and description. Tag to a business unit to analyze your voice assistant. • Power your voice assistant with agentic experience by adding AI agents. • Personalize your voice assistant by choosing a language, adding a welcome message, and an AI voice persona. **Note:** The supported languages are: ○ English ○ German ○ Spanish • Secure the voice interactions by setting up caller authentication methods and safeguards. Create a chat assistant • Add basic details such as a name and description for your chat assistant, and set your assistant as a primary assistant. The Basic details page within the UI has replaced the Overview page. • Now Assist panel – Platform (default) assistant can be set as a primary assistant and linked to secondary assistants. Now Assist panel – Developer assistant doesn't have this option. • The name and description of the Now Assist panel assistants can't be changed. Use agentic support for a chat assistant • Let the assistant use AI agent skills and agentic orchestration. Admins can choose between agentic or standard (Q&A) modes depending on business needs and user experience goals. Turn on or off the **Prioritize AI agents during skills discovery** feature. Assign search sources to a chat assistant • Restore search sources back to the default (Now Assist Multi-Turn Catalog Ordering and Now Assist Q&A). • Now Assist panel - Platform (default) assistant now has the option to copy an existing search configuration. • Dynamic global search configuration has been added to the list of search application configurations. • Create or configure additional search sources by selecting the **External Content Connectors** link. This replaces a card view.

Application or feature	Details
	• Manage knowledge articles by selecting the **Knowledge Center** link. • In edit mode, search sources are found within the Information Sources sub-tab. Add a Knowledge Graph schema to a chat assistant • Adding a Knowledge Graph schema has moved from the Information sources page to its own page. • Add a Knowledge Graph schema is now available for the Now Assist panel - Platform (default) assistant. For the NLQ schema, if Global Graph or Global Graph Mini is selected, you have the option to select tags for specific workspaces that are active on the instance. • Define the mapping relationship between individual workspaces on the instance and predefined Knowledge Graph tags when Global Schema is selected for NLQ. • In edit mode, Knowledge Graph is found within the Information Sources sub-tab. Add assets to a chat assistant • By default, all Now Assist skills (Now Assist Q&A, Now Assist multi-turn catalog ordering, Now Assist topics, subflows and actions, custom skills, and AI agents) are turned on. Therefore, the Now Assist skills page has been removed. • Map an asset to an assistant. Assets are the building blocks of each assistant, providing them with instructions and functionality for helping users. Assets include topics, subflows and actions, custom skills, and AI agents. For Now Assist panel - Developer assistant, only topics (asset type) is available. • In edit mode, assets are found within the Information Sources sub-tab. Display your chat assistant on a portal, channel, or mobile app • Leverage Now Assist capabilities in Google chat. • Use **Prominent action button override** to allow a different chat assistant other than the default assistant to be launched on a mobile app. • In edit mode, display experiences are found within the Settings sub-tab. Display your assistant on Platform or ServiceNow Studio

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• The **Add ServiceNow Platform** drop-down menu has replaced the **Add agent experience** drop-down menu. A Now Assist panel assistant can't be added to other display experiences. • In edit mode, display experiences are found within the Settings sub-tab. Brand an assistant • Minor enhancements to the look-and-feel of the standard chat preview pane. • In edit mode, branding is found within the Settings sub-tab. Manage an assistant chat experience • A standard chat preview pane is shown for the default greeting topic (Now Assist – Greeting) and the default closing topic (Now Assist – Closing). Selecting custom topics won’t show a preview pane. • Fallbacks have a standard chat preview pane and each fallback is shown if toggled on. • For the Now Assist panel - Platform (default) assistant, web search, record producer, and custom fallback are available options. End this chat and survey are available for the standard chat experience. • In edit mode, chat experience is found within the Settings sub-tab. Enable additional chat features • Web search, response streaming, document uploads, and closed chat were moved from the Manage chat experience page to its own page. By default all chat features except web search are turned on. • Response streaming can be turned on at the assistant level regardless of whether Dynamic Translation is turned on or off. However, response streaming doesn't work when Dynamic Translation is being used. • In addition to web search, response streaming, document uploads, and closed chat, Now Assist panel Platform assistant has voice input. Voice input allows users to use a microphone to enter the input. • In edit mode, additional chat features are found within the Settings sub-tab. Review chat assistant settings • New sections that have been added include: Agentic support, Knowledge Graphs, Assets, and Chat features. • Testing an assistant has been removed from the Review page.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Test a chat assistant • Test a chat assistant from **Assistant Designer** > **Assistants** tab or from within each page while in edit mode. Edit a chat assistant • Edit a chat assistant from **Assistant Designer** > **Assistants** tab. You will be directed through an edit flow with a slightly different UI from the create flow. Analyzing assistants • Monitor, evaluate, and optimize the performance of your AI-powered assistants within the **Analytics** tab of Assistant Designer. **Copy received messages** Use the copy message icon in the feedback panel to copy received Virtual Agent responses. **New system properties** • Set the *com.glide.cs.nass.synthesized_response.disabled_popove* to `true` to hide the popover for disabled catalog items for Now Assist in Virtual Agent and Now Assist panel's enhanced chat. • Set the *sn_ais_assist.enable_pi_in_nba* property to `true` to allow conversational history-based suggested actions and fill multiple suggested action slot options. • View the *sn_nowassist_va.enable_nass_show_all_options* property to decide whether to allow the **View all options** link in an enhanced chat conversation's greeting topic. • The *com.glide.interactive_view.enabled* property opens an interactive side panel view next to the chat window. The default value is `true` to activate AI Engagement Experience on your instance. **View org chart in the interactive view** Select **View org chart** from the people citation's popover in Now Assist panel's enhanced chat or Now Assist in Virtual Agent enhanced chat/enhanced chat's full-page experience. The person's organizational chart appears to the right of the chat conversation in an area known as the interactive view. You can switch between multiple organizational charts via a drop-down in the interactive view if you open multiple people citations' org charts in the same conversation. **Zurich Patch 2**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Select continue or move to next task button The **Continue to next task** button appears in the new **Ready to move on to your next task** card whenever multiple questions are found in a single standard chat user's message. The **Move on to the next task** citation appears at the end of an enhanced chat's synthesized response whenever multiple questions or requests are found along with an action in the user's single message. Whenever either **Continue to next task** (standard chat) or **Move on to the next task** (enhanced chat) is selected, the second question or request is reviewed and a synthesized response is sent back regarding the user's second question or request. **Multiple questions in a single user message are answered consecutively** Virtual Agent can answer multiple questions that were submitted in a single message query. Now Assist panel or Now Assist in Virtual Agent answers the multiple questions consecutively in a response. **Now Assist in Virtual Agent system properties** Use *sn_aia.use_agents_in_planner* to configure AI agent discovery behavior. The default value is `true`, preferring AI agents over assets including catalogs, topics, Q&A knowledge base articles, workflows, and sub-workflows. When set to `false`, there's no preference for AI agents. AI agents and assets are treated the same. **New defaults for Now LLM Service** Now Assist in Virtual Agent and Now Assist panel will use an upgraded Now LLM Service as the default. For more information, see the Now LLM Service Upgrade FAQ: Everything You Need to Know About the v2.0 Model Transition [KB2556891] article in the Now Support Knowledge Base. **Zurich Patch 1** **Configure additional user interface and experience options for enhanced chat** Customize and configure the Search Toggle Button Label for enhanced chat's full-page experience. Additionally, you can configure the Enable Unread Conversation Count Display and Left Panel Header Label for enhanced chat and enhanced chat's full-page experience. **New third-party AI model provider options available for Now Assist** Google Gemini and AWS Claude are available for Now Assist skills and AI agents in addition to Now LLM Service and Azure OpenAI. **View agentic conversations processing steps**

Application or feature	Details
	View agentic conversational processing steps and stop the flow, if needed. **View extended entities and records** View extended entities and records in standard and enhanced chat conversations that come from the additional custom tables associated with the Knowledge Graph Natural Language Query (NLQ) schema such as: • Assets • Incidents • Recently viewed knowledge base articles • Requests • Tasks **View suggested queries in the portal's search bar and chat window** View the most frequently asked queries in the portal's search bar and enhanced chat's Virtual Agent. Any search query entered into the portal's search bar or Virtual Agent is incorporated into the greeting topic for future conversations as a suggested query. Suggested queries are only included in the Virtual Agent greeting topic whenever no promoted assets are designated. **Work with suggested queries** Two system properties were added to enable the suggested queries feature: *sn_nowassist_va.enable_suggested_queries* and *sn_nowassist_va.max_suggested_queries*. **Configure AI search answers OneExtend capability for web search** Configure the AI Search answers capability via `sys_one_extend_capability.list` to establish the web search AI provider and work with API keys, if needed. **Expanding AI provider support for web search** OpenAI, Perplexity, and Google Gemini support web search. **Configuring assistants overview** Enhancements to Now Assist in Virtual Agent assistants and Now Assist panel Platform and Developer assistants. Options vary for Now Assist panel assistants. Create a chat assistant • Configure assistants by domain. Display your chat assistant on a portal, channel, or mobile app

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details

	• Now Assist in Virtual Agent: For mobile search widgets, enable the search bar to open into a full-page experience.
	
	Display your assistant on Platform or ServiceNow Studio
	
	• Now Assist panel Platform assistant: Enable enhanced chat for a conversational experience that includes a dynamic, movable, and re-sizable chat window, plus access to multiple active conversations.
	• Now Assist panel Developer assistant: Not applicable.
	
	Assign search sources to a chat assistant
	
	• Now Assist in Virtual Agent:
	  ○ Add internal and external search sources, such as catalog items and Microsoft SharePoint, from a drop-down list.
	  ○ Add a slot filling schema to input user information from your organization's Knowledge Graph. Add a Natural Language Query schema to enable users to perform a data query during a conversation.
	• Now Assist panel Platform assistant:
	  ○ Add internal and external search sources, such as catalog items and Microsoft SharePoint, from a drop-down list.
	  ○ Add a slot filling schema to input user information from your organization's Knowledge Graph. Add a Natural Language Query schema to enable users to perform a data query during a conversation.
	• Now Assist panel Developer assistant: Not applicable.
	
	Manage an assistant chat experience
	
	• Now Assist in Virtual Agent:
	  ○ Select a custom greeting topic, closing topic, error topic, and survey for your assistant.
	  ○ Select one or more fallback options: live agent, web search, record producer, end this chat, and custom fallback.
	  ○ Enable the web search fallback option and web search mode to enable users to search the web from within a chat window.
	• Now Assist panel Platform assistant:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	○ Select a custom greeting topic or error topic for your assistant. ○ Fallback options don't apply to Now Assist panel Platform assistant. ○ Enable web search mode to enable users to search the web from within a chat window. • Now Assist panel Developer assistant: Not applicable. **Now Assist panel** Use the enhanced Now Assist panel for a more intuitive and personalized experience. The updated Now Assist panel is re-sizable and can be moved anywhere on the ServiceNow AI platform.
On-Call Scheduling	**Add custom on-call notification channels** Increase the flexibility in communication by adding and configuring service providers as on-call notification channels. You must configure the communication channel by using the On-call communication channel configuration [on_call_comunication_channel_config] table. After you configure the channel, you can select the new channel. This feature is applicable only after the subflows are configured and used. **Customize the on-call notification message and keywords** Customize an on-call notification message and response keywords that are sent to the user and user groups as per your preferences. You can customize the message and keywords by using the On-call communication channel configuration [on_call_communication_channel_config] tables. **Send the on-call escalation notifications when the configured record fields are modified** Send the on-call escalation notifications when the configured record fields are modified. On-call trigger rules have the following enhancements: • Configure the changes to fields as a triggering condition to run trigger rules. For example, changes to the **Priority** field for an incident can be configured as a trigger condition. • Configure the group or team level trigger rules, or you can configure the global trigger rules that aren't associated with a user group. • If the assignment group is auto-populated when an incident is created, you can still configure the on-call trigger rules to run and send the escalation notifications.
Operational Resilience	**Use the interactive Node Map visualization**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Navigate operational dependencies using the interactive Node map visualization. Configure node and edge settings in the Nexus map, then display Main node configurations directly within the Operational Resilience Workspace. The **Resilience map** action provides access to relationships for Business Services (BS), Application Services (AS), Supporting Offerings (SO), Business Processes (BP), and Dependencies modules in the map view. You can configure node dependency directions and enhance visual elements with improved colors and icons for clarity. Additionally, you can gain comprehensive insights from the summary panel and address missing 'red flags' for a complete picture. **Generate Word reports of action tasks** Use the Document designer to set up Microsoft Word templates and download action task reports in Digital resilience incident reporting. This functionality enables you to customize predefined templates or create templates, incorporating specific data like tables and columns from records, to generate intuitive, audit-ready reports. You can then save these reports within the ServiceNow® instance or as cloud documents in Microsoft SharePoint. **Report incidents associated with multiple regulations for various legal entities** Report incidents or security incidents associated with multiple regulations for various legal entities in Digital resilience incident reporting. Its automated workflow generates regulatory reporting assessment of IT incidents, DRI Initial report, DRI Intermediate report, and DRI Final report within regulatory timelines, each with dedicated action tasks. You can complete these tasks and generate reports in Microsoft Word format required by regulatory authorities for analysis. **Generate Register of Information (RoI) regulatory packages** Generate regulator-ready Register of Information (RoI) regulatory packages using the Plain-CSV Report Package option on the download page in Digital resilience third-party registers. The resulting ZIP file, structured to regulator specifications, includes metadata and report folders with file names containing LEI, entity ID, and release version. This format helps you to verify EU DORA compliance and supports automated validation workflows. For suggested steps and permissions, refer to the user guide on the Download and Upload request page. **Validate downloaded Register of Information regulatory packages**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Validate downloaded Register of Information (RoI) regulatory packages against requirements using the Plain-CSV Report Package option on the Digital resilience third-party registers download page. This process verifies file format, structure, encoding, naming conventions, and field-level data across multiple tables. If validation warnings are detected, an automated report is attached, mapping issues to regulator fields like Template Code, Row Code, and Column Code. These reports include real-world field labels, rule expressions, and record identifiers. You can easily cross-reference validation errors using a downloadable Excel template that mirrors the CSV structure, simplifying issue location and resolution. Further enhancements include support for 'Not applicable' values, enforced file size limits, and clearer error messages for malformed data. **Improve resilience metrics with the enhanced CSDM model** Leverage the enhanced fix scripts in the Common Service Data Model (CSDM) to enhance your Operational Resilience metrics. Each node in the hierarchy is now stored separately, with its class and parent nodes, to help you manage your data more efficiently. The *`Update CSDM and other dependencies`* scheduled job script has been optimized to process the main node configurations in parallel, triggering a separate event for each node. Any node can be at the top level. Additionally, you can store impacted objects, including all parents, in a single table, so that you can efficiently retrieve children nodes and improve your data retrieval. Configure the *`sn_oper_res.top_class_name`* property to designate any class as the top class. You can view the downstream data and various dashboards based on the selected top class, such as the number of application services that are under a business service. **Analyze importance and impact tolerance of a service using Smart Assessment** Analyze a service's importance and impact tolerance through flexible assessments by using one or multiple Smart Assessment templates. Role-based access controls and auto-assigned tasks help you to streamline the process. You can reopen and complete assessments as needed and send email notifications to relevant users. **Generate customized and flexible self-attestation reports using Smart Assessment** Generate customized and flexible self-attestation reports by using Smart Assessment. Start with the default template, add relevant scopes and users, and generate a PDF report on completion of the self-attestation process. By creating custom templates with various data types, you make the self-attestation process more efficient.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Leverage enhanced DORA capabilities for contracts, supply chains, and assessments Use the enhanced Digital Operational Resilience Act (DORA) data model in Operational Resilience. You can configure contracts based on their supply chains and assessments, upload the contract records, and generate a detailed report in Microsoft Excel that provides information on the entities, third parties, and specific contract details. **Track third-party risk assessments** Track third-party risk assessments as red flags in Operational Resilience reports and overview pages for business services, service offerings, and business processes. Operational Resilience users, managers, and administrators can review these assessments in Operational Resilience Workspace. The sn_vdr_risk_asmt.vendor_assessment_reviewer role is now included in the sn_oper_res.user role, so that you can grant the necessary access to the assessments.
Operational Sustainability Management	**Support estimation when actual data isn't available** Enable organizations to provide estimated data when actual data is unavailable. Use standardized or personalized custom methods to confirm accurate and reliable ESG reporting. **Approve automated metric definitions** Configured a new approval stage for automated metric definitions, confirming that collected data undergoes review before being added to relevant tables. This improves data accuracy and governance for automated metric definitions. **DEX integration with Sustainable IT Dashboard** Real-time energy consumption data from DEX is now integrated into the ESG Sustainable IT Dashboard. This enhances sustainability reporting for IT assets, providing real-time usage trends, total energy consumption, and detailed regional and model insights, thereby supporting more accurate and actionable ESG initiatives. **Claims for reporting** Track and reuse narratives or statements for disclosures and reports. Claims play a crucial role in disclosures, highlighting key achievements and commitments while confirming actionable and credible reporting. This enhances the efficiency, consistency, and credibility of your sustainability disclosures. **Provide responses for multiple metrics** This release brings multiple improvements that aim to improve the overall functionality and usability of the Operational Sustainability Management:

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Enhanced Metric data task filtering by approval level. • Various bug fixes and UI enhancements for a better user experience. **Monitoring assessment data using ESG Management dashboards** Introduction of Platform Analytics view in ESG Management for creating dashboards and reports. **Creating claims from O365** Enhanced the Microsoft 365 plugin to enable creating and submitting claims directly from Microsoft Word to ServiceNow, streamlining the claims process. **Emission factor enhancements** Updated calculated metric definition calculation logic to automatically recalculate data when emission factor values change, using the new values for dates within the validity period. This confirms that the metrics data is consistent and accurate. **Forecast planning** The forecast planning now includes support for both manual and automated metric definitions and metrics, in addition to calculated metric definitions. This enhancement enables for more flexible and accurate forecasting across a wider range of metrics. You can adjust values either as absolute amounts or as percentages, making it easier to model various scenarios and anticipate future trends. **Entity based assess** Entity-based access aims to provide a more granular approach to data access, confirming that users can only access data through entity-based access. • The entity-based access has been enabled for metrics, metric data tasks, metric data, metric data by entity and metric threshold. • Administrators can grant access to an entity's related records by adding users or user groups, or by using entity user fields for entity-based access configuration. **Upload a disclosure document** Claims Disclosure enables you to create and link claims directly from Word documents using the ServiceNow add-in. Once uploaded, claims are automatically synced and created in to the relevant disclosures, confirming traceability and simplifying ESG reporting. **Activate default values for CMD calculations** Default values for operands in CMD formulas can now be defined in the Calculated Metric Definition Settings table. When an operand value is missing during formula

Application or feature	Details
	execution, the system automatically retrieves and applies the specified default value, confirming uninterrupted calculations. Default values can be customized or new records added to meet specific calculation requirements. **Update a metric definition** When renaming a metric definition, an option is available to apply the change to associated child metrics. Selected child metric names are updated, and their related metric data tasks automatically reflect the new name, confirming consistency across all linked elements. **Components installed with Operational Sustainability Management (formerly ESG Management)** Updated ESG Management roles to update compliance feature roles. The following roles are updated: • sn_esg.data_owner • sn_esg.program_manager • sn_grc_metric.admin • sn_grc_metric.manager • sn_grc_metric.user **ESG content accelerator** The Unified Content Accelerator has been renamed to Unified Content Management. Its user interface has been redesigned for improved usability and intuitive workflows, while retaining core functionality. **Emission factor library** Audit tracking is now enabled by default on Emission Factor tables, confirming that every modification is automatically recorded in a secure audit log. You can review detailed entries, including the user who initiated the change, the timestamp, the type of update, and the modified data values. **General guidelines for formula building** You can now select any emission factor when creating a calculated metric definition (CMD), regardless of unit type. This update removes that constraint, enabling broader formula combinations and supporting sustainability scenarios where unit alignment isn't required for calculations.
Operational Technology Incident Management	**Use the Employee Center for OT to report an OT incident** Create an OT incident as a user without an OT incident role with the Report OT incident item in the Employee Center for OT.
Operational Technology Manager	**Operational Technology Network Map**

Application or feature	Details
	Use the OT network map available in the Industrial Workspace to view a site's subnets and the OT devices in each subnet. **About the Industrial Workspace page** Use the About Industrial Workspace page on the ServiceNow AI Platform to view the OT applications and the versions that you have installed on your instance. **Search for a record in the Industrial Workspace** Search for CMDB tables in the Industrial Workspace to find CMDB related records. The search function was previously limited only to other Operational Technology records. **Check whether an OT device is virtual** Check whether an OT device is virtual using the **Is Virtual** field for OT devices in the following categories: • OT Supervisory System • OT Control System • OT Field Devices • Unclassed OT Devices **CMDB OT class model updates** Leverage an enhanced OT user experience and make additional configurations for your OT devices with the following CMDB OT class model updates: • The IP Network Subnets related list was added to IT devices in the OT view to show all the subnets the device is related to show IP Network subnets for the selected OT device. This related list was also added to the following CMDB classes: ○ cmdb_ci_display ○ cmdb_ci_firewall_network ○ cmdb_ci_security ○ cmdb_ci_ids_network ○ cmdb_ci_imaging ○ cmdb_ci_unclassed_hardware ○ cmdb_ci_multimedia ○ cmdb_ci_monitor_control ○ cmdb_ci_aix_server ○ cmdb_ci_computer ○ cmdb_ci_esx_server ○ cmdb_ci_hardware ○ cmdb_ci_hpux_server

Application or feature	Details
	• The Key Value [cmdb_key_value], Software Instance [cmdb_software_instance] and Firmware Install [cmdb_firmware_install] table references were added to the OT view on IT and OT classes. • The Backup Storage Information [cmdb_backup_storage_information] and Backup Job Execution History [cmdb_backup_job_execution_history] tables reference the CMDB CI relationships [cmdb_rel_ci] table to support backup management use cases. **Pre-import OT Worksheet Entry Review (POWER) tool updates** Import OT devices with distributed Microsoft Excel spreadsheets to help manage your OT system and its devices. The Pre-Import OT Worksheet Entry Review (POWER) tool includes the following new functionality: • Improve validations with access to ISA sites using the cmdb_ot_isa_viewer role that has been added to the ot_staging_user role needed for running validations. • Upload, validate, and import Microsoft Excel spreadsheet data for the Service Graph Connector for Microsoft Excel by creating an import task and attaching the spreadsheet to the import task record. **Create remediation tasks for invalid staging records from an import task** After validating the imported staging records, create remediation tasks for invalid staging records directly in the import task record.
Operational Technology Vulnerability Response	**Configuring Operational Technology Vulnerability Response from the SEM Workspace** Starting from Operational Technology Vulnerability Response version 30.0.x, users may be redirected to the Unified Security Exposure Management (USEM) Workspace to perform some configuration tasks. The Vulnerability Response plugin is consolidated under USEM from version 30.0.x. **Demo data not required for Operational Technology Risk Calculator plugin** You can directly access and use the Operational Technology Vulnerability Response Risk Calculator without loading the demo data while installing the plugin. In previous releases, the risk calculation was included as part of the demo data. **Enhanced features for Hardware Vulnerability Assessment for OT devices** The following enhancements are available in Hardware Vulnerability Assessment:

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Assessments without Normalization: Ability to assess discovery models without content available for normalization. • Confidence Scores: New scoring mechanism for all types of assessments. • Version Range Support: The range information provided by the National Vulnerability Database (NVD) is used to create assessments without explicitly creating Common Platform Enumeration (CPEs) in the NVD. • Partial assessment for partially normalized discovery model: Creates partial assessments for discovery models without firmware version. The partial assessments are done if the other versions of the discovery model have the same publisher and model. • Expiring of assessments: If you update the firmware version of a CI, the corresponding normalized discovery model also updates. The assessment records based on the older firmware version expires while new assessments are generated for new firmware version. **Vulnerability risk scores on the OT Risk Management dashboard** View a table of vulnerability risk scores for your OT devices at each level of the equipment model with the OT Risk Management dashboard.
Opportunity Management	**Delta pricing for opportunity** The following new fields added to the Opportunity and Opportunity Line objects improve visibility and provide greater flexibility in managing pricing amendments: • Contract Start/End Dates • Renewal Amount • Upsell/Downsell Amounts • Total Net New Amount **Add an opportunity associated contact** Create opportunity associated contacts to associate multiple account contacts, verifying clear identification of all stakeholders and their respective roles. **Add a new opportunity team member** Create a new opportunity team member to associate multiple team members with an opportunity to enable structured collaboration and grant access based on their roles. The ability to grant access is available from Zurich Patch 3 release.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Order Management	**Move order** The move order helps agents to perform move journey that requires location change, the location and change of attribute values, the location change and add or delete the product. **Pricing Adjustments for order line items** Enables order agents to quickly view, add, and edit manual price adjustments for order line items directly from the list view, reducing clicks and streamlining the process. This new experience makes it easier for order agents to enter manual price adjustments and provides a holistic view of both automatic and manual adjustments. **Summarization for Order Management** Summarizes complex orders across products, services, and fulfillment tasks. This helps agents quickly understand status, take the right actions, and avoid navigating fragmented views. This results in easier next steps and improved productivity. For more information, see the Now Assist for Order Management release notes. **Support for complex characteristics for orders** Take advantage of the following complex characteristics for orders: • Define complex characteristics for product offerings and specifications using object structures, data arrays, and other data input types such as String, Integer, Date, DateTime, and Decimal. For more information, see Defining product characteristics and characteristic options. • Define compatibility, decomposition, and attribute propagation rules based on conditions that use characteristics at any level of a complex attribute hierarchy. For more information, see , , and . **Order header discount** Provide order agents with the ability to apply discounts across multiple order lines with a single action through an order header discount feature. This feature streamlines discounting workflows, improves pricing consistency, and helps speed up order processing for large complex deals.
Partner Relationship Management	**Data model for Partner Relationship Management** Enable a user with the sn_prm.enterprise_partner_admin role to map the fields on the channel partner record to their corresponding fields on the company record. **Partner Workspace** Manage and view the partner details via the Partner workspace if you have the

Application or feature	Details
	sn_prm.enterprise_partner_admin role or the sn_prm.enterprise_partner_rel_manager role. **Partner Workspace** Enable a user with the sn_prm.enterprise_partner_rel_manager role to manage cases, orders, sold products, and install bases by using the **Partner Overview** tab in the CSM Configurable Workspace. Use the segment [sn_seg_segment] table to create records, track partner progress toward the next tier, and group partners effectively based on performance into multiple segments for tailored support, incentives, and visibility. Provide channel partners with exclusive rights to work on a particular deal registration or customer for a period of time. Use the configurable deal registration form to track deal registrations, information related to it, and successfully convert deal registrations to opportunities. Use the deal registration playbook on the Partner portal to provide channel partners the flexibility to create new deal registrations and track their end to end life cycle. Install the Quote Management for Channel Partners (com.snc.partner_relationship_management_qm) plugin to enable channel partners, B2B and B2C sales representatives, and managers to create, read, update, and track quotes associated with channel partners. Install the Order Management for Channel Partners plugin (com.snc.partner_relationship_management_orm) to facilitate the entire order life cycle, especially indirect sales and enable channel partners to track orders with channel partners.
Performance Analytics	**Apply multiple levels of breakdown to an indicator** Migrate indicators from traditional Performance Analytics architecture to change data capture (CDC)-based data snapshots. This new architecture allows for more than two levels of breakdown to apply to an indicator. RaptorDB Professional is required, and not all indicators qualify for migration.
Performance Analyzer	**Filter by duration** Select a duration from the last fifteen minutes to the last seven days to view the aggregate data from that time period for each of your applications. The aggregate data includes total UI time, download time, trends, and a comparison to previous performance over that duration. **Application metrics**

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Select an application to filter metrics by total UI time and download time, as well as view page route performance. **Page route metrics** Select a page route within an application to view interaction metrics including timestamps, interaction types, total UI time, download time, and record. **Interaction metrics** Select an interaction within a page route to view a waterfall with details for each resource on the page during that interaction.
Platform Analytics experience	**View, share, and export table records in the List component** Take advantage of the improved list capabilities of the List element, which replaces List - Simple. The List supports pagination, export from dashboards, export to comma-separated values, and alternative group by. It also provides a consistent configuration experience with other data visualizations. **Create indicators and migrate to data snapshots in the indicator library** • Manage indicators from the indicator library, including links to create and edit indicators. • Activate data snapshots conveniently, opening up the possibilities of applying multiple levels of breakdown to your indicators. See statistics on recent views and updates in tiles. • If data snapshots are activated for the instance, see how many indicators are eligible and have already had data snapshots enabled. • Show columns for any field on indicator records, as well as usage information. **Drill down to application overviews for User Experience Analytics** Navigate to individual application overviews for User Experience Analytics from data visualizations. The **Go to data view** chart interaction is now supported for User Experience Analytics data and takes the viewer to these overview pages by default. **Filter data in User Experience Analytics** Filter User Experience Analytics data on default and custom User Experience Analytics properties.
Playbooks in Workflow Studio	**Set child variants to evaluate later in a playbook** Instead of evaluating immediately after the trigger, set a playbook's child variants to be evaluated after a specific activity in the playbook. **Agentic Playbooks**

Application or feature	Details
	Enable AI agents to assist users with activities during runtime. **Add permissions for playbook authors** Control which playbook authors can create, edit, and view playbooks in Workflow Studio **Add permissions for runtime users** Control whether runtime users can view a playbook, add optional activities, restart a playbook, and complete work within specific stages. **Create decision branches for stages** Add a decision node between stages to determine which stage to run next, based on runtime conditions. **Set multiple triggers** Configure a playbook to run based on any one of multiple triggers. **Schedule when a playbook should trigger** Configure a playbook to run based on a schedule. **Choose your LLM for playbook generation and recommendations** Choose between NowLLM, OpenAI ChatGPT4-o, Gemini, Claude for playbook generation and recommendations. **Route users to stages based on decisions** Send runtime users to a stage based off of the trigger record or input that users provide. **Yokohama 27.2 and 27.3 releases** See 27.2 and 27.3 features in the Yokohama Playbooks release notes: • Generate a playbook with the OpenAI GPT-4o LLM • Retrieval Augmented Generation (RAG) for playbooks
Policy and Compliance Management	**Association of citations to controls** In many compliance frameworks, a single control objective may be referenced by multiple citations across different standards, regulations, or policy requirements. Without proper association management, organizations risk duplicating controls, misinterpreting coverage, or inaccurately reporting compliance. The association of citations to controls feature addresses this challenge by enabling users to associate controls with citations directly. When this feature is enabled, compliance scores update dynamically based on the status of directly associated active controls. **Enhancements to control objectives rationalization process** The following enhancements have been introduced to the rationalization process of control objectives:

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Rationalization process is now automatically created when selecting the Rationalize button in the control objective page. • The recommendation workflow has been simplified into a two-step process: Step 1 identifies duplicates by accepting or dismissing recommendations; Step 2 finalizes by retaining one recommendation or creating a new common control objective. • Approvals for the rationalization process are skipped for owners who are reviewers, and levels where all reviewers are owners are automatically approved. • Owners and approvers can add comments and justifications directly on recommendation cards and reply to existing comments. • The user interface has been updated with better navigation, quick summaries, visual improvements, and clear error messages. **Citation impact analysis and updates with Now Assist for IRM** When a citation's description or supplemental guidance is updated, Now Assist identifies related control objectives that might be affected. It reviews these control objectives to determine whether the descriptions or guidance need changes and provides suggested updates. Users can review, provide feedback, and approve these updates directly in the Now Assist panel, ensuring that citation changes are reflected in associated control objectives. **Enhancements to control objectives and controls** The following enhancements have been introduced to control objectives and controls: • The Control objective requirements option provides a granular layer under a control objective. When each control objective has multiple statements, each statement becomes a control objective requirement. • The Create control requirements option generates control requirements automatically for every control generated under an entity type. • The Attestation at control requirement level enables attestation at a granular level for individual control requirements within a control. **Enhancements to policy exception and extension requests** The following enhancements have been introduced: • For policy exception and extension requests, approvers can now view key details, such as justification, reason, and validity period, within a pop-up before approving or rejecting a policy exception or policy exception extension.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• For manual indicators, if the associated control is marked as exempt, no indicator task is generated. • When a policy exception is in the Analyze state and the Awaiting Requested Information sub-state, the interface now includes a Send Information button that allows the requester to provide additional details or clarifications requested by the approver. • Previously, an issue-based exception required a linked policy or control objective for additional approvals. Now, it requires any one of the following: a linked policy, control objective, or control. The control must be linked to the policy exception itself, not just to the issue. **GRC Approval Configurator** The GRC Approval Configurator can now be used to manage both policy exception and extension approvals. It allows verification, approval, and extension rules to be defined based on state, sub-state, and other filter conditions, with support for multiple user groups and multi-level approvals. This enhancement provides greater flexibility in assigning appropriate approvers at each level based on defined conditions, facilitating structured and collaborative reviews. For extension approvals, users can now configure multiple approvers, overcoming the previous limitation of a single default approver (Compliance Manager). **Common Control Objective Creation** Use Generative AI to merge similar control objectives into a single, consolidated common control objective. The system automatically populates the name, description, and guidance fields from the accepted duplicates, eliminating the need to manually select a primary control objective. **Entity based record access rules to secure new records** When entity based record access rules are enabled on the Entity Based Access Configuration Properties page, any newly created controls, control attestations, indicators, and indicator tasks associated with a configured entity will automatically inherit the entity-based access (EBA) value from that entity. Previously, users had to run bulk access updates to apply EBA restrictions whenever new objects were created. Additionally, when a standard control is converted to a common control, the **Entity based access restriction** option is inactive by default. Users can manually enable the EBA option for common controls directly from the Access Settings section in the Details tab of the respective control.
Portfolio Planning	**Roadmap enhancements**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Create custom themes for your roadmap bar colors to align with your organization's standards. • Experience consistent roadmap bar colors for choice list attribute values across all portfolio plans. • View the roadmap-level milestone row while scrolling down the Roadmap page. • Use different icons to distinguish item-level milestones. **Dynamic data linking in Docs** Keep record information in your documentation always current and reduce manual effort with the Dynamic data linking feature in Docs. You can now reference any ServiceNow application record and Docs will automatically reflect the latest updates from those records. For example, if you add a reference to a Project record, the reference will show the latest field information of the project in Docs without requiring manual edits. Clicking the project reference opens up the project form so that you can view the full details of the project record and make any necessary changes. Dynamic linking also enables adding references to a particular field of a record, such as Assigned to of an Incident record. You can add references from any ServiceNow table you have access to, with no setup or configuration needed, thereby eliminate the hassle of switching between applications to copy and paste data from various records into Docs. **Scenario planning enhancements** With the sn_align_core.apw_admin role, you can enable or disable the scenario planning feature. The *sn_align_ws.is_scenario_planning_disabled* system property allows you to enable or disable the scenario planning feature. **Quick filters enhancements** Apply filters using string-type and Boolean field values across the Planning page to view the required dataset. These filters are saved as part of your user preferences, enabling you to access the same filtered data when you log back in and continue your planning seamlessly. **Financial enhancements** • View only the planned costs of your planning items to track the total cost of projects or demands. • Use **Display mode** to switch between focused views to better plan and track the financials of your planning items. • Manage the planned and actual monetary benefit plans for your projects to identify the financial performance of your project using the Cost and benefits screen.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Use multicurrency to view and manage financial records of the project in Investment currency, which can be different from your functional currency. Manage multiple financial records such as planned and actual expenses, planned and actual benefits, and so on. • Generate and track labor cost for sub-projects, based on the resource assignments of your sub-projects and planning items such as features and capabilities.
Predictive Intelligence	**Review any errors in predictions using the Observability Dashboard** Monitor errors using the Observability Dashboard which provides analytics derived from a new table. This table is dedicated to logging any errors that may occur during Predictive Intelligence predictions. **Leverage new advanced options for classification solutions** Customize your classification models in Predictive Intelligence with the following advanced options. • Configure include only top N labels: Limit the classification model to use only the top most frequent labels. You can choose a number as the limit. • Minimum records needed for label to include it: Set a threshold for the minimum number of records a label must have in your dataset to be included in model training. • Remove others label: Reduce noise in the model and enhance predictive accuracy by removing records with the label "others" from training data. • Use LightGBM algo for classification model training: Enable the LightGBM (Light Gradient-Boosting Machine) algorithm for training classification models. • Config parameters for model config in classification: Customize training behavior by including a dictionary of parameters in the JSON format.
Privacy Management	**Data subjects** Select and define the multiple data subject types for each processing activity. You can capture the volume of data subjects that were processed, the specific data elements that were collected from the users, and the user locations. With this feature, you get a realistic, granular, and scalable representation of your processing activities. **Privacy management dashboard** Get an overview of your complete privacy risk and compliance posture from the Privacy Management dashboard so that you can quickly prioritize and remediate your processing activities. By looking at the Processing Activities, Risk & Compliance, and Operations & Case management sections, you can see the overall

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	compliance score, trends, privacy criticality assessment scores, and risk heatmap. From the dashboard, you can also see information about the global legal framework to understand the regional obligations and the built-in risk metrics that automatically assess each processing activity. **New screening and PIA templates** Use the new Privacy Impact Assessments (PIAs) and Screening Assessment templates that provide standardized questions, evaluation criteria, and workflows so that you can perform a processing activity criticality and privacy risk assessment. With these new templates, you can ensure consistency, reduce manual effort, and support compliance with regulatory and organizational requirements.
Proactive Service Experience Workflows	**Components installed with Proactive Service Experience Workflows** The granular admin role enables developers and administrators to complete administrative configuration tasks for Proactive Service Experience Workflows without requiring the full admin role. **Components installed with Product Support for Technology** The granular admin role enables developers and administrators to complete administrative configuration tasks for Product Support for Technology without requiring the full admin role. **Diagnose and resolve an incident** Diagnose the incident in the Proactive Service Experience Workflows and create the resolution task manually to resolve the issue. **Diagnose and resolve a change request** Review, diagnose, resolve, and close a change request case for the service-related issue experienced by the customer. **Diagnose and resolve a Product Support for Technology case** Review, diagnose, resolve, and close the Product Support for Technology Case.
Process Mining	**Opportunity details page** Generate highlights to surface key drivers behind process patterns that accelerate decision-making and prioritization of process changes on the Opportunity details page. This page provides the detailed context of every improvement opportunity. It uses Now Assist to help generate highlights. **Idle time analysis**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Analyze where cases are waiting to be assigned to agents by tracking and analyzing the time during which the case is assigned to a team but not yet to an agent. Idle time analysis helps identify inefficiencies, such as delays in task assignment or workflow bottlenecks, and helps improve coordination and reduce waiting time within processes. Idle time analysis must be configured in the process configuration. **Touchpoint analysis** Identify where and how human involvement occurs in a process by using touchpoint analysis. Analyzing the fields that involves human involvement helps you improve your processes, enhancing performance and reducing operational costs. Touchpoint analysis enables you to analyze the workload of transitions and cases. Touchpoint analysis must be configured in the process configuration. **Enhanced data security** Mark a project as restricted to help protect sensitive data and avoid security breaches. Restricted project data is available only to the owner and the users with whom the project is shared. **Share a Process Mining project** Share projects through a link that remains unchanged even when the project is updated and remined. **Creation of automation requests and CIMs simplified** When creating an automation or Continual Improvement Management (CIM) request from Process Mining, mandatory fields are pre-populated, reducing friction and accelerating time-to-action. **Process Mining integrated with ServiceNow playbook** Process Mining has been integrated with ServiceNow playbook. After analyzing and identifying a process for improvement, export the process to playbook and add subflows or triggers to analyze and refine the flow. Use the Playbooks icon on the Process Mining Analyst Workbench to export up to 5 routes of a project to ServiceNow playbook. This feature is enabled by Now Assist.
Product Catalog Management and Pricing Management	**Product Catalog Management features** **Create configurable product offerings and associated blueprints** Enable product catalog admins to generate blueprints for configurable products using the CPQ Configurator. A blueprint contains the product attributes, product relationships, product and pricing rules, and child products that control the structure of a configurable product offering. It also contains configuration rules, such as inclusion, exclusion, and determination.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Blueprints drive the agent and customer experience when configurable products are added using the configurator. Catalog admins can review and update an offering blueprint in the CPQ Configurator, then publish the product offering to the product catalog. **AI Search queries in the product catalog interface** Enable semantic search features that agents and customers can use in the product catalog to find relevant product offerings. Users can search by product offer attributes, characteristics, and child offerings, and also view auto-complete suggestions. AI Search supports queries with synonyms, multi-languages, Boolean operators, and auto-correction (typo handling). Product catalog admins can configure stop words, synonyms, and rules that control the search results displayed. **Complex characteristics** Starting with Product Catalog Management Core v13.0, enable product catalog admins to define product and specification characteristics using an object-based structure that supports the following data types: integer, decimal, date and date time, and data arrays. For example, product catalog admins can use these new data types to define characteristics for communication products, such as routing characteristics, that have nested levels of characteristics and characteristic options. These complex characteristics can then be used to define conditions for setting decomposition, attribute propagation, and compatibility rules. • Agents can view and select the complex characteristics available for configurable product offerings when creating opportunities, quotes, and orders. Complex attributes are displayed as separate nodes in the product hierarchy tree of the legacy product configurator interface. • Fulfillment agents can perform fulfillment tasks that capture complex characteristic data for new or MACD orders. • Customers can view and select complex characteristics when using the Business Portal to order configurable products. **Note:** Complex characteristics aren't supported in the CPQ Configurator. **Pricing Management features** **Derived product pricing** Define dynamic product pricing relationships between products, where the price for a product is derived from the price of another product or transaction-level values, such as the total quote value or annual contract value (ACV). When sales or order agents add the product to

Application or feature	Details
	a quote or order, they can see how the product price is derived in real time. **Price and quantity ramps** Enable product catalog admins to identify configurable product offerings for which pricing ramps can be created. These product offerings must also have the recurring pricing method. Sales agents create price ramps for quote lines that define and schedule pricing and quantity changes as product deals evolve over a given time period. **Product pricing changes related to MACD activities** Support different price bases, such as original prices, fresh prices, or zero prices, used to calculate pricing for products during MACD activities. **Cost-based attribute adjustments** Enable pricing admins or managers to set different product costs based on product attributes, such as model or size, by using cost book-specific or product offering-based adjustments for cost book lines. Previously, only a single cost amount was captured for a product offering, even if the product had different attributes that affected the product cost. These adjustments determine the base product cost used to calculate profit margins for sales agents when they create quotes for customers.
Project Portfolio Management	**Managing projects with Project Workspace** • End resource assignments when a project ends, view assignment details, and synchronize assignment dates with project dates. • Access and edit the resource details directly from the Resource page without switching between views. **Identify similar records using Now Assist** Detect similar existing demand records when creating or editing a demand using the identify similar records skill. This skill compares the **Name**, **Description**, and **Business Case** fields for contextual similarity. **Convert demands to EAP entities** Convert your demand records quickly to Enterprise Agile Planning (EAP) entities, such as Epic, Feature, or Capability. When you convert a demand, the system generates a new record of the selected entity type, replicates common fields from the demand, and moves the demand to the Approved state.
Project Workspace	**Use Playbooks in Project Workspace**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Playbooks provide structured stages and activities to keep projects on track. • Added two playbooks for Project Workspace: Project Default and Stage-gate Default. • Use one of the two out-of-box playbooks or create your own to match your project process. **Monitor and update project report status** • Track the status of project reports using the Status drop down, and change the status from Draft to Published once updates are complete. • Status changes are restricted to the Project Manager role. **Copy and edit status report enhancements** • Simplified workflow for copying and editing status reports. Duplicate a status report directly without opening a form modal. • The duplicated report automatically refreshes with the latest project updates (for example, overall status, milestones, or metrics). • Any static or manually added data from the original report is retained in the duplicated version. • When editing is disabled, all fields in the status report are read-only. When editing is enabled, only dynamic fields remain read-only. You can edit the status report in both the scenarios using the Edit Status Report action in the context menu. **Resource assignment updates** • Access and modify resource details directly from the Resource page without having to navigate to Resource Management Workspace. • End resource assignments when a project ends. View the resource assignments and synchronize the resource assignment dates with the project dates. • Move resource assignments to a new start and end date to align with task dependencies or resource availability. **Status report properties**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Updates made on the status report form are reflected in the Status Report document when the `sn_pw.status_report_doc_read_only` property is set to `true`. • Updates made on the status report form are not reflected in the document content when the property is set to `false`. **Project financials** • View only planned costs of your planning items to track the total cost of your projects. • Use **Display mode** to switch between focused views to better plan and track the financials of your projects. • Manage the planned and actual monetary benefit plans for your projects to identify the financial performance of your project using the Cost and benefits screen. • Use multicurrency to view and manage financial records of the project in Investment currency, which can be different from your functional currency. Manage multiple financial records such as planned and actual expenses, planned and actual benefits, and so on. • Generate labor cost for sub-projects based on the resource assignments of your sub-projects.
Public Sector Digital Services	**Grants Management Funding Program** Create a funding program, which serves as the top-level container from which individual grant programs are created and derive their budget allocations. Grant program managers can create a new funding program, or start by copying data and configurations from an existing funding program, using the funding program ID. From this funding program, admins can create grant programs directly, set and update the duration and overall budget, and ensure budgets flow down logically to individual grants. Each grant program is associated with a single funding program via the funding program ID. All grant programs linked to a specific funding program share the cumulative budget of that funding program, and their start and end dates fall within the funding program's duration. **Grants Management Evaluation & Decision** Simplify and streamline your grant application decisions with Grants Management: Evaluation & Decision. You can review, score, and manage proposals for grant programs in the Merit Review portal and define a funding proposal for a grant program by using the Grants Workspace. You can share this information internally with the grant program director. Grant program managers can define the

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	merit review framework criteria, assign a reviewer group to each application, create, and track merit review tasks. Grant program managers can use document templates to compose letters that inform the applicants of results, with template options for Award, Rejected (Ineligible), and Rejected (Decline). **Grants Management Reviewer Service portal** Enable your merit reviewers to track, score, and monitor grant applications via a dedicated Reviewer Service portal. The merit reviewers can capture and aggregate scores across the Grant Proposal review framework in the Grants Workspace. A score and rationale can be summarized as part of the application proposal result. **Agentic AI for Public Sector Digital Services** Define the fees for information requests and autonomously assess waivers against an agency's criteria . You can automate the process of synthesizing similar information requests and associated fees, and apply those fees to cases. Your case fields are automatically filled in and integrated into the Information Request Playbook workflow and ServiceNow's AI framework.
Purchase Order Management	**Reporting delivery plan issues** Suppliers can report delivery plan issues related to purchase order line through the Supplier Collaboration Portal, ensuring prompt visibility for the appropriate buyer. Suppliers can also track and collaborate with the buyers on the purchase order exception on the related record in Supplier Lifecycle Operations. **Centralized interface for purchase order exceptions** The Purchase Order Management page provides operational buyers with a centralized interface to monitor and review purchase order exceptions. Users can quickly identify urgent issues, view recent tasks, and take approval actions, improving workflow visibility and exception handling. **Resolving purchase order exceptions** Enables buyers to resolve purchase order exceptions directly from the exception page, with options to accept supplier proposals or make custom edits. It also allows buyers to find alternative suppliers with open orders for the same materials and request order expediting or increased quantities.
Quote Management	Enables sales agents to quickly view, add, and edit manual price adjustments for quote line items directly from the list view, making it easier to manage both automatic and manual adjustments. The new experience streamlines the quoting process and allows adjustments to be applied to individual or multiple line items at once.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Price and quantity ramps on quote line items Create price and quantity ramps for product offerings in quotes to define incremental price and quantity changes over time. Product offerings eligible for ramps have the Ramps enabled option and Recurring price method selected. Agents can define ramps in two ways: 1. Ramp the parent line item, which automatically applies ramps to all child line items. 2. Leave the parent unramped, allowing child product offerings to have ramps defined individually. Agents can also make manual price adjustments per segment. When a quote with ramps is converted to an order, ramps become read-only. **Quote header discount** Added a quote header discount feature that enables sales agents to apply a discount across multiple quote lines at once. This simplifies the quoting process and ensures consistent discount application, thereby improving overall sales efficiency and customer satisfaction. **Subscription revenue metrics** Provides sales agents better visibility of the entire quote cost and profit with the addition of Cost and Margin calculations to the following levels: • **Quote Header**: Total one-time cost, Total monthly cost, Total cost, Total one-time margin, Total monthly margin, Total margin amount, Total one-time margin %, Total monthly margin %, and Total margin %. • **Quote Line**: One-time cost, Monthly recurring cost, Cumulative one-time cost, Cumulative monthly cost, Cumulative margin %, and Cumulative Net Cost. The automated calculation rules introduced at Quote Header and Quote Line levels enable informed discounting decisions and help prevent unprofitable deals.
RPA Hub	**Zurich Patch 7** **Try catch component enhancement** You can now precisely control the scope of Try-Catch blocks by selecting which actions (components) to include within exception handling and which to manage outside it. This enhancement provides better control over error handling logic and improves workflow reliability. **Zurich Patch 4** **Role changed for creating, updating, and deleting the Robot License Distribution records**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Role for Create, Update, and Delete ACLs in the Robot License Distribution table is changed from admin to sn_rpa_fdn.rpa_admin. **Long term stable models** Long term stable (LTS) models are part of Now LLM Service and provide longer model stability windows for regulated industries. These models can integrate with tools to provide governance, monitoring, and compliance controls. **Zurich Patch 1** **New third-party AI model provider options available for all Now Assist applications** Google Gemini and AWS Claude are available for RPA bot generation skill in addition to Now LLM Service and Azure OpenAI. **Python connector** Execute custom Python scripts or files as part of an automation workflow in the RPA Desktop Design Studio. The connector comprises two methods: • Execute: Runs Python scripts set up in the configuration window. • InvokeScript: Runs Python script on local computers and gets the output. Ensure to install the Scripting plugin from the Plugins Manager as a prerequisite. Along with Python, VB.NET, C#, and Javascript connectors are available with this plugin. **Smart Card authentication** Use a physical smart card instead of a username and password for logging into a Windows machine. You can run unattended automations on the machines that use smart cards for authentication. While configuring a robot credential, you can store the smart card username and password to allow the unattended robot to log in to machines that use smart card. **Enhanced ACLs for security measures** Enhanced access controls for RPA bot generation skill for Now Assist for RPA Hub in compliance with AI security directives. Access to RPA bot generation skill is now restricted to users with the RPA developer or RPA admin role. These roles contain the RPA Hub Admin user role (sn_nowassist_admin.user).
Recommended Actions for Operational	**Contextualize an external document**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Technology Service Management (OTSM)	Contextualize an external document to get an explanation of why the document is relevant to the selected OT incident. **Apply Recommended Actions to your Operational Technology incidents** Use Recommended Actions to see relevant actions that can help resolve your OT incidents.
Recruitment workspace	**Create a job requisition as a recruiter** Create a job requisition for a vacancy that you want to fill in your organization. **Track a job requisition in the Recruitment workspace** Track a job requisition and view the job details, associated applications, hiring team, interview phases, approvers, and prospects. **Manage hiring team** Add, edit, or remove hiring team members from a job requisition. **Add a job description to a requisition** Manually add a description to a job requisition or use predesigned templates to fill it out faster. **Manage the job requisitions as a recruiter** Update or duplicate a job requisition, put it on hold, send it for approval, or close it from the Recruitment workspace. **Tracking an application in the Recruitment workspace** Track an application for a job requisition and its corresponding applicant and interview details as a recruiter or recruitment coordinator. **Hiring tasks** Create and assign tasks to your job applicants or internal stakeholders, and manage them within the Recruitment workspace. **Collaborate with the hiring manager** Collaborate with the hiring manager on the job requisition in the activity stream. Send targeted emails to the internal and external talent types from different access points in the Recruitment workspace for effective communication. **View the Talent Acquisition Dashboard** Understand the hiring trend in your organization with the Talent Acquisition dashboard.
Regulatory Change Management	**Now Assist for Integrated Risk Management (IRM)**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	You can review the Now Assist for Integrated Risk Management (IRM) release notes for full descriptions of the Now Assist in Regulatory Change Management (RCM) features. **Add multiple regulatory tasks** Add multiple regulatory tasks to an alert. Each task can represent a distinct area of impact or required action. By organizing work into separate change tasks, your teams can assign responsibilities, track progress, and manage dependencies more effectively. **Add multiple source document import tasks** Associate multiple source document import tasks with one regulatory alert to simplify the management and tracking of your regulatory content ingestion. Each import task adds the relevant documents to the regulatory library to help ensure that all source materials that are related to the alert are accurately captured and organized. You can help to improve traceability throughout the regulatory change management process. **Close a regulatory task** Close a regulatory task automatically when it's approved. You can also manually close a regulatory task while it's in the Implementation state, if all the associated action tasks are completed and closed. By closing a task manually, you get flexibility in managing the regulatory changes that don't require formal approval workflows. **Reopen action tasks** Reopen the action tasks for a regulatory task when it's rejected and transitions back to the Implementation state. You can review and rework the tasks to address the feedback or incorporate the updated requirements. You can also modify and resubmit the reopened action tasks so that the implementation aligns with regulatory expectations before you resubmit the change task. **Close a regulatory alert** Close a regulatory alert manually after all the associated regulatory tasks are complete. By closing the alert, you help to ensure accurate record-keeping by signaling that a compliance life-cycle for the specific regulatory alert is complete. **Work on action tasks** Initiate and complete the action tasks independently without requiring prior approval from users who are assigned with the `sn_grc_reg_change.manager` role. You can execute assigned responsibilities in a timely manner and reduce unnecessary approval bottlenecks. The access to action tasks remains governed by user permissions and role-based access controls to ensure proper accountability and oversight.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
ReleaseOps	**Pipelines in ReleaseOps** A pipeline is the flow of a deployment in ReleaseOps. A pipeline's flow is defined within playbooks, which enables you to customize as needed. **Releases in ReleaseOps** Scheduled and on-demand releases are how changes are deployed to target instances with ReleaseOps. Releases can contain one or more deployment requests. **Deployment requests in ReleaseOps** Deployment requests contain one or more update sets, and are contained in a release. **Configure a new ReleaseOps ecosystem** Configure a new ReleaseOps ecosystem using the sample pipelines and playbooks to begin deploying changes from your development to test to production instances. **Create a custom pipeline** Create a custom pipeline to move changes through your production environment to testing by duplicating one of the ReleaseOps playbooks. **Promote an update set for deployment** When you're ready to deploy your changes, promote your update set to begin the deployment process. **Create a deployment request for a scheduled release** Create a deployment request for a scheduled release to contain your update set and enable your changes to move through the pipeline for deployment. **Create a release** Specify the details for your release, including the target instance that the changes deploy to and when the release should occur. **ReleaseOps guided setup** Starting with version 1.2.1 of ReleaseOps, you can use guided setup to help simplify the initial configuration process.
Resource Management Workspace	**Move a resource assignment** Move any assigned resource assignment without actuals or an unassigned resource assignment to a different date to align the work with your project realignment, prioritization, or resource availability. You can move individual resource assignments based on your project or organizational priorities. **Using Resource Management Workspace**

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• View the type of operational work that is assigned to a resource using the resource board drill-down view. • Filter your resource board using data grid filters to easily navigate and modify the resource assignments in the top tray. • Sync the resource assignments to align them with change in planning item dates. • Override resource rate for each assignment from the assigned work in the top tray. • Apply filters using string-type and boolean field values across the resource card top tray to view the required dataset. **Assign resource assignments** Allocate effort from unassigned resource assignments using the following ways: • Auto-assign work among all the available resources. • Partially assign work among for selected resources.
Retail applications	**Note:** The new Retail Mobile application and the new case types are available in the Yokohama release. **Retail mobile application** **Retail Mobile application** As a store manager or a store associate, boost productivity by managing operations and accessing key tools on the go with the Retail Mobile application. **Customer complaint case** **Customer complaint** Help ensure quick and efficient customer service resolutions by capturing store-related complaints from customers using the customer complaint case type in the Retail customer complaint plugin. **Store inquiry case** **Store inquiry** Streamline the process for contacting HQ for store-to-HQ cases with the store inquiry case type in the Retail Store Services plugin, which provides a clearly defined workflow for resolution at HQ. **In-store operations case** **In-store operations** Standardize the reporting, tracking, and resolution of in-store issues with the in-store operations case type in the Retail in-store operations plugin. This case type contributes to structured task assignments and tracking, reducing the time to resolution. **HQ communications case** **HQ communications** Initiate and coordinate large-scale actions across multiple stores with the HQ communications case type in the Retail HQ operations plugin. Using this case

Application or feature	Details
	type as a parent case for in-store operations simplifies coordination efforts.
Return Merchandise Authorization	**Return Merchandise Authorization** Enable customers to create cases for defective products within a specified warranty period, which helps streamline the process. **Granular roles in Install Base Management** Use the following new granular roles with the sn_install_base.install_base_admin role, which is installed with Customer Service Install Base Management plugin (com.snc.install_base): • sn_install_base.install_base_read • sn_install_base.install_base_write • sn_install_base.install_base_create • sn_install_base.install_base_delete • sn_customerservice.customer_data_viewer • sn_customerservice.case.viewer These roles provide you with more control over administrative tasks related to install base and sold product related entities.
Sales Forecasting	**Modify forecast adjustments** Sales agents can modify their individual system-generated forecast values and sales managers can modify their team's forecast projections. Adjusting forecast values provides more flexibility to sales agents and ensure a more accurate view of expected sales performance and forecasts. **Submit final forecast** Finalize and submit forecasts within defined submission periods to ensure accurate sales forecasts and projections. You can modify forecast values and submit the final forecast for a selected time period. After submission, the forecast roll-up displays only the locked and finalized values. **Set up sales territory hierarchy** Set up a sales territory hierarchy for specific regions to assign sales agents to defined territories. This capability improves forecasting accuracy and tracking efficiency for organizations that use territory-based sales structures.
Sales Territory Management	**Configuring Territory Level** Configure territory levels to categorize territories such as regional, district, area, and global for better territory management, reporting accuracy, and alignment of sales strategies with business complexity.

Application or feature	Details
	Configuring the Territory Model Configure the Territory Model to maintain a structured organizational hierarchy of territories. This model serves as the foundation for assigning territories to key customer relationship management (CRM) entities such as accounts, consumers, leads, and opportunities. By defining territory levels and relationships within the model, organizations can verify consistent territory assignment, streamline sales operations, and support accurate forecasting and reporting. **Configuring the Territory** Create territories to optimize the assignment of CRM data. Map these territories to the territory model and levels to maintain the hierarchy. Provide conditions for automated assignments, and onboard members with defined roles within a territory for restricted access. **Configuring resources for territories** Territory members are added with their designated responsibilities. These responsibilities determine the level of access each user has to CRM entities within the territory hierarchy. **Configure Properties** To put a sales territory model into use at the CRM entities, enter the sys_id of an active sales territory model. By default, this model and its territories are utilized for sales territory assignments. **Run Assignments** Execute the sales territory assignment to map the CRM entities to the most appropriate territory. Each territory is evaluated against predefined territory conditions related to the CRM entity. Each territory is evaluated against its own conditions and any cascaded territory conditions associated with the CRM entity.
Security Center	**Security Task management** The new Platform Security Tasks enable administrators to see and manage all their platform security tasks in one place. Use this feature to prioritize, delegate, and monitor progress for tasks related to platform security across your teams. Security tasks can be automatically generated by the platform and manually created by users. Tasks can be assigned to any user who is notified the in app Notifications. **Updated overview summary pages** Use the overview pages for Security Center tools to understand whether you need to act on the security area these tools help you manage. The following overview pages have been updated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Security Hardening • Security Scanner • Security Metrics • Best Practices **New information and video overlays** Security Center has been updated to show overlays with short feature introductory videos to help users understand what the tool can do and how to use it. These overlays are tailored to assist both new and infrequent users of Security Center. **New Auditor Suite checks** Added two new auditor checks: • Review Public Knowledge Bases • Review Public Knowledge Base Articles **Granular admin role for Security Center** The granular admin role enables developers and administrators to complete administrative configuration tasks for Security Center without requiring the full admin role. Use the new Access Controls console within Security Center to review and remediate access issues and misconfigurations. The Access Controls console provides enhanced visibility and control of your Access Analyzer findings, and streamlines remediation efforts by enabling you to track, prioritize, and resolve access issues by assigning tasks. **Enhanced IAM Integration in Security Center** Use the new Identity and Access Management (IAM) section in Security Center to access to critical IAM tools. The new section provides a comprehensive view of security metrics. This integration simplifies the administrative experience by bringing essential IAM functionality directly into Security Center, reducing the need to navigate multiple separate tools.
Security Incident Response	**Security Incident Response Integration with Cortex XSIAM by Palo Alto Networks** As a profile admin: • Create profiles for incident ingestion. • Filter Cortex XSIAM incidents. • Map Cortex XSIAM **Incident**, **Alert**, and **Event** fields to SIR security incident fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Aggregate incidents to existing open security incidents to avoid having to create duplicate security incidents. • Synchronize ServiceNow instance Work notes with Palo Alto Networks XSIAM comments. **Setup ServiceNow Security Operations Event Ingestion Addon for Splunk ES** The ServiceNow Security Operations Event Ingestion Add-on for Splunk ES enables seamless integration between Splunk and ServiceNow Security Operations, allowing you to send security-related events from Splunk ES to a ServiceNow security incident. **LLM-powered SIR integration builder** With the ServiceNow platform's latest LLM powered integrations, you can create product-ready integration quickly. The LLM-powered integration builder has the following capabilities: • Automatically generates integration code from a public API documentation. • Provides guided setup built on existing capabilities. • Provides easy edit and maintenance of the generated auto code. **Deny rule for phishing emails** The security admin can add rules to prevent the conversion of phishing emails such as false positives or low-risk messages into security incidents. Any new phishing email is verified first with the deny rules to avoid unwanted security incidents. **MITRE D3FEND framework** Security administrators can now ingest MITRE D3FEND data. Security analysts can explore MITRE ATT&CK and D3FEND techniques through an interactive, node-based visualization that maps attack techniques, defense techniques, and related artifacts within a Security Incident Response (SIR) record. **Update information in security incident related records** The security analysts can now edit related records such as associated observables, for a security incident directly from the Related Records list view. Security analysts can quickly update the records without leaving their current context. **Advanced Work Assignment for Security Incident Response** Use Advanced Work Assignment (AWA) to streamline the security incident assignment process which ensure that critical incidents are handled by the most appropriate and available analysts. This improves overall response times and efficiency in security operations.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	As an admin, configure the following: • Service channels • Queues • Assignment rules • Presence states • Rejection reasons As an analyst, do the following: • Set your availability • Accept or reject incoming security incidents **Prevent duplicate security incidents for IT incidents** Prevent the creation of duplicate security incidents when ITIL users escalate an IT incident to a security incident, the system by enabling the `sn_si.disable_duplicate_security_incident` system property. **Ingest third-party risk scores** Factor third-party risk scores into security incident risk calculation by ingesting and mapping those scores for better prioritization of high-risk threats. **Simplified adding categories and sub-categories for security incidents** Admin can create categories and subcategories in Security Incident Response Workspace based on threat types, compliance requirements, or reporting needs. Security analysts can assign these categories and subcategories to security incidents. **Security incident Details tab** Include the **Functional Impact**, **Recoverability** and **Information Impact** fields on the Details tab of a security incident to improve triage accuracy, incident handling efficiency, and executive reporting for calculating the risk score. **Close multiple security incidents** Close security incidents in bulk with predefined closure comments or codes to reduce the time that would be spent on manually closing individual incidents. Closure candidates might include multiple incidents with common root causes such as alert misconfiguration, duplicates, or changes in system behavior. **Process Mining for security incidents** Identify factors contributing to delays in processing SIR incidents that take a long time to close or resolve by scanning historical SIR records through Process Mining. Time-consuming factors can include multiple

Application or feature	Details
	reassignments, prolonged hold times, and periods of inactivity. Use analysis methods to identify these factors such as multi-hop analysis or bottleneck analysis. **Send Observables to TISC** Add metadata to the observables such as confidence score, Traffic Light Protocol value, notes and TISC tags before sending them to TISC. **Add indirectly linked VITs to CVEs** In MITRE-ATT&CK framework, identify all third-party entities (TPEs) associated with common vulnerabilities and exposures (CVEs) and then calculate and display the total number of vulnerable items (VITs) indirectly linked to those CVEs through the TPEs by setting the *sn_ti.include_cve_vit_indirect_relation* system property. **Configure on-call schedules** As an admin, manage on-call schedules through the following activities: • Create a shift and assign or remove members to or from the shift. • Create and edit on-call schedules for groups. • View any group's on-call schedule. As an analyst, track your on-call responsibilities through the following activities: • Specify your availability and preferred contact methods. • View your on-call schedule. • See other members of your shift. **Users accessing the same incident** When you open an incident, the initials of all the users currently accessing the same incident are displayed to avoid conflicts. **Universal search field for linking observables** Search across all the field values of the associated observables for an incident. **CrowdStrike Next-Gen SIEM integration** As a Profile Admin: • Discover CrowdStrike Next-Gen SIEM detections that are candidates for security incidents and automate the creation of these security incidents. • Create detection profiles. • Map CrowdStrike Next-Gen SIEM Detection and Events Fields to SIR security incident fields.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Filter CrowdStrike Next-Gen SIEM defects. • Aggregate detections to existing open security incidents so that you don't have to create duplicate security incidents. • Automate CrowdStrike Next-Gen SIEM detection status updates for Security Incident Response. • Synchronize CrowdStrike Next-Gen SIEM detection comments with SIR Work notes. **Create and name an event profile for the Splunk Enterprise Security event ingestion integration** • Enables bidirectional updates and closure synchronization between Splunk ES and Splunk integrations. • Enables retrieval of historical, and ongoing data including closed events, with an option to pull the closed events into the ServiceNow Splunk ES instance. • Receive updates for the mapped fields in SIR. **Components installed with Security Incident Response** A new Profile Admin role (sn_si.ingestion_profile_admin) provides access to configure plugins, and to create, edit, delete, and manage profiles for the Splunk, Splunk ES, and Azure Sentinel Integration for Security Operations application. **Enhancements to relationship graphs** As an admin: • Define default child nodes to populate in the relationship graph. • Configure relationship labels. As an analyst: • Add or remove child nodes at the parent node level. • Save the state of the relationship graph. • Retrieve updated data.
Security Posture Control	**Create a custom API service graph connector in the Security Posture Control workspace** Use generative AI to help your developers create SPC API connectors quickly with the Connector builder framework module in the Security Posture Control workspace. With a Now Assist skill that is included with the Now Assist for Vulnerability Response application, your developers have the option to automate steps in the Connector builder framework.

Application or feature	Details
	• You have the option to automate the steps for selecting API templates, populating request and header parameters, and response field mapping with generative AI. **Note:** You must install Zurich Patch 4 of the Now Assist for Vulnerability Response application to have access to the generative AI skill for the Connector builder framework. See the Now Assist for Security Incident Response (SIR) release notes and Supporting information for Now Assist for Vulnerability Response for more information. • Use your custom API connector to integrate with security tools and import asset data that is based on the unique requirements of your environment. • Help your cybersecurity teams monitor your overall security posture and identify assets that are missing key security tools with the API connectors that you build. **Enhancements to policies and asset profiles included with the Security Posture Control application** Get insights into your overall security posture and configuration gaps in your security tools using new policies and asset profiles that are included with the Security Posture Control application. Activate these asset profiles and policies in the Security Posture Control workspace so that you can identify gaps in configuration or coverage for the following tools: • CrowdStrike • Microsoft Intune, Defender, and SCCM • HCL Big Fix • SentinelOne • Qualys • Rapid7
Self-service and omnichannel engagement for CSM	**Using Interaction Controls Component (ICC) call controls with Amazon Connect** Manage Amazon Connect calls directly in the CSM Configurable Workspace voice Interaction record page. This integration supports inbound and outbound call flows, presence management, and call transfers without switching applications. **Selecting queues for outbound calls** Enable agents to designate a specific queue for their outbound calls directly from the keypad or the phone directory in the Global Call window to improve routing and reporting. This provides a streamlined search interface

Application or feature	Details
	that enables agents to find and select a single queue that can be applied across all outbound dialing methods. **Integrating WhatsApp with Customer Service Management using the WhatsApp Cloud API** Connect directly to WhatsApp Cloud API for more reliable, feature-rich customer support without third-party dependencies. The key capabilities include the following: • Send and receive text messages for direct customer communication. • Exchange images, videos, audio files, and documents for clearer, more contextual conversations. • Simplify customer input with list pickers and location sharing. • View typing indicators for more natural conversational flow. • Automatically capture and record customer opt-in and opt-out messages to ensure compliance with WhatsApp's messaging policies. **Defining CCaaS callbacks** • Offer callers a callback option that lets them retain their position in the queue and receive a call when an agent is available. Alternatively, callers can choose a specific date and time for the callback, also known as scheduled callback. • As an agent, view callback requests in the order that they're received. **CCaaS callback features** As an agent, address callback requests from the CSM Configurable Workspace. Initiate callbacks and manage active calls with the Callback context card and Callback Actions component on the voice interaction page. On the Callback actions component, you can use the **Call number** option to initiate a call; alternatively, the call can be initiated automatically at the end of the preview timer when enabled. After the call has ended, the **Close callback** option closes the callback interaction and changes the status to Closed complete. Agents can also retry the callback as needed. Monitor the callback life cycle and capture the preview time that measures the time between when an agent accepts the callback request and the agent dials out the customer. **Global call list** Switch between workspaces using the global call list. As a CSM agent, you can accept calls and open

Application or feature	Details
	interaction records in supported, unsupported, or default workspaces. **Phone directory** Access the embedded phone directory in your CSM Configurable Workspace via Interaction Controls Component (ICC) to make outbound calls to external and internal contacts. **Call resiliency** Route phone calls to the CSM Configurable Workspace without creating an interaction record, helping agents handle calls even during connectivity issues. **Voice Controls Simulator tool** Test and validate voice call UI flows in the CSM Configurable Workspace to ensure CCaaS partners have clear insights into their supported voice control capabilities. **Monitoring calls** Enable supervisors to monitor, coach, and barge-in on calls in real time by integrating ServiceNow's native voice call feature within an active call interface.
Service Catalog	**Create complex catalog items in Catalog Builder** Enable catalog item creators to create complex catalog items effortlessly in Catalog Builder. They can create, edit, or delete client scripts to build a complex catalog item. Creators can also configure questions, set dynamic and advanced reference qualifiers, and scripted default values. **Use Catalog browse component** Use the Catalog browse component in UI Builder to add catalog item browsing in your custom pages. Drag it onto the Next Experience UI page to use the Catalog browse component. The component enables requesters to explore and request items from various catalogs and categories, providing a hierarchical view to sort by catalog, category, or subcategory. The component provides a grid or list view for items and a search function to search for items as needed.
Service Exchange	**Foundation data sync** Reduce manual effort, and eliminate the need to share data externally by sharing selected foundational data types with your consumers on a scheduled cadence. This data transfer supports the service life cycle by providing foundational data context for operational workflows. The

Application or feature	Details
	supported tables are CMDB (CIs), CMDB Relationship, Asset, User, Group, Location, Company, and Department. **Journal field framework** • Write journal entries as a named user instead of using a generic company name to enhance authenticity and accountability. • Maintain a complete historical record across instances by synchronizing previous journal entries between provider and consumer instances. • Ensure that all critical operational updates remain current by mapping and synchronizing any journal-type field between provider and consumer instances. **Flow action** Ensure that Remote Tasks and Remote Record Producers continue to function correctly as you adopt newer revisions by maintaining flow compatibility across configuration revisions using four new Flow Actions that preserve mapped variable integrity. **Magic links** Convert regular links sent from a provider instance into magic links that enable consumer users to directly access the linked resource in the provider instance without having to manually log in.
Service Graph Connector for Microsoft Defender for IoT (Azure)	**View the class mappings available for the Service Graph Connector** View the available class mappings and targeted CMDB classes on the MSFT D4IoT Azure SGC Class Mappings page. **Capture firmware version of devices** Firmware versions of your Service Graph Connector for Microsoft Defender for IoT (Azure) devices are captured in the Firmware Installation [cmdb_firmware_install] table. **Use the ire_criterion_attribute in the OT Entity [cmdb_ot_entity] table** The ire_criterion_attribute identifies configuration items (CIs) for an OT entity-related entry and helps avoid entity update issues. **Actively scan device data from Microsoft Defender for IoT with the Site Mappings table** Access the Site Mappings table to actively scan devices from Microsoft Defender for IoT and assign them to a site in your ServiceNow instance.
Service Level Management	**Configure the SLA timer for the First to breach source** Keep up with your service level expectations on incidents by configuring a First to Breach SLA timer for target-

Application or feature	Details
	based and advanced condition-based SLAs. These configurations help you stay on top of breaches and response times.
Service Observability	**New Service Observability integrations** Integrate with more APM vendors to bring third-party data into Service Observability dashboards. New integrations for this release include: • SolarWinds on-premise • Amazon CloudWatch • Microsoft Azure Monitor • Splunk Observability • As of 1.10, AppDynamics • As of 1.10, Prometheus • As of 1.10, support for Dynatrace process and process groups **Support for additional ServiceNow AI Platform data in Service Observability dashboards** Add data from problem records and business app records to your dashboards. The data displayed is scoped to the service being investigated. **Support for HLA data in Service Observability dashboards** As of 1.10, add service-related log data to your dashboards. **Support for full vendor queries** Recreate any supported vendor time series chart in your Service Observability dashboard using full queries and template variables to represent entities and start and end times.As of 1.10, import selected charts from an existing AWS or Azure APM dashboard. **Use data mapping tags as variables in a chart's query** As of 1.10, key/tags used in a data mapping can also be used as a template variable in a chart's query. **Additional service types** Map all service offering types to APM data instead of just the types that have a technical service as a parent. **Test your data mapping** As of 1.10, you can test your data mapping before using it to create charts and dashboards. **Use any field on a service as a variable in your data mapping query** As of 1.10, when creating a data mapping, if your key represents a service, for convenience a drop down shows fields from the corresponding CI for the service, including custom fields, that can be used as a variable.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Improved data source connection flow Create APM connections without leaving the SOW.
Service Operations Workspace for ITSM	**Configuring Notify in Service Operations Workspace** Configure Notify with Microsoft Teams SOW in Admin Center using the guided setup. **Visual indicators for unread messages** To help agents maintain the Service Level Agreement (SLA) for chats, visual indicators are available on chat session tabs in the SOW. These indicators include color codes, where tabs with unread messages are highlighted in different colors. Inactive tabs display a purple background color to indicate that a message has been received. Tab colors shift to yellow and then to red to highlight critical wait times. These enhancements aim to improve customer service by ensuring quick response time, increase productivity by helping agents manage multiple chats more effectively, and reduce stress by providing clear visual cues, ultimately leading to better SLA compliance and higher service quality. **Resize modal in Service Operations Workspace** Optimize your viewing experience by resizing the following modals in SOW: • Copy incident • Report knowledge gap • Reopen incident **Add similar incidents to major incident record** Find multiple similar incidents and add them as child incidents to a major incident or major incident candidate record from the child incident related list in the **Related records** tab of the major incident record. Similar incidents are retrieved based on the similarity solution definition that can be configured to train on various fields such as **Short description** and **Description**. Adding the similar incidents as child incidents to the major incident record ensures avoiding the creation of multiple major incident records for the same issue. **On-Call Scheduling enhancements in Service Operations Workspace** On-call scheduling in SOW has the following enhancements: • The On-call trigger rule page is enhanced to support and select subflows. • The On-call trigger rule page is enhanced for supporting re-triggering escalations on configured fields such as Priority. Re-triggering is enabled whenever the value in the configured field changes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Configure custom providers as channels for on-call escalation notifications. • Send the on-call escalations notifications to all stakeholders when any of the record fields configured using the on-call trigger rules are modified. **Auto-dismiss the alerts and notification in Service Operations Workspace** Configure the alerts and notifications in SOW to automatically dismiss within the specified time. Auto-dismissal of the alert notification reduces the user effort in manually dismissing the notification. By default, the base system has the following settings: • Auto-dismiss is turned on for alert notification of type info, positive (success) and low and has the timeout value of three seconds. • Auto-dismiss is turned off for alert notification of type critical, high, moderate, and warning. • The time label is turned off and only a visual time indicator is displayed. • The alert notification content is expanded. **DEX and SO view in the investigate tab** Based on the Configuration Item (CI) selected in the **Investigate** tab and the rules defined in the **Investigate CI Experience Rules** (*sn_sow_investigate_ci_ux_rule*) table, the Investigate tab displays the CI metrics in the UI experience dashboard view for the different CI classes: • DEX view - Displayed for the cmdb_ci_computer CI class. • SO view - Displayed for the cmdb_ci_service class. You can select both the affected CIs including service and service offering and caller CIs. **SOW record page enhancements** The SOW record page has the following enhancements: • Add a clickable URL to the Summary section on the **Overview** tab of an incident record, enhancing navigation and reference capabilities. The Overview page supports URL type of field in read-only mode. • Perform various DEX actions on a CI using actions from the Action library in the contextual side panel of the SOW record page. • Manage user actions on the reference fields of a SOW record page with the following glide list actions:

Application or feature	Details
	○ Add me - Add the logged in user to the field. ○ Remove me - Remove the logged in user from the field. ○ Add multiple users - Add multiple users to the field. ○ Add multiple records - Add multiple records to the field. **View recent tasks in a knowledge article record** Configure the **Display recent task for knowledge article** (*glide.knowman.recent_task.display*) system property to view the recent task records to which the knowledge article is recently attached. You can select the task record link to open the task record in a new tab with the workspace view. **Introduction of Granular Admin roles in SOW** The following granular admin roles are introduced in SOW: • sn_sow_admin.sn_sow_admin: Provides access to SOW Admin Center page for SOW configurations. Admins can use the role to configure SOW features and maintain organizational policies. • sn_sow_inc_sn_incident_sow_admin: Provides access to SOW Admin Center pages for configurations related to Incident Management features. • sn_sow_mim.sn_mim_sow_admin: Provides access to the SOW Admin Center pages for configurations related to Major Incident Management (MIM) features. • sn_sow_on_call.sn_on_call_sow_admin: Provides access to the SOW Admin Center pages for On-Call Scheduling configurations. • sn_sow_problem.sn_problem_sow_admin: Provides access to the SOW Admin Center pages for Problem Management configurations. **View conflicts in the change request form** The improved schedule and conflicts section added in the change request form displays the scheduling conflicts for a change request. If a scheduling conflict exists, conflict detection also provides details of any related blackout or maintenance schedules and other active change requests to determine the scheduling conflict. You can use the resulting information to review and modify the change request details to eliminate conflicts. You can also manually check and manage conflicts. For more information on conflict detection, see Conflict detection. **Monthly roster rotation for an on-call schedule**

Application or feature	Details
	Specify how the roster rotation should happen monthly for an on-call schedule. This option is available only for the 2024 schedule engine. **Interaction wrap up with modeless dialog in Service Operations Workspace** Provide agents with dedicated time after each call or chat to finalize the interaction details and wrap up their work before starting a new conversation.
Service Portal	**Approval Info Record widget** The Service Portal Approval Info Record widget shows details about the approval request and a full record for an approval including the activity stream. The Approval Info Record widget and the new Now Assist Approval Assistance AI agent maintain parity. To use the new Approval Info Record widget, activate the Approval Details Page Route Map, and uptake the Approval Info Record widget in your custom page. The new Now Assist Approval Assistance AI agent allows you to see your pending approvals, as well as the details about your pending approvals. For more information, see Platform Approval assistance AI agent. **Configure Service Portal Approval Configuration record** Configure the Service Portal Approval Configuration record to make the Approval Assistance AI agent and Approval Info Record widget work better for your specific use case. **Configure widget loading order in Service Portal** As an admin, configure the widget loading order to defer their loading. This feature enables faster loading of the page and makes the widgets available for interaction as they load, thus improving the user experience.
Service Reliability Management	**Auto-generate SLOs for SRM services** Use the SLO creator agent to generate SLOs for your SRM services. This capability is available with the AI Agents for SLO (sn_ai_agents_slo) plugin. The agent analyzes incidents, alerts, and outage events to automatically create SLOs, helping teams adopt SLOs faster and track service reliability. **Remove a service from SRM** Starting in version 6.5.0, remove a service from SRM when you no longer need to track or monitor its reliability. Removing a service clears it from SRM views, including the Service page and Service reliability dashboard. The service remains in the Configuration Management Database (CMDB), and you can add it back to SRM at any time.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Create outage-based SLIs Starting in version 6.5.0, add outage-based SLIs to track real downtime and customer impact. Use them with existing alert-based SLIs for a broader view of reliability. The flow for creating service level objectives (SLOs), SLIs, and error budget policies is also improved to simplify setup. **Keep teams informed with notification destinations** Send notifications about error budget policy violations to notification destinations. The first supported destination is Microsoft Teams, which lets you post details in specific channels and link back to SRM for further investigation. **Monitor service reliability in a dashboard** Use the Service reliability dashboard to monitor and manage service performance. The dashboard offers multiple visualizations to help you track error budgets, monitor SLOs, and identify issues across your services. Starting in version 6.4.1, monitor reliability using interactive charts and a new service level objective (SLO) table in the Service reliability dashboard. **Customize team approval settings** Customize team governance with more flexibility and less manual effort. You can assign different approval teams for new and existing team requests. The customization options are also fully available in the Service Operations Workspace Admin Center and no longer require manual setup in the Catalog Builder.
ServiceNow AI Lens	**Zurich Patch 1** **ServiceNow AI Lens UI enhancement** Launch the ServiceNow AI Lens scanner window by using the context defined in the Lens actions or as a standalone application. You can preview the gathered insights or extracted data. You can also see the logged-in user and instance details. **Use Lens actions to customize Lens behavior** • Define Lens behavior depending on how ServiceNow AI Lens is triggered and what context is set. With Lens actions, you can customize how a classic form is auto-filled. You can define default instructions, trigger options, custom context, transform response logic, and post processing instructions for the ServiceNow AI Lens execution. For example, you can define a Lens action that is used when Lens is triggered from an instance to populate a form of a table. You can also define form fields that must be used as context.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• As part of your integration logic, configure a Lens action as one of the steps to invoke a ServiceNow AI Lens service from any part of the ServiceNow AI Platform, such as a workspace form or portal. **Use ServiceNow AI Lens in Virtual Agent** Trigger ServiceNow AI Lens from a Virtual Agent conversation by using the ServiceNow AI Lens topic in Virtual Agent. **Auto-attach images to a record** View captured images that are automatically attached to an auto-filled record using ServiceNow AI Lens. You can view the images to understand the source of the auto-filled information. **New third-party AI model provider options available for all Now Assist applications** Use Google Gemini and Anthropic Claude on AWS as AI model providers for ServiceNow AI Lens in addition to Azure OpenAI.
ServiceNow AI Platform core feature	**Hierarchical queries in condition builders** Simplify and build queries with fewer conditions using existing hierarchical data in a table. You can also define new hierarchical relationships between records that are in the same table. **Dynamic namespaces** Define categories and attributes once and reuse them using dynamic namespaces across multiple tables and dynamic attribute store fields. A dynamic namespace is automatically created when you add a dynamic attribute store field. **Experimentation framework** Help enable innovation by trying new ServiceNow® feature variants in your instance. Only single customer instances or Gen AI Innovation Program participants have early access to new innovations via experimentation framework. You can opt out of specific experiments or turn off the framework entirely. **Audit Management Console and audit retention** Simplify your audit data management and configuration by using the Audit Management Console module. It includes a new Retention option, which automates and simplifies the deletion of audit data based on your requirements. **Monitor requestors' API usage rates through the Inbound API Integration Usage dashboard** Inbound integrations track web service requests for OAuth registered applications and user accounts making those requests.

Application or feature	Details
	Use schemas to define the structure and format of REST API responses and requests When you define a schema in the ServiceNow AI Platform, the schema can be used to define the structure of requests and responses within the associated REST API. The schema data for the requests and responses is then available in the exportable OpenAPI specification for the API.
ServiceNow IDE	**Clone a repository that contains multiple applications** Clone a Git repository that contains multiple applications that support development in source code. The repository must contain at least one `package.json` file and one `now.config.json` file. **Default to using the latest version of the ServiceNow SDK in new or converted applications** Configure whether to use the bundled version or the latest version of the ServiceNow SDK when creating or converting applications in the ServiceNow IDE with the *`sn_glider.default_to_bundled_sdk`* system property. By default, the latest version of the ServiceNow SDK is used.
ServiceNow SDK	**Version 4.3** **Flow API - ServiceNow Fluent** Use the Flow API to create flows and subflows [sys_hub_flow] that automate business processes with reusable multiple-step components. **Service Catalog API - ServiceNow Fluent** Use the Service Catalog API to define catalog items [sc_cat_item] and related aspects of service catalogs. **Email Notification API - ServiceNow Fluent** Use the Email Notification API to define notifications [sysevent_email_action] that send automated emails. **Service Level Agreement API - ServiceNow Fluent** Use the Service Level Agreement API to define service level agreements (SLAs) [contract_sla] that set the amount of time for a task to reach a specified condition. **Dashboard API - ServiceNow Fluent** Use the Dashboard API to define dashboards [par_dashboard] for organizing and sharing data visually. **Workspace API - ServiceNow Fluent** Use the Workspace API to define configurable workspace experiences for organizing and sharing data visually. **Allow access to ServiceNow APIs for third-party modules** Configure which third-party library modules to identify as trusted and have access to ServiceNow APIs with

Application or feature	Details
	the `trustedModules` parameter in an application's `now.config.json` file. **Version 4.2** **Import Sets API - ServiceNow Fluent** Use the Import Sets API to define transform maps [sys_transform_map] that specify how to transform and map data from the import set staging table to target tables. **UI Policy API - ServiceNow Fluent** Use the UI Policy API to define user interface policies [sys_ui_policy] that dynamically change the behavior of information on a form and control custom process flows for tasks. **Attach user images to records from source code** Attach user images to records associated with metadata defined in source code with the `Now.attach` construct. **Use utility functions for additional type validation** Use utility types that help validate values for properties that support the Duration (*`Duration()`*), Time (*`Time()`*), Field List (*`FieldList()`*), and Template Value (*`TemplateValue()`*) field types in ServiceNow Fluent APIs. Utility types provide validation at build time for tables both within and outside of an application. **Generated ServiceNow Fluent code organized in taxonomy-based directories** Configure a custom directory structure for metadata transformed into ServiceNow Fluent code with the `taxonomy` parameter in an application's `now.config.json` file. By default, generated ServiceNow Fluent files are organized in a taxonomy-based directory structure within the `fluent/generated` directory. **Version 4.1** **Specify which files to build as JavaScript modules** Configure which files to include or exclude when building JavaScript modules with the `serverModulesIncludePatterns` and `serverModulesExcludePatterns` parameters in an application's `now.config.json` file. **Version 4.0** **Develop a user interface with React** Develop a user interface with the React library and the UI Page API to build a full-stack application in source code. **Script Action API - ServiceNow Fluent** Use the Script Action API to define script actions [sysevent_script_action] that run when an event occurs. **Script Include API - ServiceNow Fluent**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Use the Script Include API to define script includes [sys_script_include] that store JavaScript functions and classes for use by server-side scripts. **Service Portal API - ServiceNow Fluent** Use the Service Portal API to create custom widgets [sp_widget] for portal pages. **UI Action API - ServiceNow Fluent** Use the UI Action API to configure custom user interface actions [sys_ui_action], such as buttons, links, and context menu items on forms and lists. **UI Page API - ServiceNow Fluent** Use the UI Page API to configure custom user interface pages [sys_ui_page] that display forms, dialogs, lists, and other UI components. **Download application metadata from an instance** Download application metadata (XML) from a ServiceNow instance to compare it with the metadata in your local application using the `now-sdk download` command. **Clean or package an application** Remove the build artifacts that were output with the previous build using the `now-sdk clean` command. You can also package the build artifacts that were output with the previous build into an installable ZIP file using the `now-sdk pack` command.
ServiceNow Studio	**Add AI files to your apps in ServiceNow Studio** You can add agentic workflows, AI Agents, and skills to your apps in ServiceNow Studio. **Link an app to source control in ServiceNow Studio** Use source control operations on the App details page to link an application to a Git repository. **App details page** View and manage app files and metadata on the enhanced App details page. You can also link your app to source control from the App details page and create new files for your application. **Focus the Navigator panel on an app or app file** Improve efficiency as you work in ServiceNow Studio by focusing the Navigator panel on any file or application open in an integrated tab. **Personalize your UI with dark theme** Dark theme is now supported in ServiceNow Studio. Access user preferences to switch between dark and light mode on your instance. **Create an application in ServiceNow Studio**

Application or feature	Details
	As of version 28.2.1, you can use Now Assist or Creator Studio to begin creating your applications. You can also view the App Gallery for more inspiration. **Elevate your role in ServiceNow Studio** As of version 28.2.1, you can elevate your role to security_admin without having to leave ServiceNow Studio. Users with the security_admin role can make changes to other roles and to access control lists (ACLs). **ServiceNow Studio personas and roles** As of version 28.2.1, several new granular admin roles enable developers to complete administrative configuration tasks without requiring the full admin role in ServiceNow Studio. **Opening files in your preferred editor** As of version 28.2.1, for file types that open in a builder, decide whether you want to edit the file in the builder or in the classic UI16 view. **Bookmark lists in ServiceNow Studio** As of version 28.2.1, access your favorite lists by bookmarking them. **AppSee support in ServiceNow Studio** As of version 28.2.1, AppSee is supported in ServiceNow Studio. **Create an app file in ServiceNow Studio** As of version 28.2.1, you can create files directly from an app open in the Navigator panel.
ServiceNow Vault	**Zurich Patch 4** **ServiceNow Vault console dashboard** • Manage and monitor cloud encryption metrics. • Get AI guidance using the Ask Now Assist panel. • Explore more detail for each metric. **Zurich Early Availability** **ServiceNow Vault console dashboard** Monitor your sensitive data in ServiceNow Vault with a comprehensive dashboard. The dashboard view shows metrics from each of the ServiceNow Vault tools and provides easy access to them. **Guided Vault** Use guided setup to quickly start using ServiceNow Vault on the following applications: • Financial Services • Customer Service Management

Application or feature	Details
Sidebar	**Sidebar** Use threaded replies to answer Sidebar messages without adding clutter to the main discussion.
Smart Assessment Engine	**Collaboration in assessments** Enhance assessments with the new collaboration feature, enabling owners to add multiple contributors to work together in real time. This update enables assessors to collaborate efficiently by adding several contributors to an assessment. Real-time updates reflect each contributor's changes, and presence indicators show who is present on the assessment. **Normalization in assessments** Adjust assessment scores to a common scale to promote fair comparison and prioritization. This normalization process helps standardize these measurements, enabling different metrics or scores to be evaluated on the same scale. **Creating code questions** Capture data quickly and accurately from physical documents using a new barcode and QR code question type for assessments. By scanning barcodes or entering QR codes, the system can instantly retrieve and input relevant information. **Creating an assessment template from legacy metric types** Migrate question dependencies with an improved migration utility, which now supports the check box question type and conditional visibility criteria defined on templates. **Combining assessments and copying responses** Combine assessments from different templates into a single, streamlined view. Eliminating the need to open each assessment separately, preserving context, and improving efficiency.
Software Asset Management	**Retrieve detailed subscription and consumption data across your entire organization with the Docusign integration** Get insights into detailed subscription and consumption data across your organization by integrating Docusign with the Software Asset Management application. You can now access data at both the account and organization levels, giving you a centralized view of envelope activity and usage. This enhancement helps you better monitor Docusign consumption and optimize your license use. **Streamline the authentication process for Salesforce CRM integration**

Application or feature	Details
	Experience seamless data flow between the Software Asset Management application and Salesforce CRM. This updated feature supports the OAuth 2.0 Client Credentials grant type, eliminating manual authentication, and uses a secure machine-to-machine method to ensure efficient and uninterrupted data exchange. **Manage license compliance and optimization for Adobe Cloud services through Adobe Guided Setup** Simplify setting up Adobe SaaS integration using the Adobe Guided Setup. The Guided Setup provides step-by-step guidance to set up the Adobe integration with the Software Asset Management application that supports license compliance and optimization for Adobe Cloud services. **Gain the flexibility to exclude certain SaaS subscriptions (users and subscription identifiers) from license calculations** Optimize your licensing costs with the ability to exclude certain low-value and high-volume subscriptions from ServiceNow's licensing calculations. **Optimize subscription licensing for specific SaaS offerings and editions via Single Sign-On (SSO) integrations** Leverage the enhanced SSO integration that supports tracking subscriptions for specific SaaS offerings and editions. This update enables you to map SSO groups to software models for the specific offerings or editions and optimally license users based on their access. **Improve the security of Microsoft-related integrations with the enhanced support for application type permissions** Enhance Microsoft SaaS integration security with the added support for application-type permissions. This feature includes SSO integration with Microsoft Entra ID, Microsoft Dynamics 365 and Power Apps, and Microsoft 365. **Monitor database memory for your SAP HANA Database with SAP HANA Database integration** Manage memory allocations and licensing costs for your SAP HANA Database by integrating with the Software Asset Management application. Data populated through this approach helps in effective license reconciliation based on the peak memory usage of the SAP HANA Database. **Receive more frequent updates from the Software Asset Management Content Service** Gain the benefit of twice-weekly shipments of the Content Library. This increase in the update frequency delivers faster Content Service to your ServiceNow instance. **Improve reclamation candidate selection for Microsoft 365 by considering mailbox and OneDrive sizes**

Application or feature	Details
	Enhance the process of reclamation candidate selection for Microsoft 365 downgrade opportunities by considering three key factors: product usage, mailbox storage, and Microsoft OneDrive storage. Considering all these aspects enables more accurate and effective reclamation decisions. **Leverage the Flow Designer for reclamation workflow updates** Manage the reclamation process using the functionality migrated to the Flow Designer. The Flow Designer migration includes additional error handling features to enable a more intuitive and efficient way to manage the reclamation process. **Automatically identify and license Microsoft SQL Server high availability configurations** Use the Software Asset Management publisher pack for Microsoft to automatically identify and license Microsoft SQL Server deployments in high availability configurations, such as Always On availability groups. This capability enables the Software Asset Management application to automatically classify each replica within a configuration as either active or passive, resulting in more accurate license compliance for Microsoft SQL Server. **Manage licensing for Microsoft Server products on Microsoft Hyper-V virtualization technology** Use the Software Asset Management publisher pack for Microsoft to track and manage licensing for Microsoft Server products, such as Microsoft Windows Server and Microsoft SQL Server, on Microsoft Hyper-V virtualization technology. Track license usage and determine your license compliance position so that you can better optimize your licensing costs. **Apply preferred licensing assignments to Microsoft software products that are deployed on clusters** Define and apply preferred cluster licensing assignments to the Microsoft software products that are deployed on your hypervisor clusters. By using a preferred cluster licensing assignment, you can choose whether you want to license these software products at either the physical host layer or the virtual layer, helping you better align with your organization's predetermined licensing strategy. Built-in validations help verify that your licensing strategy setup complies with the relevant Microsoft licensing requirements. **Manage the life-cycle risks of a software product based on its add-on or optional support** Gain insight into the extended life cycle of a software product when you purchase an add-on or optional support. Each time you indicate that a software product has an add-on or optional support, the Software Asset Management application extends the life-cycle dates of that product, as defined by the add-on or optional

Application or feature	Details
	support. Use these extended life-cycle dates to identify and plan for your end-of-life (EOL) risks. **Manage licensing for VMware vSphere Standard (VVS) and VMware vSphere Essentials Plus (VVEP)** Following the updates to VMware's licensing policy, use the Software Asset Management publisher pack for VMware to track and manage licensing for VMware vSphere Standard (VVS) and VMware vSphere Essentials Plus (VVEP), which are updated suite-based product offerings for VMware vSphere. With these updated product offerings, you can measure compliance and optimize licensing for multiple VMware vSphere products under a single subscription. In addition, the publisher pack can account for the number of cores and the licensing minimums when calculating licensing requirements for VVS and VVEP. **Gain expanded insight into the content library information through content dashboard analytics** Gain in-depth information related to various content tables and trends in content change from the enhanced Content Library portal. The introduction of numeric widgets, line graphs, bar charts, and content-specific tabs provides complete visibility to content shipped and analyze content coverage. The expanded search feature with additional filter options lets you view the records for a particular period or release. **Efficiently manage user allocations in bulk using group allocations** Allocate licenses to user groups instead of individual users for a software entitlement using the group allocation feature for the user-based licensing metric software. Group allocation feature enables Software Asset Management managers to streamline and manage the license allocation process efficiently. User allocation is created for the group members based on the availability of unallocated licenses. Any changes made to the composition of the user group automatically updates the license allocation. **Use the enhanced License Usage view for expanded insights on your license compliance** Conduct a deeper analysis of your publisher compliance using both the list view and the card view in the License usage view. You can save and share the data by exporting the list view in multiple file formats. View integrated health check results, license usage analysis, and learn why a retired or stale CI is using a license. Furthermore, to avoid clutter on the Publisher details page, software model results are only shown for software models that have entitlements.

Application or feature	Details
	Seamlessly continue with the entitlement import process even when PPNs are missing Continue with the entitlement import process by automatically creating software models when both PPNs and software models are missing. Software models are automatically generated based on the publisher and product details. **Use flexible reporting capabilities to gain deeper insights into your Effective License Position (ELP)** Improve analysis of your ELP with flexible reporting on reconciliation results. Reports can be run on existing reconciliation groups or customer-defined groups, and the report data can be organized by unique combinations of group, subgroup, publisher, product, version, and edition. For each combination, the average cost is calculated and provides the total number of required licenses. The results are presented in a structured format for easy analysis and reporting.
Source-to-Pay Operations Integrations	**Source-to-Pay integration with SAP** • You can use this integration to perform Integration Hub actions for purchase requisition, purchase order, receipt, and invoices. • You can also perform the following: ○ Create, update, or cancel purchase orders in SAP ECC and SAP S4 HANA. ○ Create good receipts in SAP ECC and SAP S4 HANA. ○ Create invoices in SAP ECC and SAP S4 HANA. **Source-to-Pay integration with Oracle EBS** • You can use this integration to perform Integration Hub actions for Invoices, cost centers, product models, payment terms, purchasing organizations, departments, GL accounts, currencies, FX rates, invoice payment details, suppliers, plant addresses, and legal entities. • You can also perform the following: ○ Create, update, or cancel purchase orders in Oracle EBS. ○ Create good receipts in Oracle EBS. ○ Create invoices in Oracle EBS. **Source-to-Pay integration with Coupa** You can use this integration to perform Integration Hub actions for loading primary data, supplier management, purchase requisition, purchase order, receipt, invoice, and sourcing. You can also look up Legal Entity, Currency, and Supply details respectively.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Source-to-Pay integration with SAP Ariba You can use this integration to perform Integration Hub actions for invoices, cost centers, payment terms, purchasing organizations, departments, GL accounts, currencies, FX rates, invoice payment details, suppliers, and legal entities. You can also create good receipts in SAP Ariba.
Sourcing and Procurement Operations	**Multi-currency support in Shopping Hub** Enable multi-currency display across approval-related views, including To-Dos, tasks, email notifications, and the Bundles page. Currency values are shown in both the approver's local currency and the original supplier currency where applicable. The local currency is displayed as the primary value, with the original currency shown as a secondary reference. This display format provides consistent currency visibility for approvers during review. Enable requesters to enter and edit decimal quantities for service-based purchase requisitions and purchase orders without validation errors. Decimal quantities are supported only for services to maintain data integrity. Decimal quantities for goods are not supported and return a clear validation message. This validation logic is consistent across Shopping Hub and Employee Center. Automatically classify service requests, purchase requisitions, and purchase orders into the correct spend categories using the Spend categorization agent. This classification process reduces manual classification effort and improves consistency across procurement workflows. Enable users to purchase on behalf of others without requiring delegate configuration in Shopping Hub. Users can manage individuals they are authorized to purchase for, directly within the buying experience. Purchases made on behalf of others are visible through filtering by business owner in the My Purchases view. **Purchase requisition line-level questions in Shopping Hub** Create configurable, line-level questions during checkout in Shopping Hub. These questions are defined in Catalog Builder and are specific to certain products or product categories. **Multi-currency support in Shopping Hub** View and select your local currency while shopping for products in Shopping Hub to provide a seamless multi-currency experience. **Category management tab**

Application or feature	Details
	Access a unified, filter-based view of category performance across spend, savings, pipeline projects, contracts, purchase orders, and suppliers. **Category analytics** View savings opportunities across the sourcing pipeline using the Savings dashboard in the Category Analytics module of the Source-to-Pay Workspace. **Pipeline management tab** Gain insights into savings and pipeline projects to enhance visibility, tracking, and collaboration across teams. **Report savings when awarding multiple suppliers** Enter the spend and savings data for the sourcing event associated with the pipeline project when awarding multiple suppliers. **Create a pipeline project from an expiring contract** Create a pipeline project directly from an expiring contract using a guided, decision-based workflow. **Submit multi-product sourcing requests** Submit sourcing requests with multiple products in a single sourcing intake form, and the third-party sourcing solution will automatically create separate sourcing events for each product. **Manage third-party RFx tasks in Employee Center** View and manage third-party Request for anything (RFx) tasks in the Employee Center and navigate to the third-party sourcing tool to review, publish, and award RFx. **Sourcing and Procurement Operations integration with IT Asset Management** The Asset Management Integration for Sourcing and Procurement Operations plugin (com.snc.sn_spend_asset) provides an integration between IT Asset Management (ITAM) and Sourcing and Procurement Operations (SPO) applications, enhancing operational efficiency. This integration enables asset managers to access catalog items, including those items without assigned prices, directly within the ITAM workspace. By enabling procurement actions without switching platforms, it streamlines workflows and improves the user experience. **Sourcing Pipeline Management** Sourcing Pipeline Management introduces a centralized approach to managing sourcing projects, enabling you to create, track, and manage sourcing activities in one place. It includes workflow automation to reduce manual effort, improves visibility into sourcing activities, and supports tracking and forecasting of cost savings. **Using Shopping Hub**

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Enter decimal quantities when creating purchase requisitions for service items using quick or full checkout flows in Shopping Hub. Edit service acknowledgments with decimal values to enable more precise tracking of service consumption. **Purchasing tasks and procurement cases** Review and respond to proposed case resolutions based on conditions defined in the decision tables before the case is permanently closed. When a fulfiller marks a case as resolved, the system now automatically transitions the case status to Awaiting Acceptance, pausing closure until the requester takes action. Requesters are notified via email with actionable buttons and can also accept or reject the resolution directly through the Employee Center. This notification helps to ensure that unresolved issues are addressed before a case is closed, improving resolution accuracy and customer satisfaction.
Strategic Planning	**Strategic Planning and AI Control Tower** Categorize your strategic priorities, goals, planning items, and execution items—projects and demands as Artificial Intelligence to track and monitor strategy progress from the AI Control Tower workspace. Use the **Type** field for strategic priorities, the **Category** field for goals, the **Investment type** field for planning items - to classify them as Artificial Intelligence and monitor their progress in the AI Control Tower workspace. **Integrate Enterprise Agile Planning (EAP) with Atlassian Jira** Facilitate execution of the work planned in EAP and executed in Jira. With this integration, enable seamless tracking of work across tools with bidirectional sync between Jira and EAP. Key updates made in one system, such as a status change or field update for Epics and Stories, will automatically reflect in the other. This integration ensures your team can collaborate and track development efforts without switching contexts, reducing manual effort and improving visibility across platforms. **Enterprise Agile Planning (EAP) integration with CWM** Enhance visibility, planning, and execution for your teams with seamless integration between EAP and CWM. For Agile teams managing non-agile work items such as incidents and change tasks, this integration bridges the gap by automatically creating a dedicated Space and Board in CWM. Agile work is seamlessly brought over via Connected Work, while EAP sprints are reflected directly in CWM's Sprint planning view, thus enabling unified planning across work types. Teams can plan work for their sprints and update work status directly from the CWM Board, with performance reports in EAP dynamically reflecting these changes. This integration

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	enables teams to manage their full scope of work from a single, connected workspace. **Dynamic data linking in Docs** Keep record information in your documentation always current and reduce manual effort with the Dynamic data linking feature in Docs. You can now reference any ServiceNow application record and Docs will automatically reflect the latest updates from those records. For example, if you add a reference to a Project record, the reference will show the latest field information of the project in Docs without requiring manual edits. Clicking the project reference opens up the project form so that you can view the full details of the project record and make any necessary changes. Dynamic linking also enables adding references to a particular field of a record, such as Assigned to of an Incident record. You can add references from any ServiceNow table you have access to, with no setup or configuration needed, thereby eliminate the hassle of switching between applications to copy and paste data from various records into Docs. **Portfolio plan enhancements** • Create portfolio plans for AI-related items by applying a filter on the planning item tables, setting the **Investment type** field value to **Artificial Intelligence** during portfolio plan creation. This allows you to focus exclusively on AI-related items. • With the sn_align_core.apw_admin role, you can update the following system properties: ◦ *sn_align_core.planning_item_types_allow_list* - Defines the planning item types that can be configured and allowed for a portfolio plan. ◦ *glide.ui.sn_align_core_dependency_activity.fields* - Enables activity stream for the dependency formatter fields. ◦ *sn_align_ws.gantt_show_higher_planning_upper_entitie* - Enables display of entire hierarchy of lens structure from top to bottom in prioritization hierarchy view for high-level portfolio plans. ◦ *sn_align_ws.portfolio_plan_items_limit* - Defines the number of planning items to be loaded on the planning page. **Roadmap enhancements** • Create custom themes for your roadmap bar colors to align with your organization's standards. • Experience consistent roadmap bar colors for choice list attribute values across all portfolio plans.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• View the roadmap-level milestone row while scrolling down the Roadmap page. • Use different icons to distinguish item-level milestones. • Match milestone colors with their status labels across the roadmap, milestone popover, and side panel. For example, a missed milestone displays the same color in all locations. • With the sn_align_core.apw_admin role, you can define the number of milestone items to be loaded in the Roadmap tab. The *sn_align_ws.item_milestone_limit* system property allows you to define the number of milestone items to be loaded in the Roadmap tab. • With the sn_align_core.apw_admin role, you can define the list of planning item types that can be created in a free-form roadmap. The *sn_align_ws.freeform_planning_items_creation_list* system property allows you to define the list of planning item types that can be created in a free-form roadmap. **Scenario planning enhancements** With the sn_align_core.apw_admin role, you can enable or disable the scenario planning feature. The *sn_align_ws.is_scenario_planning_disabled* system property allows you to enable or disable the scenario planning feature. **Quick filters enhancements** Apply filters using string-type and boolean field values across the Planning page and Scoring page to view the required dataset. These filters are saved as part of your user preferences, enabling you to access the same filtered data when you log back in and continue your planning seamlessly. **Investment type and Investment class fields on the Planning item table** The **Investment type** and **Investment class** fields have been added to the Planning item [sn_align_core_planning_item] table to enable these attributes to be defined at the parent planning item level. A new value, **Artificial Intelligence**, has also been added to the **Investment type** field to categorize a planning item as an Artificial Intelligence initiative. **Goal management enhancements**

Application or feature	Details

	• With the sn_gf_goal_admin role, you can update goal-specific system properties:
	  ○ *sn_align_ws.goal_hierarchy.max_records* - Defines the number of targets to load on the Hierarchy tab in the Targets view. The default value is 250.
	  ○ *glide.ui.sn_gf_goal_activity.fields* - Enables activity stream for fields of the goals.
	• Experience faster loading of goals data, even when large volumes of data are present.
	• With the sn_gf.goal_admin role, you can edit any goal and target as needed, even when you aren't the owner or contributor of a goal or target.
	• With both the sn_gf_goal_admin and sn_apw_advanced.spw_goal_user roles, you can edit target breakdowns as needed.
	
	Financial enhancements
	
	• View only the planned costs of your planning items to track the total cost of your planning items.
	• Use Display mode to switch between focused views to better plan and track the financials of your planning items.
	• Manage the planned and actual monetary benefit plans for your projects to identify the financial performance of your project using the Cost and benefits screen.
	• Use multicurrency to view and manage financial records of the project in Investment currency, which can be different from your functional currency. Manage multiple financial records such as planned and actual expenses, planned and actual benefits, and so on.
	• Generate and track labor cost for sub-projects, based on the resource assignments of your sub-projects and planning items such as features and capabilities.

Subscription Management	**Manage custom applications and table mapping through the platform** Map any missing custom application and tables in Subscription Management to a subscription directly from the Custom Applications list or Custom Table Inventory list. **Support for domain separation** View and filter subscribers by domain for user-based subscriptions and view Now Assist usage by domain. **Monitor Workflow Data Fabric usage** Monitor and track Workflow Data Fabric capability usage and view the relative token use rate of each capability.

Application or feature	Details
Supplier Lifecycle Operations	**Supplier Operations** Supplier Operations provides support for advanced case management capabilities to handle key supplier lifecycle events such as onboarding, offboarding, and ongoing operations. It includes the ability to resolve cases via Playbooks for a structured and consistent approach. **Supplier Payment Optimization** Supplier managers can identify, prioritize, and track suppliers with high potential for accepting credit card payments. • Supplier Managers can initiate credit card enablement cases, enabling suppliers to use credit card payments as their preferred payment method. • They can initiate credit card enablement journey for new or existing suppliers after checking their propensity scores (currently requires manual updates). • They can view the saving estimates associated with the card for a given supplier using the **Savings calculator** tool. They can also view the calculation details of the savings estimator formulas. **Relish Integration for Supplier Lifecycle Operations** Supplier managers can conduct sanction screening, validate banking details change requests, and supplier location change requests via Relish integration. **Automated KPI data collection** This feature enables automated data collection, KPI template modifications, and calculation at supplier and contract levels. The automated KPI system integrated into action plans can be used for comprehensive performance monitoring. **Mapping multiple internal stakeholders to a supplier** This feature enhances supplier governance in SLO by enabling the mapping of multiple internal stakeholders such as legal, business, technical, and risk teams to suppliers, improving visibility and management of supplier relationships. **Universal Request** Supplier contacts can create generic cases by selecting **Request Help** in the Supplier Collaboration Portal, if they can't find the relevant search results or are unsure of which department to contact for help. These cases are triaged and routed internally to appropriate case types. Universal requests remove ambiguity and improve efficiency for both suppliers and internal operations. **Overall supplier dashboard** The overall supplier performance dashboard provides detailed information about overall supplier scores, count

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	of all active suppliers, their all-time spend, and overall risk ratings. It also includes the Supplier Insights section and the Action plans section showing relevant details. Supplier managers can use the segmentation rules and assessment templates to create smart assessments in bulk for users. Smart assessments provide a survey-like experience with enhanced UI capabilities for both internal and external users. This feature utilizes the capabilities of the Smart Assessment Engine application. Supplier managers can access their emails within the Source-to-Pay Workspace from the **Emails** tab in the case, task, and supplier details pages respectively. Email actions are reflected, incomplete email errors are handled, and email-related activities can be summarized from the workspace. Supplier contacts receive the emails and they can perform the assigned tasks directly via email without logging in to the Supplier Collaboration Portal.
Synthetic monitoring	**MID Server support for running synthetic monitors** Run synthetic monitors from your MID Server. **HTTP endpoint creation directly in synthetic monitoring** Create HTTP endpoints for your monitors without leaving the SOW. **Support groups for synthetic monitor-based alerts** Assign a support group to a monitor, and then any raised alerts follow the associated alert automation rules. **View all monitors with open alerts** As of 1.4, view all monitors with open alerts. **View alerts associated with a monitor** As of 1.4, navigate to a monitor's open alerts. **Assign tags to a monitor's alerts** As of 1.4, use tag-based clustering to group monitor alerts. **Use OAuth-based credentials** As of 1.4, OAuth credentials on endpoints are supported.
Talent profile	**Create Talent pools** Create talent pools to organize similar talent profiles in one place for particular hiring requirements. You can share and collaborate using talent pools and also send out communications to all talent profiles in the pool at once. **Copy talent to pool** Use existing talent pools to associate suitable talent profiles from the pools to your talent pool.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Remove talent profiles from a pool As an owner of the pool or one of the collaborators, remove the talent profiles that are no longer required. **Delete a Talent pool** Delete a talent pool when it has served its purpose or is no longer relevant. **Create talent profiles** Create talent profiles to add it to the talent profile repository of your organization and use it for an optimized hiring process. **Filter talent profiles** Use filter options to find relevant talent profiles more efficiently in the **Talent pool** tab. **Add talent profiles to a Talent pool** Add similar talent profiles to a talent pool to streamline communication to all the profiles during a particular hiring drive. **Copy talent profiles as job prospects** Copy talent profiles from a talent pool to a particular job requisition as prospects.
Telecommunications Network Inventory	**Create a logical connection record using the Design and Assign function** Logical interfaces created are now automatically related to their corresponding cards or parent equipment. This enhancement ensures consistency across systems and helps prevent duplicate CI creation by improving the alignment between logical and physical interfaces. **Visualize your network infrastructure** Use the new L1 menu that consolidates all network visualizations into a single canvas and include a tabular section for each view, such as site, floor, and topology. The following roles are introduced to manage datacenter infrastructure. • DC Floor Designer (sn_ni_core.dc_floor_designer) – Design floor layout in Map Studio. • DC Ops Agent (sn_ni_core.dc_ops_agent) – Oversee the operations of the data center floor. • DC Ops Viewer (sn_ni_core.dc_ops_viewer) – View the Network Inventory Workspace and its components. **Floor map** Use the floor map to view the layout of your datacenter infrastructure. View network asset placement and operational details to monitor power, thermal, and usage data. View the incidents and alerts and take appropriate action.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Geo map Use the geo map to view the geographical locations of your network sites and data centers. Geo map supports rendering data centers on the map, enabling the relevant persona, such as the DC Ops Viewer, to view connected data centers. You can open a data center floor map directly from the geo map for more detailed insights. **Upload and manage floor map for your datacenter** Upload and manage your datacenter map objects using the Map Studio interface. Enable you to view respective floor plans for a selected building in a campus. **Service Operations Workspace for TNI** Provides a converged experience for agents to view both incident/alarm details and Network Inventory entities within a single Workspace. Enhances efficiency in retrieving information and significantly improves the overall user experience. **Capacity management** Supports pushing operational data to REST endpoints through an exposed API and store it in the ClothoDB. Overlay time series metrics on the datacenter floor map to monitor overall health and take appropriate action. **Collect operational values for datacenter** Manually record operational values of Configuration Items (CI) and store it in ClothoDB. Use this data for datacenter performance tracking. **Define the datacenter details** Define your datacenter record to view the location-specific attributes for each datacenter, including the campus, buildings, and floors where your network asset is located. **Define the power circuit details** Define the power circuit record to represent the electrical pathway that delivers power within a data center. **Define the facility hardware details** Define the facility hardware record to represent power, HVAC (Heating, Ventilation, and Air Conditioning), network representation, and their connectivity in a data center. **Create a facility model** Create a facility model to define the physical characteristics data of the facility record based on the product manufacturer's recommendations. **Create an equipment record by using design and assign** View datacenter records listed in the Equipment task attribute form. **Define the network interface details**

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Add **Wavelength** attribute to the Network Interface form and **Port position** attribute to Interface Model form. **Create an equipment holder model** Added **RU numbering direction** attribute to define the numbering sequence of rack units in the Rack view.
Telecommunications Service Operations Management (TSOM)	**Telecom Discovery Builder framework** Leverage a standardized Extract, Transform, Load (ETL) framework to streamline the processing and storage of telecom network data on the ServiceNow AI Platform. This reusable framework simplifies implementation by removing the need to manually build ETLs. It enables you to focus on connectivity logic while confirming consistent and reliable mapping of network elements such as equipment, cards, ports, LAGs, logical ports, and logical connections into predefined CMDB structures. Use Telecom Discovery Builder Framework to do the following: • Simplify data transformation tasks by duplicating the common ETL and configuring essential fields and settings for specific connector applications. • Deploy new Service Graph Connector (SGC) using existing ETLs to maintain consistent data transformation practices. • Help to ensure data integrity and support the automatic creation of TNI Entities through configured Before and After scripts. • The standardized CMDB/TNI data model enables ETL reusability across multiple connectors. • Allocate predefined storage locations for both physical and logical inventory elements. • Maintain consistent data model hierarchies across connectors to support unified network inventory management. • Improve Discovery SGC quality by providing an OOTB Data Source Validation tools. **Telecom Discrepancy Identification and Reconciliation** Use enhanced discrepancy identification and reconciliation features to keep your discovery data accurate and up to date on the ServiceNow AI Platform. These features give you better control over detected changes and improve overall audit performance.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Identify attribute value mismatches during discovery, such as bandwidth changes on ports (for example, from 10 Mbps to 100 Mbps). • Display previous and current attribute values, enabling you to decide whether to accept the new value, retain the old one, or manually raise a remediation task. • Detect discrepancies in logical entities alongside physical entities for comprehensive discrepancy management for newly discovered logical network elements. • Generate audit results using filtering conditions—such as specific IP ranges, device vendors, or port types—to focus on relevant subsets of data and significantly enhance audit performance and usability. **Fault Management: Events and alerts** You can monitor your SD-WAN network health and resolve issues faster with automated alerts and event detection. • Detect and resolve SD-WAN network issues faster with automated alerts and event monitoring. • Configure customizable event rules to detect SD-WAN device issues in real time. **Added Service Graph Connector for Cisco Meraki and Fortinet** The following capabilities have been added to Cisco Meraki and Fortinet: • Provides a centralized management of physical infrastructure and logical network relationships within the ServiceNow AI Platform®. • Supports automated, telecom-aware discovery and real-time CMDB synchronization, along with visual network mapping, guided setup, and a dashboard for monitoring integration health. **Granular admin roles** The granular admin role enables developers and administrators to complete administrative configuration tasks for TSOM without requiring the full admin role.
Theme Builder	**Publish the new Coral theme** Publish or unpublish the new Coral theme directly from Theme Builder. This theme provides a fresh look and feel and features brand-neutral illustrations to enhance your user experience. A dark theme variant is available for web and mobile experiences. **Upload and manage custom fonts in your theme**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Use your organization's fonts to maintain a consistent look and feel for your brand throughout your experience. • Upload, preview, and edit at most 10 custom font families from the **Global styles** or **Component styles** tabs. • Add unlimited associated font faces to each font family and apply them individually to components. • Delete your font family or font face from your theme. **Explore the expanded image categories with color editing and override capability** As of Theme Builder version 6.1, configure the following new image categories to further enhance your theme: • Edit the colors of banners, modals, tile icons, and cards from within Theme Builder. • Override each of these default illustrations with your own custom images to uniquely align with your branding style. **Guided tours in Theme Builder** As of version 6.1, learn about additional features and complete tasks through interactive steps by taking guided tours within Theme Builder. As of Zurich Patch 7, leverage Now Assist to generate themes based on your brand image. After generating a theme, navigate to Theme Builder to publish and apply additional styling. This feature requires Now Assist for Creator. As of Zurich Patch 7, use AI to generate themes from brand images, preview multiple options, and refine results all within the updated Create a theme wizard. If you prefer, you can skip the AI step and continue creating your theme manually using the existing workflow. This feature requires Now Assist for Creator.
Third-party Risk Management	**Now Assist for Third-party Risk Management (TPRM) release notes** Review the Now Assist for Third-party Risk Management (TPRM) (TPRM) release notes for full descriptions of the features. **Document Management system in Third-party Risk Management** Starting with version 21.1.x, you can use the Document Management System (DMS) in TPRM, which provides a centralized repository for storing, organizing, and managing third-party documents throughout the vendor life cycle. It can be used by third-party risk managers [sn_vdr_risk_asmt.vendor_manager], third-party assessors [sn_vdr_risk_asmt.vendor_assessor],

Application or feature	Details
	and third parties to upload, categorize, track, and review documents with metadata, version control, and access permissions. This feature streamlines evidence tracking, reduces duplication, and improves audit readiness by enabling document reuse across assessments, contracts, issues, and tasks. For information on Now Assist skills for TPRM and Document Management, see Now Assist for Third-party Risk Management (TPRM) release notes and Now Assist in Document Intelligence release notes. **Register of information regulatory packages** After upgrading the Digital Resilience Third-party Information Register application to version 21.1.x, third-party assessors [sn_vdr_risk_asmt.vendor_assessor] can now generate regulator-ready Register of Information packages using the Plain-CSV Report Package option on the download page. The ZIP file includes metadata and report folders structured to regulator specifications, with file names containing LEI, entity ID, and release version. This format helps ensure EU DORA compliance and supports automated validation workflows. You can follow the user guide on the Download/Upload request page for suggested steps and permissions. **Validation framework for Register of Information** After upgrading the Digital Resilience Third-party Information Register application to version 21.1.x, third-party risk managers [sn_vdr_risk_asmt.vendor_manager] can now validate downloaded Register of Information packages using the Plain-CSV Report Package option on the download page against requirements. File format, structure, encoding, naming conventions, and field-level data are validated across multiple tables. If any validation warnings are detected, a validation report is automatically attached, including mappings to regulator fields such as Template Code, Row Code, and Column Code. Validation reports include real-world field labels, rule expressions, and record identifiers. You can cross-reference validation errors using a downloadable Excel master template that mirrors the CSV structure, making it easier to locate and address issues. Additional enhancements include support for “Not applicable” values, enforcement of file size limits, and clearer error messages for malformed data. **New sn_vdr_risk_asmt.sae_enabled property** Use the new and improved Smart Assessment experience after you upgrade to version 21.0.x and set the Smart Assessment Engine enabled (**sn_vdr_risk_asmt.sae_enabled**) property. **Smart assessments with Third-party Risk Management** Create Smart Assessment Engine assessments for your organization:

Application or feature	Details
	• Enhanced navigation: Use the improved navigation for a better user experience. • Assessment support: Conduct assessments for both internal and external parties. TPRM questionnaire templates include additional attributes such as the risk area and the option to include previous responses, which aren't available in SAE. TPRM templates must be created directly within the Vendor Management Workspace to ensure that they include the necessary attributes. • Organize questions: Group questions into subsections for better organization. • Add attachments: Attach the files directly to the individual questions. • Add reference information: Add reference information to a questionnaire template to help ensure that assessors can access the information they need while responding. • Filter questions: Quickly identify and filter unanswered questions. • Auto-save for questionnaires: Auto-save each question automatically after changes are made to them. • Standardized risk rating scale definition: Define the risk rating scales at the template level for both internal and external assessments. • Assessment duration: Define the duration of an assessment when creating a questionnaire template. • Combine assessments: Respond to questionnaires by using the same SAE template in a single, streamlined view. • Bulk template migration: Migrate classic templates in bulk to the Smart Assessment format. To ensure the templates work correctly in TPRM, you must migrate them by using the Third-party Risk Management application. • Risk score normalization: Standardize the risk scores for a consistent evaluation. • Support for the GRC and third-party portals: Use the GRC portal to access and complete internal assessments and the third-party portal to complete external assessments.
Threat Intelligence Security Center	**Configure Threat Intelligence External Sharing** Take advantage of external sharing for secure, automated, and on-demand dissemination of threat intelligence using STIX 2.1 and MISP formats. Supports sharing across external agencies (CISA, ISAC), integrations

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	(SIEMs, EDRs), TAXII-based TISC instances, and inbound intelligence from external entities. **About Report Templates in TISC** Generate reports outside case management using base templates through a new reporting section in the Threat Intelligence Library. **Configure custom MISP API feed** Import events, attributes, and objects from the MISP server into the Threat Intelligence Library. **Configure Custom Event Types for Timeline and Using Timeline in Investigation Canvas** Define, visualize, and manage timeline events associated with nodes through the Investigation Canvas. **Configuring TISC add-on in Splunk** Include optional attributes during configuration that can be stored in the Splunk KV Store. **Configure custom CrowdStrike feed** Map CrowdStrike Indicator Malicious confidence to TISC confidence. **View Threat Intel Feeds** Map specific source values to required observable fields during import process.
UI Builder	**Build and customize components** Build custom components and configure them to be used across pages and experiences. **Utilize AI on pages you are building** Easily add generative AI capabilities to any page, component, or controller **Get conversational help with the Now Assist panel** Ask questions directly in the Now Assist panel to receive immediate AI-driven guidance without leaving UI Builder. **Build pages and gain page insights using the Now Assist panel in UI Builder.** As of UI Builder Version 28.2, use Now Assist to add components, bind data, adjust layouts, and get page insights such as number of components, data resource information, and access permissions. **Add test values in Component Builder** As of UI Builder Version 28.2, define simulated page parameters to preview and validate how customer components behave during development.
Unified Security Exposure Management	**Qualys Integration – API enhancements** Qualys Integration has been upgraded to support newer Qualys API versions across Host Detection, Host List,

Application or feature	Details
	Knowledgebase, PC Controls, PC Policies, and PCRS integrations. The integrations now ingest additional data fields, including vulnerability detection source, authentication privilege status, active status for controls and policies, and cloud metadata, giving you better visibility into your vulnerability and compliance data. Use the new `posture_api_version` integration instance parameter to choose between the default v2.0 APIs or the newer v5.0 streaming APIs for the PCRS Policy Host and PCRS Test Results integrations. **Enhanced security exposure management** Introduced Security Exposure Management Workspace for all security personas, providing a centralized platform for managing security exposures. It includes the following views: • Findings view: Comprehensive filtering, dashboard creation, and visualization controls enable efficient analysis and prioritization. • Remediation view: Multiple work modes (tasks, findings, assets) facilitate effective remediation strategies. • Approval view: The Exception Management UI now provides enhanced insights directly within the Change Approval record, enabling approvers to make informed decisions without navigating to related records. Additionally, the Approver landing page has been redesigned with an improved table view and additional columns, delivering better visibility and context for all findings. These enhancements streamline the approval workflow, reduce manual effort, and accelerate decision-making for exception requests. **Streamlined administration** Introduced Administration console to enable one-stop configuration for all Unified Security Exposure Management applications, including assignment rules, classification rules, and remediation targets. It provides consistent workflows across Vulnerability Response, Application Vulnerability Response, Container Vulnerability Response, and Configuration Compliance applications. **Centralised Approval Experience via Employee Service Center** The Employee Service Center ESC now provides a standardized approval experience for Business Unit Heads, Service Owners, and IT Heads who may not regularly access the USEM platform. This enhancement ensures that vulnerability-related approvals can be managed from a single, central location, improving efficiency and transparency. **Configure approval workflow with unified Approval Rules**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	The Approval Rules now provide a standardized way to configure approval workflows across multiple findings and remediation task tables in Security Exposure Management. Administrators can now define approval conditions, select applicable tables, and configure multi#level approvers through a single, unified interface. **Cloud Exposure view** View and act on all your cloud-related security findings from multiple vendors across your cloud environments with the Cloud Exposure View supported by USEM. The Cloud Exposure View provides a single location for your cloud security teams to monitor your cloud security posture. **Monitor integrations** USEM introduces integration monitoring capabilities within the Security Exposure Management Workspace Administration console. Administrators can now view and troubleshoot integration run statuses for installed third-party applications, ensuring better visibility and operational health. **Generate insights to prioritize findings** SEM Workspace uses Now Assist to bring generative AI to your dashboard. This capability helps you focus on critical risks and make informed decisions faster, improving overall security outcomes. It provides: • Contextual summaries to quickly understand your security posture • Actionable recommendations to address prioritized risks **Create custom widgets in the Visualization Library** Create and manage custom widgets in the finding view of the SEM workspace to visualize findings data that align with your organization's reporting needs. The Visualization Library lets you define widget attributes such as chart type, visualization group, and data filters, enabling you to build dashboards that highlight the insights most relevant to your teams. This flexibility helps you focus on meaningful security metrics and make data-driven decisions. **Improved remediation target date handling** Remediation target (RT) dates now dynamically recalculate when a finding's risk rating changes. When enabled, the system recalculates the SLA from the most recent risk rating update date, preventing RT dates from being set in the past and ensuring accurate SLA tracking. **Exception management configuration**

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Manual and automated exception request and approval workflow: Flexible, customizable workflows streamline submission, review, and approval of exception requests. • Comprehensive exception tracking and audit trails: Detailed records of approvals, justifications, and timelines support compliance efforts and simplify regulatory reporting. **Consistent remediation task management with remediation views and centralized findings configuration** Unified task management: Supports both manual task creation and automated rule-based task generation across all Unified Security Exposure Management applications. Centralized rule definition: Enables efficient management of tasks across Vulnerability Response, Application Vulnerability Response, Container Vulnerability Response, and Configuration Compliance applications. **Advanced risk management** Risk calculators: Introduced for all Unified Security Exposure Management applications, enabling definition of risk rules based on multiple factors and calculation mechanisms. Risk rollup calculators: Aggregate scores from findings to higher-level entities, ensuring consistent risk scoring across applications. **Approval Recommendation** AI-powered recommendations for Exception and False Positive requests: Provides an on-demand recommendation to approve or reject a request using the Now Assist skill framework to analyze contextual data such as vulnerability details, risk factors, exploit availability, and related indicators. The recommendations are accessible directly from the Exception Change Approval record in the Security Exposure Management Workspace, enabling approvers to make faster, more consistent decisions while reducing the manual analysis effort. **Exception Rule & Change Approval Enhancements** • Change Approval Creation for Exception Rule submission: Previously, Change Approval (CA) was created only for a few types of exception requests. Now, the Change Approval(CA) is also created during exception rule submission. This enhancement verifies consistency across exception workflows and improves traceability.

Application or feature	Details
	• Vulnerability Intelligence Tile on Change Approval Record: The Vulnerability Intelligence Tile is added to change approval records, displaying vulnerability intelligence such as CISA KEV information, Known ransomware indicators, and EPSS percentile. This tile is visible only when the Intelligence and App-Vuln NVD plugins are installed. This enhancement provides approvers with the critical threat context for informed decision-making. • Summary Tiles on Change Approval Record: The Impact Tile is added in the overview tab of the Change Approval record to provide approvers with the visibility of the impacted count information such as, Impacted CIs, Total Findings, and Total Vulnerabilities on the Change Approval for a Remediation Task. This enhancement improves visibility of potential impact during approval or rejection of requests. • Application-Based Filtering on Approvals View: Added filtering capability on the Approvals view by application type such as: Application vulnerabilities (AVR), Container vulnerabilities (CVR), Infra Vulnerabilities (VR), and Misconfigurations (CC). This capability enables approvers to quickly drill down and manage approvals by category. • Reapply Assignment Rules for Deferred and Manually Assigned Items: Introduced the ability to reapply assignment rules for Deferred items and Manually assigned items. This enhancement provides the flexibility to reassign items through the Re-evaluate action in the list view.
Upgrade Console	**Additional way to access Upgrade Management** You can now access Upgrade Console through the Admin menu by selecting **Admin Home**, and then selecting the **Upgrade Console** link. **Guided upgrade on sub-production instance** Upgrade your sub-production instance to facilitate a seamless and successful transition. This process is structured into three pivotal phases: Pre-upgrade, Instance upgrade, and Post-upgrade tasks. **Guided upgrade on production instance** Elevate your upgrade experience within your production instance by meticulously completing each stage of the transition. This comprehensive process encompasses four crucial phases: Select upgrade, Pre-upgrade, Instance upgrade, and Post-upgrade tasks, all designed for a successful upgrade experience. **Additional step in pre-upgrade activities** You an now choose an upgrade plan in the Choose an upgrade plan step by either selecting an existing plan or

Application or feature	Details
	by creating a new plan. This new step is applicable for both production and sub-production instances. **Enhanced functionalities in the Preview application upgrades step** Experience the new functionalities within the Preview application upgrades step for a seamless upgrade experience on your instance. These new functionalities are applicable for both production and sub-production instances. **Enhanced capabilities in the Store application upgrades step** Review the Store application upgrades step in the post-upgrade activities for updated information in the App updates and Upgrade store applications sections. You can also use the new **Sync Now** option to update the list of installed applications that were either added or upgraded outside the upgrade process.
User Experience Analytics	**Analytics overlay experience** Try the new utility icon that shows you the key usage metrics for the pages that you're navigating to without having to leave the application page. The shortcut gives you faster access to the contextual analytics overlay. **UXA-PA integration enhancements** Experience the enhancements by enabling UXA filters on dashboards, additional metrics configuration for sessions, and the inclusion of Pages in the User Experience Analytics data source. Furthermore, inline dashboards for User Experience Analytics data now offer drill-down, and the Events data source benefits from a new condition builder.
Virtual Agent	**Zurich Patch 4** **Assistant Designer** Create and manage LLM-based chat and voice assistants within Assistant Designer, a centralized assistant administrator experience. Assistant Designer is comprised of three main areas: Assistants, Asset library (previously Virtual Agent Designer), and Analytics. **Conversational settings for Assets in the Asset library****Conversational settings** Manage the settings for an asset directly from the Asset library page. **Zurich Patch 1** **Integrating with Google Workspace** Integrate Google Workspace chat with the ServiceNow® conversational interface features, including Virtual Agent, Natural Language Understanding (NLU), Notifications, and live agents.

Application or feature	Details
	AI Connector utility Select AI agents to handle tasks in the AI Connector utility. For more information on AI agents in Virtual Agent Designer, see Managing AI agents in Assistant Designer and Using AI agents in Virtual Agent topics. **Virtual Agent server** • In chatHandshake, set *dynamic_step_loader_enabled* to `true` to send stacked agentic AI messages to the server. Set *dynamic_step_loader_enabled* to `false` to avoid sending messages. • Pre-chat and post-chat surveys are now available for Anthropic Claude on AWS and Google Gemini large language models (LLMs). For more information on surveys, see Chat surveys. **Create a Virtual Agent topic** Start the create flow for all supported conversational LLM assets directly from Virtual Agent Designer. **Assistants in Virtual Agent Designer** The Now Assist Panel - Platform (default) assistant is now available in Virtual Agent Designer. **Integrating Now Assist in Virtual Agent with Microsoft Copilot** Custom Engine Agent (CEA) is replacing the legacy Microsoft bot framework, allowing Microsoft Copilot to discover Virtual Agent, Now Assist, and use multi-turn conversations.
Vulnerability Response	**Qualys Integration – API enhancements** Qualys Integration has been upgraded to support newer Qualys API versions across Host Detection, Host List, Knowledgebase, PC Controls, PC Policies, and PCRS integrations. The integrations now ingest additional data fields, including vulnerability detection source, authentication privilege status, active status for controls and policies, and cloud metadata, giving you better visibility into your vulnerability and compliance data. **Enhancements to the Wiz Vulnerability Response Integration** • The Universally Unique Identifier (UUID) that identifies detections for the Wiz Host Vulnerability integration will be mapped to a detection key. **Note:** This enhancement is supported for new customers only. For existing customers, the detection key for the Wiz Host Vulnerability integration is created using the combination of vulnerability, asset_id, and proof.

Application or feature	Details
	• You can configure the **First** parameter for the Wiz Asset Integration to help you resolve 504 errors. You can reduce the page size if you are having memory issues or generating errors. The default value is 500. **Enhancements to Detection Key Configurations for Vulnerability Response** Introduced configurable detection keys allowing customers to choose between Asset ID and Configuration Item, with validations, UI controls, and enhanced an existing schedule job to update existing detections. **Enhancements to the Vulnerability Response Integration with Wiz** The Missing Assets [sn_vul_wiz_missing_asset] is deprecated. After updating to version 1.1, you must backdate your existing primary Wiz integrations by three days and run them. The backfill integrations are activated by default. After you backdate and run your primary integrations, the following backfill integrations are no longer required: • Host Vulnerability Backfill Integration • Test Results Backfill Integration • Host Test Results Backfill Integration • Issues Backfill Integration Resource types filters are supported on the Host Vulnerability, Host Test Results, Test Results, and Issues tabs on the Wiz Configuration page. Additional attributes imported from Wiz that are not stored in the Discovered items [sn_sec_cmn_src_ci] table are stamped with `Asset Attributes` in this table. Test results from the Host misconfiguration integration are classified as result type 'host_misconfiguration'. Data for resources that have the validated_at_runtime flag set to 'yes' is imported and populated on detections. The is_ignored column is deprecated on the Host Test Results and Test Results Integrations. This column was replaced by the is_result_ignored column. The CMDB internet-facing field on the discovered item is mapped to Limited Internet Exposure on findings. Column length for the descriptions in the Host Vulnerability import table has been increased. **Improved remediation target date handling**

Application or feature	Details
	Remediation target (RT) dates now dynamically recalculate when a finding's risk rating changes. Administrators can configure how recalculation occurs to ensure RT dates remain accurate and align with the latest risk updates, helping maintain consistent and reliable SLA tracking. **Identify Wiz Resource Types for import** Identify the Resource Types (assets) that are reported by Wiz that you want to import with the Wiz Integration Resource Type configuration page in your ServiceNow AI Platform instance. The Resource Types that you select apply to all the primary Wiz vulnerability and compliance integrations except the Wiz Container Vulnerability Integration. See the Wiz Vulnerability Response Integrations for more information about the vulnerability and compliance integrations. **Wiz Backfill Integrations** Retrieve and process data stored on the Wiz Missing Assets [sn_vul_wiz_missing_asset] table for assets that were not processed by the primary Host Vulnerability Integration with a specialized Wiz Backfill Integration. The Host Vulnerability Backfill Integration is activated by default. **Note:** The Wiz Asset Integration and the Wiz Container Vulnerability Integration do not have backfill integrations. The Wiz Asset Integration can discover assets and create and update discovered item records on the Discovered item [sn_sec_cmn_src_ci] table. The Wiz Container Vulnerability Integration imports and processes discovered container image records. **Import host vulnerability data with the Vulnerability Response Integration with Wiz** Import host vulnerability findings related to virtual machines and serverless assets in your cloud environment with Wiz's Host Vulnerability Integration. These findings are mapped to Host Vulnerable Items (VITs) within the Vulnerability Response application to support remediation workflows. **Modify the severity for a CVE or TPE** Vulnerability managers and vulnerability analysts can now adjust the severity of common vulnerabilities and exposures (CVEs) and third-party entries (TPEs) from the list view in the vulnerability manager workspace. The risk level of the associated vulnerabilities will be recalculated during the scheduled jobs based on the

Application or feature	Details
	modified severity. You can also reset the severity to its original source value if required. **Questionnaire Support in Exception Management via Smart Assessment** Configure advanced questionnaires as part of the exception management process using Smart Assessment. This enhancement allows remediation owners to provide detailed context for exception requests and enables approvers to configure conditional questions to gather information for informed decision making. • Collaboration and streamlined approval: Facilitate collaboration between your vulnerability management and remediation teams by streamlining the approval process with clear and complete exception justifications. • Mandatory questionnaires: Block the submission of exception requests until mandatory questionnaires are completed. If a questionnaire is marked as mandatory, the test results and its associated remediation tasks remain in the 'Open' state until the questionnaire is completed and submitted. • If the questionnaire is incomplete, the state change approval record is saved as 'Draft'. Only after completing the questionnaire can the user submit the exception request, which will then move the test results or remediation tasks to the 'In Review' state. **Lookup rules enhancements** When you reapply Lookup rules, Discovered items (DIs) that have been inactive for more than 90 days are ignored. These Discovered items (DIs) are also excluded from licensing considerations. Removing them from the lookup logic can improve performance and reduce processing time. • Background job enhancements: New fields have been added to help you view successfully evaluate records, the time taken for processing, the time remaining, and an estimated number of records. • Improved accuracy for non-CSDM Vulnerability Response users: A system property (sn_sec_cmn.ci_lifecycle_status_source) has been introduced to help users who do not follow Common Service Data Model (CSDM) standards. This property ensures that Discovered items (DIs) and associated VITs are properly marked as Decommissioned and are excluded from the CI Lookup. Additionally, the Retired Configuration Items PA indicator has been updated to accurately reflect CIs based on the decommissioning flags.

Application or feature	Details
	• The scheduled job to create reconcile unmatched discovered items feature is deprecated. You can "Reapply Look up Rules" for selected or filtered items in the discovered items table view. **Tenable.cs integrations with the Vulnerability Response and Container Vulnerability Response application** The Vulnerability Response Integration with Tenable application now supports data ingestion from Tenable.cs, enabling you to bring in cloud and container vulnerabilities directly into ServiceNow. This integration enhances your ability to prioritize and remediate vulnerabilities identified in Tenable cloud resources and container images. Key capabilities are: • Importing vulnerabilities discovered by Tenable.cs in cloud hosts and container images into ServiceNow automatically. • Enabling remediation workflows to triage, assign, and resolve the most critical vulnerabilities across cloud-native and containerized environments. • Using the Setup Assistant to easily configure credentials and integration parameters—get started with minimal manual setup. • Scheduling jobs to run periodically to import findings from Tenable.cs, create vulnerable items (for cloud hosts), create container vulnerable items and associate them with the relevant cloud resources and container image records. **Assess vulnerability exposure by publisher** Starting with v5.0 of Vulnerability Exposure Assessment, a publisher-based assessment is introduced that enables you to assess the vulnerability impact by vendor. For example, Microsoft, and Red Hat. By focusing on recently disclosed vulnerabilities from critical vendors, you can prioritize remediation and proactively address threats, improving your overall security posture. **View risk score details of a vulnerable item in the Work notes section** Starting with v25.0.3 of Vulnerability Response, the system property *sn_sec_cmn.risk_score_changes_add_worknotes* is inactive by default. If you enable it, only then you can see all the changes related to the risk score of a vulnerable item in the Work notes section. Additionally, the work notes are updated only if there's a change in the risk score. **Quick Start Tests for Vulnerability Response** After upgrades and deployments of new applications or integrations, run quick start tests to verify that

Application or feature	Details
	Vulnerability Response works as expected. If you customized Vulnerability Response, copy the quick start tests and configure them for your customizations. **Enhancements to exception rules handling** • Exception rules are reevaluated with nightly scheduled jobs. • Vulnerable items that no longer match exception rule conditions are unlinked from remediation tasks. • A deferred vulnerable item (VIT) is reopened if it doesn't match any active exception rules. • Exception rules don't create remediation tasks. VITs are deferred directly and aren't associated with a remediation task. **Tenable's endpoint scanning integration** Support for Tenable's endpoint scanning integration to retrieve scan metadata. The integration fetches scan details using the last_schedule_id from existing asset data in Tenable.io. **Reopened Count field on vulnerable items** Added the Reopened Count field on vulnerable items to track the number of times their states change from 'Closed' to 'Open' or to 'Active'. **Out-of-the-box vendor advisories via Common Security Advisory Framework (CSAF) integration** The following vendor advisories are configured out-of-the-box and are automatically activated when the Solution Management plugin is enabled: Redhat and Suse.
Workflow Data Fabric Hub	**Established connections** Retrieve real-time data from external sources directly in the ServiceNow AI Platform, without copying any data to your instance using zero copy connections. **Data fabric tables** Enable data consumers to access external data on the ServiceNow AI Platform to power AI features and build applications using data fabric tables. **Connect to Teradata** Retrieve data from Teradata in real-time without copying or duplicating the data. **Connect to Amazon S3 tables** Retrieve data from Amazon S3 tables in real-time without copying or duplicating the data.
Workforce Optimization for	**View the monthly staff alignment on the team calendar in the Manager Workspace**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Customer Service CSM	Enable managers to plan, monitor, and adjust staffing more effectively with the month view on the Team Calendar tab in the Schedule page of the Manager Workspace. You can also view staffing and shift details across a full month to optimize and identify gaps in coverage, detect over staffing, and take proactive steps to balance workloads improving operational efficiency and responsiveness. **View the monthly schedule on the team calendar in the Configurable CSM or FSM Workspace** Enable agents to view your upcoming shifts, time-off requests, and availability for the entire month in the month view of the Team Calendar in the CSM or FSM Configurable Workspace. This enables them to better plan their schedules, stay informed, and remain engaged with their work commitments. Decoupling Channel Management from the core Workforce Optimization (WFO) modules is necessary during dependencies or emergency situations. This architectural enhancement supports modular deployment, enabling independent updates or scaling of Channel Management without impacting other workforce engagement features. • Independent Deployment: Channel Management can be deployed independently, allowing for greater flexibility and control. • Reduced Inter-Module Dependencies: The decoupling reduces dependencies between modules, enhancing system stability. • Enhanced Scalability and Maintainability: The new architecture improves scalability and maintainability, making it easier to manage and expand. • Streamlined Future Upgrades: Future upgrades for individual modules can be streamlined, ensuring smoother and more efficient updates.
Zero Copy Connector for ERP	Zurich Patch 4 **Use agentic AI** Discover ERP database table information and identify relevant ERP Data Product models using the Explore ERP models agentic AI workflow in Now Assist for Zero Copy Connector. **Now Assist for Zero Copy Connector skills** More easily identify SAP objects like tables, BAPI endpoints, and OData endpoints that can then be used to query the data you need with the ERP Data Query skill. Query SAP standard database tables for data and transactional records using the ERP Data Discovery skill. **Some Now Assist skills are turned on by default**

Application or feature	Details
	The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive. **Use AI to discover model entity options** Use ask AI in model manager to obtain detailed entity options by describing the entity you want to add to a model. **Set security on model operations** Apply roles and user group names to control access to create, read, and update model operations. **More easily create model operation entity inputs and outputs using scriptable API** Query complex request/response structures faster and easier using scriptable Glide APIs for models instead of Flow Designer. **Check that your production instance has the latest version of a model** Determine if production and non-production instances are using the same or different versions of a model to check if the latest model updates are on your production instance. **Create and change SAP business entities with IDoc** Work with SAP business entities that can only be created or changed using IDOC. **Control data access for ERP AI agents** Grant, modify, and revoke AI agent data access with specific read, write, and query privileges. **Use ETag in update operations** Create update operations where ETag is required and OData services are used. The ETag is fetched by default and sent with the update call. **SAP ECC and SAP S/4HANA are now primary connectors** The SAP ECC and SAP S/4HANA connectors are now primary connectors in Workflow Data Fabric Zero Copy Connectors. **Upload data from SAP SuccessFactors** Access data from SAP SuccessFactors using OData V2 APIs and use the information in Zero Copy Connector for ERP models.

Application or feature	Details
	Use automatic mapping to map table fields between systems faster Map table fields between systems faster with automatic mapping. **View session-level debugging logs** View debug logs from within Zero Copy Connector for ERP to obtain information about requests, responses, and payloads without having to open Workflow Studio.

Changes to Zurich features and products

Cumulative release notes summary on changes to Zurich features and products.

Existing products were updated and changed in Zurich. This includes the renaming of certain buttons or features.

Application or feature	Details
AI Control Tower	**Zurich patch 7** **Security & privacy tab in AI Control Tower** • The Autonomous vs. supervised AI tools chart has been removed. • The Prompt injection, Offensive content, and Sensitive data tabs have been removed and replaced by Access and Guardrails tabs. Metrics have been reorganized into those two tabs. • In **Configurations**, under **Data**, the **Data privacy** tab was renamed to **Security & privacy**. In that tab, the data leak detection and anonymization section was renamed to sensitive data input and anonymization. **Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Changes in Zurich Patch 4** • The AI asset inventory plugin structure has been updated. • Product owner view: Added a role called AI asset owner [sn_ai_asset_mgmt.ai_asset_owner], which enables the Product Owner view experience with a personalized home page and enhanced visibility into AI assets to simplify task management.

Application or feature	Details
	• AI discovery: The Innovation lab store application (AWS AI discovery plugin) is decommissioned. Uninstall the AWS AI discovery plugin prior to installing the AI discovery plugin (sn_ai_disc). • AI cases management has moved under the **AI cases** tab on the AI Control Tower home page.
AI Risk and Compliance	**AI risk and compliance home page** The **Risk and compliance** tab now features dedicated Risk overview and Compliance overview sections that enable you to continuously monitor the risk and compliance posture of your AI assets. The Risk overview section is a filtered view of your AI assets that are based on inherent and residual risk levels so that you can make informed risk evaluations. The Compliance overview section displays the regulatory risk classification of AI systems, models, and datasets through donut charts. Additionally, you can see the compliance status of your AI assets in relation to applicable authority documents and internal policies. **Worknotes and comments in AI system records** The AI system record now supports worknotes and comments. You can now document decisions, share updates, and provide context throughout the AI risk and compliance life-cycle. Worknotes and comments help improve the communication among stakeholders and ensure a comprehensive audit trail. **Feature-specific administrator role enhancements** Starting with version 21.1.1, if you have a feature admin role you can now complete tasks that were initially reserved for users with the broader administrator role.
AI Search	**Zurich Patch 4** **Now Assist Multi-Content Response Genius Results** If you have Now Assist in AI Search installed, Now Assist Multi-Content Response Genius Results are supported in global and workspace search. Activating Now Assist Multi-Content Response Genius Results in global or workspace search profiles overrides all other Genius Result configurations, so that global and workspace searches only display Genius Result answers from Now Assist Multi-Content Response Genius Results. Virtual Agent topic citations from Now Assist Multi-Content Response Genius Result answers in global or workspace search open the selected topic in the Now Assist panel so the user can continue their conversation on that topic. **Search Suggestions** Search administrators with the ais_admin granular admin role can access all Search Suggestions tables. Assign

Application or feature	Details
	search administrators this role to eliminate needless propagation of full admin access. **Gain insights into search behavior with a refreshed and updated Search Preview UI.** Preview search query results using settings from a search application configuration or a search profile. Choose between keyword and hybrid search modes. Display search results as individual EVAM cards or as a JSON-format search query response object, with search and syntax highlighting. Review search query behavior and results and specify search query settings with the new Summary, Genius Results, Details, and Profile admin tools. **Zurich Patch 1** **Consumer-grade search experience for search portals** The search results page for search portals has been revised to offer a more intuitive and consistent experience. Navigation tabs have been replaced with source facet buckets. All search results now open in a new browser tab, preserving your search in the existing browser tab. Facet buckets now show minimum search result counts, reflecting results removed by late binding content security. Search terms are no longer highlighted in search results. **Consumer-grade search experience for global search and workspace search** The search results page for global search and workspace search has been revised to offer a more intuitive and consistent experience. Navigation tabs have been replaced with source facet buckets. All search results now open in a new browser tab, preserving your search in the existing browser tab. Facet buckets now show minimum search result counts, reflecting results removed by late binding content security. A new `glide.ui.ais.show_all_facets` system property enables you to display facets from all sources when no source is selected. (The default behavior is to hide facets until a source is selected.) Search terms are no longer highlighted in search results. **Sort facet buckets alphabetically** Override the default sorting of facet buckets by their search result counts and display them sorted alphabetically by their labels. **Improved display for grouped attachment search results** When grouped with their parent search results, attachment search results now appear in collapsed form to save space. If a parent search result includes more than three grouped attachments, you can use the new **Show more** and **Show less** links to control how many attachments are visible.

Application or feature	Details
	its respective purchase order line when multiple invoices are generated for the same purchase order line. The Insufficient Funds (Header Amount) logic has been enhanced to validate available funds at the invoice header level against the corresponding purchase order when multiple invoices are created for the same purchase order.
Advanced AI Search Management Tools	**Zurich Patch 4** **AI Search analytics dashboard** The performance metrics, trends, and charts for this dashboard have been refreshed to offer a cleaner visual experience. **Zurich Patch 1** **AI Search analytics dashboard** The **Date range** interactive filter now enables you to access data from the last 180 days, rather than the last 90 days.
Advanced Risk	**Some Now Assist skills, agents, and agentic workflows are turned on by default** The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive.
Agent experience for CSM	**Thin compose modeless dialogs** Enable agents to initiate a comment, work note, or email in the activity stream and then open the text in a modeless dialog. This feature is available on the following record pages: • Front-line case page • CSM default record page • CSM Interaction record page • CSM voice interaction record page

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• CSM centered chat interaction record page • Email interaction record page **Activity Stream enhancements** • Activity Stream layout now automatically adjusts to your device (laptop, tablet, or mobile). Hidden content is indicated by (...) for better readability. **Lookup component on CSM Configurable Workspace record pages** Use the Lookup component to look up and link a contact and then verify the contact. The Lookup component replaces the Lookup and Verify component on the CSM Configurable Workspace record pages. **Hide inbox after item selection** The Inbox panel collapses after selecting an inbox item, enabling agents to see more of the screen and focus on the interaction. **Multi-form controller support** Supports having two forms on a record page. **Real-time notification count updates** Updated the bell icon behavior so the notification count accurately reflects the number of unique, unread notifications in real time, eliminating duplicate increments. **Customer History enhancements** Use the following enhancements to control grouping, appearance, and refresh behavior in customer history: • Enable time grouping by month or quarter: A new property enables selection of time grouping as monthly or quarterly (Q1-Q4) in date filters. • Customize feed appearance: Admins can configure feed icons along with their background colors using a property that offers predefined color options. • Display activities by updated date: A new property enables feeds to surface activities based on the last updated timestamp in Customer History. • Dynamic refresh updates: Customer History feeds now refresh automatically, but only for records in the Customer History activities table and within the current context (for example, Contact). Other tables and parent records are not included. • Introduced a new search icon that lets agents show or hide the search bar with a click. **Improve discoverability of Recommended Actions**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details

	Use the following updates to improve the visibility of Recommended Actions across key CSM pages:
	• Set Recommended Actions as the default first tab in the contextual side panel to provide agents with instant access to recommendations without switching tabs. This change applies to the following pages:
	  ○ Front-line case page
	  ○ CSM default record page
	  ○ CSM Interaction record page
	  ○ Email interaction record page
	  ○ CSM voice interaction record page
	  ○ CSM centered chat interaction record page
	• Load Recommended Actions asynchronously to keep the UI responsive while recommendations load.
	• Enable agents to send relevant KB articles through SMS during voice interactions and messaging-type interactions.
	
	Default recommendations for Pro customers
	Recommendations are now delivered by default for Pro customers when either the Task Intelligence for CSM or the Now Assist for CSM plugin is installed. Agents can view contextual recommendations under the **Suggested Actions** tab, such as similar cases and open incidents, when the case meets the predefined criteria. Agents can link or copy resolutions directly into the current case.
	Resurface special handling notes
	Display the special handling notes at any time by selecting#Special handling notes#from the More actions menu on the case record action bar. This action is now available on records from the following tables:
	• Account
	• Asset
	• Contact
	• Incident
	• Product Model
	• Work Order Task
	
	This applies only to records where special handling notes are configured.
	Information session tab enhancements
	Use the following changes to enforce permissions and improve usability of the **Session** tab:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Restrict access to unauthorized users with error messages and validate role-based permissions. • Auto-save admin updates to timer and color changes in real time. • Display workspace settings only after the Session tab is enabled. **Configure Alert Dismissal settings at experience and alert level** Use the following settings to control alert dismissal: • Set alerts to auto-dismiss or require manual dismissal. • Configure alert behavior globally or according to alert. • Reduce alert overload while supporting accessibility standards, which helps agents focus on critical alerts. **ServiceNow Link Manager is available on the Google Chrome, Microsoft Edge, and Mozilla Firefox plugin store** Streamline tab management and reduce browser clutter with ServiceNow Link Manager: • Automatically consolidates new ServiceNow related tabs into an existing open ServiceNow tab. • Provides cross-platform support. • Enables agents to share record links, such as cases, through platforms like Gmail, Microsoft Teams, Microsoft Outlook, and other web tools integrated with ServiceNow. These links open using ServiceNow Link Manager, ensuring the record loads in the correct workspace and context. • Provides a user-friendly interface that is easy to enable and turn off directly from the extension settings in the respective browser. **Follow records to receive notifications** Select the **Follow** action to receive notifications when comments or work notes are added to a record. The Follow action is available in the More actions menu on the Front-line case page and the CSM default record page.
App Engine Studio	**Granular configuration admin roles** Several new granular admin roles enable developers to complete administrative configuration tasks without requiring the full admin role. **Separate App Engine Management Center release notes** The App Engine Management Center (AEMC) release notes now appear separately from the App Engine Studio release notes because you can use AEMC to manage app development for apps built in App Engine Studio, Creator Studio, and ServiceNow Studio. For information

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	about AEMC, see App Engine Management Center release notes.
Application Manager	**Unlicensed application information** In addition to details about applications that are already licensed, the "Available for you" tab of the Application Manager now includes information about applications that haven't been procured from the ServiceNow Store yet.
Application Vulnerability Response	**Configure maximum rows in related lists** To improve readability and performance, you can now limit the number of rows shown in related lists on forms by setting the system property *sn_vul_cmn.related_list.set_max_row*. **Improved state management for remediation tasks and vulnerable items** State management logic for roll down of state from remediation tasks (RTs) to findings and roll up of state from findings to RTs has been refined across all modules. Updates improve accuracy by handling mixed item states (a combination of Deferred and Closed), supporting closure of tasks in sub-states like In-Review, and reopening tasks based on the Assigned To field. The update also improves handling of False Positive state transitions based on scanner results as source of truth. These enhancements reduce manual effort, clarify task ownership, and streamline remediation workflows.
Authentication	**Enhanced SSO login and logout experience** Use the enhanced SSO login and logout experience. Enhancement includes: • Display of active SAML and OIDC Identity Providers (IdPs) on the ServiceNow platform and portal login pages. • Assign users to specific groups during SAML and OIDC auto-provisioning. • Set up OIDC with the same well-known URL. The OIDC configurations can use the same well-known URL of the IdPs for multiple SSO records. • Display login failure reasons to the users who logged out of ServiceNow due to session expiry or other reasons. Use the login link on the external logout page to again log in to ServiceNow in case of successful logout.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Display of a generic error message for unsuccessful single log out. • Enhanced email notifications for SAML certificate and Encryption Key store update. **FIDO2 as an MFA factor** Use the FIDO factor policy to enforce FIDO (Hardware key or Biometric as second factor for authentication) as second factor authentication to users who attempt to log in to the instance. **OAuth integrations** Configure OAuth integration that includes the following enhancements: • You can provide a maximum client secret length up to 4096 characters to meet security requirements of the third-party systems. • You can provide a JSON Web Key Set (JWKS) URL to automatically manage and update the public key for JSON Web Tokens (JWT) signature validation. • You can request OAuth tokens using the JWT grant type signed with Elliptic Curve Digital Signature Algorithm (ES) signing algorithms, including ES256, ES384, and ES512, for inbound JSON Web Tokens (JWT). It also supports RS256, RS384, RS512, HS256, HS384, and HS512. • You can customize the JWT ID (JTI) claim name in both inbound OpenID Connect (OIDC) and JWT Bearer flows.
Case management for CSM	Sharing task plan templates ensures that only authorized users can access, edit, or share templates based on their role and location, preventing misuse and maintaining operational integrity. Sharing task plant template features include: • Access control: Users can now provide access to task plan templates at various levels, including user, group, and service organization. • Ownership Management: The Owner or an Admin can change the ownership of a Template by updating the Owner field. • Global template: Task plan templates can be marked as global, making them visible to all users with read access. • Form and List Layouts: Admins can view and edit form and list layouts for sharing, displaying all relevant fields. • Notifications: In-app notifications are sent when access is granted, Selecting the notification opens the shared template directly.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Task plan template configurations Admins can create configurations for task plan templates that pre-fill information when creating a new task plan template. **Filtering service definitions** Enable agents to filter the service definitions that are shown on the service selector in the following ways: • By user, role, group, or agent • By entity critera such as location, customer level, or related entities **Case lines for Case Management - Add multiple entitlements to case lines** View the available entitlements on a case line and associate the multiple entitlements to that case line. Available entitlements are associated with the contracts and entitlements that are purchased by the customer. **Targeted Communications and Case Digests workflows** Legacy workflows for the Targeted Communications (com.sn_publications) and Case Digests (com.sn_csm_case_digest) applications have been migrated to low-code flows in Workflow Studio. The functionality of the flows remains the same. **Classifying sensitive data** Fields in the Customer Service Management and Targeted Communications tables are mapped to the Data Privacy data classes. For more information, see the Data privacy overview topic in the ServiceNow® Platform Security documentation. **Deny-Unless ACLs implemented on CSM tables** Deny-Unless access control lists (ACLs) were implemented on CSM tables for non-authenticated users, such as users with public roles. With this minimum-security setting, only authenticated users can perform read, write, delete, or create actions on these tables. For more information about Deny-Unless ACLs, see the Deny-Unless ACL topic in the ServiceNow® Platform Security documentation. **Customer Service Case Types moved from family to store release** Starting with the Zurich release, the Customer Service Case Types application (sn_csm_case_types) has moved to the ServiceNow Store. Any new enhancements to this application are delivered through the Customer Service Case Types store app.
Change Management	**Propose a standard change template in Service Operations Workspace**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	As a user with the itil role, you can create a standard change template proposal in Service Operations Workspace.
Code Signing	**Enhanced Code-Signing Verification for ACC Framework Table** You can now generate KMF signature files for tables that extend Agent Client Collector Configuration (`sn_agent_configuration_file`) and Agent Client Collector Plugin (`sn_agent_asset`). This enhancement allows attachments from the tables to successfully pass code-signing verification and be downloaded to the MID Server when code signing is enabled.

Collaborative Work Management	**My Work enhancements**
	Track all your work from one place using the enhanced My Work in CWM. My Work now supports all ServiceNow task records-such as incidents, changes, and requests-whether they originate in CWM or outside, giving you a unified view of everything assigned to you. This helps you stay on top of overdue or open tasks and improves on-time delivery.
	Additionally, the Item type filter has been refined to show all CWM tasks (including custom ones) grouped under a single category, instead of listing every CWM task type individually. You'll also only see task types in the filter that you're actually assigned to, reducing clutter and making it easier to filter what matters.
	Enhancements to tables in Docs
	• Resize the column width of a table per your preference.
	• Add color to single or multiple table cells.
	• Select multiple cells of a table using the mouse device or by pressing **Shift+ one of the arrow keys** on the keyboard.
	• Delete content from multiple cells using the **Backspace** or **Delete** keys.
	• Copy and paste cell content:
	  ○ Copy content from one cell and paste it to multiple cells.
	  ○ Copy content from n number of cells and paste it to another set of n number of cells.
	  ○ Copy content from multiple cells and paste it as a new table in an empty block on the page.
	Enhancements to CWM Board templates

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details

	• Save template: While saving a Board as a template, choose between saving the current view or all shared views. You can see the number of Board views and custom task types that are included in this template.
	
	These details are displayed in the Template Center, where you can select a template that best meets your team's needs.
	
	• Apply template: While applying a Board template, you can see the number of Board views and custom task types that you get if you apply this template. The Board views drop-down list lets you switch between views and provides information on the type of views that are enabled in this template.
	
	Only those custom columns that are part of these views are brought over when you apply this template.
	
	Collaborating with Spaces in CWM
	
	When a user is added to the **Assigned to** field of a CWM task but doesn't yet have access to the Space, the email notification requesting access is sent only to the Space owners. This way, there's less email clutter for all the Space users because notifications are sent to only those users who need to know this information.
	
	New columns for CWM tasks
	
	Every task within a CWM Board has new columns called Sprint and Story points. You can use these columns if you choose to plan any task into Sprints. These columns are available on every type of work item, including the items that are brought into the Board through Connected work.
	
	Changes within CWM Docs
	
	• Open the keyboard shortcut panel:
	  ○ macOS: Cmd + Option + K
	  ○ Windows OS: Ctrl + Alt + K
	• Images can be resized after inserting them within a table cell.
	• The page name can be updated by editing the name and clicking anywhere on the Doc.
	• Moving content blocks to within a numbered list or deleting a list item from a list automatically adjusts the list numbering.

Common Core	**States in the entity based record access update utility** A new Preview state has been added to the record access update utility life cycle. You can now review the estimated number of impacted records before you apply the restrictions. This step helps you to validate

Application or feature	Details
	the selected scope, assess potential impacts, and make adjustments, if needed. It also adds an extra layer of control and reduces the risk of unintended access changes.
Configurable Workspace	**Browser warning for unsaved changes** Configure a browser warning to alert you of unsaved changes when you navigate away from a page using the back or forward buttons. **Record List component bundle enhancements in UI Builder** Configure these enhancements to the Record List component bundle in UI Builder: • Select **Related** list as a list type option. • Switch between the standard view and gallery list, which displays list items as cards. **Export lists to Google Sheets** Export your lists to Google Sheets directly from the Export menu. **Live updates for lists** Configure live updates at the list page level without affecting other lists in your Configurable Workspace. **Predicate Builder component enhancements in UI Builder** Configure these enhancements to the Predicate Builder component in UI Builder: • Use the Predicate Builder for all list types. • Set up a read-only version of the Predicate Builder to display all conditions without users editing them. **Form component enhancements in UI Builder** Configure these enhancements to the Form component in UI Builder: • Display Boolean fields as a toggle. • Add an indicator that marks unsaved fields after any changes. • Wrap field labels instead of truncating them. • Change field-level configurations from field context menus displayed as a gear icon beside every field label. • Choose whether related lists load with the form, after the form, or on demand. • Hide the related list header when the last record is removed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Choose to display field labels beside its value or stacked vertically. • Suppress special handling notes and notifications from secondary forms on a page. **Personalize Form menu** Customize which fields display on a form with the Personalize Form menu () in the form header. Use system properties to hide the Personalize Form menu or change the roles with access to the menu. **Format string fields with guidance text and inline validation** Set up guidance text to display in string fields with format requirements such as account ID, SSN, or SIN. Use regular expression inline validation to display an error message if input values are incorrect. **Advanced view rules configuration** Use client scripts to set up view rules configurations. **Activity Stream Compose component enhancements in UI Builder** Configure these enhancements to the Activity Stream Compose component in UI Builder: • Hide the rich text editor toggle for your workspace without affecting other experiences. • Rename and reorder Emails, Work notes, and Comments tabs. • Annotate new activities to make it easier for you to find unread emails and messages. **@mentions for the email composer** Configure @mentions in UI Builder for the Email composer and Email composer (mini) components, enabling you to add an email recipient by using an @mention in the email body. **Digital signature and encryption in the email composer** Send emails with a digital signature that verifies you as an authentic sender and an email encryption that certifies authentic recipients. **Custom attachment layout** Configure a custom layout mode for the Attachments component in UI Builder. Customize the maximum file size, file types, multiple file uploads, and preview modal. **Adding the Now Assist icon to action buttons** Use declarative actions to create buttons with the Now Assist (✦) icon and hover animation.
Configuration Compliance	**Qualys Integration – API enhancements**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Qualys Integration has been upgraded to support newer Qualys API versions across Host Detection, Host List, Knowledgebase, PC Controls, PC Policies, and PCRS integrations. The integrations now ingest additional data fields, including vulnerability detection source, authentication privilege status, active status for controls and policies, and cloud metadata, giving you better visibility into your vulnerability and compliance data. Use the new `posture_api_version` integration instance parameter to choose between the default v2.0 APIs or the newer v5.0 streaming APIs for the PCRS Policy Host and PCRS Test Results integrations. **Configure Tenable test result granularity** Starting with v15.6.1, you can configure the granularity of Tenable Configuration Test Results (CTRs) to split results into unique findings. For example, if a database has five instances, the system generates five distinct test results, one per instance, providing improved visibility into individual patching efforts. **Configure Qualys Test Result Granularity** Starting with v15.4.3, you can configure the granularity of Qualys Configuration Test Results (CTR) in configuration compliance and split CTRs into unique findings. For example, if a database has five instances, the system generates five distinct test results, one per instance, providing improved visibility into individual patching efforts. **Configure maximum rows in related lists** To improve readability and performance, you can now limit the number of rows shown in related lists on forms by setting the system property *`sn_vul_cmn.related_list.set_max_row`*. **Improved state management for remediation tasks and vulnerable items** State management logic for roll down of state from remediation tasks (RTs) to findings and roll up of state from findings to RTs has been refined across all modules. Updates improve accuracy by handling mixed item states (a combination of Deferred and Closed), supporting closure of tasks in sub-states like In-Review, and reopening tasks based on the Assigned To field. The update also improves handling of False Positive state transitions based on scanner results as source of truth. These enhancements reduce manual effort, clarify task ownership, and streamline remediation workflows.
Configuration Management Database (CMDB)	**CMDB Workspace v7.6**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• On the Published policy tile on the Data Manager policies page, the policies list view now shows the scheduled job that is associated with the policy and the user that the policy runs as. For more information, see Create a CMDB Data Manager policy. • Instead of the system automatically setting the *run as* attribute of the scheduled certification and attestation jobs to be the user that authored the policy, you can now set a specific user that adheres to the policies and regulations in the organization. Configure the default values for the run as user and user accounts available for run as assignees for auditing purposes when it's important to know who initiated the changes. For more information, see Components related to CMDB Data Manager. • For certification and attestation policy tasks, choose how to assign tasks in cases where a specified task assignment field is empty for a target CI. Specify a user or a user group to assign such tasks to, or create the tasks without assigning them. An administrator can later review and assign those tasks. For more information, see Create a CMDB Data Manager policy. • View the closed tasks in the My Work view in CMDB Workspace. Select the Closed card in the Task status tile to review the (in read-only mode) details for tasks that are in the Closed Complete, Closed Canceled, Closed Incomplete, or Rejected state. For more information, see My Work view in CMDB Workspace. • New CIs in the Create CI experience no longer have their *Operational status* attribute set. The new *CI Operational state* attribute appears on the Additional attributes page of the Create CI experience. Setting it to any value is optional. For more information, see Create a CI manually in CMDB Workspace. • The itil user role now contains the sn_cmdb_user user role and no longer contains the sn_cmdb_editor user role. As a result, the following functions that were

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	accessible to itil users now require the sn_cmdb_editor user role: ○ Create and delete the operations that are related to CMDB 360 queries. ○ Access the CMDB Retirement Definitions module by navigating to **All** > **Configuration** > **CMDB Retirement Definitions**. ○ Access the Create CI quick link on the Home view of CMDB Workspace. **Containment in the itil user role** In zBooted instances, the itil user role no longer contains the sn_cmdb_editor user role and the itil_admin user role no longer contains the sn_cmdb_admin user role. However, the sn_cmdb_admin and the sn_cmdb_editor user roles now have full (create, update, delete) access to the Configuration Item [cmdb_ci] class. **Constraints when deleting a CMDB Data Manager retirement definition** The same constraints that exist when deleting a retirement definition in CMDB Workspace now apply when directly accessing the CMDB Retirement Custom Definitions [cmdb_retirement_custom_definitions] table: • The retirement definition that you want to delete must be in an inactive mode (**Active** = **false**). • The retirement definition for the Configuration Item [cmdb_ci] class can't be deleted. **Prioritize using IRE identification rules for uniquely identifying CIs** Configure the system to prioritize the use of IRE identification rules to uniquely identify CIs in a payload, instead of using the **source_name** and **source_native_key** fields. For more information about using the *glide.identification_engine.skip_sys_object_source_matc* system property to control this behavior, see Properties. **Run a query in an enhanced execution mode** Set the execution mode for a saved CMDB Query Builder query to run using an enhanced query execution engine, which is designed for improved performance and scalability. **Role configuration required for agentic workflows and AI agents** Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *Users with selected roles* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they won't execute. Data access settings must

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add. After the roles are configured, users must have the specified role to invoke the agentic workflow or AI agent. **New role required for the Create configuration item agentic workflow** The sn_cmdb_admin role is now required to use the Create configuration item agentic workflow (was sn_cmdb_editor).
Container Vulnerability Response	**Configure maximum rows in related lists** To improve readability and performance, you can now limit the number of rows shown in related lists on forms by setting the system property *sn_vul_cmn.related_list.set_max_row*.
Continuous Authorization and Monitoring	**New Authorization Documents tab for ATO reports** Access all Authority to Operate (ATO) artifacts reports from the new **Authorization Documents** tab available in the Authorization Package. **New CAM System Properties page for administrators** Access the new CAM **System Properties** page to enable administrators to configure various system properties. **Track package progress with the Ageing of Packages widget** View the duration that a package stayed in each step, like Prepare, Categorize, Select, Implement, Assess, Authorize, and Monitor, using the Ageing of Packages widget. **Set Next Engagement Date for Automated Audit Generation** Enter the **Next engagement date** to automatically generate the audit engagement on the specified date.
Contract Management Pro	**Send contracts for signature using Adobe Sign without signing in** Send contracts for signature in Adobe Sign without requiring users to sign in to the e-signature portal. Any modifications to the signatory details and contract documents are restricted in the Adobe Sign portal and must be completed in Contract Management Pro before initiating the signature process. **Compare contract revisions in Contract Management Pro** Compare contract revisions of a contract document stored in external storage. **Validations for content control placement in the Microsoft Word add#in** See when a clause, table, or signature block is incorrectly tagged while configuring a contract template through

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	validation messages displayed in the Microsoft Word add-in. **Improved Microsoft Word document processing** Contract Management Pro now supports processing of Microsoft Word documents larger than 10 MB. This enhancement applies to all document operations such as contract revision generation, document synchronization, and document comparison. **Select contract type while initiating a third-party contract** Specify whether a contract request is for a single contract or multiple contracts. For single contracts, you can select the type of contract document. **Classify contract requests as a single or multiple contracts type based on selected documents** Automatically classify a contract request as single contract type or multiple contracts type based on single or multiple contracts when creating a third-party contract review request from Employee Portal. The **Type** field in the contract request reflects this selection by displaying either **Single contract** or **Multiple contracts**. **Use scripts to define additional conditions for a clause variation** Define clause conditions on fields and variables of a table that isn't directly linked to the contract template table. The condition determines when the clause variation is used in a contract. **Configure tables in a contract template to append or add fields from related tables** Insert additional data from the related table fields into the dynamic tables of a contract using scripts. Display additional data from related table fields by appending it to existing columns or adding it as new columns. **Contract Management Pro configurations are available on the Contract Request table** You can now set up the following Contract Management Pro configurations directly on the Contract Request [sn_cm_core_contract_request] table to centralize the configuration on a single table and improve consistency and reusability across business units: • Contract templates • Template rules • Internal signatory rules • Clause and clause variation setup • Contract configuration • External storage and e-signature integrations • Mappings for Now Assist contract metadata extraction and Now Assist contract analysis

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	The Contract Request table is automatically selected for a new configuration. You can manually select a different table, if necessary. **Configure dynamic tables for contract template** Set up contract templates on the Contract Request [sn_cm_core_contract_request] table to reuse the template across business units. When you select the Contract Request table, the **Table** tab in the Microsoft Word add-in displays an additional field, called the **Parent request table** field, that you can use to select the source parent request table. Additionally, the **Table** field has been renamed **Lookup table**. You can select the table from the data that is populated into the contract document. If the template isn't based on the Contract Request table, only the **Lookup table** field is shown. **Copy fields from parent request to contract request** Automatically copy the required fields from the originating business unit record to the contract request when it's initiated. **Signature workflow for a contract request** Wet signature requests are sent one signatory at a time, starting with the first signatory in order, rather than to all signatories at the same time. Signatories can be changed even after the signing process has been initiated. When a signatory signs and returns the document, the fulfiller manages the remaining signatures. **Modify signatories** Enable contract fulfillers to pause an ongoing signature process, make necessary changes to the list or order of signatories, and then resume the process without restarting the entire workflow by using the **Modify Signatories** and **Resume signature** options. This feature is supported only for the Docusign electronic signature provider. **Resend signature request** Enable contract fulfillers to manually trigger a signature request when needed instead of relying on automated reminders by using the **Resend signature request** option. **Configuring signatories in Contract template using Microsoft Word add-in** Signature placeholders in contract templates are now mapped to the e-signature tool tags (such as Docusign) instead of signer fields to help accommodate changes in the signatories. The values in the signature blocks are filled in by the signatories during the signing process.
Creator Studio	**Deleting questions from unpublished forms removes the record**

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	When you delete a question from an unpublished form, the record for the question is now also removed from the ServiceNow AI Platform.
Data Management for CSM	**Enhancements to the declarative responsibility framework** Introduced several key improvements to enhance the flexibility and usability of the declarative responsibility framework: • Enabled responsibility access configurations to support more granular access control. • Updated the data model by adding new fields and renaming select field labels for improved clarity. • Refreshed associated forms and lists to reflect the latest framework updates. **Updated account manager responsibility access configuration** Enhanced access configurations for account manager responsibilities by creating a unified entity that defines access based on record and role for more consistent and streamlined access control. **Managing account addresses** Manage account addresses by associating locations with accounts where the Update access is granted to confirm tracking of address information and support account management. **Updating location records associated with account** Restricts users from updating a shared location record unless they have the Update access to all associated accounts, confirming location details can only be modified with the necessary permissions across every linked account. **Delta price enhancements** The following are enhancements added in Delta pricing: • Added pricing fields that reference sales agreements and captures base prices on sold products to verify consistent pricing during modifications, such as quantity changes or attribute updates. New fields are added to enhance the traceability for subscription-based products. • Added columns to the Sold Product base table. Use the Split from and Split from root to track lineage during upsells, downsells, and expiration date changes ensuring accurate order management, compliance, and analytics. **Install base data model enhancements** Improve traceability and product life cycle management with the **Serial Number** field on the install base form. Base install base items are mapped directly to

Application or feature	Details
	model categories to support industry-specific product configurations. Added **Provider Service Org** field on the install base form to support tracking, recall workflows, and post-sale engagement with dealers and partners. **Access control improvements** Provide hierarchical access to Install Base items for location managers and staff to manage assets sold by or associated with their service organizations. **Entity configuration and mapping** Gain precision in sales entity setup with three new columns in the Lead to Cash Entity Definition table: Filter Conditions, Enable Post Processing, and Post Processing Script. These columns enable targeted data filtering and post-processing logic execution. **Explore Partial sync** Partial sync processes the data sections you specify instead of the entire structure, significantly improving performance and reducing resource consumption. The partial sync enhancement includes improved error handling that provides clear, actionable error messages when mandatory fields are missing from synchronization requests. **Setting up products and available services at a business location****Support for service-related capabilities in business locations** Enable service-related capabilities for business locations by activating the optional Customer Service Case Types (sn_csm_case_types) plugin.
Data Privacy	**Full scan support added** Data Discovery jobs support full type scans, which scan for sensitive data patterns in all the records. You can also use an incremental scan, which acts as a delta scan from the point of the last full scan. **XLS and CSV support added** Data Discovery attachment scan type jobs now support XLS and CSV files. Attachment scans are incremental scans by default. **Text to Regex from a LLM** Create a regex data pattern with the help of Now Assist, which supports all third-party LLMs approved by ServiceNow.
DevOps Change Velocity	**Support for MID Server cluster** Improve load balancing and failover protection by selecting a MID Server cluster when connecting to a

Application or feature	Details
	tool instance associated with a MID Server cluster. This configuration enables multiple MID Servers with relevant capabilities to be grouped. **Improved UX for DevOps Change health scans** Run health scans and analyze findings efficiently in the DevOps Change workspace with an intuitive and user-friendly interface. **Pipeline association for GitHub Actions** When onboarding GitHub Actions pipelines through the App onboarding catalog or the onboarding APIs, now only the selected pipelines are associated with the DevOps app. If no pipeline is selected, all pipelines within the specified repository are associated. **Tool connection check status** If a tool is marked as Disconnected because of a system-generated failure during an unsuccessful connection check, any subsequent successful check automatically updates the connection status to Connected. If you manually disconnect the tool, the tool status remains Disconnected even if there's a subsequent successful connection check. **New roles for vulnerability integration** • The sn_vul.app_sec_manager role is added to the DevOps Tool Owner [sn_devops.tool_owner] role when the DevOps Vulnerability Integrations plugin (sn_devops_vul_ints) is installed. • The sn_vul_veracode.configure_integration role is added to the DevOps Tool Owner [sn_devops.tool_owner] role when the Vulnerability Response Integration with Veracode plugin (sn_vul_veracode) is installed. **Prod deploy commit logic for other step types** Update the *sn_devops.commit_rel_change_step_type* property to have other step types, like Test or Deploy, use the same commit logic as Prod Deploy. **Override start and end time of a change request** Set the **#sn_devops.change_request.auto_close_allow_override_start_time** and **#sn_devops.change_request.auto_close_allow_override_end_time** properties as false to consider the change request start and end time instead of the pipeline's when the #autoCloseChange#parameter is enabled in a pipeline. **Node version of DevOps extension** The node version of the ServiceNow DevOps#extension has been upgraded to version 20.x in Azure DevOps. **Enhanced pipeline governance in GitLab**

Application or feature	Details
	Change requests can now be auto-closed without requiring you to install the Change Management - State Model [Legacy] plugin.
Digital End-User Experience	**Use DEX Desktop Assistant** By default, the Desktop Assistant home page now has two sections: My resources and Quick links. My resources includes Device health check and Network test cards, while Quick links includes Employee Center and Outages cards. **Modified Devices page** • The device view is now optimized and segregated into two tabs based on the user persona. The **All devices** tab is for DEX operators, and the **Devices by ACC status** tab is for DEX operators and DEX admins. • The application performance tab in the Device page has been enhanced. Filter performance for installed apps and web apps by date and time, and view the performance metrics for the last seven days. • Access the performance page to view the performance and details of both installed and web applications. • Filter the active devices to view only the devices that were active in the last five minutes. **Updated landing page** The world map in the **Devices** section on the DEX landing page now shows the devices list instead of users list. The Impacted Devices card now shows the count of impacted users based on the alerts of both the devices and the applications running on that device. **Updated users link reference** The user link now redirects to Users page in Service Operations Workspace. **Changed device alerts** View alerts for both your device and its applications in the Alerts section of the Devices page.
Dispute Rules Content Pack for Mastercard	**Dispute Rules Content Pack for Mastercard chargeback eligibility rules updates** Transformed chargeback eligibility rules into technical formulas to determine the eligibility or ineligibility of a selected transaction for chargeback. **Dispute Rules Content Pack for Mastercard intake questionnaire updates** Updated the dispute questionnaire provided through Dispute Rules Content Pack for Mastercard by adding new questions and updating existing questions.

Application or feature	Details
Encryption	**Field Encryption Enterprise API** Use all three Encryption APIs to encrypt on attachments, without needing to use any one specific API.
Encryption Key Management	**Updates to GlideEncrypter functionality** The GlideEncrypter API has been updated to use AES256-GCM encryption via the Key Management Framework. If needed, your instance can be changed to use legacy 3DES encryption, but this task can only be done by ServiceNow support. **Disable GlideEncrypter on your instance** GlideEncrypter can be enabled or turned off using the **glide.security.glideencrypter.allow** system property. This property is unavailable on new Zurich instances, but administrators with the security_admin role can edit this property in upgraded instances. When this system property is set to **false**, users see this error when attempting to run GlideEncrypter. `Unsupported call to GlideEncrypter. Details: GlideEncrypter is deprecated and now returns null, please refer KB1320986`
Enterprise Architecture	**Granular level admin role changes** Added granular level admin role (sn_apm.apm_admin) to the following system properties in the Enterprise Architecture Workspace: • glide.ui.sn_apm_di_digital_interface_activity.fields- Digital Interface activity formatter fields. • glide.ui.sn_apm_di_digital_integration_activity.fields- Digital Integration activity formatter fields. • sn_apm_tpm.discoveryModelProductTypesForTPM- Product types of discovery models to consider for TPM software suggestions. • sn_apm_tpm.configurationItemsWithSoftwareInstalls- Non hardware configuration items which have software models for TPM discovery process.
Enterprise Asset Management	**Enterprise Asset Management demo data migration** All Enterprise Asset Management demo data has migrated from the Enterprise Asset Management application to either the EAM Demo Data application or Indoor Mapping for Assets application. The EAM Demo Data application contains all Enterprise Asset Management demo data except for indoor mapping-related demo data, which is now included in the Indoor Mapping for Assets application.

Application or feature	Details
	Shipment asset table label Starting from the Enterprise Asset Management version 9.1.0, the Shipment asset [sn_itam_common_m2m_shipment_asset] table label has been renamed to Shipment line [sn_itam_common_m2m_shipment_asset]. **Shipment quantity field on the Shipment Details form** Starting from Enterprise Asset Management version 9.1.0, a new field **Shipment quantity** has been added to the Shipment Details form. The **Shipment quantity** field displays the quantity of assets shipped for the shipment record.
Event Management	**Automated regex generation** Effortlessly extract event field content into alert fields with automated regex generation, reducing manual effort and improving accuracy. **Support for OAuth authentication method in Kafka connector** Starting in version 2.17.1, you can use OAuth authentication with the Kafka connector, allowing you to securely connect and manage access without storing or sharing static credentials. **Support for SCOM 2025 version** Starting in version 2.17.1, you can now check SCOM 2025 compatibility with the current code, ensuring that the connector setup, alert collection, and Metric Intelligence data ingestion work seamlessly with the latest SCOM release. This helps maintain integration reliability, reduces configuration errors, and ensures smooth upgrade readiness. **Group automation enhancements** Starting in version 26.11.0, group automation now supports grouping by impacted service instances and related log properties, with enhanced test automation details for better visibility. These updates enable more effective analysis of alert correlations and more accurate validation of grouping logic. The updated Test Automation section provides detailed insights into alert groups, including total alerts, description, grouping category, node, and time, with support for sorting by grouping type. **Validate CI identification in Enrich automation** Starting in version 26.11.0, you can ensure CI attributes are present in the **Additional info** field of the alert for accurate matching and test CI identification on sample events.
External Content Connectors	**Zurich Patch 7**

Application or feature	Details
	Sitemap support in the Webcrawler external content connector Retrieve content and links from URLs found in sitemaps defined for your web source system when running content crawls for the Webcrawler external content connector. A content crawl only retrieves sitemap URLs that include the crawl's starting point URL. **Start point links for scheduled partial content crawls** View the start point for a scheduled partial content crawl via a link in its entry in the the external content connector's list of crawls. **Start point links in partial content crawl history entries** View the start point for a scheduled partial content crawl via a link in its crawl history entries. **Limited Role-Based Access Control (RBAC) support in the Atlassian Confluence Cloud external content connector** Map source system user and group permissions assigned via RBAC roles to users in your ServiceNow AI Platform instance. **Zurich Patch 4** **Analytics for external content connectors** Analyze connector performance and behavior in a selected time period using the redesigned Analytics page. You can access this page from the connector editor. **Atlassian Jira Cloud connection settings** The Atlassian Jira Cloud external content connector no longer requires your Atlassian Jira Cloud instance ID as a connection setting. **Microsoft OneDrive connection settings** The Microsoft OneDrive external content connector now accepts certificate SHA1 thumbprint hashes in hexadecimal format as well as in base64-encoded format. **Microsoft SharePoint Online connection settings** The Microsoft SharePoint Online external content connector now accepts certificate SHA1 thumbprint hashes in hexadecimal format as well as in base64-encoded format. **Microsoft Teams connection settings** The Microsoft Teams external content connector now accepts certificate SHA1 thumbprint hashes in hexadecimal format as well as in base64-encoded format. **Zurich Patch 1** **Webcrawler external content connector** The predefined web sources external content connector has been subsumed into the new Webcrawler external content connector, which enables you to specify a custom web source or select a predefined one.

Application or feature	Details
Field Service Management	**Capacity and Reservations Management** Use the aggregated schedules of all agents of a territory to allocate resources until a specified cut-off date, after which predicted capacity can be used for bookings. This feature optimizes resource utilization and capacity management for a territory, which helps ensure that business services remain available without overburdening resources. **Google Maps#APIs for#Field Service#capabilities** Effective March 1, 2025, Google has designated the Places API, Directions API, and Distance Matrix API as Legacy services. The newer versions of these services are Places API (New) and Routes API. You can't generate new API keys for these legacy services. However, you can continue using these services with the existing API keys. If you create a Google API key after March 2025, you must upgrade to a supported ServiceNow release version to verify compatibility. **Smart Assessment for Field Service** Use Smart Assessment for Field Service to do the following: • Streamline asset identification and data entry by scanning and capturing barcode values directly within a work order questionnaire. • Configure a predefined range for numeric inputs to minimize errors and help ensure data accuracy. • View completed questionnaires in the workspace. • Create follow-up work order tasks from a work order questionnaire based on the responses. • Allow users to retry or replace an attachment if the upload is unsuccessful. **Field Service Scheduling** Migrates data from the Work Parameter table to the Resource Schedule Attribute table for each technician, confirming that work parameters align with the new schedule attributes.
Financial Services Card Operations	**Overview of the Dispute Management workflow** Track the progress of the investigation workflow intuitively with a redesigned user interface that presents each transaction within a dispute case using a clear, process-based layout. This new layout visualizes the distinct stages of the investigation workflow, Investigate, Chargeback, and Closure, which enhances visibility and dispute management efficiency. **Managing disputes integrated with Mastercard**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Integrate the Dispute Management workflow with subflows that communicate with Mastercom, supporting an end-to-end dispute life-cycle from raising an initial dispute to final resolution. **Unified dispute intake experience** The dispute intake process has been streamlined to provide a clear, intuitive experience for customers and dispute agents, resulting in faster resolution and reduced manual effort. A unified interface now allows cardholders, account holders, and agents to raise disputes for both card and non-card (ACH) transactions seamlessly.
Financial Services Operations Core	**Added field to Financial transaction table** Added the **Payment Card** field to the Financial transaction [sn_bom_transaction] table as part of the Payment card application.
Generative AI Controller	**Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Direct action calls removed from Generative AI Controller** Starting with Zurich Patch 5, the Generative AI Controller (GAIC) no longer supports direct action calls in order to support the security requirements that all AI capabilities be protected by Access Control Lists (ACLs). To create custom generative AI functionality, use Now Assist Skill Kit instead. • Configure actions in the Generative AI Controller • Generate Content to create AI-generated text responses • QnA to answer user questions • Summarize to shorten long or complex text • Generic Prompt to generate ideas or content on any topic • Sentiment Analysis to identify the sentiment of user input For more information, refer to KB KB2716977: Generative AI Controller actions are no longer avaliable for custom workflows.
Goal Framework	**Active goals**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	By default, only active goals—those goals with the **Active** field set to **true**—are displayed in the **Goal** and **Parent goal** reference fields across all applicable tables.
Goal Framework for SPM	**Goal system properties** Users with the sn_gf_goal_admin role assigned can update goal-specific system properties: • *sn_gfa.weeklyCheckInDayToMapMonth* - Defines the end day of the week used for mapping weekly target breakdowns to a month. The default value is Friday. • *glide.ui.sn_gf_goal_target_activity.field* - Enables activity stream for fields of the targets. • *sn_gfa.target_breakdown_decimals* - Sets the number of decimal places displayed for target values when generating target breakdowns. The default value is 2.
Hardware Asset Management	**Shipment asset table label** Starting from the Hardware Asset Management version 14.0.0, the Shipment asset [sn_itam_common_m2m_shipment_asset] table label has been renamed to Shipment line [sn_itam_common_m2m_shipment_asset]. **Shipment quantity field on the Shipment Details form** With Hardware Asset Management version 14.0.0, a new field **Shipment quantity** has been added to the Shipment Details form. The **Shipment quantity** field displays the quantity of assets shipped for the shipment record.
Healthcare Operations Core	**Embedding Care Team Portal in Epic Hyperspace via Hyperdrive** The process for embedding Care Team Portal into your EMR system has been streamlined to enable more efficient launch context configuration. The portal now supports capturing launch context tokens across multiple launches within the same Hyperspace session when embedding Care Team Portal into Epic's Hyperspace. Previously, only tokens captured from the initial launch were displayed. The FHIR endpoint is now retrieved dynamically, eliminating the need to embed it directly in the Single Sign-on Script. **Setting up roles and responsibilities for Healthcare Operations users** Roles and responsibilities have been updated to enable more selective user access.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	The following responsibilities were added in Healthcare Operations Core: • Support Department Agent • Support Department Manager The following responsibilities were renamed in Healthcare Operations Core: • Team Member has become Care Team Member • Team Manager has become Care Team Manager Healthcare operations users can now be assigned these responsibilities in the Edit member related list within healthcare organizations.
ITOM Visibility	**Use the enhanced Discovery and Service Mapping Patterns for extended discovery** Note the following new Pattern improvements using version 1.29.0: • IBM Hardware Management Console (HMC): additional fields in IBM Frame [cmdb_ci_ibm_frame] and IBM LPAR Instance [cmdb_ci_lpar_instance] tables • Dell PowerMax storage: additional fields in Storage Server [cmdb_ci_storage_server] table • Pure Storage FlashArray: additional fields in Storage Server [cmdb_ci_storage_server] table • NetApp Server and Cluster: additional fields in Storage Server [cmdb_ci_storage_server] table • AWS Auto Scaling groups: The relationship between Instance Scale Set and VM Instance has changed from **Members::Member of** to **Managed by::Manages** **Employ Tag-based mapping in the Service Mapping Workspace** Easily view data and create new tag-based services through an enhanced workspace that includes a dedicated dashboard for managing your tag-based services. **Name updates in Discovery and Service Mapping Patterns** Name updates starting with Discovery and Service Mapping Patterns version 1.28.0: • The RHV cloud provider has been changed to oVirt • The RHV MID Server capability has been changed to oVirt • The label for the [cmdb_ci_rhv_ldc] datacenter type has been changed from RHV LDC to oVirt LDC • The label for the [rhv_credentials] credential type has been changed from RHV Credentials to oVirt Credentials

Application or feature	Details

	• The following pattern names have been changed from RHV to oVirt:
	  ○ From RHV Clusters and Hosts to oVirt Clusters and Hosts
	  ○ From RHV Discover Logical datacenters to oVirt Discover Logical datacenters
	  ○ From RHV Virtual Machines to oVirt Virtual Machines
	  ○ From RHV Discover Manager Instance to oVirt Discover Manager Instance
	• The following table labels have been changed from RHV to oVirt:
	  ○ The [cmdb_ci_rhv_vm_instance] table label from RHV Virtual Machine Instance to oVirt Virtual Machine Instance
	  ○ The [cmdb_ci_rhv_cluster] table label from RHV Cluster to oVirt Cluster
	  ○ The [cmdb_ci_rhv_ldc] table label from RHV LDC to oVirt LDC
	  ○ The [cmdb_ci_rhv_manager] table label from RHV Manager to oVirt Manager
	  ○ The [cmdb_ci_rhv_object] table label from RHV Object to oVirt Object
	  ○ The [cmdb_ci_rhv_server] table label from RHV Server to oVirt Server
	
	Benefit from an updated, curated selection of application service candidates in Service Mapping
	
	If you have ITOM Content Service installed, you can view an enhanced selection of Application Service Candidates (ASCs) that provides more accurate and useful information, with an automatic filter applied to hide irrelevant and non-essential components.
	
	Automate your certificate workflows using Keyfactor EJBCA and ACME
	
	Starting with version XX of Certificate Inventory and Management, you can automate the life cycle of requesting, renewing, and revoking your certificates by integrating the Keyfactor EJBCA certificate authority with the ACME automated certificate management environment. Predefining your routing policies enables automated completion of the fields in your Certificate Signing Request (CSR) and provides a secure environment for an automated flow of certificates.
	
	Discover a Root Certificate from a Browser
	
	Standard Discovery collects information about the certificates stored in your servers. You can also discover

Application or feature	Details
	root certificates stored outside your servers and connect them to your certificate chain. **Kubernetes Visibility Agent (KVA)** KVA performs continuous discovery to detect changes on resources in a Kubernetes cluster and updates the CMDB with the latest data. Starting with KVA version 3.11.0, and Informer version 2.5.0, absent namespace CIs aren't deleted automatically. Create a scheduled job to remove them. Starting with KVA version 3.11.0, and Informer version 2.5.0, map application services based on traffic connections between the workloads in Kubernetes, by using istio and linked service meshes or the DaemonSet service. **Prevent credential exposure by updating HTTP Classify behavior** The HTTP Classify probe no longer attempts credentials over the HTTP protocol by default. This change enhances security by helping prevent potential exposure of credentials over unencrypted connections. To override this behavior, a new MID Server property, *mid.http_classy.allow_credentials_over_http*, has been introduced. Enabling this setting might expose credentials to man-in-the-middle (MitM) attacks. Therefore, it's strongly recommended to keep this property set to false and use HTTPS whenever possible. **Automated Certificate Renewal** Starting with version 3.8.2, Certificate Inventory and Management introduces automated renewal capabilities. Administrators can set certificates to renew automatically, either when creating the certificate or by applying the setting to an existing one. The system also enables you to define the renewal window by specifying the number of days before expiration that the process should begin.
Identity	**Access analyzer** Display the Security data filter that is in the **Applied** or **Undefined** status in the Access Analyzer results. Access Analyzer also supports the new criteria in ACLs that is controlled by reference. **Important:** Access Analyzer is available in the ServiceNow Store. For more information, visit ServiceNow Store.
Impact	**The outcome summarization Now Assist skill is now turned on by default** This skill is automatically available to appropriate role users for the application. This change simply activates

Application or feature	Details
	the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill is turned on automatically (the skill was never turned on, then off again). Previously configured skills that were turned on, then off, remain inactive. **GenAI-powered Root Cause Summary** • Use the dynamically generated Root Cause Analysis (RCA), which is readily available in the RCA History page. RCA is available not only for alerts but also for the Critical or Warning scenarios of the performance category. This feature is a change to the existing functionality and is delivered dynamically. • The core Root Cause Correlation functionality is being offered under the revised name of Root Cause Analysis to ensure product consistency. **Artificial Intelligence Readiness Assessment Accelerator** The content and flow of this Accelerator has been streamlined to provide a clearer assessment and more targeted guidance on your readiness to adopt ServiceNow Generative AI capabilities (Now Assist). **Jumpstart Your ServiceNow AI Journey Accelerator** This offering is now available across all packages, and includes clearer guidance on how customers can leverage ServiceNow's AI capabilities to achieve their organizational goals and objectives. **Use Guided Setup for Impact Store Application configuration** Use automated registration, the preferred method, to initiate the connection and registration to the Impact Delivery Instance provider instance in one combined step.
Incident Management	**Incident task record behavior changes** When an incident task is closed, you can no longer edit the field values in the incident task form. Disabling the fields helps prevent any further updates or modifications to closed incident tasks, reducing audit risks. **Incident and problem workflow changes** When a problem record is linked to an incident or multiple incidents, the incident and problem workflow has the following enhancements:

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• When a fix or workaround is shared from the problem record, an event is added in the activity stream of the incident record as work notes. The event includes a brief description of the provided fix or workaround and a link to the problem record. • When a Known Error (KE) article is linked to the problem record, an event is added in the activity stream of the incident record as work notes. The event includes the links to the problem record and the KE article.
Industrial Process Manager	**Admin role dependency** Several new granular admin roles enable developers to complete administrative configuration tasks without requiring the full admin role. **Viewing multiple records at once in the Equipment Model Manager** In the Equipment Model Manager of the Industrial Workspace, view multiple records and keep the record context available instead of only viewing one record at a time. When creating or opening multiple records, the records open in single row of tabs at the same level so you can navigate back to other opened records.
Integration Hub	**New debugging property for Stream Connect** Enable more detailed logging in the Stream Connect logs with the *glide.ih.kafka.stream_connect.debug* property. This property replaces the *glide.ih.kafka.debug.consume* property. **Spoke Generator license changes** Starting with Zurich, the Spokes list page and Spoke details pages are a part of the ServiceNow Integration Hub Starter Pack. To create a spoke using OpenAPI or Postman collection specification or Now Assist, you need a ServiceNow Integration Hub Professional license in your prod and sub-prod environments.
Knowledge Graph	**Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.
Localization Workspace	**Dynamic artifact detection**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Dynamic artifact detection enables Localization Workspace to identify all translatable content, including your custom artifacts. From version 1.1.0. **Status synchronization** With status synchronization, you see the same status for your translation request in Localization Workspace as you see for the corresponding project in Localization Framework (Submitted, In progress, Complete). From version 1.1.0.
MID Server	**Smart Workload Manager in clusters** MID Servers in a cluster now assign jobs based on the true load, using a variety of criteria. The smart workload manager continuously evaluates the queue size, execution time, CPU usage, and buffer size. The manager then assigns tasks to ensure that no server is overloaded. **Enhancements to MID Server logging and JFR** MID Server logging has been improved with log backups that are preserved in a compressed format on local host with option to fetch to the instance. You can enable JFR logs every four hours and backup JFR files for a set time. **MID Server has improved performance during heavy discovery load** MID Servers no longer have performance degradation due to script include cache misses when using large amounts of worker threads.
Mentoring	**Create a Mentoring program** The multiple mentoring program enables mentor admins to configure multiple programs that can run at the same time. It enables admins to restrict access based on employee criteria. The multiple mentoring program enables employees to choose and enroll in available mentoring programs, edit their preferences, search for mentors, and send connection requests. To make a program visible in the Mentoring app, admins need to configure programs with the following information: • Short description • Long description • Employee criteria
Mobile Platform	**Enhanced native features in hybrid web screens** Enhanced native features in hybrid web screens that support functionality such as native search, quick

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	actions, and customizable welcome messages within hybrid screen launcher or header tabs. **Enhanced chat push notifications** Tap enhanced chat push notifications to go directly to the associated chat. **Promoted actions and suggested topics** See how Virtual Agent can assist you with suggested actions and topics related to your request.
Next Experience Developer (NED) Tools	**Service Workers tab in the Next Experience Inspector** The **Service Workers** tab displays cache buster details for viewing how service workers impact page performance.
Notifications	**Email digest for multiple target records** The email digest now supports both single or multiple target records within a set time interval. **Notification preferences** Enables admins to control the list of notifications displayed for users under the advanced notification preferences.
Now Assist	**Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Using Now Assist Readiness Evaluation** • View the updated legend that now includes None-XXL estimated remediation efforts along with assessment icon explanations. • Understand estimated remediation efforts more clearly now that blocker areas are included in the estimated remediation efforts and non-blocker observations are not included in estimated remediation efforts. • Select any widget on the Agentic AI - Assessment dashboard and Now Assist assessment dashboard tabs to open that widget's data table in a separate tab. **Zurich Patch 4** **Some Now Assist skills are turned on by default** The new default behavior works as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• New customers: When you install a Now Assist product, designated skills are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive. **Zurich Patch 1** Enable translation settings is now a multilingual service in the Now Assist Admin console.
Now Assist AI agents	**Zurich Patch 7** **Updates to platform agentic workflows** Several platform agentic workflows have seen updates to how they work and what configurations are available for AI admins. Generate resolution plans now takes related records into account when planning next steps. Generate my work plan shows suggested next steps and reruns after work is done. Process images for new tasks now links to the created task record upon creation and includes certain metadata from the image. **Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Zurich Patch 4** **Platform Request status AI agent** The request status AI agent provides an AI-generated summary of the most recent comments from the AI agent or other people working on a ticket. You can add attachments to an open ticket or incident to support a request action. To find more information about an open ticket, you can ask the request status AI agent follow-up questions based on previous answers from the agent. **Understand the Now Assist AI agents** The base reflection prompt has been replaced with the ReAct Orchestrator prompt, introducing a Route scheduling mode when an agent needs assistance from another agent during execution. **Configure Now Assist AI agents** Run AI agents and agentic workflows concurrently in AI Agent Background Channel and in Non-interactive mode.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Add a Knowledge Graph to an AI agent The Global Graph resource for creating a Knowledge Graph tool has been renamed to Enterprise Graph. **Zurich Patch 3Zurich Patch 3** **Review and complete actions on requests using the Request Status AI agent** The ticket status AI agent has been renamed to the request status AI agent. Request details include an AI-generated summary of the most recent comments on a request. Performance has been improved. **Confirm your web search tool provider data policies** If you select Google as your web search provider for web search AI agent tools, Google uses Grounding with Google Search, offered under a Global Standard deployment, and data may be routed to places outside of regions specified on your ServiceNow AI Platform instance as a result. Consult your organization's data policies before enabling AI agents with web search tools that use Google as the provider. **Zurich EA** **Add version control to instructions sent to the LLM** You can review multiple versions of instructions sent to the LLM when designing your AI agents or agentic workflows. You can choose which version is active to help with testing or evaluating the success of an AI agent or agentic workflow to compare against other versions. Versions are named and ordered by time created for organizational purposes. **Duplicate and edit existing tools when creating new AI agents** When adding a tool to an AI agent, you can select an existing tool instead of creating a new tool. After an existing tool is added, you can change it to suit the specific needs of an AI agent. **Now Assist AI agents reference** The *sn_aia.enable_agent_tool_input_value_overrides* system property is migrated to the Agent properties [sn_aia_property] table.
Now Assist Skill Kit	**Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Now Assist for App Engine	**Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.
Now Assist for CMDB	**Zurich Patch 7** The skill answers your questions on CI classes and attributes to help you work in CI forms, dashboards, home pages, and other views on the workspace. You can submit similar queries on the Explore CI view. **CMDB searches can include relationships** Search queries can depend on relationships between CIs and can span multiple tables. For example, you might ask: "Search for servers that depend on databases - only Linux servers running Redhat". **Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Zurich Patch 4** **Some Now Assist skills, agents, and agentic workflows are turned on by default** The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive. **New role required for the Create configuration item agentic workflow**

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	The sn_cmdb_admin role is now required to use the Create configuration item agentic workflow (was sn_cmdb_editor). **Role configuration required for agentic workflows and AI agents** Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they won't execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add. After the roles are configured, users must have the specified role to invoke the agentic workflow or AI agent. **Create a CI using Now Assist** Verbal interaction with this feature has improved. Occasionally, you might need to create a CI manually. To help you, the CI creator agentic workflow accepts your natural language request and verifies that it understands which class the new CI should belong to. The workflow then checks Identification and Reconciliation engine (IRE) rules to determine the required attributes for the CI and requests that information. After you provide sufficient data, the workflow ensures that the proposed CI includes the attributes that you requested, complies with IRE rules, and is not a duplicate. The workflow then creates the CI. **Getting advice from Now Assist on CMDB governance** To help users understand the value of each step in the process, responses now include richer context. The CMDB Governance agentic workflow supports administrators and service owners by improving CMDB data governance. Before starting in on each governance task, the workflow presents the reasons for the task to help you better understand the importance and benefits of the activity. The objective is to ensure that CMDB data is accurate and complete so that users can trust the data. **Use Now Assist to search the CMDB for CIs** Verbal interaction with this feature has improved. Users can now select the CI inline when multiple CIs are returned as matches. A summary of the CI now appears in the conversation. The CMDB search agentic workflow enables you to search for CIs by specifying any of several attributes of the CI of interest. The workflow accepts your natural language request, verifies your search goal, and then generates a keyword search, a single-table search with dot walks, or a multi-table search, depending on the information that you provided. The workflow can infer CI relationship data to generate an appropriate query. **View CI information with the Now Assist CI summarization skill**

Application or feature	Details
	Verbal interaction with this feature has improved. You can now view a concise summary of the key CI data by selecting the CI on a CI form, in a workspace page, or on any list view. The summary can include discovery data, ownership, and key related items such as open incidents, alerts, problems, upcoming change requests, and security vulnerabilities. Additionally, the summary lists the service instances that the CI is part of. Resolve de-duplication tasks with support from the Now Assist Manage duplicate CIs skill. CMDB administrators follow step-by-step guidance to perform remediation, and can preview remediation results before applying a template. **Fix SGC import set issues with the Now Assist SGC diagnosis skill** Verbal interaction with this feature has improved. You can now diagnose a failed import set that is associated with a Service Graph Connector to get a summary of the errors and recommendations for resolving the issues.
Now Assist for Collaborative Work Management (CWM)	**Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Zurich Patch 4** **Some Now Assist skills are turned on by default** The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.
Now Assist for Configure, Price, Quote (CPQ)	**Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Application or feature	Details
	• Sentiment analysis dashboard support has expanded to include interaction records, and positive and negative sentiment drivers have been consolidated into a single Sentiment Drivers view. • The top negative assignment group and number of cases by channel visualizations have been merged into the new Impact Explorer visualization for streamlined analysis. • Widget placement in the Workforce Optimization dashboard has been optimized for accessing insights and trends across interfaces. **Enhancements in Trending topics dashboard** • The Accounts, Products, Assignment Groups, and Channels graphs have been consolidated into the Impact Explorer card. • Search and pagination have been added to the list header. • The Historical trends resurfacing graph has been added the Trending topics dashboard to show historical trends at a glance. • Trending topics have been expanded beyond the top 10 results to provide deeper insight into emerging patterns. • The trending topics widget has been added in the Workforce optimization dashboard as the **AI insights** tab. **Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Zurich Patch 4** **Enhancement in case summarization skill flow** The **Define trigger** step has been added to the case summarization flow. This step enables admins to choose between the User Trigger option, where users select a button to generate a summary, and the Automatic Trigger option, where summaries are automatically generated based on specified conditions. **Enhancement in email reply recommendation skill** Generate reply suggestions in the compose area using preset templates that include headers, footers, and signatures.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Unified admin experience for Now Assist skills Skills cloned in Now Assist Admin console can now be edited in Now Assist Skill Kit. This update unifies the admin experience across Now Assist Admin and Now Assist Skill Kit, enabling users to add headers, configure prompts, and manage Now Assist skills in one location. The migration supports case summarization and resolution notes generation. **Role configuration required for agentic workflows and AI agents** Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they won't execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add. After the roles are configured, users must have the specified role to invoke the agentic workflow or AI agent. **Display sentiment scale in case list view** Sentiment scoring has been added to both the case record page and list view across cases, giving agents immediate visibility into the emotional tone of customer interactions. The sentiment scale ranges from very positive, positive, neutral, negative, to very negative. **Zurich Patch 3** **Multilingual support** Enhanced multilingual support in chat summarization, resolution notes, and knowledge generation. Leveraged native multilingual LLMs for improved fluency and domain specificity, addressing translation inconsistencies across Tier 1 and Tier 2 languages. **Early Availability** **Suggested steps in the Recommended Actions tab** View the suggested steps on the **Recommended Actions** tab in the contextual side panel. If suggested steps are available for a case, Now Assist for CSM generates and displays these steps in a card at the top of the **Recommended Actions** tab. **KB generation skill configuration enhancement** The **Is Template** field on the KB generation skill configuration record is enabled by default. With the skill_builder.admin role, you can copy or clone the KB generation skill and customize the prompt in the skill kit.
Now Assist for Enterprise Architecture (EA)	**Zurich Patch 5** **Changes to Now Assist usage measurement**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Zurich Patch 4** **Role masking** Role masking enables users to limit the roles and privileges of agentic workflows during tool execution. Agentic workflows and their AI agents that get installed with Now Assist applications are assigned pre-defined roles. If you select *`Users with specific roles`* for user access, you must configure the security controls to include these roles. Data access settings must also include these roles. For the instructions to change the security controls, see Define security controls for an agentic workflow. **Some Now Assist skills, agents, and agentic workflows are turned on by default** The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive.
Now Assist for FSM	**Create Work Order AI agent performance improvements** The Create Work Order AI agent was optimized to reduce latency and improve response times. Inter-agent communication was streamlined to minimize redundant processing during work order creation. **Removed prompt headers** The prompt headers have been removed from the work order summarization skill to support third-party large language models. You can now customize prompts via a hyperlink to the Now Assist skill.
Now Assist for Financial Services Operations (FSO)	**Zurich Patch 5** **Changes to Now Assist usage measurement**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Zurich Patch 4** **Disputes intake via Virtual Agent** Disputes intake via Virtual Agent has the following updates: • Questions presented to the user for disputes will follow the dispute questionnaire in the disputes playbook. • Bypass inferring answers to certain questions so that customers provide answers directly, ensuring the correct dispute category and dispute reason are determined. • Supports ACH disputes, Disputes intake via Virtual Agent including submission of the Written Statement of Unauthorized Debt (WSUD). • Checks if the disputed transaction is already part of an existing case. **Role configuration required for agentic workflows and AI agents** Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they won't execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add. After the roles are configured, users must have the specified role to invoke the agentic workflow or AI agent.
Now Assist for HR Service Delivery (HRSD)	**Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Zurich Patch 4** **Functional change** The resolve HR cases agentic workflow has been broken down into three agentic flows:

Application or feature	Details
Now Assist for IT Operations Management (ITOM)	**Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **AIOps AI agents removed from the analyze alert impact agentic workflow** Four AIOps AI agents have been removed from the analyze alert impact agentic workflow because they're now available in the manage alerts autonomously agentic workflow. AI agents for Dynatrace, Kentik, and New Relic remain in the analyze alert impact agentic workflow to help you learn about and respond to alerts. **Some Now Assist skills, agents, and agentic workflows are turned on by default** The skills are automatically available to appropriate role users for the application, such as ITIL roles on incident forms or change forms. This change simply activates the skill and does not touch the roles that may be needed to use the skill. The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills and agentic workflows are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill, agent, or agentic workflow is turned on automatically (the AI asset was never configured and turned on, then turned off again). Previously configured skills and agentic workflows that were turned on, then off, remain inactive. **AIOps LEAP rebranding** AIOps LEAP is renamed as Learning-Enhanced Automation Platform reflecting expanded scope beyond just Playbook creation. **Service Operations Workspace (SOW) Integration** Playbooks appear in SOW module. **Data Range Display** The AIOps LEAP landing page shows analyzed data date range for automation teams to be aware of time-ranges of analysis. **Zurich Patch 4** **Role configuration required for agentic workflows and AI agents**

Changes to Now Assist usage measurement

Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.

Configuration item details for suggest configuration items for a change request workflow

Provide details such as class, location, and environment to find configuration items (CIs) relevant to a change request while using the suggest configuration items for a change request agentic workflow from the Now Assist panel.

Zurich Patch 4

Role configuration required for agentic workflows and AI agents

Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they won't execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add. After the roles are configured, users must have the specified role to invoke the agentic workflow or AI agent.

Some Now Assist skills are turned on by default

The new default behavior works as follows:

Application or feature	Details
	Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Zurich Patch 4** **Now Assist in Virtual Agent conversational prompt auto-complete suggestions** Auto-complete suggestions for Now Assist in Virtual Agent conversational prompts are only returned from the search user's domain. Suggestions are disabled if they match any exclusion rule entry from the Search Suggestion Exclusion List [sys_search_suggestion_blacklist] table. The system scores suggestions based on how search users interact with and rate their Genius Result responses, and preferentially displays higher-scored suggestions. **Zurich Patch 1** **Semantic vector search indexing includes Catalog Item short descriptions** Semantic indexing now indexes short descriptions from Catalog Item source records to improve search recall and make field indexing more consistent between legacy (keyword) and semantic indexing. **Now Assist Q&A Genius Results** The Now Assist Q&A Genius Results feature is in maintenance mode. This feature will have no new enhancements but will have continued support. Similar and improved functionality is available in the newer Now Assist Multi-Content Response Genius Results feature. For more details on this feature, see Now Assist Multi-Content Response Genius Results. **Now Assist Actions Genius Results** The Now Assist Actions Genius Results feature is in maintenance mode. This feature will have no new enhancements but will have continued support. Similar and improved functionality is available in the newer Now Assist Multi-Content Response Genius Results feature. For more details on this feature, see Now Assist Multi-Content Response Genius Results. **Microsoft SharePoint Online login prompts in Knowledge Graph user citations** If you're not logged in to Microsoft SharePoint Online, Knowledge Graph user citations in Now Assist Multi-Content Response Genius Result answers now prompt you to log in. When logged in, you can check any user citation in a Genius Result answer to see the list of files the cited user has shared with you in Microsoft SharePoint Online.

Application or feature	Details
Now Assist in Contract Management	**Zurich Patch 7** **Configure use case mappings for metadata and obligation extraction** Clear the **Contracts created from contract request** check box on the use case mapping forms for the contract metadata extraction and contract obligation extraction skills to extract metadata and obligations form signed contracts that are uploaded directly on a contract record. **Conversational contract search and insights Workflow** The Now Assist powered conversational search feature's improved experience enables you to: • View results in a listing view, making it easier to scan, compare, and navigate contract information. • Open contract documents directly from the search results and perform an in-document search. The conversational search feature does not support searching within contract documents that are scanned PDFs. **Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Zurich Patch 4** **Some Now Assist skills are turned on by default** The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive. **Enhanced Manage contract repository agentic workflow** The manage contract repository agentic workflow has been optimized for enhanced performance. It now utilizes a single agent, the Contract Repository AI agent to extract both contract metadata and obligations from signed contracts, and retrieve required information to calculate the contract reminder date.

Application or feature	Details
	Role configuration required for agentic workflows and AI agents Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *Users with selected roles* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they won't execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add. After the roles are configured, users must have the specified role to invoke the agentic workflow or AI agent. **Zurich Patch 1** **Extract metadata from signed contracts automatically** Use the AI agents in the manage contract repository agentic workflow to automatically extract metadata from signed contracts and calculate the contract reminder dates for contract renewal or termination. You can review the AI results in the contract playbook and update it if necessary before saving it. **Contract metadata extraction use cases** Support for 14 additional metadata fields in the CM Pro - Contract Metadata Extraction use case is available in the base system.
Now Assist in Document Intelligence	**Zurich Patch 7** **Document and visual insights AI agent enhancements** Tools used by the document and visual insights AI agent are consolidated to improve performance. **Changes to limitations** The file size limit for uploading a file using the attachment summarization feature is changed from 10MB to 20MB. **Document Intelligence for Now Assist Skill Kit** The document and visual intelligence capabilities used to leverage extraction, question answering, and summarization capabilities for skills created with Now Assist Skill Kit are available to users with the appropriate role(s). **Now Assist in Document Intelligence skills are now turned on by default** The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills are turned on automatically. • Existing customers who are upgrading: Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive.

Application or feature	Details
	• DOCX files are supported for information extraction. • The page count limit is 200 pages per file If image mode is turned off for the use case. If image mode is turned on, the page count limit is 10 pages per file. • The file size limit is 20 MB.
Now Assist in Platform Analytics	**Zurich Patch 7** **View recommended actions** AI Data Explorer can suggest actions based on the insights that it generates in an exploration. **Ask questions about FX currency data** Query Generation now supports the FXCurrency (Currency 2) data type. This means that you can use AI Data Explorer to explore financial operations data, including those within Source-to-Pay Operations. **Benefit from improvements to segments** Segments are reusable definitions in Query Generation that provide non-obvious context to assist the semantic layer or LLM to select the correct dimension and values. Users can create manual segments via a new form. A scheduled job synchronizes manual and autogenerated segments. This job also cleans up segments to help surface the correct segments and reduce noise. Domain separation is also now supported, with a Domain field on the Segments table. Segments based on reports and filters inherit the source domain. Manual segments have domains that are passed up to the Segments table on synchronization. Segments are not supported for indicator sources or modules on domain-separated instances. **Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic. **Dashboard and data visualization export skill is active by default (January 2026)** The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 5): If this skill was previously unconfigured, it is turned on automatically (the skill was

Application or feature	Details
	never configured and turned on, then turned off again). If the skill was previously turned on, then off, it remains inactive. **Zurich Patch 4** **Query Generation skills are active by default** If the Generative AI Controller plugin is activated, the skills for Query Generation are activated by default. The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill is turned on automatically (the skill was never turned on, then off again). Previously configured skills that were turned on, then off, remain inactive. **Greater visibility into the Query Generation process** When you call Query Generation from AI Data Explorer or another application, you see each state that the query and response goes through before completing. **Multi-table source support** Query Generation supports related table conditions and dot-walking in queries. **Get insights and visualizations for Workflow Data Fabric tables** Ask AI Data Explorer information about Workflow Data Fabric data and get insightful responses. You must first add the Workflow Data Fabric tables to the Query Generation Semantic Table Configuration table. **Use database views in queries** Generate visualizations or ask AI Data Explorer about data kept in database views, like SLA data. You have to add the database views to the Query Generation Semantic Table Configuration table. **Zurich Patch 1** **Add tables to the semantic data layer** Choose which tables your users can query with generative AI for data analysis. **Monitor the health of the Query Generation back end** View the state of Now Assist for Platform Analytics LLM, plugins, system properties, components, and dependent products.
Now Assist in Virtual Agent	**Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-

Application or feature	Details
	back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.
	Zurich Patch 4
	Conversational Platform Now Assist skills are active by default
	The following Platform Now Assist skills are active by default and no longer visible in Now Assist Admin console: • Now Assist Multi-Turn Catalog Ordering • Now Assist Q&A Genius Results • Now Assist Topics • Subflows and actions • Custom skills • AI agents
	Zurich Patch 1
	Additional fallback options
	There are up to five fallback options that can be presented to end users: • **Search the web**: Triggers web search mode and uses the internet to search for the results. **Note:** Only the last query entered into the conversation is considered when entering web search mode via the fallback option. • **Request a live chat**: Triggers live agent mode and routes you to a human support representative. • **Create a generic ticket**: Creates a record. • **End this chat**: Ends the chat. **Note:** This option is only available to standard chat conversations. • **Custom fallback option**: Presents a fallback Virtual Agent topic.
	Web search mode enhancements
	Manually enter into web search mode via the input bar for standard and enhanced chat conversations. Web search mode includes in-line citations and the associated sources. A web search mode banner appears in enhanced chat conversations that end users can use to end the mode.
	Profanity recognition response

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	If Now Assist Guardian is enabled and the end user's request contains profane content, the Virtual Agent responds with a message prompt to re-enter an appropriate request without profanity or offensive content.
On-Call Scheduling	**Performance improvements in subflows for on-call notifications** The following performance enhancements are available for on-call notifications when subflows are used: • On-call notifications are sent to multiple channels such as SMS or email simultaneously instead of sending it sequentially. • When the *com.snc.on_call_rotation.new_trigger_engine* property is set to true, the on-call subflows are processed via the Flow runner queue. The on-call subflows that are marked as High priority are processed faster via a Flow runner queue especially when multiple events are triggered at the same time and are in the process queue. • Reminder notifications are also sent to users when the instance is upgrading. **Enhanced on-call trigger rules to support subflows** The on-call trigger rules form is enhanced to trigger a subflow when the trigger rule is executed. You can enable and select a specific subflow for a trigger rule.
Operational Technology Incident Management	**Admin role dependency** Several new granular admin roles have been added, which enable developers to complete administrative configuration tasks without requiring the full admin role.
Operational Technology Manager	**Use CMDB groups to add OT context to IT CIs** When you use CMDB groups to add OT context to IT CIs, you can no longer create an Automated IT OT Bulk Contextualization record with more than 1 CMDB group. **Automated IT OT Bulk Contextualization - Using CMDB groups scheduled job** The Automated IT OT Bulk Contextualization - Using CMDB groups scheduled job can only process 10,000 CIs at one time. If you have more than 10,000 CIs, the remaining CIs will be processed in the next job run. **Admin role dependency** Several new granular admin roles enable developers to complete administrative configuration tasks without requiring the full admin role. **IT Discovery for Operational Technology (OT) Networks**

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	The Discovery for Operational Technology plugin has been renamed IT Discovery for OT Networks. **Operational Technology Manager roles** The following changes have been made to Operational Technology Manager roles: • Users assigned the Operational Technology Manager Editor [cmdb_ot_editor] role or Operational Technology Manager Admin [cmdb_ot_admin] role cannot edit IT configuration items (CIs). Users with these roles can only edit or delete OT CIs. • Users who aren't assigned an OT role cannot view OT records in the following CMDB tables: ○ IP Address [cmdb_ci_ip_address] ○ Network Adapter [cmdb_ci_network_adapter] ○ Serial Number [cmdb_serial_number] • The Operational Technology Editor [cmdb_ot_editor] role contains the cmdb_manual_ci_ire_access role to support manually creating an OT CI in the Industrial Workspace.
Order Management	**Zurich Patch 5** **Changes to OM integration with SPM** Use OM integration with SPM to create program, reuse program, create site project and reuse site project in the SPM.
Platform Analytics experience	**Select whether to drill down to Platform Analytics or Core UI lists** Decide whether data view chart interactions for data visualizations on an instance drill down to Platform Analytics or Core UI record lists. This choice applies only on the Platform Analytics experience. **View usage information in the dashboards library** For analytics managers, the dashboard library now contains usage statistics, such as the number of dashboards not viewed in one year and the number of dashboards deactivated for more than three months. **Export data visualizations from dashboards to PNG and JPEG** Export individual data visualizations as a viewer to a graphic file. **Platform Analytics experience is supported even when Next Experience UI is disabled** You can migrate to Platform Analytics even if Next Experience isn't enabled. Core UI dashboards are embedded in iframes. **Migration Center changes**

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Dashboard owners can perform partial migration on their own dashboards. • Geomap migration supported. • Interactive filter check box option. • Header color is supported. • Export to CSV from lists is supported. **Data visualizations and filters support Workflow Data Fabric tables** Perform data analysis on external data fabric sources.
Playbooks in Workflow Studio	**Activate playbooks without a trigger** Configure and activate playbooks without specifying triggers, so that playbooks are only triggered programmatically. **Implement playbooks that are callable by a scriptable API** Configure a playbook that executes with an input object instead of requiring the configuration of a trigger record reference and trigger conditions. **Decision activity enhancements** User experience improvements to decision activities: • In the Board view, select the branch or Start rule icon on a decision activity card to see a list of dependent activities and branches, and to navigate to them. • When a decision or one of its branch nodes is selected in Diagram view, the decision and all of its branches are selected, and the side panel opens. • Add parallel activities within decision branches. **Enter a combination of pills and text in an email body** Enter a combination of text and multiple pills in any rich text / HTML editor container, such as an email body.
Policy and Compliance Management	**Improvements to the rationalization process of control objectives** Several enhancements have been made to the rationalization process: • Redesigned the rationalization UI with a reordered layout and highlighted primary actions. • Validations added for deactivated and deleted control objectives. Introduced the “Restart Analyze” option to support reevaluation of recommendations.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Introduced support for Azure OpenAI, Amazon Bedrock, and Google Gemini for recommendations of control objectives. • Updated the Consolidate state UI to show the recommendation panel with retained and accepted control objectives and their associated items.
Predictive Intelligence	**Validation logic ensures that Predictive Intelligence can access data tables** Reduce errors while training Predictive Intelligence models with the help of new validation logic. This validation checks whether your data tables have ACLs (Access Control Lists) granting access to Predictive Intelligence.
Privacy Management	**Zurich Patch 4** **Some Now Assist skills are turned on by default** The new default behavior works as follows: • New customers: When you install a Now Assist product, designated skills are turned on automatically. • Existing customers who are upgrading (starting with Zurich Patch 4): Any previously unconfigured skill is turned on automatically (the skill was never configured and turned on, then turned off again). Previously configured skills that were turned on, then off, remain inactive. **Zurich Patch 1** **Processing activity tab** The revamped Processing Activity overview page provides a unified dashboard that displays key compliance and risk metrics, such as risk scores, compliance scores, and criticality scores. This update makes it easier for privacy managers and analysts to assess the status of each processing activity, track open issues, and prioritize actions. **Layout for processing activity record view** The vertical layout of a processing activity enables you to see the information in a top-down linear flow. With this layout, you can see the sequential representation of a data processing workflow. **Privacy management home page** The enhanced Privacy Management home page now has dedicated tabs for Processing Activity, Risk and compliance, Operations, and Privacy Cases. This updated layout helps to improve readability by organizing your reports into clearly defined sections.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Product Catalog Management and Pricing Management	**Product Catalog Management changes** **Support minor changes to published product offerings and specifications** Make minor changes to published versions of a product offering or specification, without creating a version. Minor updates include changes such as modifying the product offering display name, description, or product image. **Configurable product offerings** The Create Product Offering form, used when creating product offerings, has two new options. The **Configurable** option indicates that the product offering is configurable and that it can be customized by agents and customers using the CPQ Configurator. The **Enable ramps** option indicates that price ramps can be defined for a configurable product. **Enhancements for exporting and importing product catalog entities between ServiceNow instances** Support the export and import of product catalog-related entities: • Product Catalog Management Core V15.0.0: During import, the system checks for minor updates to product offerings and specifications in the target version and imports them accordingly. • Product Catalog Management Core v13.0.0 ○ Export catalog entities, such as complex characteristic hierarchies, default values for characteristics including complex characteristics for product offerings and specifications, catalog entity versions in any order, and more, such as fetching referenced specifications during export. For details, see Export catalog entities. ○ Import catalog entities, such as complex characteristic hierarchies, default values for characteristics including complex characteristics for product offerings and specifications, catalog entity versions in any order, and more, such as suppressing validation of business rule errors in logs. For details, see Import product catalog entities.
Public Sector Digital Services	**Enhancements to Grants Management: Program Setup** In the Grants Management: program setup, grant program managers can now add new points of contact for the applicants to the grants program in the Define Program stage. In the Publish Program stage, new fields have been added for program announcement removal. Grants program managers can now set grants programs to auto-remove at a defined date, and set application close to disable new applications from being submitted through the Grants Management portal.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Enhancements to Grants Management portal Enable grant program managers to turn off new grant proposal submissions after the proposal close date. Applicants can no longer submit proposals after the proposal close date, keeping the process on schedule and helping prevent late submissions from being reviewed. Enable applicants to review and download the results letter and merit review summary (where applicable) of their grants application, as well as accept or decline their award, all within the new **Results** tab of the Grants Management portal. Notify constituents about a pending award decision through the portal. **Constituent Service Dashboard Migration to Platform Analytics** The Constituent Service Dashboard has been migrated to Next Experience Platform Analytics. Next Experience is a ServiceNow AI Platform® feature that is active by default when you load or upgrade to the Zurich release. The dashboard migration to Next Experience enables you to visualize historical and real-time process statistics in role-based dashboards. Access the new dashboard by navigating to **All** > **Platform Analytics** > **Library** > **Dashboards**.
Regulatory Change Management	**Administrator role enhancements** After upgrading to version 21.1.x, if you have a feature admin role you can now complete tasks that were initially reserved for users with the broader administrator role. **Read-only field enhancements** Starting with version 21.1.x, the following Regulatory Change Management plugins have security enhancements for read-only fields in this release: • GRC: Taxonomy management [com.sn_grc_taxonomy] • GRC: Regulatory Change Management integration with RSS Feeds [com.sn_grc_rcm_rssfeed] • GRC: Regulatory Change Management [com.sn_grc_reg_change] • GRC Case Management Core [com.sn_grc_case_mgmt] • GRC integration with Thomson Reuters Regulatory Intelligence [com.sn_grc_int_tr] • Regulatory Agency Library [com.sn_reg_body_mgmt] **Tasks widget** The overview page of a regulatory alert includes a newly added Tasks widget that enables you to get more visibility into related activities. This widget displays the total number of associated action tasks and change tasks that

Application or feature	Details
	are linked to the specific regulatory alert. By using this widget, you can assess the level of effort that is required for compliance. **Workflow of regulatory task** A regulatory task progresses through the following states: • New • Work In Progress • Implementation • Awaiting Approval (optional) • Completed While in the Implementation state, requesting approval is optional. If all associated action tasks are completed, the regulatory task can be closed directly from the Implementation state without requiring additional approval. **Workflow of source document import task** A source document task progresses through the following states: • New • Ready to Import • Work In Progress • Implementation • Completed. **Create action tasks** You can create action tasks for a regulatory task when the task is in any of the following states: • New • Work in Progress • Implementation You can now break down a regulatory task into smaller, manageable components so that you can more efficiently track and execute the required activities. You can plan, assign, and monitor tasks now in a structured manner that supports your compliance objectives and regulatory requirements.
Return Merchandise Authorization	**Enhancements in the RMA case flow** Streamline the sales return process by enabling agents to initiate, track, and close RMA cases for install base items directly within the Agent Workspace. It also bridges the gap between self-service and full support.

Application or feature	Details
Security Center	**Auditor checks** The Review Public Knowledge Bases and Review Public Knowledge Base Articles checks use global API calls, so they've been added in the Global scope. **Security Center Theming for Security Center** Security Center banners and Cascading Style Sheets CSS elements have been updated to conform to any instance-wide themes you apply. **Updated first time user experience** Security Center has been updated to provide guidance to understand what the tool can do and how to use it. This redesign is tailored to assist both new and infrequent users of Security Center. **Hardening settings updates** Updated the Security Hardening tool with the latest Instance Security Hardening Settings baseline V6. **Security Hardening tool Updates** The security Hardening tool has been updated to the latest Instance Security Hardening Settings V7.
Security Incident Response	**Security Incident Response Other Records** Add multiple ITSM incidents, problems, or change requests to a security incident for which multiple IT actions are needed. For more information, see the "Link multiple ITSM incidents" section. **Modify attachments of a closed security incident** You cannot modify the attachments of a security incident once the security incident is closed.
Security Posture Control	• Security Posture Control relies on data from service graph connectors that is populated in the CMDB 360 Data [cmdb_multisource_data] table. This data is populated only when the glide.identification_engine.multisource_enabled system property is set to true. You must have the cmdb_ms_admin role to modify property values. To set the property, navigate to **All** > **Configuration** > **CMDB 360 Properties**. • The labels on the form view for the mitigation control details record associated with vulnerable item records (VITs) have been enhanced for more clarity. These updates make the interface more user-friendly by expanding abbreviations on the form view, such as changing "EDR" to "Endpoint Protection."
Self-service and omnichannel engagement for CSM	**Using the email interaction page** View annotations for the most recent activity along with a compact email header that includes the subject, sender,

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	and receiver details in the activity stream. Focus on new or unread email messages rather than the entire email conversation. View or edit the interaction record while drafting an email in a modeless dialog, keeping all relevant information accessible. **Using Agent Chat** Leave a chat without ending it for other agents, enabling you to complete your task and exit the chat. Confirm before closing a chat tab to avoid unintentionally leaving the chat. Enable multiple agents to add wrap-up codes and comments for a single chat. **Import queues** Review and update queues imported from a contact center in a post-import page. The post-import page for a queue mirrors the existing post-import pages for skills and wrap-up codes, providing a consistent user experience. **Interaction Controls Component (ICC) call features** Notify agents when a supervisor is coaching or has joined an active call while monitoring agents directly through the CCaaS system. **CCaaS callback features** Callback management has been improved to make handling requests easier for agents. The key changes include: • Equip agents to transfer the callback requests before dialing the call, enhancing flexibility in managing customer interactions. • Enable scheduled callbacks, which help customers to choose a preferred callback time in addition to the existing ASAP option. • Facilitate agents to view the list of queues and other agents for easier callback transfers and efficient customer management. • Capture callback reasons more effectively with the expanded Reason for Call field, which includes additional choice values. **Unified routing of email interactions via CCaaS** Email interaction handling has been enhanced to improve efficiency and responsiveness in managing customer communications. The key changes include:

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	• Support external routing of email interactions. • Enable agents to put email interactions on hold while waiting for customer responses. • Notify CCaaS when an interaction is put on hold so that CCaaS can free up the agent's capacity for handling other interactions. • Send automatic email reminders to customers for interactions that are on hold for a configurable period. • Reroute email interactions to available agents when the originally assigned agent is unavailable. • Prevent creating outbound email interactions when emails are sent on top of cases. **Import queues** Use bulk action to assign service channels to multiple queues simultaneously during queue-import, simplifying queue management for CCaaS integrations. **Portal Data List widget** The Data List widget now offers more configuration flexibility and supports dynamic, context-aware view selection. Key enhancements include: • Role-Based and Guest Views: Use the new role_based_views and guest_view options to define different views for different user roles and for unauthenticated users removing the dependency on a single static view. • Automatic URL Parameter Passing: Pass URL parameters automatically into scripts invoked from Data List instance options enabling admins to build richer, multi-parameter conditions without extra setup. • Script-Based View Selection: Use the Data List Condition Script option to choose a view dynamically. Scripts can evaluate URL parameters and other context to determine the most appropriate view at runtime. • Configurable Default Sorting: Define initial sorting behavior using the new sort_by and sort_order options letting the users see a meaningful default order when the list loads.
Service Catalog	**A property to delete a draft of catalog item** Use the property *`glide.sc.delete_draft_item_on_version_change`* to determine whether to delete a saved draft of a catalog item on its modification. **Dynamic Lookup Choices and Enhanced Table Sourcing** Lookup questions are now more flexible and user-friendly. You can effortlessly display choices directly from a

Application or feature	Details
	specific table field, offering similar ease for select box configurations. Additionally, create dynamic dependent lookups where the choices refresh automatically based on the values selected in other fields on the same form, guiding users to more relevant selections. **Enhanced Sorting Control for Lookup Fields** Customize the display order in lookup select boxes, look up multiple choice, and list collector fields with the new *ref_ac_order_by* attribute. This attribute enables options to be sorted primarily by a specified data column, and then by their display label, providing a more logical and predictable presentation for users.
Service Operations Workspace for ITSM	**Configure help and order of the remedial action parameters** Configure the **Help** and **Order** fields for the remedial action parameters on the Remedial action parameter [sn_reacf_remedial_action_parameter] table if you have the Remedial action admin[sn_reacf.sn_remedial_action_admin] user role. **List page enhancements in Service Operations Workspace** The list page in SOW has the following enhancements: • The related lists in the **Related records** tab of the SOW record pages, including those within the record pages as well such as Recent Incidents or Assigned Assets, are updated with the record list bundle. This update provides them with the same appearance, functionality, and user experience as the SOW list page. • The related lists in the **Related records** tab of the SOW record pages, including the Multi Record Associator (MRA) list, as well as the related lists within the record pages such as Recent Incidents or Assigned Assets, now support the fuzzy count UX page property. You can configure a default value that is applicable to the list for all tables or a value for a specific table such as incident thereby improving the list page performance. **Dependency view changes for reference fields** Selecting the dependency view for the following fields in the incident, problem, change, and request records, opens a unified CMDB map in a new tab within the workspace view instead of a new browser tab: • Configuration item • Service • Service offering **Propose a standard change template** As a user with the itil role, you can create a standard change template proposal from any change record in SOW.

Application or feature	Details
	Service Operations Workspace access for an on-call shift administrator Starting in version 8.2, a user with the rota_admin role can access Teams, Schedules, and Home pages in SOW.
ServiceNow AI Lens	**Zurich Patch 5** **Changes to Now Assist usage measurement** Starting with Zurich Patch 5, Now Assist usage measurement is transitioning from a 365-day look-back model to a 365-day burn-down model, with usage resetting at the contract anniversary date. For more information, refer to KB KB2704710: Now Assist Usage - Overview & New Measurement Logic.
ServiceNow AI Platform core feature	**ECMAScript 2021 (ES12) JavaScript mode supports additional scripting features** Use additional scripting features, including Promises and Async await, in applications or scripts that use the ECMAScript 2021 (ES12) JavaScript mode. **Stream multipart responses with REST APIs** Stream multipart responses rather than buffering responses until complete by default with REST APIs that support the multipart/mixed requests, such as the `Batch` API. The `glide.rest.serialize.disable_response_stream_buffering` system property controls this behavior and applies only to instances configured with Application Delivery Controller, version 2 (ADCv2). **Additional field types supported in a configurable workspace** The following field types are now supported for use in a configurable workspace: • **datetime** • **email_script** • **int** • **integer_time** • **related_tags** • **user_input** **Vertical layout configuration for radio buttons in a configurable workspace** Configurable workspaces now support a vertical layout configuration of radio buttons. **More dictionary attributes available for selected fields in a configurable workspace** Applicable fields used in a configurable workspace now support the following dictionary attributes:

Application or feature	Details
	• `atf.server.addAttachmentsToExistingRecord` • `atf.server.runServerSideScript` • `atf.server.setOutputVariables` **Build command doesn't package build artifacts** Use the `now-sdk pack` or `now-sdk install` commands to package build artifacts. The `now-sdk build` command compiles the source files but doesn't package the build artifacts.
Skills Foundation	**Skills Foundation** Skills search is powered by AI Search capability instead of machine learning models. You can configure the skill search to be indexed based on the skill name or description or both. For Pro Plus License (i.e. LLM Integration) customers, AI search with RAG configuration is provided to power skill search. Multilingual skill support is limited to the languages supported by AI Search, which is fewer than the previously supported 23 languages. Resume parsing is done using Now Assist. ITSM skills previously stored in the CDS plugin were moved back to the seed data plugin. **Skills Workspace** The application name Skills Intelligence Workspace has been changed to Skills Workspace. Role group skill recommendations will not be readily available unless you load your own ontology data to the industry plugin. In Skill Harmonization, duplicate skills identification relies on AI search instead of ML models, which will have some quality impact in identifying duplicates. In Skills Import, two new integration options are added for SAP SuccessFactors and skills and user skills imported go through harmonization pipeline. **Career tab in Employee Center** In the Career tab, the recommended skills source is now derived both from skills that are tagged to activities that employees has been pursuing and from similar user skills.
Software Asset Management	**Publisher optimizations for Microsoft** The Publisher Optimizations dashboard for Microsoft has been updated to support additional subscriptions.

Application or feature	Details
	Publisher optimizations for SAP The Publisher Optimizations dashboard for SAP has been updated with a report on SAP HANA Database monthly peak usage.
Sourcing and Procurement Operations	**Components installed with Sourcing and Procurement Operations** The Negotiation event table label has been renamed to Sourcing event. This change affects the label only. The underlying table name, [sn_shop_negotiation_event], remains unchanged.
Strategic Planning	**Investment type and Investment class fields** The **Investment type** and **Investment class** fields have been deprecated from the Project and Demand planning item tables. These fields are now created at the parent level in the Planning item [sn_align_core_planning_item] table. **Goal management** By default, only active goals—those goals with the **Active** field set to **true**—are displayed across the workspace. This change applies to the **Dashboards** and **Goals and targets** tabs on the Goals page, the **Goal**/**Parent goal** reference fields in all applicable tables, and all relevant dashboards. **Default related list view changes for Stories** In the Stories list for an Epic, Feature, or Capability in the Enterprise Agile Planning workspace, the Assignment group and Sprint columns in the default related list view are replaced with the EAP team and Iteration columns. **Enhancements to tables in Docs** • Resize the column width of a table per your preference. • Add color to single or multiple table cells.
Subscription Management	**Assist usage excludes demo data** Demonstration instances are excluded from the total Assist usage count to improve tracking of Assist consumption. **Changes to Now Assist usage measurement** Now Assist usage measurement is evolving. If your instances are below Zurich Patch 6, update Subscription Management to version 6.0.2 or later on all instances to avoid mixed measurement states. For more information, see Now Assist Usage - Overview & New Measurement Logic [KB2704710]. **Hidden user-based subscription allocations**

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	To help prevent inaccuracy when allocations aren't complete, allocation details for user-based subscriptions are now hidden from the Subscription Management overview. Contact your account executive for user-based subscription allocation details.
Telecommunications Network Inventory	**Define network service instance details** **xNF Instance** is renamed to **Service Instance**. **Define network function details** **xNF** is renamed to **Network Function**.
Telecommunications Service Operations Management (TSOM)	**Telecom Discovery via Nokia Altiplano** Nokia Altiplano SGC enables you to do the following: • Discover logical inventory for Nokia Altiplano such as logical ports, LAGs, and logical connections. • Enable customers to manage both physical infrastructure and logical network relationships on the ServiceNow AI Platform. • Store logical elements in the CMDB, improving visibility and traceability across the network. • Use the generic Extract, Transform, Load (ETL) framework provided by ServiceNow to integrate with Nokia Altiplano, significantly reducing development effort. **Discrepancy identification** Use the enhanced audit and reconciliation logic to do the following: • Detect mismatches in logical elements such as logical ports, LAGs, and connections. • Filter audit results by IP range, device type, or vendor to focus on relevant subsets of data. • Enhance audit performance, usability, and customer satisfaction by reducing unnecessary processing.
Third-party Risk Management	**Risk areas extended to internal assessments** Starting with version 21.1.x, if you have the third-party risk admin [sn_vdr_risk_asmt.vendor_admin] role, you can now configure risk areas with weighted questions and scored responses for internal assessments using the Smart Assessment Engine in the Vendor Management Workspace. Risk scores can be aggregated at the engagement level using customizable methods such as max, min, or average, and mapped to risk ratings based on business rules. Risk managers can override system-generated ratings with required justification, enabling expert judgment and helping ensure transparency in risk decisions.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Smart Assessment Engine advanced plugins Starting with version 21.1.x, the following Smart Assessment Engine advanced plugins are automatically installed: Post Assessment Actions for Smart Assessments [com.sn_smart_imp_auto and com.sn_impact_fwk] and Advanced Response Automation for Smart assessments [sn_smart_resp_auto]. The Post Assessment Actions for Smart Assessments plugin lets Third-party risk admins [sn_vdr_risk_asmt.vendor_admin] automate follow-up tasks, like notifications or workflow launches, after an assessment is completed. The Advanced Response Automation for Smart Assessments plugin automatically fills in assessment responses based on prior data or logic, streamlining and standardizing the assessment process. **Feature-specific administrator role enhancements** Starting with version 21.1.x, if you have a feature admin role you can now complete tasks that were initially reserved for users with the broader administrator role. • Assign sn_vdr_risk_asmt.vendor_risk_admin to users who need to configure and manage vendor risk features. • Assign sn_vdr_risk_asmt.vendor_assessment_reviewer to users who perform assessments, manage dashboards, and require operational access. • Assign sn_vdr_risk_asmt.external_assessment_responder to users who need access to the third-party portal and to complete assessments. **Note:** Administrator privileges no longer grant access to TPRM features. Users must be assigned an appropriate feature-specific role to access relevant functionality. **Read-only field enhancements** Starting with version 21.1.x, the following Third-party Risk Management plugins have security enhancements for read-only fields in this release: • Third-party Risk Due Diligence [com.sn_tprm_onboarding] • Third-party Risk Management [com.sn_vdr_risk_asmt] • GRC: Vendor Portal [com.sn_grc_vendor_portal] • GRC: Profiles [com.sn_grc] • GRC: Compliance Assessment [com.sn_comp_asmt] • GRC: SIG Questionnaire Integration [com.sn_sig_asmt] • GRC: Performance Analytics Premium Integration [com.sn_grc_pa]

Application or feature	Details
	• Vendor Risk Management integration with EcoVadis [com.sn_app_grc_ecovadis] • ITAM applications [com.snc.vendor_core] **Fourth-party assessment support in SAE** Starting with version 21.1.x, Fourth-party assessments are now supported after you enable the Smart Assessment Engine enabled (**sn_vdr_risk_asmt.sae_enabled**) property. **Enhanced contract records for Digital Resilience Third-party Information Register in Vendor Management Workspace** If you have the third-party assessor role [sn_vdr_risk_asmt.vendor_assessor], you can now associate multiple entities with a single contract record. This association indicates that all entities have signed the contract and are providing services that are associated with the contract. You can also configure contracts that are based on the supply chain and assessment, upload contract records, and generate reports in Microsoft Excel. To better track these entities and help ensure compliance with Digital Operational Resilience Management (DORA) regulations, related lists have been added to the existing contract records, and existing fields have been reorganized for better usability.
Threat Intelligence Security Center	**Adding Internal Intelligence to Investigation Canvas** Aggregate and analyze the data from internal systems through internal intelligence included in the Investigation Canvas module to help you identify potential threats more effectively. **Import Intelligence in TISC** Enhanced the Import Intelligence functionality to support direct import of allow list observables. **Working with Investigation Canvas** The Investigation Canvas feature has been extended to include customized nodes, node relationships, and node legends, as well as the grouping and ungrouping of nodes. **Investigation canvas and MITRE ATT&CK** Navigate and use the MITRE-ATT&CK model within the Investigation Canvas more effectively by taking advantage of enhanced filtering options.
UI Builder	**Add events to track components with unsaved changes** Use an event to quickly identify modified components. **Configure alerts to auto-dismiss**

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	Enable alerts to auto-dismiss across an experience by configuring all of them in the experience settings or individually through an event. **Use pages across experiences** Share and reuse pages across workspaces without switching contexts or rebuilding content to help save time and simplify maintenance. **Use the floating Now Assist panel to streamline your workflow** As of UI Builder version 28.2, the fixed Now Assist panel has been replaced with a drag-enabled floating panel improving layout flexibility and workflow visibility. **Specify your page type in the Create a page wizard** As of UI Builder version 28.2, the Create a page wizard now includes a page**Type** dropdown field. This new field helps you to later identify and filter important pages within the Experience view list, especially helpful in large experiences with many pages. **Explore the newly enhanced Experience view** As of UI Builder version 28.2, the Experience view has improved usability in the following ways: • Pages and their variants appear collapsed by default for a cleaner, more focused view. • Locate pages and variants with ease utilizing the search field. • Search by name, URL, URL type, or variant, and toggle between filters for a cleaner, more intuitive page list. • Pagination is automatically enabled when 10 or more pages are present.
Upgrade Console	**Updated access to Guided upgrade** Apart from the **Guided upgrade** tab option, you can also access Guided upgrade by selecting **Resume upgrade** if there is an ongoing upgrade in the instance.
Virtual Agent	**Zurich Patch 1** **Table bot response control** Use the new **Show links for each record** toggle switch to activate links for each record in the output in your Virtual Agent conversation. **Test assistant options** The **Test** button in the Virtual Agent Designer canvas directly opens up the chat widget.
Visa Spoke	**Visa Resolve Online (VROL) version 25.2 updates** Updated the following Visa Spoke actions to align with Visa Resolve Online (VROL) release 25.2 revision changes:

Application or feature	Details
	• Submit Dispute Questionnaire • Hypersearch Request Builder • Hypersearch Response Parser • Create Dispute Pre-Arbitration Request Builder • Create Dispute Pre-Arbitration Response Parser • Look up Dispute Response Details Request Builder • Look up Dispute Response Details Response Parser • Look up Dispute Pre-Arbitration Response Details Request Builder • Look up Dispute Pre-Arbitration Response Details Response Parser • Look up Dispute Pre-Arbitration Details Request Builder • Look up Dispute Pre-Arbitration Details Response Parser • Look up Dispute Details Request Builder • Look up Dispute Details Response Parser
Vulnerability Response	**Granular VIT creation for Microsoft TVM recommendations** You can now configure recommendation as a vulnerability item (VIT) key for Microsoft Threat & Vulnerability Management (TVM). This enhancement enables each recommendation to generate a separate vulnerable item, offering more granular control for tracking, assigning, and managing remediation efforts, especially when different recommendations require actions from different teams. **Improved state management for remediation tasks and vulnerable items** State management logic for roll down of state from remediation tasks (RTs) to findings and roll up of state from findings to RTs has been refined across all modules. Updates improve accuracy by handling mixed item states (a combination of Deferred and Closed), supporting closure of tasks in sub-states like In-Review, and reopening tasks based on the Assigned To field. The update also improves handling of False Positive state transitions based on scanner results as source of truth. These enhancements reduce manual effort, clarify task ownership, and streamline remediation workflows. **Ability to manually cancel Exposure Assessment background jobs** Vulnerability Admins and Event Managers can now cancel Exposure Assessment background jobs that were triggered with incorrect parameters or are taking longer than expected. This enhancement reduces downtime by removing the need to wait for the job to complete. Once cancelled, the sub-state is immediately set to User cancelled, and the state updates to Complete after

Application or feature	Details
	the job is fully terminated; giving you better control and flexibility. **Configure maximum rows in related lists** To improve readability and performance, you can now limit the number of rows shown in related lists on forms by setting the system property *sn_vul_cmn.related_list.set_max_row*. **Qualys Integration – Detection Splitting** Use the Qualys Host Detection Integration to create a separate VIT for each vulnerability instance based on proof. This improves accuracy in vulnerability tracking and supports clearer team ownership during remediation. **Activate the Qualys QVS score integration** Add Qualys-specific risk context to CVEs by importing QVS scores, helping you make more informed prioritization decisions.
Workflow Data Fabric Hub	**SAP ECC primary connector** The SAP ECC connector is now certified as a primary connector. **SAP S/4HANA primary connector** The SAP S/4HANA connector is now certified as a primary connector. **Primary connectors in preview** Primary connectors that are still being enhanced to include all planned functionality are now identified as in preview. These connectors are fully supported by ServiceNow®.
Zero Copy Connector for ERP	Zurich Patch 7 **Additional system property to specify how many records are retrieved** The system property sn_erp_integration.result_page_size has been added to specify the number of records to retrieve from the external system. The default global property for all extractions is set to 50, but can be overridden with this new property. Zurich Patch 4 **Zero Copy Connector for ERP Enterprise Data Foundation data product** Additional models, including Business Partner, Chart of Account, Cost Center, and Vendor have been added to the data product for use when interacting with an SAP system. **Zero Copy Connector for ERP Quote to Cash data product** Additional models, including Customer Invoice, Outbound Deliveries, and Service Notification have been

Application or feature	Details
	added to the data product for use when interacting with an SAP system. **Zero Copy Connector for ERP Source to Settle data product** Additional purchase order models have been added to the data product for use when interacting with an SAP system. **Role configuration required for agentic workflows and AI agents** Agentic workflows and AI agents included with Now Assist applications require additional security configuration. If you select *`Users with selected roles`* for your user access security controls for an agentic workflow or AI agent, you must add the installed roles, or they won't execute. Data access settings must also include these roles. See the documentation for the agentic workflow or AI agent for the specific roles you must add. After the roles are configured, users must have the specified role to invoke the agentic workflow or AI agent.

Removed features and products in Zurich

Cumulative release notes summary on features that were removed from Zurich features and products.

Some features were removed as part of Zurich product updates.

Application or feature	Details
Advanced Risk	To enhance the Risk Workspace home page load performance and reduce latency, the **Tasks** widget has been removed from the home page.
Alumni Center	The following system properties are removed and the existing configured values are copied to the alumni common configuration UI. • Email property - sn_asc.self_registration.personal.email.domains • Deleted properties - sn_asc.import.default.state, sn_asc.import.user_name.max.tries, sn_asc.import.alumni.suffix
Classic Workflow	• Removed the legacy workflows created and published by ServiceNow, Inc. for new customers who start on the Zurich release. • Retained the legacy workflows created and published by ServiceNow, Inc. for customers who upgraded from versions prior to the Zurich release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Configurable Workspace	• The List, List - Simple, and List - Related components are no longer available in UI Builder are replaced by the Record List component bundle. • The Condition Builder component is no longer available in UI Builder and is replaced by the Predicate Builder component for all list types.
Configuration Management Database (CMDB)	• Common Service Data Model no longer provides **Design** as a value for the *Operational status* attribute in CIs.
Digital End-User Experience	• Removed the **Impacted users** and **Active users** cards from the landing page. • Removed the **Users** page. • Removed the **Users list** page. • Removed the **Users** and **Devices** filters from the **Devices** page.
Document Intelligence	The Document Intelligence application has been removed from the application navigator.
Impact	The Jumpstart Your Document Intelligence Accelerator has been removed.
Instance Data Replication	• The Key Management Service test has been removed from the IDR Diagnostics page. • The VAULT Service Status test has been removed from the IDR Diagnostics page.
Now Assist for Creator	Zurich Patch 6 • Spoke generation has been removed from Now Assist for Creator. See the ServiceNow Store website for additional information. Zurich Patch 4 • Starting with version 28.4.3 of Now Assist for Creator, the now.assist.creator role has been removed as a required role for using most Now Assist for Creator skills and agents. Some skills and agents might have additional role requirements. See the Now Assist for Creator product documentation for more information.
Now Assist in Document Intelligence	• The Document extraction skill has been removed from the list of Platform skills in the Now Assist Admin console. • The Document Q&A skill has been removed from the list of Platform skills in the Now Assist Admin console.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details

Operational Technology Manager	• The **New** button was removed from the following related lists for users with read-only access to a site:
	  ○ Network Adapters
	  ○ Memory Modules
	  ○ Software Installed
	  ○ IP Addresses

ServiceNow AI Platform core feature	• The *glide.script.use.sandbox* system property has been removed. The script sandbox is enabled by default. • Dynamic groups have been removed. Instead, use dynamic attributes in dynamic categories to simplify administration and improve the dynamic schema user experience.
ServiceNow SDK	• The `now-sdk upgrade` command has been removed. To upgrade the version of the ServiceNow SDK, see Upgrade the ServiceNow SDK.
Skills Foundation	• The LinkedIn Parsing capability is not supported because it is based on ML models. • The skills ontology, which contained skill structure with categories and definition, is no longer provided. Supply your own skills data and import it into the Skills Foundation application. • Legacy Data Science algorithms from Talent Development applications.
Upgrade Console	• Removed the Ready your environment step in the pre-upgrade activities on a production instance.

Deprecation information for all Zurich features and products

Cumulative release notes summary on deprecation information for Zurich features and products.

For information about deprecated plugins in Zurich, refer to

Application or feature	Details
API	• The *GlideEncrypter* API no longer supports Triple Data Encryption Standard (3DES) due to updated NIST 800-131A Rev 2 guidelines. ○ For existing instances that upgrade to the Zurich release, the *GlideEncrypter* API is available for use but has been updated to automatically use the Key Management Framework algorithm. See GlideEncrypter - Global (deprecated) for more information on how to continue calling this API.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
	○ For all new instances created starting with the Zurich release, the `GlideEncrypter` API is no longer supported. Directly use the Key Management Framework instead for all cryptography operations. • Dynamic groups have been removed from dynamic schema in Core Platform. For dynamic attributes defined with an associated dynamic attribute group before the Zurich release, the GlideDynamicAttribute `getGroupName()` method originally designed for dynamic attribute groups continues to work for backwards compatibility. The `getGroupName()` method returns null for migrated attributes and newly created attributes. Customers are urged to migrate to the current Dynamic Attribute definitions to take advantage of future improvements in features and functionality. For migration details, see the Dynamic Schema Zurich Migration Guide [KB2146133] article in the Now Support Knowledge Base.
Agent Client Collector	Agent Client Collector Security Incident Response is no longer supported. For details on replacement options, see the Deprecation guidance for Agent Client Collector Security Incident Response [KB2249776] article in the Now Support Knowledge Base.
Agent experience for CSM	Starting with the Yokohama release, Customer Service CTI Demo Data is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. ServiceNow Voice with Amazon Connect provides the latest experience for this functionality. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.
App Engine Studio	The ui_builder_admin role was removed from the AES Portal UI Template plugin in the Zurich release. Admin and delegated developer roles can still access the AES Portal UI Template plugin (sn_portal_starte_0).
Authentication	Due to the launch of new simplified inbound integration configuration in Machine Identity Console, the following inbound integrations configurations in the Application registry page are deprecated: • OAuth API endpoint for external clients • OAuth JWT API endpoint for external clients • OIDC provider to verify ID tokens
Automation Discovery	Starting with the Zurich release, Automation Discovery has been deprecated. It will be hidden and no longer installed on new instances but will continue to be supported in this release. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base. For more information about this application see Automation Discovery.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Case management for CSM	• Starting with the Yokohama release, Customer Service CTI Demo Data is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. ServiceNow Voice with Amazon Connect provides the latest experience for this functionality. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base. • Starting with the Zurich release, the Customer Service Case Types plugin is available as a store plugin and, as such, the family version of the plugin is being prepared for future deprecation. Upon upgrading, customers will automatically move to the store version of the plugin. It will be hidden from the family plugins and no longer installed on new instances but will continue to be supported as a store plugin. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.
Classic Workflow	• Support for classic workflows is deprecated. • Use Workflow Studio flows and subflows instead of classic Workflow.
Clone Admin Console	• The legacy clone request page clone_instance.DO is going to be retired in the A release. • Update to the latest version for the best experience and performance improvements. To update Clone Admin Console, see Clone Admin Console.
Cloud Cost Management 9.0	The current mechanism for the Azure billing download is planned for deprecation. With this deprecation, the Export option remains the default method for the Azure billing download.
Configuration Management Database (CMDB)	• The Data Certification plugin (com.snc.certification_v2) is now deprecated and no longer supported or available for new activation. The latest experience for this functionality is included with CMDB Workspace.
Data Management	The Data Usage Visualization Console dashboard has been deprecated in the Zurich release. Instead, you can monitor the growth of data on your instance using the Data Management Console.
Data Management for CSM	The following legacy base system workflows have been deprecated: • Escalation Master-Approval • Escalation-Approval Custom workflows remain supported, and you can continue to create them as needed. However, any new business requirements must be implemented using the new or updated flow-based framework rather than with the legacy workflows.

Application or feature	Details
Document Intelligence	• Starting with Zurich release, the document extraction feature in Document Intelligence is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base. Instead, you can extract information from documents using the Now Assist in Document Intelligence application. For more information, see . • The Document Intelligence Admin (sn_docintel_admin) plugin is planned for deprecation in the B release.
Encryption	**Prepare your instance for GlideEncrypter deprecation** Encrypted string keys 3DES format is no longer supported. Key Management Framework (KMF) is the supported format.
Enterprise Asset Management	The Classification (classification) column in the Enterprise good model [sn_ent_model] table has been deprecated and renamed as Classification (Deprecated). The data from this column is available in the new Classification (classification_code) column in the Product model [cmdb_model] table.
Event Management	• Event Management connector: Deprecate unused V1 connector definitions during Event Management connector upgrades. • vRealize connector: Enhance the vRealize event connector by replacing the deprecated XML API with a JSON-based API, ensuring compatibility with future versions. • The "em_alert_lists_auto_refresh" table no longer controls live alert list updates in the Service Operation Workspace Lists. Use the new property, table sys_ux_list, to turn on and off live incoming alert updates.
Field Service Management	• Non-collapsed mode is being deprecated and removed from Dispatcher Workspace. Dispatchers must use collapsed mode to see available resources in Dispatcher Workspace. • Starting with the Zurich release, the **Enable capacity** constraint for Schedule Optimization is being deprecated. It will no longer be applied for Schedule Optimization. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.
HR Service Delivery integration with Accurate Background service	Starting with Zurich release, HR Service Delivery integration with Accurate Background service is being prepared for future deprecation. It will be hidden and no longer available for activation but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
HR Service Delivery integration with First Advantage service	Starting with Zurich release, HR Service Delivery integration with First Advantage service is being prepared for future deprecation. It will be

Application or feature	Details
	hidden and no longer available for activation but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
HR Service Delivery integration with Sterling Talent Solutions service	Starting with Zurich release, HR Service Delivery integration with Sterling Talent Solutions service is being prepared for future deprecation. It will be hidden and no longer available for activation but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
Hardware Asset Management	Starting from the Zurich release, the following workflows are being prepared for future deprecation: • Procurement Process Flow – Hardware • Procurement Process Flow – Mobile • Procurement Process Flow - Default • Transfer Order • Transfer Order Line • Source Request • Contract Approval **Note:** Procurement Process Flow-Default and Procurement Process Flow – Mobile are demo data workflows displayed in the workflow studio when the Workflow Authoring Tools (com.glideapp.workflow.authoring) plugin is installed. These impacted workflows are migrated to Workflow Studio flows. After upgrading to the Zurich release, you must transition to the new Workflow Studio flows. For more information about the deprecation process and its impact, see the Application/Plugin Deprecation Process [KB0867184] article in the Now Support Knowledge Base.
ITOM AIOps	• The "em_alert_lists_auto_refresh" table no longer controls live alert list updates in the Service Operation Workspace Lists. Use the new property, table sys_ux_list, to turn on and off live incoming alert updates.
ITOM Visibility	Starting with the Zurich release, Cloud Discovery Workspace is being prepared for future deprecation. It's hidden and no longer activated on new instances but continues to be supported. Discovery Admin Workspace provides the latest experience for this functionality. For details, see the Application/Plugin Deprecation Process [KB0867184] article in the Now Support knowledge base.
Impact	Starting with Impact Zurich version 6.0.8 ServiceNow Store release, Proactive Code Check is being prepared for future deprecation. It will be hidden and no longer installed on new instances but will

Application or feature	Details
	continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.
Instance Data Replication	Legacy replication sets have been deprecated in the Zurich release and are no longer supported.
Journey designer	• Learning Posts. All Learning Posts capabilities are now integrated within Journey designer. For more information, see Learning Posts release notes. • Listening Posts. For more information, see Listening Posts release notes.
Learning Posts	Starting with the zurich release, Learning Posts is being deprecated. It will be hidden and no longer available for activation. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.
Legacy Application Manager	Starting with Zurich patch 4, Legacy Application Manager is being prepared for future deprecation. It will be hidden but will continue to be supported. For details, see the Application/Plugin Deprecation Process [KB0867184] article in the Now Support Knowledge Base.
Legacy Studio	Starting with the Zurich release, Legacy Studio is being prepared for future deprecation. It will be hidden and no longer installed on new instances but will continue to be supported. For details on this process, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base. For more information about app development on the ServiceNow AI Platform®, see ServiceNow Studio.
Listening Posts	Starting with the zurich release, Listening Posts is being deprecated. It will be hidden and no longer available for activation. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.
Now Assist	• In Patch 5, the **Select Use Case** drop-down menu was removed from the Agentic AI - ITSM tab.
Now Assist for IT Operations Management (ITOM)	In Zurich Patch 7, the Dynatrace analysis AI agent is being prepared for future deprecation. To continue getting Dynatrace insights in agentic workflows, deactivate the Dynatrace analysis AI agent and set up the Dynatrace MCP server agent. For configuration details, see .
Now Assist for IT Service Management (ITSM)	The Escalate IT Ticket core ITSM Virtual Agent topic is being deprecated in this release. The topic is renamed to **(Deprecated) Escalate IT Ticket**. This capability will be available in the Platform Request Status AI agent in a future release.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
Now Assist in Virtual Agent	• In Patch 4, *sn_aia.use_agents_in_planner* system property has been removed. The system property was used for configuring AI agent discovery behavior. • In Patch 4, Now Assist skills page in the assistant admin guided setup has been removed due to the skills being turned on by default. • In Patch 1, Bing support for the searching and scraping search result type is no longer supported when adding a web search tool in Now Assist Skill Kit.
Operational Resilience	The Operational Resilience application previously stored the entire dependency chain in the [sn_oper_res_profile] table, which resulted in redundant data and potential performance issues. The *Update CSDM and other dependencies* scheduled job script has been optimized to address this issue. Any node can now be at the top level. Data retrieval is more efficient because you can store the impacted objects in a single table.
Operational Technology Manager	For the Service Graph Connector for Microsoft Excel, the following items were deprecated on the ServiceNow AI Platform: • The SG OT Excel Staging Task table • The Staging task reference on the SG OT Excel Staging table
Playbooks in Workflow Studio	• now.assist.creator role
Project Portfolio Management	**Resource Management reports** Starting with the Zurich release, Resource Management reports are deprecated. You can start using the interactive Overview dashboard in Resource Management Workspace to work on reporting. For more information on the Overview dashboard, see Using Resource Management Workspace. **Resource Management classic** Starting with the Zurich release, the Resource Allocation workbench and Capacity planning overview are removed from the product navigation of Resource Management for new customers.
Self-service and omnichannel engagement for CSM	Starting with the Zurich release, Customer Service CTI Demo Data Plugin and CTI Softphone Plugin are no longer deployed, enhanced, or supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base, Components installed with Customer Service CTI Demo Data, and Components installed with CTI Softphone.

Application or feature	Details
Performance Analytics	Complimentary Performance Analytics for Incident Management is active by default. You cannot create indicators or breakdowns with this complimentary application. The full features of Performance Analytics are available with a subscription. Activate the Premium plugin that matches your subscription. For details, see Activate your Performance Analytics subscription.
Performance Analyzer	Install Performance Analyzer by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Platform Analytics experience	Platform Analytics experience is a ServiceNow AI Platform feature that is active by default.
Playbooks in Workflow Studio	The application comes with the Workflow Studio ServiceNow Store app. Workflow Studio is part of the ServiceNow AI Platform® and is available by default. Get the latest Workflow Studio features by downloading the latest Workflow Studio app in the ServiceNow Store, as well as related applications like the Process Automation Content and Process Automation Experience Demo applications. The application can be downloaded for patch fixes. To use the playbook generation feature in Workflow Studio, download the Now Assist for Creator application. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Policy and Compliance Management	Install Policy and Compliance Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Portfolio Planning	Install Portfolio Planning by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Predictive Intelligence	Predictive Intelligence is a ServiceNow AI Platform feature that is active by default.

Application or feature	Details
Privacy Management	Install Privacy Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Proactive Service Experience Workflows	Install Proactive Service Experience Workflows by requesting it from the ServiceNow® Store.
Process Mining	Process Mining is available by default. For details, see Activating Process Mining.
Product Catalog Management and Pricing Management	The Product Catalog Management and Pricing Management features are included with Sales and Order Management store applications and don't need activation. Depending on your entitlements, you can install the Product and Pricing Rules application for pricing and product eligibility matrices and the CPQ Integration application for the CPQ Configurator from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Project Portfolio Management	Project Portfolio Management is available with activation of the PPM Standard (com.snc.financial_planning_pmo) plugin. For more information on activation, see Activate PPM Standard (Project Portfolio Management). Install Strategic Spend Tracking for PPM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Project Workspace	Install Project Workspace by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Public Sector Digital Services	Install Public Sector Digital Services applications by requesting them from the ServiceNow Store. For details on installing the applications, see Configuring Public Sector Digital Services. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Application or feature	Details
Purchase Order Management	Install Purchase Order Management by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Quote Management	Install Quote Management by requesting it from the ServiceNow Store. To add Docusign plugin to the Quote Management PDF document function, use the Docusign eSignature Spoke plugin (sn_docusign_spoke). Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
RPA Hub	Install RPA Hub by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Recommended Actions for Operational Technology Service Management (OTSM)	Install Recommended Actions for OTSM by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Recruitment workspace	Install Recruiter Workspace by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Regulatory Change Management	Install Regulatory Change Management and Now Assist for IRM by requesting them from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
ReleaseOps	Install ReleaseOps by requesting it from the ServiceNow Store. Visit the ServiceNow Store to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Application or feature	Details
Software Asset Management	Software Asset Management is available with activation of the Activate all Software Asset Management Professional plugin, including the Software Asset Workspace plugin (com.sn_samp_master_ws). Activating this plugin automatically activates the Activate all Software Asset Management Professional plugin (com.sn_samp_master) and the Software Asset Workspace store app (sn_sam_workspace). After the new plugin is activated, you can't access the classic user interface. In the ServiceNow AI Platform® Zurich release, there's limited support for the Software Asset Management classic user interface. While it remains active in your instance, including when you upgrade to a new ServiceNow AI Platform® release, you can move to the new workspace for an intuitive and personalized experience. For releases before Utah, if you activated the older Software Asset Management Professional plugin (com.sn_samp_master), the Software Asset Workspace is available with activation of the Software Asset Workspace plugin (com.sn_sam_workspace). After the Workspace plugin is activated, you can't revert to the classic user interface. For details about the plugins and how to request them, see Request Software Asset Management. Install the following Software Asset Management applications by requesting them from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes. • Software Asset Management - SaaS License Management • Data Collection for Oracle Global Licensing and Advisory Services (GLAS) • IBM License Compliance for Software Asset Management • ITAM Health Check • Software Asset Management Guided Experiences • Software Asset Workspace
Source-to-Pay Operations Integrations	Install Source-to-Pay Operations with third-party applications by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Sourcing and Procurement Operations	Install Sourcing and Procurement Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Application or feature	Details
Strategic Planning	Install Strategic Planning by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Subscription Management	Subscription Management is a ServiceNow AI Platform feature that is active by default. Updates for Subscription Management are available through the ServiceNow Store. For cumulative release notes information for applications available on the ServiceNow Store, see ServiceNow Store release notes.
Supplier Lifecycle Operations	Install Supplier Lifecycle Operations by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Synthetic monitoring	Install synthetic monitoring by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Talent profile	Install Talent profile by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Telecommunications Network Inventory	Install Network Inventory Advanced plugin (sn_ni_adv) by requesting it from the ServiceNow Store. For installation details, see Install Telecommunications Network Inventory . Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Telecommunications Service Operations Management (TSOM)	Install Telecommunications Service Operations Management applications and plugins by requesting them from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Application or feature	Details
Theme Builder	Theme Builder is included as a core plugin with the Next Experience application and is available by default. You can update to the latest version of Theme Builder from the ServiceNow Store.
Third-party Risk Management	Install Third-party Risk Management by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Threat Intelligence Security Center	Install Threat Intelligence Security Center by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
UI Builder	UI Builder is active by default. You can update to the latest version of UI Builder by downloading it from the ServiceNow Store.
Unified Security Exposure Management	Unified Security Exposure Management is a ServiceNow AI Platform feature that is available with activation of the Security Exposure Management (com.snc.security_support.core). For details, see Install Unified Security Exposure Management.
Upgrade Console	Upgrade Console is a ServiceNow AI Platform feature that is active by default.
User Experience Analytics	User Experience Analytics is a ServiceNow AI Platform feature that is active by default.
Virtual Agent	Virtual Agent is a ServiceNow AI Platform feature that is active by default.
Visa Spoke	Install Visa Spoke by requesting it from ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Vulnerability Response	Install Vulnerability Response and third-party integrations by requesting them from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Application or feature	Details
Walk-up Experience	Walk-up Experience is a ServiceNow AI Platform feature that is available with activation of the Walk-up Experience plugin (com.snc.walkup). For details, see Activate Walk-up Experience.
Workflow Data Fabric Hub	Install Workflow Data Fabric Hub by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes. Workflow Data Fabric Hub is also available with activation of the Zero Copy Connectors app (sn_data_fabric_zcc), which requires a separate subscription. For details, see Request Zero Copy Connectors.
Workforce Optimization for Customer Service CSM	Install Workforce Optimization for Customer Service by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
Zero Copy Connector for ERP	Install Zero Copy Connector for ERP by requesting it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Additional requirements for all Zurich features and products

Cumulative release notes summary on additional requirements for Zurich features and products.

To use certain products, specific setups or third-party requirements are required.

Application or feature	Details
AIOps LEAP	You should have Now Assist for Creator installed to generate playbooks.
Advanced AI Search Management Tools	You must have the User Experience Analytics API application installed from the ServiceNow Store to use Advanced AI Search Management Tools.
Agentic Desktop	To use the Agentic Desktop application, the software requirements are: • Operating system: Microsoft Windows 11. • .NET 9.0 runtime v9.0.10 or .NET 9 Desktop Runtime v9.0.10. • No extended monitors are connected.

Application or feature	Details
	The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.
Now Assist	**Zurich Patch 4** **Voice Input in Now Assist** Administrators can enable an optional voice input setting for the Now Assist panel in the Now Assist Admin console. This feature, Voice Input, gives users a voice-to-text input option to access the Now Assist skills in the panel in any supported language. Voice Input helps users with mobility impairments access generative AI skills without using a keyboard. This feature can also be useful to blind or low-vision users, neurodivergent users, non-native language speakers, or mobile users on the go, such as field service agents. Once enabled, Voice Input can be changed using the individual user accessibility preferences. See Configure Next Experience accessibility preferences for more information.
Now Assist AI agents	**Voice Input for Now Assist AI agents** Administrators can enable an optional voice input setting for the Now Assist panel in the Now Assist Admin console. This feature gives users a voice-to-text input option to access the Now Assist skills in the panel in any supported language. For more information, see Enable voice input for Now Assist panel. After enabled, the Enable voice input for the Now Assist panel option is available in individual user accessibility preferences. See Configure Next Experience accessibility preferences for more information. Voice-to-text input can help users with mobility impairments access generative AI skills without using a keyboard. This feature can also be useful to blind or low-vision users, neurodivergent users, non-native language speakers, or mobile users on the go, such as field service agents.
Now Assist for Enterprise Architecture (EA)	**Dark theme** The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.
Now Assist for IT Operations Management (ITOM)	**Dark theme** The new Coral theme includes a dark theme option for web and mobile experiences. This option is commonly used to alleviate eye strain and improve readability.

Product localization information in Zurich

Cumulative release notes summary on new Zurich features and products.

Some products may have specific localization requirements or behavior in Zurich.

Application or feature	Details
AI Search	AI Search supports international languages. For details of language support by feature, see Internationalization support for AI Search.
Accounts Payable Operations	Accounts Payable Operations supports multiple languages. However, the current DocIntel model is trained to extract invoices in the English language only. If you want to process an invoice in the multiple languages supported by DocIntel, you must train the DocIntel model.
Continual Improvement Management	Localization is applicable to CIM in all languages supported by the ServiceNow AI Platform.
Digital End-User Experience	Localization is applicable to DEX in all languages supported by the ServiceNow AI Platform.
Generative AI Controller	Generative AI Controller uses Microsoft Azure OEM for Dynamic Translation in Now Assist for multilanguage support. You can enable dynamic translation from the Now Assist Admin console. For more information, see .
Health Log Analytics	The current available languages for Health Log Analytics are US English, UK English, French, German, Italian, Japanese, and Spanish. The default language is US English.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application or feature	Details
ITOM AIOps	The current available languages for Health Log Analytics are US English, UK English, French, German, Italian, Japanese, and Spanish. The default language is US English.
Now Assist	Now Assist supports Dynamic Translation for Zurich.
Now Assist AI agents	The Now Assist AI agents application is built on the GPT-4o-based framework and supports localization according to the GPT-4o model.
Now Assist Skill Kit	Now Assist supports Dynamic Translation for Zurich.
Now Assist in AI Search	Now Assist in AI Search supports Dynamic Translation in Now Assist Genius Results. For details, see Dynamic Translation for Now Assist Q&A Genius Results and Dynamic Translation for Now Assist Actions Genius Results.
Now Assist in Document Intelligence	**Zurich Patch 1** **Support for files in multiple languages** Process files with text in multiple languages, including Simplified Chinese and Japanese.
Now Assist in Virtual Agent	Dynamic Translation is supported for non-streaming Now Assist Virtual Agent conversations. For details, see , Using language detection and dynamic machine translation in Virtual Agent enhanced chat conversations, and Using language detection and dynamic machine translation in Virtual Agent NLU and LLM standard chat conversations.
Playbooks in Workflow Studio	Using OpenAI LLMs for playbook generation is not available in the APAC region.
RPA Hub	RPA Hub supports international languages. For more information, see Internationalization support for RPA Hub.
ServiceNow IDE	The ServiceNow IDE is localized in all supported left-to-right languages and reflects the language preference selected by users for the instance. For information about how to activate a language on an instance, see Activate a language.

Changes to plugins in the Zurich release

This table lists the existing plugins that were deprecated, planned for deprecation, renamed, or changed in some way.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Planned for deprecation: In preparation for the future deprecation. The application is being prepared for future deprecation. The plugin will be hidden and no longer available for activation but will continue to be supported. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- Deprecated: The application is no longer deployed, enhanced, or supported. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- Maintenance mode: The application will have no new enhancements or activations but will have continued support.

Deprecated plugins

This table lists the existing plugins that were deprecated in Zurich and Yokohama that weren't previously listed as planned for deprecation.

Plugin	Status	Description	Details
Agent Client Collector for Security Incident Response [sn_secops_acc]	Deprecated in Zurich	Automate security operations center (SOC) tasks for gathering details and enriching data.	Use the already installed Security Incident Response workflows and integrations or the ACC Spoke.
Aleph Alpha Spoke [sn_aleph_alpha_spk]	Deprecated in Zurich	Aleph Alpha Spoke enables integration of Generative AI capabilities from Aleph Alpha in the Generative AI Controller store app. You can leverage the spoke via the Generative AI Controller Store App.	There is no replacement for this application.
Cloud Migration Assessment [sn_cloud_migration]	Deprecated in Zurich	Plan and organize the process of relocating your enterprise IT resources and workloads to cloud platforms.	There is no replacement for this application.
Timeline Visualization/ CIO Roadmap [com.snc.timeline_visualization]	Deprecated in Zurich	Enables graphical representation of activities over time to provide a high-level view of strategic and operational activities in your organization such as incidents, problems,	Install the Portfolio Planning (standard customers) or Strategic Planning (Pro customers) application from the ServiceNow Store. Review the Planning roadmaps in

Plugin	Status	Description	Details
		application into your ServiceNow instance.	application on the ServiceNow Store. This application is owned by ExtraHop.
Sustainability Accounting Standards Board (SASB) Content Accelerator for ESG [com.sn_esg_sasb]	Deprecated in Xanadu	The SASB Accelerator is designed for use with the ESG Management and Reporting application to enable customers to easily adopt the SASB framework to produce their ESG disclosures.	Install the ESG Content Accelerator application from the ServiceNow Store. For guidance, see ESG content accelerator.

Plugins planned for deprecation

This table lists the existing plugins that were planned for deprecation in a future release.

Plugin	Status	Description	Details
Automation Discovery [sn_auto_discovery]	Planned for deprecation in the B release	Identifies opportunities that can be automated by ServiceNow products, such as Virtual Agent, Auto-Routing, and Agent Assist.	There is no replacement for this application.
Cloud Discovery Workspace [sn_cloud_ops_ws]	Planned for deprecation in the B release	Manage the cloud operations of your organization.	Use the already installed Discovery Admin Workspace application.
Conversational Integration with Facebook Messenger [sn_va_fb_messenger]	Planned for deprecation in September 2025	Enable brands to engage with their customers using the Facebook Messenger app.	There is no replacement for this application.
CTI Softphone [com.snc.cti]	Planned for deprecation in the B release	Enables Twilio integration using Notify and OpenFrame to provide softphone functions and call center capabilities.	Install the ServiceNow Voice with Amazon Connect application from the ServiceNow Store.
Customer Service Case Types [com.snc.csm_case_types]	Planned for deprecation in the B release	Manage complex case processes by defining new case types.	Upgrade the instance to Zurich or higher release versions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Plugin	Status	Description	Details
Document Intelligence Admin [sn_docintel_admin]	Planned for deprecation in the B release	Provides a dedicated administration experience for Document Intelligence.	Install the Now Assist for Platform application from the ServiceNow Store.
Guided Application Creator [com.glide.sn-guided-app-creator]	Planned for deprecation in the B release	Quickly and effortlessly create new applications.	Install the ServiceNow Studio application from the ServiceNow Store.
Learning Posts [sn_lnp]	Planned for deprecation in the B release	Empower employees by delivering in-moment learning experiences and personalized learning recommendations when and where employees need it.	Install the Journey Designer v6.0.0 application from the ServiceNow Store.
Listening Posts [sn_lp]	Planned for deprecation in the B release	Capture employee feedback across various touch points, gain insights, and take action to quickly improve the employee service experience.	Install the Employee Center Pro application from the ServiceNow Store and use Integrated Experience and Service Feedback.
Now Assist for Service Graph Connectors [sn_nowassist_sgc]	Planned for deprecation in March 2030	Get easy-to-understand assistance with setting up, managing, and troubleshooting Service Graph Connectors, reducing manual effort and decreasing the time required to succeed.	Uninstall the Now Assist for Service Graph Connector and install the Now Assist for Configuration Management Database (CMDB) v2.1.0.
Retail Task Management Core [com.sn_retail_task_management_core]	Planned for deprecation in the A release	Optimize the planning, organizing, and assigning of tasks to staff in retail environment.	Use retail case types (HQ communications) along with the task plan template plugin for retail task management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Plugin	Status	Description	Details
Sensitive Data Handling [com.glide.sensitive_data_handling]	Planned for deprecation in the B release	Detects and masks sensitive data shared by users of both conversational and non-conversational channels.	Install the Data Privacy application from the ServiceNow Store.
Service Creator [com.glide.service_creator]	Planned for deprecation in the B release	Service creator makes it easy for departments to create their own services in the catalog.	Install the Creator Studio application from the ServiceNow Store.
Studio [com.glide.dev-studio]	Planned for deprecation in the B release	Provides an Integrated Development Environment (IDE)-like interface for application developers to work on custom applications in one centralized location.	Install the ServiceNow Studio application from the ServiceNow Store.
Password Reset Orchestration Add-on [com.glideapp.password_reset.addon_orchestration]	Planned for deprecation in the A release	Password reset add-on to enable the use of ServiceNow Orchestration. Includes support for Active Directory and remote SOAP-based credential systems.	Install the Password Reset integration for Microsoft Active Directory application from the ServiceNow Store and review the Integrate Password Reset with your Active Directory service documentation.
Patient Support Services [sn_patientservice]	Planned for deprecation November 2028 or contract term end date (whichever is earlier)	Streamlines the patient onboarding, education, and engagement for various patient support services such as discount plans, adherence programs, opioid, and diabetes management.	There is no replacement for this application.
Performance Analytics - Content Pack - GRC: Audit Management [sn_audit_pa]	Planned for deprecation in the A release	Provides Performance Analytics reports	Test the migrated GRC: Audit Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Plugin	Status	Description	Details
		for the GRC Audit Management application.	Core UI analytics assets in Platform Analytics.
Performance Analytics - Content Pack - GRC: Policy and Compliance Management [sn_compliance_pa]	Planned for deprecation in the A release	Provides Performance Analytics reports for the GRC Policy and Compliance Management application.	Test the migrated GRC: Policy and Compliance Management Core UI analytics assets in Platform Analytics.
Performance Analytics - Content Pack - GRC: Risk Management [sn_risk_pa]	Planned for deprecation in the A release	Provides Performance Analytics reports for the GRC Risk Management application.	Test the migrated GRC: Risk Management Core UI analytics assets in Platform Analytics.
Pre-Visit Management [sn_previsit]	Planned for deprecation October 2029 or contract term end date (whichever is earlier)	Streamlines the scheduling process of procedure requests for patients and increases visibility to pre-authorization approvals prior to scheduled procedures.	There is no replacement for this application.
Redox Electronic Health Record Spoke [sn_redox_spoke]	Planned for deprecation in the A release	Enable communications with your customers using the Redox platform from your ServiceNow instance.	There is no replacement for this application.
Redox Inbound Integration [sn_redox]	Planned for deprecation in the A release	Use the real-time bidirectional data exchange with external healthcare systems via the Redox platform.	There is no replacement for this application.
Security Incident Response UI [com.app_secops_ui]	Planned for deprecation in the A release	Provides an enhanced user interface for monitoring and resolving threats to an organization's security. Activation of this plugin on production instances may	Install Security Incident Response version 13.4.5 or higher from the ServiceNow Store and review the Security Incident Response Workspace documentation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Plugin	Status	Description	Details
		require a separate license. Contact ServiceNow for details.	
Service Graph Connector for Microsoft Defender for IoT (On-premises Management Console) [sn_msftd4iotsgc]	Planned for deprecation in the A release	Integrate Microsoft Defender for IoT (On-premises Management Console) with the ServiceNow Operational Technology Manager application to automate import of sensor appliances, OT devices, and network connections.	There is no replacement for this application.
SharePoint Online Search Connector [com.snc.sharepoint_online]	Planned for deprecation in the A release	Offers a consumer-grade search configuration to manage your information resources.	Install the External Content Connectors ServiceNow application from the ServiceNow Store.
Vaccine Administration Management [sn_vaccine_sm]	Planned for deprecation October 2029 or contract term end date (whichever is earlier)	Enables governments and healthcare providers to deliver vaccines, on a deadline and with finite resources.	There is no replacement for this application.
Vulnerability Response Integration with Microsoft Defender for IoT (On-premises Management Console) [sn_msftd4iotvr]	Planned for deprecation in the A release	Use the Vulnerability Response for Microsoft Defender for IoT (On-premises Management Console) application to track, prioritize, and resolve vulnerabilities on devices used in the production process.	There is no replacement for this application.

Personalized PRB release notes for upgrades to Zurich

If you are thinking about upgrading to the Zurich family, problem (PRB) fixes can be an important factor in your upgrade plans. Compare the lists of fixed problems across various Zurich upgrade scenarios to help you decide which release version to upgrade to.

Generate cumulative PRB release notes

To create personalized release notes for your upgrade, use the **Filter by** feature to select your current release version and your target version. The table will filter to show you the personalized release notes for the selected upgrade scenario. You can view the cumulative PRB release notes by downloading the CSV file.

Warning: The personalized PRB release notes now include security PRB fixes. You can filter on the PRB tables by security category, or you can search for the text "Security bug."

Fixed problems in upgrades to Zurich

Only available target release versions are listed in the personalized release notes generator. For further information on a PRB, documentation updates, or fixes included for a specific release version, you can also browse the standard release notes topics on the ServiceNow Product Documentation website.

Important: Be sure to upgrade to the latest release version that includes all of the PRB fixes you are interested in.

- Available: Any user can upgrade to the version. "Available" versions will appear on the Instance Upgrade Management Dashboard.

  ServiceNow Patching Program targets and patches are immediately available. Users do not need to request an entitlement to schedule an upgrade to these versions.

- Available by request: Contact Customer Service and Support for approval to upgrade to the version.
- Unavailable: The release version is not available.

MetricBase releases

For the latest MetricBase on-premise release notes, refer to KB0748185.

Ancillary software releases

For information about latest Password Reset Windows Application, ODBC driver, and all other ancillary software available for download from the ServiceNow Store, see ServiceNow Store release notes.

Zurich Patch 7

The Zurich Patch 7 release contains important problem fixes.

Zurich Patch 7 was released on March 10, 2026.

- Build date: 03-04-2026_1012
- Build tag: glide-zurich-07-01-2025__patch7-02-19-2026

Important: For more information about how to upgrade an instance, see ServiceNow upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

Note: This ServiceNow AI Platform® major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

Overview

Zurich Patch 7 includes 307 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

Security-related fixes

Zurich Patch 7 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Zurich Patch 7, refer to KB2797601.

Changes in Zurich Patch 7

Associate a request header with a resource

[Target <result> was unhandled by content reference generator.]

Create a theme with Theme Builder

[Target <info> was unhandled by content reference generator.]

[Target <info> was unhandled by content reference generator.]

If your instance uses Zurich Patch 7, you can edit any part of the theme from this screen.

Define an API resource request structure

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add a schema to a REST request record to define the request's expected data structure.

Define a REST API response header

Define one or more REST API response headers in a REST API.

Define an API resource response structure

Add a schema and relevant response headers to a REST response to define the response's expected data structure.

Define a scripted REST API request header

a scripted REST API request header

[Target <titlealts> was unhandled by content reference generator.]

request

request

Define a REST API schema

Specify the expected data structure for requests or responses within a REST API by defining a schema.

Now Assist and agentic AI release notes

For Now Assist new features and changes, see Now Assist and agentic AI release notes.

Scripted REST APIs

Schemas define a structure that can be used for API requests and responses, including data type, expected fields, and formats. You can define multiple schemas within a scripted REST API, which can be used to specify request and response contents of the resources within that API.

Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

Problem	Short description	Description	Steps to reproduce
Application Manager PRB1889269	Progress worker state isn't set to complete after worker is finished	Installing plugins shows an error even when successfully completed. In the logs, it looks like the error comes from a script include. Previously, the code block was a part of a larger function that had appVersion and appID as parameters. The code was refactored into the forceSyncWithStore function, which doesn't have appVersion and appID as parameters.	1. Install the custom scoped app (such as x_conym_atf_sc_req or x_conym_hrp). 2. Check 'sys_upgrade_history' to confirm the installation is marked as 'Complete'. 3. Check the 'sys_progress_worker' list for the message 'Progress worker state is not set to complete after worker is finished.' Notice that the syslog has the error 'com.glide.script.RhinoEcmaError: 'appVersion' is not defined.'

Problem	Short description	Description	Steps to reproduce
		If the gs.info line is reached, it throws an error because those two fields were not passed into the function.	
Application Manager PRB1986694 KB2753355	App Manager and My Company Applications incorrectly shows available updates after update checker	When publishing a new version of the app, it doesn't appear in 'My Company Application'.	Refer to the listed KB article for details.
Connections and Credentials PRB1974412 KB2730719	Certain outbound HTTP requests fail randomly with '401 unauthorized' even though valid tokens exist	While executing outbound HTTP request using REST step, the request misses the authorization header even though the valid oAuth token exists.	Refer to the listed KB article for details.
Declarative Actions PRB1975231	Field decorators for **Variable** fields are cached in a way that causes issues, causing them to not show up sometimes		1. Create a variable set. 2. Create a catalog item for specific catalogs only. 3. Add the catalog item to the included in list for the variable set. 4. Navigate to the catalog item. 5. Select **Try it**. 6. Order the item. 7. Navigate to the request record. 8. Navigate to the related list. 9. Navigate to the request item record. 10. Notice the sys id and visit the record in workspace. 11. Add a reference variable to the variable set created above. 12. Navigate to the catalog item. 13. Try it again. Following the same steps above, users end with the **Variable** field in workspace without field decorators.

Problem	Short description	Description	Steps to reproduce
Multi-provider Single Sign-on (SSO) PRB1979071 KB2715489	SAML SP Keystore expiration		Refer to the listed KB article for details.
Natural Language Query (Family Release) PRB1992648 KB2794876	com.snc.nlq.Metadata.save modifies GlideElement objects in TableDescriptor Cache	This issue is observed in production.	Refer to the listed KB article for details.

All other fixes

Problem	Short description	Description	Steps to reproduce
Access Analysis Instrumentation API PRB1990716	Add agentic support in access simulation and compare use access	This is a product update.	
Activity Stream PRB1923171	When the **Journal** field is truncated, new lines are lost	The new lines are not displayed.	1. Using the regular text input in compose, post a long message with new lines over 16000 characters (or whatever the glide.activity.rule.sys_journal_field.truncate_threshold is set to, but the default is 16000). Notice the new journal entry popup, but the content has been truncated. 2. Select **Click here to load and view content**. 3. Load the content. Notice the new lines are not being displayed.

Problem	Short description	Description	Steps to reproduce
Activity Stream PRB1969041	Focus remains on the 'Email' tab after 'Save'		**1.** Log in to the instance. **2.** Navigate to a CSM record. **3.** Open any incident record. **4.** Change the **Impact** field. **5.** Fill in the mandatory **Worknote** field. **6.** Select **Save**. Observe that the focus is on the 'Email' tab after refreshing, and the focus returns to Comments, which is expected.
Activity Stream PRB1996382	When setting glide.ui.escape_text to 'false', forms break		**1.** Open any Zurich instance. **2.** Upload the sys_properties file for glide.ui.escape_text. **3.** Run a /cache.do. **4.** Load any relevant record, such as 'Incident'. Expected behavior: The record should load normally with the glide.ui.escape_text sys_property activated. Actual behavior: A blank screen with a basic message at the top will call out the ampersand issue.
Advanced Work Assignment PRB1938992	High AWA assignment cycle times for DHL impact voice call routing	DHL is uptaking in NVC and they are facing slow response times for call routing. It's taking ~12 seconds to route the call to agent. Each AWA assignment cycle is taking ~11 secs and out of which ~8 secs is being spent for Agent Map creation. Expected response times should be less than a second as there's no other load in the system.	
Advanced Work Assignment PRB1981019	AWA TransferToQueue shouldn't reassign a workItem to an AI Agent once rejected	If the interaction was previously transferred from the AI Agent, it shouldn't be transferred back to the AI Agent later	**1.** Make sure an AI agent (sys_user with identity_type='ai_agent') is part of the agent chat assignment group of the chat queue. **2.** Make it AI available.

Problem	Short description	Description	Steps to reproduce
		(even if the AI agent is available).	**3.** Create a workItem. **4.** Assign it to the AI agent. **5.** Use the 'Transfer to queue' API to transfer the interaction to the same chat queue where the first workItem was created. **6.** Make the agent 'Abel Tuter' available so they receive the transferred workItem. **7.** Invoke the 'Transfer To queue' quick action from Beth. **8.** Select the same chat queue. Observe that the interaction is transferred to the AI Agent.
Advanced Work Assignment PRB1990260	The CreateSegment Scriptable API throws error when invoked from different scope that is not global	The error 'No implementations found for extension point: interactionSegment' is thrown.	**1.** Log in to the instance. **2.** Install customer service management demo data. Notice two records in sys_extension_instance with the point 'global.InteractionSegment' (openframe) **3.** Create an interaction and respective phone log record. **4.** Link the phone log record to the interaction by creating interaction related record. **5.** Run this createSegment Wrap Up Scriptable API from 'Scripts - Background' from any other scope (sn_openframe) Expected behavior: A wrap up segment with a segment record is created, and works if run from global scope. Actual behavior: An error is thrown, 'No implementations found for extension point: interactionSegment.'
Agent Chat PRB1964909	When an agent receives a new interaction within the workspace, the non-focused tab won't blink or flash	The tab is focused for the agent, but not the end user.	**1.** Log in to a Zurich instance using a regular Chrome session as the agent 'Abel Tuter'. **2.** Make the agent Abel Tuter available on the Service Operations Workspace (SOW).

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			3. Log in to the Zurich instance using a Chrome profile session as the user 'Abraham Lincoln'. **4.** Navigate to the **/esc** portal. **5.** Log in Zurich instance using a Chrome profile session as another user. **6.** Navigate to the **/esc** portal. **7.** Request a Live Agent. Notice that as the agent, one tab is focused, but the tab for the end user is not focused. **8.** Send a message. Observe that the non-focused tab won't blink or flash.
Agent Chat PRB1979795	Users can't update the agent chat status message content consistently via [sys_ui_message] records	When using agent chat, if an agent joins the chat, leaves the chat, or ends the conversation, a message appears indicating this. If the user wants to update these messages to display something other than 'Agent', they are only able to update the initial message through a [sys_ui_message] record, where the message for the key is updated to display the desired text. However, the other messages are displayed via business rules. If a user wishes to update these other messages, they must modify these scripts, which can cause breaking changes.

Problem	Short description	Description	Steps to reproduce
Agent Chat PRB1982490	RECORD#OPEN_TAB event isn't emitted during manual reject for transferred work items	The flow breaks inside closeRejectModalAndCard().	1. For an incoming call, Agent 1 receives and accepts an inbound call. 2. For a consultation initiation, Agent 1 initiates a consult transfer call to Agent 2. 3. For a consult rejection, Agent 2 views the alerting popup and rejects the incoming consult call. Expected behavior: openframe_awa_workitem_rejected should be emitted. Actual behavior: openframe_awa_workitem_rejected isn't generated when agent selects the **Reject** button on an interaction.
Agent Chat PRB1990618	Live agent connection is not established with the Utterance and Contact button for non-admin requestors	Even though there is an agent available online, the requestor sees no agents available in the Agent workspace.	
AI Agents (Glide Family) PRB1994390	After a Zurich upgrade, hundreds of thousands of log entries are generated by CacheInvalidationEventHandler	The message is 'No endpoints available for cache invalidation'. The source is com.glide.ui.ServletErrorListener.	
AI Search (Glide) PRB1925238	AI Search should reuse the filter generated for each request instead of generating a filter again each time	The pre-processing time with Genius Results takes more time.	1. Navigate to **Search preview**. 2. Select a profile. 3. Perform a search. 4. Record the pre-processing time for search. 5. Navigate to that profile. 6. Remove all the Genius Result (GR) configurations. 7. Re-run the search in the 'Search' preview. 8. Observe the pre-processing time. Expected behavior: The pre-processing time with GR as opposed to without GR

Problem	Short description	Description	Steps to reproduce
			isn't different since the filter generated from the first request is being used. Actual behavior: The pre-processing time is more than double with GR.
AI Search (Glide) PRB1934845	Make query boolean mode a first class parameter for search	When invoking AI search API, there should be a way to override the default query boolean mode. The goal is to first make NAVA default to OR mode.	
AI Search (Glide) PRB1980738	When using AISearch Dynamic Filter, the pre-processing doesn't filter out search results as expected		1. Implement AISearch Dynamic Filters in recommended actions. 2. Implement getFilterCondition to filter the search results with short_description spam. 3. Search the term 'Spam' on a case in recommended actions. Observe that the search results with short_description spam aren't filtered out.
AI Search (Glide) PRB1986147	Extend branding properties to support the update to the dynamic landing page 'Search My Servicenow' placeholder		
AI Search (Glide) PRB1989537	New tables added in Knowledge Graph AI Search pipeline	New tables added: sn_kg_tag_table, sn_kg_tag_column, sn_kg_tag_table_instruction, and sn_kg_tag_column_instruction.	
AI Search (Glide) PRB1990134	If all KBBs from one doc are removed from KB late binding, the post process stops and all	If ACL filtering removes all the embedded documents from a knowledge base article (and there's no embedded match), the code stops processing	1. Ensure the KB is using ACL instead of UC 'glide.knowman.search.apply_acls'=true. 2. Create two KB articles:

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
	following docs are returned	all subsequent documents.	**a.** For KB1, the user has ACL access, but cannot access any of the KBB. **b.** For KB2, the user has no ACL access. **3.** As the user, search a query that matches KB1. (Or use result improvement rule to boost KB1.) Expected behavior: KB2 is not shown because the user has no ACL access. Actual behavior: KB2 is shown.
AI Search (Glide) PRB1992808	AI server response time is more	While comparing with baseline, slowness on the AIS server side is observed.	**1.** Open KG Designer. **2.** Execute any query on EG. Notice the response time is slower.
AI Search PRB1808581	activateDatasource API can pass semantic index configuration Sys ID from a different index source	The semantic index configuration is activated and the table is re-indexed.	
AI Search PRB1822229	Query Performance metrics are down because it is polluted with the Genius Result configuration, making difficult to find required information	When logging performance time breakdown, E2E search takes more than 5 seconds forais_long_query_log. There are missing crucial performance metrics breakdown, as it getting polluted with Genius Result pre-processing and post-processing scripts.	
AI Search PRB1896807	'Index All Table' from the list view of a datasource should trigger 'No block indexing' instead of 'Block re-indexing'	This causes an event queue pile up when the user triggers multiple re-indexing from the list view of the 'datasources' page.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
AI Search UX PRB1943058	There's a global search highlighting issue when using a Safari browser in Next Experience with Zing	There's a visual rendering issue affecting the search bar on the Support ServiceNow portal when accessed via Safari OS version 26. The text typed into the search bar isn't properly visible regarding the theme, making it difficult for users to interact with the search functionality.	**1.** Log into any instance. **2.** Select any available theme. **3.** Navigate to the support portal. **4.** Select the search bar and begin typing. Observe that the input text isn't rendered correctly, affecting visibility and usability.
AI Search UX PRB1980290	In the Service Portal with Now Assist enabled, when the tab focus is on the link and the 'Enter' key is pressed, the link doesn't open		**1.** Navigate to **Conversational Interfaces** > **Assistants**. **2.** Under Now Assist in Virtual Agent, select **Display Experiences** > **Add service Portal** > **Save**. **3.** Open any instance. **4.** Navigate to the **Service Portal**. **5.** Navigate to the search's **Edit** field. **6.** Type 'email' and search for it. **7.** Navigate to the **Search results** > **Select a filter**. **8.** Navigate to the **Any links** in the 'Results' section and attempt to press the 'Enter' key to select. Observe that when the tab focus is on the link and the 'Enter' key is pressed, the link does not open.
AI Search UX PRB1988802	additionalContext is not passed through the Suggestions GQL API to AI Search, preventing DynamicFilters from working for Virtual Agent (VA) skills	When additionalContext is passed from the client to the Suggestions GQL API, it was not being threaded through the call chain to the AI Search Suggestion Reader. This causes DynamicFilters to not work properly, preventing VA Skills from being returned in suggestion results.	Call the Suggestions GQL API with additionalContext parameter containing DynamicFilter information. Observe that the VA Skills that should be filtered by DynamicFilters are not being properly filtered, and the additionalContext is lost in the call chain and never reaches the AI Search service where DynamicFilters are applied.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
AI Search UX PRB1989321	Logic for retrieval should support 'CONTAINS' and not just prefix matching	Popular query suggestions are only returned if they start with has been inputted in the Omni bar.	
AI Search UX PRB1991226	Search-based suggestions should have a user-friendly label for source		Call the Suggestions GQL API with a term that will return search-based suggestions. Expected behavior: The payload has the **Source label** field for user-friendly labels based on what is configured for the corresponding source's 'Source Facet Bucket' label on the Search Application. Actual behavior: There is no label based on the Source Facet Bucket.
Analytics Data API PRB1931476	Issue with Incident SLA donut translation in Service Operations Workspace (SOW)	After changing the language in SOW, the Incident SLA widget appears as 'Breached'. After clearing the cache, it then appears as 'undefined'.	**1.** Impersonate a user. **2.** Open SOW. Notice that the Incident SLA widget label appears as 'Breached'. **3.** Change the language to any language. Notice that the label still appears as 'Breached'. **4.** Clear the cache by cache.do. Notice that the label now appears as 'undefined' while the translation is already added in the sys_ui_message table.
Analytics Data API PRB1952604	The data label indicators show the same unit in Platform Analytics Data Visualization	After creating a data visualization that uses two indicators as data sources with different units, the data labels reflect the same unit.	**1.** Create a data visualization (line). **2.** Add to the data sources with different units (# and % for example). **3.** Show the data label. Expected behavior: The data label unit in each indicator reflects the unit of the indicator. Actual behavior: The data label units in both indicators are the same, and not respecting the configured unit of the indicators used as a base.

Problem	Short description	Description	Steps to reproduce
Asset Management PRB1990771	Asset Analyst UI changes	This is a product update.	
Authentication PRB1913258	In the IP Filter Criteria Record, the user can't add a description to an existing range	The user is unable to save the form and gets the error message 'Duplicate IP Range entry'.	**1.** Open a Yokohama instance. **2.** Navigate to **sys_ip_filter_criteria.list**. **3.** Enter the value for IP range bot (the start IP and end IP). **4.** Enter the description. **5.** Select **Save**. Expected behavior: The user can save the form. Actual behavior: The user is unable to save the form and gets the error message 'Duplicate IP Range entry'.
Authentication PRB1975818	The property glide.authenticate.failed_redirect is not working after login failure	The glide.authenticate.failed_redirect property is not functioning as expected after SSO login failure. This property is configured to redirect users to a specified URL after a failed SSO attempt. The URL can be either a public knowledge article describing the error with helpful links, or a company URL. However, after login failure, the redirect is not occurring as configured.	**1.** Configure the 'glide.authenticate.failed_redirect' property with a valid redirect URL. **2.** Attempt an SSO login with invalid credentials or configuration. Observe that after login failure, the user is not redirected to the configured URL. Expected behavior: The user should be redirected to the URL specified in glide.authenticate.failed_redirect. Actual behavior: The redirect does not occur as configured.
Authentication PRB1990715	Token Exchange API for Voice Service Agent	This is a product update.	
Case and Knowledge Management for HR Service Delivery	New RCA records for attachment summarization

Problem	Short description	Description	Steps to reproduce
PRB1985492			
Case and Knowledge Management for HR Service Delivery PRB1991031	Attachment Summary is not working when the HR case is transferred from one HR service to another service for Now Assist	Attachment Summary doesn't work on the new HR case with attachments after using 'Transfer case.'	**1.** Open an HR case. **2.** Upload an attachment. Observe that attachment summarization is working fine. **3.** Select **Transfer case** from the side menu. Observe that modal opens. **4.** Choose any transfer type (for example, 'transfer to a new case number') and any New HR service(for example, Dental Benefits Inquiry). **5.** Select **Ok**. Observe that this HR case transfers to a new HR case, and all the attachments are also copied to new HR case. **6.** Select **Summarize**on the new HR case. Observe that attachment summarization is not available even though HR case has attachments. Expected behavior: Attachment summarization works on the new HR case with attachments after using **Transfer case**. Actual behavior: Attachment summarization doesn't work after using **Transfer case** on the on new HR case with attachments.
Change Management PRB1977634	Change ATF test fails/flaps due to ATF steps timeout		
CI Lifecycle Management API PRB1772623	List view does not translate non-English languages for Lifecycle Stage and Lifecycle Stage status	This issue occurs when the user's language preference is set to a non-English language.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
KB2518604			
CMDB Query Builder PRB1977703 KB2727703	Query Builder in V2 mode can cause memory issues due to a static variable	An internal variable which is declared as static keeps being appended and thus creates a large memory footprint. This would happen if one or more queries are executed enough times to bloat this variable.	Refer to the listed KB article for details.
CMDB Query Builder PRB1982264	There's an inefficient query on cmdb_rel_ci - primary_hash=-739782408 OR 39782408	The query is scanning 90% of table with an odd OR condition. Also, if users split the condition, the first half sys_id>123 AND sys_updated=date runs 1ms and the 2nd half sys_updated_on date runs in 3ms.	Run the scheduled 'CMDB Query Builder Suggested Relations Computation' job.
CMDB Query Builder PRB1984814	'CMDB Query Builder Suggested Rels Cleanup SysTrigger' is using DISTINCT SYS_ID, causing the query to take very long	Removing DISTINCT so that the query finishes immediately.	
Column Level Encryption PRB1892581	KMFCallerAccessPolicyRecordModel isn't cached, causing a performance bottleneck	getCryptoModulesFromCallerPolicyTable shows up in 1.16% of samples and should be cached. It queries sys_kmf_crypto_caller_policy table, which is a metadata table. This can be easily cached using the CacheManager.	getCryptoModulesFromCallerPolicyTable
Configuration Management Database (CMDB) PRB1986775	IRE throws missing dependency errors for dependent CIs when glide.identification_engine.skip_sys_object_source_matching property is enabled	.

Problem	Short description	Description	Steps to reproduce
Database Persistence - Data Access PRB1823749	In GraphMetadataAPI, node/edge types should allow special characters	An error appears that says only alphanumeric and underscore characters are supported.	With JSON or GraphMetadataBuilder, create an edge with type 'Depends On::Used By'. Observe the error that says only alphanumeric and underscore characters are supported.
Database Persistence - Data Access PRB1834259 KB2343586	Syntax error or access rule violation is detected by database	The following error is displayed when a glidefunction column is used as a sort in a list view with a filter on a denormalized glidelist: '(ERROR: for SELECT DISTINCT, ORDER BY expressions must appear in select list Position: 2328)'.	Refer to the listed KB article for details.
Database Persistence - Data Access PRB1891525	Error appears when querying overridden node in child graph	The parent graph has a node with node_type as 'sys_user'. The child graph has a node with node_type 'User', which overrides the parent graph node. When the user tries to execute the cypher query, an error appears: 'java.lang.NullPointerException: Cannot invoke 'org.json.JSONObject.getString(String)' because 'sourceNode' is null'.	
Database Persistence - Data Access PRB1909452	Scriptable GraphMetadata returns an unclear error message when KG's global graph (an extended graph) is run on the wrong scope	The NullPointerException error message can be confusing. To troubleshoot the problem, the user should check if the graph exists or check if they're on matching scope.	
Database Persistence - Data Access PRB1944043	Memory Consumption is significant for getForTables for most transactions	getForTables consumes more memory due to JSON parsing.	1. Setup an instance on Z mainline with Knowledge Graph enabled. 2. Execute the load test with 6 users 1500 TPH.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
	in the HI clone during loadtest		Observed that getForTables seems to be consuming more memory due to JSON parsing in the snapshot.
Database Persistence - Data Access PRB1951393	Set up a default allowed list of SQL functions for DBSqlParser to use with the existing allow list property		
Database Persistence - Data Access PRB1953813	The user doesn't get the negative value in duration.between() function	If the first date input is more than the second date input, then the result should be negative.	Execute the following cypher query: 'RETURN duration.between(date('2017-02-02'), datetime('2016-01-01T00:00:00')).years AS timeDuration'. Observe that the output is 1, but it should be -1. If the first date input is more than the second date input, then the result should be negative.
Database Persistence - Data Access PRB1955802	ScopedGraphMetadata.get() issues 100 queries for sn_kg.now_user_sys_id	This happens when ScopedGraphMetadata.get() is used in sys_generative_ai_validator_5a6265987fb05210995810a9dc866558.	Ask 'What is spam?'.
Database Persistence - Data Access PRB1960120	In GraphQueryBuilder, an encoded query string with a blank value for the **int** field gives a cytosm exception		1. Add the encoded query string 'priority=3^state' to the incident node. 2. Execute the query from GraphQueryBuilder. Observe the cytosm exception.
Database Persistence - Data Access PRB1963104	KG doesn't raise an error when the result is truncated	Truncated results are returned, even though there should be more or an error given.	Issue a query that returns over 1000 results. Observe that 1000 results are returned, even though there should be more or an error given.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
Database Persistence - Data Access PRB1973087	GraphMetadata.get() should respect node type to table migration	Cached JSON is returned with node_type and the custom node type is given.	1. Create a graph without specifying migratedToTable flag and custom node type (for example, User). 2. Specify migratedToTable flag. 3. Call get() method. Expected behavior: The node_type should be the table name (for example, sys_user) and the custom node type (for example, user) should be given as a synonym. Actual behavior: Cached JSON is returned with node_type. The custom node type is given.
Database Persistence - Data Access PRB1973286	'getForTables' throws an exception if table doesn't exist on the anowassist instance	This causes Enterprise Graph to break.	
Database Persistence - Data Access PRB1977551	A few queries break with function not allowed error	The queries were tested with strict security turned on and turned off, and they don't work in both cases.	Run any of the following queries: • Select top 10 log(cost) from cmdb where cost !=0; • Select top 10 log10(cost) from cmdb where cost !=0; • Select top 10 mod(priority,2) from incident; • Select top 10 repeat(first_name,2), first_name from sys_user; • Select top 10 replace(first_name,'a',''ba'), first_name from sys_user; • Select top 10 right(first_name,2), first_name from sys_user; • Select top 10 second(sys_created_on), sys_created_on from incident;
Database Persistence - Data Access PRB1986877	Graph JSON cache should respect the 'isTieredCachingEnabledForCacheable' property value	GraphCacheableJSONString should be used for a tiered cache instead of EncodedForCacheable	1. Disable tiered caching. 2. Call new sn_db.GraphMetadata('graphName').get().

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: The tiered cache with GraphCacheableJSONString isn't used. Actual behavior: The GraphCacheableJSONString wrapper is used even though the value is in a regular cache.
Database Persistence - Data Access PRB1987230	C2R pagination API is not working for 'cypher string with LIMIT'	An error occurs when executing the cypher, 'Error executing cypher: Unsupported keyword: LIMIT clause not allowed when using pagination API.'	
Database Persistence - Data Access PRB1987871	Add API to get the display column name from Table Descriptor		
Database Persistence - Data Access PRB1990139	Knowledge Graph support	This is a product update.	
Database Persistence - Data Access PRB1990516	WDF queries are not returning a response when result limit API option is passed		
Database Persistence - Data Management PRB1939498	Migration to RaptorDB brings column length changes, which could impede archive table synchronization	The synchronization should run quickly, but this scenario can occur and slow down the process.	**1.** Provision an instance on MariaDB. **2.** Create some archive rules. **3.** Archive some data. **4.** Migrate the instance to RaptorDB. **5.** Install a plugin that will cause many table schema updates that will propagate to archive tables, such as 'Discovery and Service Mapping Patterns.' Observe what happens during archive table synchronization.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: The synchronization shouldn't be vulnerable to caches that take a long time to build. Actual behavior: The synchronization could become vulnerable to caches that take a long time to build.
Database Persistence - Data Management PRB1988503 KB2764725	Active subflow executions with clean parent flow executions are listed as 'Unreferenced Records' and are deleted by DMUnreferencedRecordCleaner	This issue was observed in Zurich. If a parent flow completes while an associated asynchronous subflow continues running, the completed parent flow context is cleaned up by the retention policy by routine system cleanup. As a result, the running subflow becomes unreferenced, and may be removed during routine system cleanup.	Refer to the listed KB article for details.
Database Persistence - Data Scale PRB1875764	There's DBI leakage	The user can add some code to trap the lease/cache of the DBI and print out the stacktrace (of where the leak came from) when it's freed by GlideSession. In Glide without the code, the stacktraces aren't available.	**1.** Run Glide. **2.** If the code path is hit by chance, the 'Connections active at session disconnect are being released' message is logged from GlideSession.
Database Persistence - Data Scale PRB1970851	Glide enters 'Databaseless' mode after AHA failover is completed	This happens on an instance where the primary server is down.	**1.** Open an instance where PG Fastaha is enabled and the primary server is down. **2.** Perform AHA failover. Observe that the failover is successful but app nodes aren't coming online. Glide entered 'Databaseless' mode.
Database Persistence - Graph PRB1947688	Datetime doesn't work with WDF tables	If the user runs a query that uses datetime, it doesn't return any results.	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
Database Persistence - Graph PRB1952043	Unable to create sys_meta_graph_edge record properly with source node and target node selected	The nodes can't be selected from the UI or directly imported from the attachment.	1. Create a sys_meta_graph record with two nodes added. 2. Create an edge between these two nodes. 3. Try to select the two nodes as source and target node. Observe that the nodes can't be selected from the UI or directly imported from the attachment.
Database Persistence - Graph PRB1973162	Anowassist has a huge prompt for KG(6.0.6) invocation, causing high processing times		1. Provision an anowassist instance with GenAI set up and platform 10.0.3 version and KG 6.0.6 installed. 2. Perform any transaction that invokes KG. Observe the prompt and token count.
Database Persistence - Graph PRB1975734	Duplicate query execution for sys_scope (child of sys_package) in GraphUtils for every iteration/ execution		
Database Persistence - Graph PRB1975735	Duplicate query executions for sys_user during sample script iteration/ execution		
Database Persistence - Graph PRB1975738	Add support for AGlideRecordOptimizer in GlideRecordDynamic, especially for ArrayLoader implementation		
Database Persistence - Graph	DBSqlParser key injection must consider both local and cte keys	An error message appears: 'com.glide.db.DBGraphApiException: Error executing cypher: FAILED TRYING

Problem	Short description	Description	Steps to reproduce
PRB1982912	when deciding whether to add additional ones in finalizeKeyInjection	TO EXECUTE ON CONNECTION...'	
Database Persistence - Graph PRB1992704	Getting 'com.snc.db.graph.GraphMetadataSerializationException: Edge type is required' exception on CMDB tables	The exception, com.snc.db.graph.GraphMetadataSerializationException: Edge type is required.: org.mozilla.javascript.JavaScriptException: com.snc.db.graph.GraphMetadataSerializationException: Edge type is required' occurs.	
Database Persistence - Graph PRB1993285	Simple queries are timing out on Enterprise Graph and Enterprise Graph Mini		
Database Persistence PRB1864221	Glide Aggregate performs a second unrequested aggregate, doubling the DB work and response time	Ideally, there would be a separation of concerns. Table UI performs the queries it wants for itself, and this isn't forced into the code paths for users of Table.java or GlideAggregate.	
Database Persistence PRB1930261	DB connection recycling reduces the number of available semaphore permits	During recycling, the freeConnection0 method shouldn't make a connection available or release available semaphore permits.	1. Find a broken connection marked for recycling. 2. Try to obtain all available connections up to pool MAX. Observe warnings when trying to obtain a connection: 'No connection was obtained while semaphore was available'.
Database Persistence PRB1939323	SQLException thrown when loading the sc_cat_item table with language translations	SQLException throws an exception that 'GROUP BY' are not in 'SELECT' after changing the language to French and reloading the list view.	1. Ensure there is a glide node running connected to the postgres database. 2. Install French Translations plugin [com.snc.i18n.french]. 3. Ensure workers are running during the installation of this plugin. Notice that after the plugin installations, the translations are loaded from an event processor. 4. Log out.

Problem	Short description	Description	Steps to reproduce
			5. Log in again as an admin. **6.** Confirm from user settings that a new language is now available. **7.** Open the list view. **8.** Ensure it is ordered by the **Name** field. **9.** Return to the user profile. **10.** Change the language to French and reload the list view Notice that there is an SQLException stating the fields in 'GROUP BY' are not in 'SELECT.'
Data Management Console PRB1977994	Remove unnecessary debug and warn logs in Stats Gatherer	The logs print many times in prod even though they're debug logs. The record count estimate for the table 'Optimal sys_id prefix length' is fetched from the transaction cache for the table.	
Discovery PRB1905069	Discovery can fire both discovery.completed and discovery.canceled events, which results in any 'run after' schedules being triggered twice	Triggering both completed and canceled events is an error, but Discovery needs to be resilient when errors occur. This issue is not about both events getting fired; it's intended to handle the case where both events are fired in error.	
Discovery PRB1956011 KB2601907	ADM / ADME probes cause memory issues and take down instance nodes due to large amount of PostgreSQL processes discovered	When ADM / ADME sensors are running, around 150MB memory is consumed.	Refer to the listed KB article for details.
Discovery PRB1981940	Add global scope support to allow application scope to delete	The cmdb_file_information table is owned by the global scope and requires global-scope handling for controlled bulk deletions.	**1.** Create or use an existing application scope. **2.** Implement logic in the application scope that requires deletion of records from the cmdb_file_information table using

Problem	Short description	Description	Steps to reproduce
	cmdb_file_information records		dynamic query conditions (based on runtime parameters). 3. Attempt to perform the deletion directly from the application scope. Observe that the deletion can't be completed due to cross-scope access restrictions and/or the lack of a global-scope utility that supports dynamic, caller-defined queries.
Document Intelligence Unified Backend PRB1988914	Add functionality for Input Router to consider an entire document set	This is a product update.	
Dynamic Scheduling PRB1979973	Dynamic scheduling shows the wrong date for certain tasks when the date format is different than default	The date format for all tasks should align with the default date format.	1. Set the date format to DD/MM/YYYY. 2. Set the assignment method to dynamic scheduling. 3. Drag and drop a Pending Dispatch task(T1) onto an Assigned task. Expected behavior: The date format for both tasks align with the default date format. Actual behavior: The original task(T1) has a date format that doesn't match the default date format. This causes an error when confirmed, as the date would be miscalculated.
Dynamic Translation for Agent Chat PRB1988564 KB2776693	If Dynamic Translation for Agent Chat (DTAC) translation fails from agent to requester, the original message isn't sent	Note that messages from the requester to the agent still get delivered in the original language even though they aren't translated. Messages from the agent to requester don't get translated and don't get delivered.	Refer to the listed KB article for details.
Embedded Help PRB1975389	Add a check in Platform to control the access of foreign language	Support has been extended to localized content in the Help Center framework. However, content in languages other than English isn't being
