Encryption PRB1982059	Migration job changes to separate Rekey issues and 3des migration failures	After the job execution is complete, the summary has recordsSkipped. The 3des skipped records are captured in recordsSkippedSysId.	1. Open a Zurich instance that has long 3DES encrypted data that is less than 125 characters in the **password2** fields. 2. Navigate to **Security Jobs** > **Create new** > **Mass encryption job**. 3. Create a job with the type 'Password2 data migration'. 4. Execute the job and wait for it to complete. Observe that the summary has recordsSkipped and the 3des skipped records are captured in recordsSkippedSysId.
Encryption Support PRB1973482	Search filter 'startsWith' is not working on a referenced column when another column with the same name has an EFC	This is happening due to the 'Like' operator being removed as the method 'com.glide.db.ElementDescriptor#shouldConcealForQuery' is returning 'true'. The column 'profile.name' should be null since there is no EFC on Entity.name or Profile Name column (reference).	1. Create Entity table with the following columns: a. id (Integer) b. name (string) display =true 2. Create Profile table with the following columns: a. Id (int) b. Profile Name reference to Entity table c. comments (string) d. name (string) 3. Create an EFC on the profile.name column. 4. Enter few records into the Profile table 5. Create a filter on the Profile table. 6. Select the column **Profile Name**. 7. Select the operator **startsWith**. Notice that the the filter didn't return matching results, and instead shows all the records in the table.

Problem	Short description	Description	Steps to reproduce
Event Management PRB1990235	Add an entry point to sanitize an **HTML** field before insert	This is a product update.	
Flow Engine PRB1907242	Published flow switched from CRUD trigger to email trigger doesn't create sys_flow_email_trigger	When the trigger type has changed to email trigger, creating or updating a record-based trigger shouldn't activate the flow. It should only be triggered by inbound email.	**1.** Create a flow with a CRUD trigger and publish it. **2.** Trigger the flow. Observe that it works fine. **3.** Change the trigger type to inbound email. **4.** Verify that the sys_flow_email_trigger record isn't created and the sys_flow_record_trigger is still active. **5.** Create a record as configured in step one. Observe that the flow is still triggered. Since the trigger type has changed to email trigger, creating or updating a record-based trigger shouldn't activate the flow. It should only be triggered by inbound email.
Flow Engine PRB1935825	Skip_schedule_cleanup is not reset to false for subflows	The table cleaners need to be revised.	
Flow Engine PRB1944299	'Extension point not found' exception from com.glide.hub.action_step.api plugin	The send_notifications action executed on a node with new code has no error. The send_notifications action executed on a node with old code errors out with an exception.	**1.** Open a Yokohama or Zurich 2-nodes TD instance.2. Generate Now Assist Troubleshooting Notifications. **2.** Upgrade node 1 to a more recent release. Expected behavior: The send_notifications action is executed on both node 1 and node 2 without any error. Actual behavior: The send_notifications action executed on node 1 (the new code) has no error. The send_notifications action executed on node 2 (the old code) errors out with an exception.

Problem	Short description	Description	Steps to reproduce
	'Does Not contain' isn't working on the 'Owner' column		Expected behavior: All the records should be filtered by the applied filter value. Actual behavior: It is not filtered properly when there are multiple values.
Platform Analytics Dashboard API PRB1969752	Cached toolbox items cause options to remain in a previously selected language	While working on the Platform Analytics Dashboard and Data Visualization modules, users have observed that the language in the right-hand menu changes automatically without any user action. The issue occurs intermittently. Sometimes, it appears only in a single browser session, while at other times it affects multiple browsers simultaneously. No consistent trigger has been identified so far. Users report that refreshing the page or clearing the cache may temporarily resolve the issue, but it can recur unpredictably.	
Platform Analytics Dashboard API PRB1971556	Rich text components in the in-line dashboard editor are getting partially translated	It partially translates the rich text component for a few scenarios. A few words aren't translated when all should be.	
Platform Analytics Migration API PRB1972851	Hide the info message if 'com.glide.par.coreui_single_migration.enabled' property is 'false'		**1.** Create CoreUI dashboard (pa_dashboards). **2.** Add Dynamic content block to it. **3.** Set 'com.glide.par.coreui_single_migration.enabled' system property to 'false.' Expected behavior: The info message should be hidden

Problem	Short description	Description	Steps to reproduce
			Actual behavior: The info message is shown.
Playbook Experience Core PRB1965373	When adding an optional activity on a playbook more than once, the playbook bugs	Adding a single optional activity effectively breaks playbook execution in regards to activity state logic between associated record and activity context, such as completing an associated Flow Data record leaves the corresponding activity context 'In Progress'.	**1.** Provision an instance with the Playbook Experience plugin 28.2.1 or 28.2.2 installed. **2.** Create a playbook. **3.** Trigger this incident. **4.** Add 1 stage with any name. **5.** Add 1 instruction activity in that stage. **6.** Add an optional activity using the board view and make it available to all stages. **7.** Test the playbook. **8.** Add 1 optional activity after the existing instruction. **9.** Add again a new optional activity after the previous optional activity. See that the activity keeps loading and if the user refreshes, it doesn't show the same activity 2 times but instead it seems to have replaced the previous.
Playbooks (Family Channel) PRB1967945	Pill picker for **Dynamic output** doesn't work for flows	The **Dynamic output** fields are unavailable for pill picking.	**1.** Create a flow with dynamic outputs. **2.** Add the flow as an activity in a playbook. **3.** Add another activity. **4.** Pill pick the outputs of the activity in step 2 into step 3. Expected behavior: Pill picker can drill down fields of the **Dynamic output** fields. Actual behavior: **Dynamic output** fields are unavailable for pill picking.
Playbooks (Family Channel) PRB1984620	Loading of sys_pd_process_definitions_c5f42adaff37e21082a8ffffffff2d taking two hours	This issue occurs when upgrading to Yokohama and Zurich.	
Project Management	When the user creates a project with a template,	If a portfolio exists, it should add portfolio stakeholders to the project. However, if	**1.** In a Zurich instance, navigate to **pm_project.LIST**. **2.** Select **New**.

Problem	Short description	Description	Steps to reproduce
PRB1951811	the system inserts all stakeholders defined in the table dmn_stakeholder_register without portfolio	the portfolio is null, it should not add them.	**3.** Try to create a project using the template by selecting **To create project from a template click here**. **4.** Use any template. **5.** **Ok**. The project gets created to review the stakeholders related list. Expected behavior: The stakeholders are added those who have empty portfolio. Users can review those in the 'dmn_stakeholder_register' table. Actual behavior: This shouldn't be happening where stakeholders with empty portfolios are added.
Project Management PRB1976395	Reference qualifier behaves inconsistently In Project Workspace RIDAC risk modal	The **Assigned To** reference qualifier for new risks opened in the RIDAC screen of the Project Workspace fails to retrieve the SysID of the current project.	**1.** Open the Project Workspace. **2.** Create a new project. **3.** Open the RIDAC screen for the project. **4.** Select **Add risk**. Observe that the **Assigned To** field in the modal only lists time_card users, regardless of project setup. **5.** Save the Risk without assigning it to anyone. **6.** Open the risk. **7.** Try to change the **Assigned To** field. Observe that the list is now includes more users, since current.task no longer returns null in the ref.qualifier.
REST APIs PRB1986190	Scriptable OpenAPI spec support	This is a product update.	
REST APIs PRB1986192	OpenAPI response header support for REST services	This is a product update.	
REST APIs	OpenAPI request and response	This is a product update.

Problem	Short description	Description	Steps to reproduce
PRB1986194	support for REST services		
Roles PRB1933185	Admin can't access 'Background Scripts' on partial upgrade	Admin access is blocked, and the user sees the 'Security Constraints' page instead.	1. Log in to a Yokohama instance. 2. As an admin user, navigate to **Background Scripts** > **Scripts-Background**. 3. Verify that the admin user has access to the 'Background Scripts' UI page. 4. Put the instance in partially upgraded mode. 5. Navigate to **Background Scripts** > **Scripts-Background**. Expected behavior: The admin is able to access background scripts. Actual behavior: Admin access is blocked, and the user sees the 'Security Constraints' page instead.
Schedule Optimization PRB1985203	ACL issues with the Schedule Optimization (SO) task filter for the CSM/FSM integration for SO v1.0	ACL restrictions can lead to double booking.	1. Verify and log canRead access to wm_task in GraphQL resolver logic. 2. Identify from the logs if the SO user cannot access a record/field. 3. Review the wm_task read ACLs installed with CSM/FSM integration plugin and for other integration plugins. 4. Add the needed roles to the SO user as conditional plugin content.
Schedule Optimization PRB1986839	Refactor Workforce Optimization (WFO) API calls with Territory to improve performance for Schedule Optimization (SO)	The response times for Territory is greater than that of the assignment group, even though they contain the same users.	1. Ensure Territory is installed and WFO is active. 2. Set up a Territory and an Assignment Group with the exact same users. 3. Set the qualifier type to 'Assignment Group'. 4. Make a QualifierData GraphQL call for the group. Notice the response time. 5. Change qualifier type to 'Territory'. 6. Make a QualifierData GraphQL call for the territory. Notice the response time.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Notice that when comparing the values from steps 3 and 5, the response time for Territory is far greater, even though the exact same user data is being fetched for assignment groups.
Schedule Optimization PRB1988877	Fix default skill level logic for Schedule Optimization 1.1	An additional validation is needed to ensure that the default skill level is returned correctly for skills.	
Search Application Configurations PRB1949837	Search_application_admin role grants write access to sys_dictionary through personalize_dictionary role	When installing other plugins, a plugin-specific admin role was granted to the search_application_admin role, which granted these users the ability to write to any sys_dictionary record through the personalize_dictionary role. This allowed seemingly unintended write access to sys_dictionary records.	1. Log in to the instance. 2. Create a user. 3. Grant them the search_application_admin role. Observe that they will get the personalize_dictionary role included with it, and two base instance ACLs grant write access to sys_dictionary through personalize_dictionary. 4. Impersonate a user. 5. Attempt to change the label for any sys_dictionary record. Notice that the change goes through for the sys_dictionary record.
Service Bridge for Providers PRB1978019	Rename ServiceBridge and security fix in Yokohama and Zurich changes		
Service Catalog Builder PRB1937707	UI Policy model pop-up shows two primary buttons	The UI Policy model pop-up has primary buttons in every tab. There should only be one primary button, and other buttons should be colored gray. The client script section needs to be updated to maintain uniformity across the pages.	1. Log in as a Catalog Builder developer/ Catalog Builder editor role user. 2. Try to create a UI Policy using the Catalog Builder. 3. Navigate to the **UI Policy** section. 4. Select **Add new behavior**. Observe that a model pop-up with four tabs opens. At the bottom, there are **Continue to conditions** and **Add behavior** buttons. Expected behavior: There is only one primary button, and other buttons are colored gray.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: There are primary buttons in every tab.
Service Catalog Builder PRB1937710	Tool tips are missing for **UI Policy** model pop-up buttons	None of the buttons have tool tips. **Client Scripts** and other gray buttons also don't show any tool tips (except the buttons on the top banner).	**1.** Log in to an instance using the builder_editor or builder_developer roles. **2.** Create a UI Policy by selecting the **Add Behavior** button. **3.** Hover over **Continue to Conditions**, **Continue to Scripts**, or **Continue to Applies To**. Expected behavior: All of the buttons have tool tips. Actual behavior: None of the buttons have tool tips.
Service Catalog Builder PRB1937885	UI policy option still shows up on questions in Catalog Builder	There's an option to define dynamic behaviors. Since the UI Policy creation/editing was moved to its own step, this icon should no longer appear on the question.	**1.** Open Catalog Builder. **2.** Create or edit an item. **3.** Add a question. **4.** After adding the question, return to the 'Questions' step. **5.** Hover over the question. Observe that there's an option to define dynamic behaviors. Since the UI Policy creation/editing was moved to its own step, this icon should no longer appear on the question.
Service Catalog Builder PRB1943016	Stale action configurations still exist for UI policy CRP		
Service Catalog Builder PRB1948251	Heading hierarchies aren't followed for the UI Policy 'Actions' tab	As a catalog item creator, the user should be able to add multiple action records against multiple variables in the catalog builder. This way, the user can efficiently configure complex catalog items with the necessary logic and flexibility.	**1.** Navigate to the **Catalog Builder**. **2.** Create a catalog item using the builder. **3.** Create a couple questions. **4.** Create a UI policy and observe the 'Actions' tab. **5.** Select **Add a new action**. Expected behavior: It follows heading hierarchies.

Problem	Short description	Description	Steps to reproduce
PRB1975292		only after successful validation.	3. Set the contract renewal date to any number. 4. Open the Docusign integration profile form again. Observe that the contract renewal date is checking for integers, but the functionality is different in classic and workspace. In classic, any alphanumeric value is reduced to just integers. In workspace, the value stays as-is and a warning message appears. 5. Set Integration type =Org Level. 6. Populate the fields. 7. Save. 8. Validate. 9. Change the org ID. 10. Save again. Observe that the **Organization ID** field isn't set to read-only after successful connection validation.
SQL API (Server) PRB1989263	Cannot execute a query against a physical representation of a long table name using SqlParser in physical mode	SqlParser throws an exception for the long table name, when the query should instead return a response with no records.	1. Create a table with a very long table name, such as u_very_long_table_name_abcdefghijklmnopqrstuvwxyz 2. Send a rest request to Trino Connector API /api/now/integration/trino/query/sql?sql_type=physical&connector_typ=loopback with body containing the following: ○ SQL query: SELECT * FROM. Expected behavior: The query returns a response with no records since the table doesn't contain any data. Actual behavior: The SqlParser throws an exception, 'Invalid table name.'
System Import Sets PRB1981092	Protocol version max length is not configurable for SCP and other data source file retrieval types	The protocol version reverts to the default version size.	1. Create a file type data source with the retrieval method SCP. 2. Make a connection where the protocol version is longer than the default 512 characters. Notice that it takes the default protocol version size because there are

Problem	Short description	Description	Steps to reproduce
			5. Open the sys_cs_topic file for the created topic. **6.** Check the definition. Expected behavior: getMessageLang isn't invoked. Actual behavior: getMessageLang(\'\', vaContext.getRequesterLang()) is used.
Virtual Agent Designer Legacy PRB1992505	HTML rendering issues in alert analysis		**1.** Navigate to **Now Assist panel**. **2.** Run alert analysis. Notice that the response contains HTML tags.
Virtual Agent PRB1820705	Installing the plugin 'Glide Virtual Agent' [com.glide.cs.chatbot] throws some of the errors in the activation log	This issue occurs when installing Glide Virtual Agent [com.glide.cs.chatbot]. Errors occur related to an invalid plugin, but functionality is not affected for sys_ux_lib_component_slot and the topic_variable table.	**1.** Open a Washington or Xanadu base instance. **2.** Install the plugin Glide Virtual Agent [com.glide.cs.chatbot]. Notice that in activation log, there are some errors related to the invalid plugin om.servicenow_sdk_ci and dependency unavailable. The sys_ux_lib_component_slot and topic_variable table does not exist, and there is no functionality affected, but there are error logs in activation log.
Virtual Agent PRB1915355	Skill isn't triggered as capability in Virtual Agent Designer when tools (such as RAG) are added for the skill	A 'Runtime Exception' error appears.	**1.** Create a custom skill with a RAG node in the flow. **2.** Create a 'sys_one_extend_builder_capability' record for the skill, with Virtual Agent Designer as the builder. **3.** Create a topic in VA that uses that capability in VA. **4.** When the capability shows up under VA capabilities, drag it into the topic. **5.** Test the topic. Expected behavior: The topic executes fine. Actual behavior: The topic errors out.

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1919055	Add a new property to turn off the 'shorten responses' feature by default	After upgrading Xanadu, shorten responses were added and set as 'on' by default. There is no method to set up shorten responses to 'false' as default. The user cannot see the full test display as default as before.	
Virtual Agent PRB1959245	Fluency Judge penalizes fluency for the word 'False' in the synthesized response		1. Use the QnA proxy skill on Now Assist Skill kit to trigger a chat. 2. Use aia_artifact_table and pick any record to generate the data from the table. 3. Once data generation is complete, look at the generated chats in the auto_chat_level_one_result table. Observe the work 'False' is returned with the synthesized answer response in the conversation.
Virtual Agent PRB1973526	The business rule 'VA Phone Interaction - On Close' is not firing in the 'wrap_up' state	The outcome of this issue end to end is this is causing an interaction that is intended to be closed by the agent (so has entered wrap up) resurfacing when the same caller makes consecutive calls before wrap up is finished.	
Virtual Agent PRB1977262	Elevated roles are missing in the topic after subflow execution	The message says that the user has an elevated role before flow execution, but returns false for the same code after flow execution.	1. Create a placeholder subflow from Flow Designer. 2. Create a topic from Virtual Designer. 3. Add a bot text response node to log the presence of elevated roles (for example, '[Pre-flow]Has security_admin role: '+ gs.hasRole(\'security_admin');). 4. Add an action node. 5. Call the placeholder subflow created in step 1. 6. Add a bot text response node to log the presence of elevated

Problem	Short description	Description	Steps to reproduce
			roles (for example, '[Post-flow]Has security_admin role: '+ gs.hasRole('security_admin');). 7. Publish and promote the topic. 8. Create a user. 9. Assign 'security_admin' and 'now_assist_panel_user' to the user. 10. Open a new session. 11. Elevate the role. 12. Select the topic pill from the Now Assist panel. Observe that the text says that the user has an elevated role before flow execution, but returns false for the same code after flow execution.
Virtual Agent PRB1983377	In enhanced chat, the virtual_agent flag is always set to false	In enhanced chat, the virtual_agent flag has never been set to true. If users are starting the conversation in Virtual Agent (VA), irrespective of the assistant, the flag must be set to true.	1. Set up NAVA with enhanced chat. 2. Start a conversation in VA. 3. Check the virtual_agent flag on an interaction.
Virtual Agent PRB1984195	Interactions are reused every time the startVoiceInteraction Voice API is invoked	The API should create a new interaction, but instead it reuses the interaction if it's active. This used to work correctly in Yokohama, but is now failing.	Invoke the startVoiceInteraction voice API to create an interaction. Expected behavior: The API creates a new interaction every time it is invoked. Actual behavior: The API reuses the interaction if it's active.
Virtual Agent PRB1985773	Now Assist Virtual Agent (NAVA) doesn't trigger the onboarding workflow	The onboarding workflow works as expected when running from Playground, but NAVA doesn't trigger the workflow on the journey record. An execution also doesn't appear in the sn_aia_execution_plan table.	Generate onboarding ramp-up plan. Notice that it works as expected when running from Playground, but NAVA doesn't trigger the workflow when checking 'Initiate onboarding ramp-up plan' flag on the journey record.
Virtual Agent PRB1987536	Attachment upload fails for users with elevated privileges

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1988044	hasUnreadMessages value for conversations in the chat history widget does not matches with values in the 'Recent chat updates' widget using OffGlideScriptObject.getConversationsByConsumerAccount()	The chat history widget 'now-lbf-chat-client' is using cache to show an 'unread' status for conversations. The 'Recent chat updates' widget is using the OffGlideScriptObject.getConversationsByConsumerAccount() API to fetch the latest five active conversations from the database. The 'unread' status for conversations in both widgets do not match.	OffGlideScriptObject.getConversationsByConsumerAccount()
Virtual Agent PRB1988112	All the closed chats have the same name	This issue occurs in Now Assist panel (NAP).	1. Select **NAP**. 2. Select **Chat history**. Notice that all the closed chats have the same name.
Virtual Agent PRB1988879	Incorrect endpoint is used for connecting to the NextWave cluster for glide	This issue occurs when NextWave for Microsoft Teams is set up.	Set up NextWave for Microsoft Teams in a deployed environment. Notice that requests from glide are not reaching the off glide cluster.
Virtual Agent PRB1989732	The sn_nowassist_va.assistant_personalization system property should handle default case properly for branding and personalization	When updating the sn_nowassist_va.assistant_personalization system property to a random value, it doesn't behave the same as the default value.	1. Open the sn_nowassist_va.assistant_personalization system property. 2. Update the value to a random value, different from the given three choices. 3. Run a query in the Virtual Agent portal connected to the assistant that has personalization. 4. Navigate to the **sys_generative_ai_log** table. 5. Locate the record for either AIA Unified Planner, AIA Unified Planner Quick, or AIA Planner. 6. Review the record and verify that the configured persona is appearing in the prompt, in between 'and'. Expected behavior: It behaves the same as the default value, and should return only agent_persona from the configuration attribute table.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: It behaves as TONE_RESPONSE_LEN_PERSONA and returns all the details.
Virtual Agent PRB1989830	Additional assistantAttributes for Knowledge Graph NLQ: knowledge_graph_anchor_tables, knowledge_graph_focus_table, knowledge_graph_focus_record_id	To execute KG-NLQ, certain attributes are needed to be passed to the tool. Presently, AO is getting following Knowledge Graph keys in assistantAttributes: knowledge_graph_name, knowledge_graph_sys_id, knowledge_graph_nlq_schema_sys_id, knowledge_graph_nlq_tags, knowledge_graph_nlq_schema, knowledge_graph_tags. For Now Assist panel (NAP) conversation, additional attributes are required: knowledge_graph_anchor_tables knowledge_graph_focus_table knowledge_graph_focus_record_id. This is in parity with Glide implementation of kgnlq.	
Virtual Agent PRB1991070	In the middle of a topic tool execution when CLOSURE intent is detected, the conversation is stuck		1. Start a topic execution, such as 'Order stationary' (which has a couple of questions to ask to the user). 2. When the tool execution starts and the first question is asked to the user, give the reply, 'Exit immediately.' Notice that the conversation gets stuck, and no incoming payload is sent to AO.
Virtual Agent PRB1991780	Execution gets stuck in the playground and in Now Assist panel (NAP) with the subflow/flow tool if there is no valid input	This issue may occur any time a tool needs an input. There should be proper error handling in these scenarios.	1. Choose an agent, such as 'Order fruit flavored chocolate. 2. Enter an utterance, such as 'order'. Notice that the execution is stuck and the input returns empty, leading the execution to be stuck.
Virtual Agent PRB1991845	Reverting the production bot support for Google Chat while waiting for external

Problem	Short description	Description	Steps to reproduce
		messages is not correct. Live agent requests need to have a callback URL to send to the off glide conversation so that the messages go through.	
Virtual Agent PRB1992729	Add preferred skills handling for Open Graph (OG)		
Virtual Agent PRB1993335	Chat history shows 'No conversations yet' randomly when navigating back to 'Conversation history' page	Users are unable to access their conversation history after navigating away from the page. Users may believe their conversations are lost, leading to confusion and potential re-creation of conversations.	**1.** Open an instance. **2.** Impersonate any user. **3.** Start a conversation in the chat interface. **4.** Observe that the conversation history shows a red dot indicator **5.** Select **Conversation History**. **6.** Verify that the conversations are displayed correctly. **7.** Navigate away by selecting **Home** or any other page in the menu. **8.** Select **Conversation History** again. Expected behavior: The Conversation history page should display the list of conversations for the user, consistent with the initial view before navigation. Actual behavior: The conversation history page displays the 'No conversations yet' message, even though the user has active conversations as indicated by the red dot.
Virtual Agent PRB1994599	Off Glide code introduced an issue for DTAC when the agent sends a message to the requester	The dynamic translation for messages doesn't work when the agent sends messages to the requester. It throws NPE.	**1.** Create a Zurich instance. **2.** Set up NAVA. **3.** Set up DTAC. **4.** Start a conversation between a requester and agent. **5.** Make sure the requester is in a non-English language and the agent is in English.

Problem	Short description	Description	Steps to reproduce
			Observe that dynamic translation for messages doesn't work when the agent sends messages to the requester. It throws NPE.
Virtual Agent PRB1996750	Sending the incident number for the chat label in the 'History' panel in Now Assist panel (NAP) for ITSM not working	This issue occurs for Zurich.	**1.** Start the contextual conversation in agent workspace. **2.** Search any text. Observe the chat label in the History panel in NAP does not appear.
Virtual Agent PRB1997012	Do not allow 'backup/ fallback' URLs to be used for Glide messages sent to OGCS	The callback_url and pod_ip must be present in the tool execution request, or the Live Agent context, or the session context (for session-related messages back to OGCS).	
Virtual Agent PRB1997534	Survey in LLM mode errors out	The user gets an error after submitting a response in the pre-chat survey in Now Assist Virtual Agent (NAVA).	**1.** Navigate to **sys_cs_survey**. **2.** Enable pre-chat and post-chat survey. **3.** Start a conversation in NAVA. **4.** Submit a response in pre-chat survey. Expected behavior: User is able to complete the survey with no errors. Actual behavior: User gets 'Sorry there was a problem on my side error.'
Virtual Agent PRB1999010	Time Out abandoned Virtual Agent (VA) conversation scheduled job closes the conversation in the middle	'Time out Abandoned VA conversation' should not close the conversation if idle time out is not completed.	**1.** Log in as requestor. **2.** Initiate a chat. Log in as agent. **3.** Attempt to accept the chat. **4.** As the requestor and the agent are chatting, attempt to run scheduled job 'Time Out abandoned VA conversation. Notice that as soon as this scheduled job runs, the conversation times out even if the agent and the requestor are chatting.

Problem	Short description	Description	Steps to reproduce
Virtual Agent Web Client PRB1825407	Unable to change ServiceNow VA message for com.glide.cs.general.multi_file_size_exceed_msg	Even if the value within com.glide.cs.general.multi_file_size_exceed_msg is modified, the following message is displayed: 'Looks like that file was too big to upload. 10 MB is the max.'	1. Log in to a Washington DC instance. 2. Navigate to **sys_property - com.glide.cs.general.multi_file_size_exceed_msg**. 3. Modify the value. 4. Clear the cache. 5. Create a virtual agent topic within designer. 6. Add a 'File Picker' component. 7. Test it by adding a file that's more than 10MB. Observe that the following message is displayed, even if the value within com.glide.cs.general.multi_file_size_exceed_msg is modified: 'Looks like that file was too big to upload. 10 MB is the max.'
Virtual Agent Web Client PRB1983355	Markdown to HTML parsing issues when there are special characters in the payload		1. Create a topic in the designer with a text node with an response message containing a ` (backtick) character. 2. Test the topic. Notice the response shows unintended HTML. Expected behavior: Parsing is broken and links are highlighted. Actual behavior: The HTML output is broken.
Virtual Agent Web Client PRB1992017	The 'Thank you' text stays in chat even after sending and receiving response	This issue occurs with Now Assist panel (NAP).	1. Log in to an instance. 2. Open NAP. 3. Enter, 'What is spam' followed by 'Thank you.' Expected behavior: The 'Thank you' text disappears after the message is sent. Actual behavior: The 'Thank you' text says in the chat even after sending and receiving response. It is also observed that other prompts like 'What is spam' appear in the chat until a response gets generated.
Virtual Agent	Add the 'fetchDocuments' attribute to

Problem	Short description	Description	Steps to reproduce
Web Client PRB1996311	be passed in contextData of the session API call request data parameters when switchContextConversation is 'true' and parsed from AIEL		
Virtual Agent Web Client PRB1997587	'Start a new chat' from contextual Now Assist panel (NAP) doesn't map the conversation with a record		1. Open a Service Operations Workspace (SOW) incident record. 2. Launch contextual NAP by setting switchContextConversation on AIEX launcher. 3. Pick a non-active conversation under the 'Incident' tab in the NAP conversation picker. Notice that 'Start a new chat' shows at bottom. 4. Select a conversation. Notice that the conversation opened doesn't get mapped to a record.
Web UX Runtime PRB1983522	The sn-canvas-tabs component displays a record preview popup on hover that is inaccessible to keyboard and screen reader users	In configurable workspaces, there is a top level tab navigation region made up of the sn-canvas-tabs component. Hovering over a record tab in this region with a mouse triggers a popup to display a short preview of key fields on the record, such as a short description and state. This is crucial information for agents to quickly differentiate between multiple tabs at a glance, but keyboard and screen reader users can't trigger or access the popup. In some workspaces, an unnecessary additional	1. Navigate to a configurable workspace, such as Service Operations Workspace. 2. Open at least two records (for example, Incidents, Cases). 3. In the top level navigation tabs, hover over a deselected record tab. Notice that a popup appears with a short summary of key fields for the record. 4. Attempt to trigger the popup with a keyboard. Expected behavior: When a tab for a record has keyboard focus, the preview popover also appears and remains visible until the user shifts keyboard focus or dismisses the popover (Escape key or otherwise). Screen reader users should hear the details in the popup announced.

Problem	Short description	Description	Steps to reproduce
		tooltip appears on keyboard focus, but only repeats the record number.	Actual behavior: There is no way to trigger the popover with a keyboard alone, and the arrow and Tab keys do not trigger the popup. Screen reader users are not aware they are missing the preview popup.
Window Manager PRB1992484	In window-manager 29.2.12 , resizableBehavior is throwing errors		1. Provision a Zurich instance. 2. Install AI Data Explorer. 3. Select the **Sparkle** icon on the Next Experience dashboard. Expected behavior: The popup appears. Actual behavior: Nothing happens.
Word Document APIs PRB1987850	Issue with document sync when paragraph properties do not exist	An error occurs when attempting to sync the document. This issue occurs when the document was generated using ChatGPT or other AI tools, or when content controls are positioned on blank text.	1. Make changes to the content control fields with 'Track Changes' on. Observe that the selected paragraph should not have any styling. 2. Attempt to replace the value. Notice that it will throw an error.
Work Order Management PRB1973913	ACL restrictions can lead to double booking	There are ACL issues with SO task filter and CSM/FSM integration.	
Zero Copy Connectors (Glide) PRB1984931	The WDF table throws exception when referencing glide tables with long logical table names that are greater than 30 characters	An error occurs when opening the WDF table and including the reference column in the list view.	1. Create a glide table with more than 30 characters. 2. Create a WDF table with a column that references a column in the glide table. 3. Open the WDF table and include the reference column in the list view. Notice than an error shows on the page.

Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

Problem	Short description	Description	Steps to reproduce
			I transfer you to a human support representative' on the client side. 6. Select **Support**. Expected behavior: The live agent is connected and the work item is displayed in the Agent workspace. Actual behavior: No agent is available, even when the agent is available in the workspace.
AI Agents (Glide Family) PRB1994390	After Zurich upgrade, hundreds of thousands of log entries are generated by CacheInvalidationEventHandler	The message is 'No endpoints available for cache invalidation'. The source is com.glide.ui.ServletErrorListener.	
AI Search UX PRB1988802	additionalContext is not passed through the Suggestions GQL API to AI Search, preventing DynamicFilters from working for Virtual Agent (VA) skills	When additionalContext is passed from the client to the Suggestions GQL API, it was not being threaded through the call chain to the AI Search Suggestion Reader. This causes DynamicFilters to not work properly, preventing VA Skills from being returned in suggestion results.	Call the Suggestions GQL API with additionalContext parameter containing DynamicFilter information. Observe that the VA Skills that should be filtered by DynamicFilters are not being properly filtered, and the additionalContext is lost in the call chain and never reaches the AI Search service where DynamicFilters are applied.
AI Search UX PRB1989321	Logic for retrieval should support 'CONTAINS' and not just prefix matching	Popular query suggestions are only returned if they start with has been inputted in the Omni bar.	
OneExtend PRB1988786	On Log Sync, the Generative AI Log is not updated with a reference to a Generative AI usage Log		1. Set up a glide instance with Now Assist enabled from glide. 2. Set up Mosaic Log Sync. 3. Execute a capability that should have assists associated. Expected behavior: Generative AI Log has a reference to the associated Generative AI Usage Log.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: Generative AI Log has an empty reference for Generative AI Usage Log.
OneExtend PRB1990084	The integration_type metadata is missing in the metadata sync that is needed to support BYOK scenarios	Metadata sync from glide to Mosaic is missing the integration_type related metadata. Without this metadata, Mosaic would not know whether the user has opted in for BYOK, and therefore cannot support BYOK related use cases. The metadata sync from glide to Mosaic should be able to send all updates even when the updates were done in quick succession.	
OneExtend PRB1993333	The Kafka plugin should not be enabled on the install of OneExtend for IntegrationHub ETL Consumer		
System Import Sets PRB1981092	Protocol version max length is not configurable for SCP and other data source file retrieval types utilizing SSH connections	The protocol version reverts to the default version size.	**1.** Create a file type data source with the retrieval method SCP. **2.** Make a connection where the protocol version is longer than the default 512 characters. Notice that the default protocol version size is retained because there are no parameters being set to alter the default configuration of the SSHEngine/SSHConfig from the GlideSSHSessionPool.
Virtual Agent PRB1983853	Topic Block tool execution is not running correctly	The topic block doesn't display the messages for the topic block inputs.	**1.** Import the topic block, 'Trade in a car'. **2.** Navigate to **Virtual Agent Designer**. **3.** Publish the topic block. **4.** Create an AI Agent 'Trade in a car'. **5.** Configure it with the 'Trade in a car' topic. **6.** In LBF client, enter 'Trade in car'.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			7. Verify that the data collector asks for the car's 'make' and 'model', because the topic block inputs are 'make' and 'model.' **8.** Answer the questions. Expected behavior: The topic block sends two display messages to the LBF client: 'Hi Abel Tuter, welcome to the trade in a car TB!' and 'Thanks, I see your trade in is a (make) and (model)'. Actual behavior: Nothing occurs, and the messages aren't displayed.
Virtual Agent PRB1987016	Unread message call is made even before the session is established	A call to get unread messages occurs before the session established. This can be seen on the console logs.	
Virtual Agent PRB1987536	Attachment upload fails for users with elevated privileges		
Virtual Agent PRB1988044	The value of hasUnreadMessages for conversations in the chat history widget does not match with values in the 'Recent chat updates' widget using OffGlideScriptObject.getConversationsByConsumerAccount()	The chat history widget 'now-lbf-chat-client' is using cache to show an 'unread' status for conversations. The 'Recent chat updates' widget is using the OffGlideScriptObject.getConversationsByConsumerAccount() API to fetch the latest five active conversations from the database. The unread status for conversations in both widgets do not match.	
Virtual Agent PRB1988112	All the closed chats have the same name	This issue occurs in Now Assist panel (NAP).	**1.** Select **NAP**. **2.** Select **Chat history**. Notice that all the closed chats have the same name.
Virtual Agent	Incorrect endpoint is used for connecting to	This issue occurs when NextWave for Microsoft Teams is set up.	Set up NextWave for Microsoft Teams in a deployed environment.

Problem	Short description	Description	Steps to reproduce
PRB1988879	The NextWave cluster for glide		Notice that requests from glide are not reaching the off glide cluster.
Virtual Agent PRB1989830	Additional assistantAttributes for Knowledge Graph NLQ: knowledge_graph_name, knowledge_graph_sys_id, knowledge_graph_nlq_schema_sys_id	To execute KG-NLQ, certain attributes are needed to be passed to the tool. Presently, AO is getting following Knowledge Graph keys in assistantAttributes: knowledge_graph_name, knowledge_graph_sys_id, knowledge_graph_nlq_schema_sys_id, knowledge_graph_nlq_tags, knowledge_graph_nlq_schema, knowledge_graph_tags. For Now Assist panel (NAP) conversation, additional attributes are required: knowledge_graph_anchor_tables knowledge_graph_focus_table knowledge_graph_focus_record_id. This is in parity with Glide implementation of kgnlq.	
Virtual Agent PRB1991070	The conversation is stuck when CLOSURE intent is detected in the middle of a topic tool execution	This issue occurs with the utterance, 'order stationery using order stationery action.'	**1.** Start a topic execution with 'Order stationery' which has a couple of questions to ask to the user. Notice that the tool execution starts, and the first question is asked to the user. **2.** Give the reply, 'Exit immediately'. Notice that the conversation is stuck, and there's no incoming payload sent to AO.
Virtual Agent PRB1991780	Execution gets stuck in the playground and in Now Assist panel (NAP) with the subflow/flow tool if there is no valid input	This issue may occur any time a tool needs an input. There should be proper error handling in these scenarios.	**1.** Choose an agent, such as 'Order fruit flavored chocolate. **2.** Enter an utterance, such as 'order'. Notice that the execution is stuck and the input returns empty, leading the execution to be stuck.
Virtual Agent	Live agent messages need to use	Live agent messages are not being sent to the requester

Problem	Short description	Description	Steps to reproduce
PRB1992697	callback URL to send to the user	on lab instances because the URL in the http_connection for off glide conversation messages is not correct. Live agent requests need to have a callback URL to send to the off glide conversation so that the messages go through.	
Virtual Agent PRB1992728	Request ID missing in Mosaic logs for conversation server requests	The request ID is null in mosaic logs.	
Virtual Agent PRB1992729	Add preferred skills handling for Open Graph (OG)		
Virtual Agent PRB1994599	Off Glide code introduced an issue for DTAC when the agent sends a message to the requester	The dynamic translation for messages doesn't work when the agent sends messages to the requester. It throws NPE.	1. Create a Zurich instance. 2. Set up NAVA. 3. Set up DTAC. 4. Start a conversation between a requester and agent. 5. Make sure the requester is in a non-English language and the agent is in English. Observe that dynamic translation for messages doesn't work when the agent sends messages to the requester. It throws NPE.

Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

- Zurich Patch 6 Hotfix 1
- Zurich Patch 5
- Zurich Patch 4
- Zurich Patch 3

Zurich Patch 6 Hotfix 1

The Zurich Patch 6 Hotfix 1 release contains fixes to these problems.

Build information:

Build date: 02-09-2026_1234

Build tag: glide-zurich-07-01-2025__patch6-hotfix1-02-05-2026

Important: For more information about how to upgrade an instance, see ServiceNow upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

Note: This ServiceNow AI Platform® major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

Fixed problem

Problem	Short description	Description	Steps to reproduce
Application Manager PRB1986694	App Manager and My Company Applications incorrectly shows available updates after Update Checker		
CMDB Query Builder PRB1977703 KB2727703	Query Builder in V2 mode can cause memory issues due to a static variable	An internal variable which is declared as static keeps being appended and thus creates a large memory footprint. This would happen if one or more queries are executed enough times to bloat this variable.	Refer to the listed KB article for details.
Database Persistence - Data Management	Active subflow executions with clean parent flow executions	This issue was observed in Zurich. If a parent flow completes while an associated asynchronous subflow	Refer to the listed KB article for details.

Overview

Zurich Patch 6 includes 237 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

Security-related fixes

Zurich Patch 6 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Zurich Patch 6, refer to KB2713103.

Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

© 2026 ServiceNow, Inc. All rights reserved.

Problem	Short description	Description	Steps to reproduce
Analytics Export API PRB1950794	An admin is no longer able to edit fields from 'Scheduled Email of Reports' (sysauto_report) in Zurich	An admin is no longer able to edit fields from 'Scheduled Email of Reports' (sysauto_report) in Zurich, impacting sysauto_report.address_list, sysauto_report.group_list, and sysauto_report.user_list.	Open any sysauto_report in Zurich as an admin. Observe that the following fields are read-only: **Users**, **Groups**, and **Email addresses**.
CMDB Query Builder PRB1952766 KB2634786	Calls to QueryBuilder from ServiceMapping return no results when executing in the new V2 mode	In Zurich, processes that call into Query Builder can have no results returned. There are two scenarios where this occurs. Firstly, a service CI populated via CMDB Group containing a saved query (as constructed in Query Builder) can have no 'svc_ci_assoc' records, even when rerunning the service population. However, the expected CIs will appear when viewing the CMDB Group or the saved query directly. Secondly, instances configured to use 'Zing' for Global Search don't return any CI records in the findings. These different methods both rely on the 'CMDBGroup' API, which may not return results of query execution when using the 'v2' execution mode introduced in Zurich. Instances are at risk if they use dynamic CI groups which are built using Query Builder, they're on an impacted Zurich Version, and the system property glide.cmdb. query.execution _mode = 'v2'.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
Email Notifications PRB1951516	When using email client, drag and drop functionality isn't including an attachment on sending	In the current UI16 email client, users can add attachments using the paper-clip icon or by dragging and dropping files into the email body. However, drag-and-drop doesn't work outside the email body because a background field was not properly defined, which causes this limitation.	**1.** Log in to a Zurich instance. **2.** Navigate to the incident.list. **3.** Open Email Client. **4.** Drag and drop an attachment. When an email is sent, see the attachment isn't included. When users manually add the attachment, it's being added in to the email and is being sent.
Email Notifications PRB1952527 KB2743221	An email template isn't applied when users select **Apply template** in the mini/full composer	The template isn't applied.	Refer to the listed KB article for details.
Key Management Framework (KMF) PRB1944097 KB2654904	Users are unable to upload push certificates into the sys_certificate table	An error is thrown.	Refer to the listed KB article for details.

All other fixes

Problem	Short description	Description	Steps to reproduce
Access Control PRB1966968	ScriptingGovernanceUtils does not correctly create sys_user_has_role records for the snc_required _script_writer _permission based on the legacy/ V1 or V2 Role Management mechanisms	In Zurich, a 'Conditional Script Writer' group has been introduced and this group has the single role 'snc_required _script_writer _permission'. Users are added to this group automatically by a scheduled job during the Zurich upgrade. This is done by inserting records into sys_user_grmember

Problem	Short description	Description	Steps to reproduce
		and sys_user_has_role to create this relationship. The ServiceNow platform has two currently different ways of tracking the roles in the sys_user_has_role table: Legacy/V1 Role Management and Role Management V2. V2 introduced the concept of inheritance counts with the goal of reducing the overall size and complexity of the sys_user_has_role table, with the benefit of reducing the amount of time performing large roles changes could take. With the legacy mechanism the three fields **granted_by**, **included_in_role** and **included_in_role** instance record where a role was inherited from and need to be correctly set. If a user is a member of the 'Conditional Script Writer' group, and therefore they inherit the 'snc_required_script_writer_permission' role, then the sys_user_has_role record must have the **granted_by** field set to the sys_id of the 'Conditional Script Writer' group. Without this, the 'Group Member Delete' business rule on sys_user_grmember is unable to delete the sys_user_has_role record if the user is removed from the group.

Problem	Short description	Description	Steps to reproduce
Activity Stream PRB1973866	When showEmailMiniCompose = ON_EMAIL_ACTION, users can't reply to an email more than once		1. Select the **ALL** menu. 2. Type 'sys_aw_master_config.list'. 3. Open the 'Agent Workspace' row. 4. Check the 'Active' checkbox. 5. In the browser URL bar, type '/workspace' after the instance URL. 6. On the record page, use the declarative action to compose a new email and send it. 7. On the instance, navigate to 'sys_email.list' and find the email just sent to switch the status to 'Sent'. 8. On the record page, select **Reply** on the activity stream tile for the email sent. 9. An email tab appears in 'compose'; fill it out and send it. Once it is sent, the 'Email' tab disappears. 10. Select reply on the same email tile as before. 11. The email tab should appear again; fill out the email and select **Send**. Expected behavior: Users should be able to send another reply if they already sent the previous one. If they have not sent it, then selecting the **Reply** in the tile doesn't do anything. Actual behavior: When selecting **Reply**, it is loading the previously sent reply draft. Selecting **Send** gets a error saying that the draft was previously sent.
Advanced Work Assignment PRB1959522	Agents are able to send messages even after a conversation is closed	The chat summary includes details about a chat closure message that's not present in the transcript.	
Agent Chat PRB1978194	There's empty bubbles on Agent Workspace due to an		1. Navigate to OG requester. 2. Have some conversation going on. 3. Connect to a live agent.

Problem	Short description	Description	Steps to reproduce
	empty payload in Agent Chat		**4.** Log in as an agent in the instance mentioned. Notice empty bubbles on Agent Workspace. **5.** Navigate to sys_cs_message. Notice that there are empty payloads in the conversation.
Agile Development PRB1968771	/sn_safe_$safe_board.do#/teamBacklog is broken	Loading different PIs in the SAFe team backlog board in Zurich isn't working. The data in the board doesn't always change and can take multiple tries to change the PI on the board.	
AI Agents (Glide Family) PRB1969245	sn_aia_tools_execution displays an empty tools value but the value exists in the XML	sn_aia_tools_execution tools column is referencing sn_aia_agent_tool_m2m but the value is set from the sn_aia_ agent_tool table.	**1.** Execute an agentic workflow. **2.** Navigate to the sn_aia_execution_plan. **3.** Navigate to the 'Tools' execution tab. Notice that all the tools records are empty. However, open one and show XML that there is a value.
AI Agents (Glide Family) PRB1975174	Agentic Evaluation isn't working for the 'Support Renewals Expansion Agentic' workflow		
AI Agents (Glide Family) PRB1975798	Glide fixes to JSON return type in AIAToolDataPillUtil		**1.** Ensure that 'capability' text is within the value field apart of the sn_aia.supported_ tools sys prop. **2.** Create or find a skill tool that takes JSON as input. **3.** Apply that skill to a tool and then add to an agent. **4.** Run the agent in the playground and observe the execution log on the right hand side.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: Users should see the actual JSON as an input for the skill tool. Actual behavior: The input is blank, causing the agent to fail.
AI Agents (Glide Family) PRB1981261	Make agent and tool columns non-mandatory in sn_aia_agent_tool_m2m and fix the empty cacheconfig name issue		
AI Experience Framework - Glide PRB1982032	'Extend session' functionality issue	The 'Extend session' functionality should work the same as the platform.	
AI Search (Glide) PRB1971388	IngestableDocument.getObjectSize isn't counting fEmbeddedDocuments.	Indexing the document/table causes out of memory errors.	
AI Search (Glide) PRB1975413	AI Search Dynamic filters extension point impl isn't triggered from a non-global scope	When an AI Search scriptable API provided is executed from both global and sn_nb_action scopes, the extension point implementation doesn't get triggered when the scope is not global (sn_nb_action).	
AI Search (Glide) PRB1980531	Issue in RAG response for external content (connector-specific fields and missing chunk structure)	The external document results should be grouped under 'ragResponse.external_document' (instead of using the connector table name as the top-level key). Also, each external document must include a chunks list. Finally, the **table** field should identify the connector/ schema name (for

		example, 'sn_ext_conn_spo_external_search_schema').	
AI Search (Glide) PRB1981323	Removing the m2m tool xml for RAG, Reranker, WebSearch for Perplexity that shall be migrated to the nowassist-ai-agent repo		
AI Search (Glide) PRB1982327	The RAG tool returns documents that shouldn't be included in a search source	Users get duplicate articles for some queries.	
AI Search for Service Portal PRB1942272 KB2608116	Users are unable to select multiple facets even when 'multi select or' is selected in facet settings		Refer to the listed KB article for details.
AI Search for Service Portal PRB1956814	Pressing the 'Enter' key doesn't open the link	When the tab focus is on the link and the 'Enter' key is pressed, the link doesn't open. However, if the user presses the 'Tab' key, the focus moves to hidden and pressing 'Enter' opens the link.	**1.** Open any base instance with AI search enabled. **2.** Navigate to the Service portal. **3.** Navigate to the **Search edit** field. **4.** Search for 'email'. **5.** Navigate to the search results. **6.** Select a filter. **7.** Navigate to any links in the 'Results' section. **8.** Press the 'Enter' key to select. **9.** Verify whether it opens. Expected behavior: The tab focus is on the link, and pressing the 'Enter' key opens it. Pressing the 'Tab' key moves the focus to the next interactive element.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: When the tab focus is on the link and the 'Enter' key is pressed, the link doesn't open. However, if the user presses the 'Tab' key, the focus moves to hidden and pressing 'Enter' opens the link.
AI Search for Virtual Agent PRB1945491	Tags should be passed as 'Array of Strings' not 'String'		
AI Search UX PRB1962691	AI Search doesn't populate sys_search_source_event with sources that weren't returned		1. Enable AI Search for a portal. 2. Search for a query that doesn't return documents from a search source. Observe that only the tables from search results that were returned were added to sys_search_source_event.
AI Search UX PRB1978161	Replace the sparkle icon with the lens icon and updated specs in the workspace search		
AI Search UX PRB1982272	There's a missing configuration for RAG popular search suggestions	This limits the ability for the suggestion type to be used, as the sys_suggestion_reader entry would need to be shipped in a store app or created by background script, neither of which is ideal.	1. On an AI Search enabled instance, open the list view for the sys_suggestion_reader table. 2. Check for an entry for RAG Popular Queries (e.g. Type = RAG_POPULAR_QUERY). Expected behavior: There is an entry. Actual behavior: There isn't an entry, and no **New** button to create one.
Analytics Data API PRB1937286	When a visualization acts as filter, another visualization isn't filtered for the first time		1. Create a dashboard. 2. Add 2 visualizations:

Problem	Short description	Description	Steps to reproduce
		_checksums_cache' sys_property was set to true (default). This regression led to the latest_version being set to the incorrect values on Install/Sync.	
Appointment Booking PRB1940645	If users load appointment booking on a portal home page and then use the Service Portal (SP) date picker in a different portal page, the datepicker won't be clickable until a page reload		
Appointment Booking PRB1973793	Blackout schedule isn't honored	Users are able to book an appointment during the blackout schedule period.	1. Impersonate a user. 2. Navigate to the 'Credentials' page. 3. Select **Fingerprinting**. 4. From the location drop-down list, select **San Diego - Linda Vista Campus**. 5. Answer the question 'What is your reason for visiting?' with 'Fingerprinting'. 6. Select the **calendar** icon next to Appointment. Notice that appointment slots are available during the blackout schedule (for example, December 31st).
Asset Management PRB1968544	Assets which were created aren't displaying in 'Create Asset' on the Agent Mobile app		1. Navigate to the Agent Mobile app. 2. Navigate to **Asset** > **Create Asset**. 3. Select **Submit**. 4. Select the 3 dots menu on the list. 5. Select the **Create Asset** function. 6. Fill all the fields and submit. The asset gets created.

Problem	Short description	Description	Steps to reproduce
			7. Select **Create Asset**. 8. Enter the asset tag or serial number for the created Asset. Expected behavior: An asset which gets created should be visible. Actual behavior: An asset which gets created isn't displaying.
Authentication PRB1927594 KB2423799	Oauth token calls fail from an API authenticated sessions	As part of multi-factor authentication enforcement for local internal user logins, adaptive authentication is enabled and configured the MFA context policy. Once an API authenticated session is established, it's expected to make only API integration (or non-interactive) related calls, and the '/oauth_token.do' call falls outside of integration calls.	Refer to the listed KB article for details.
Authentication PRB1960277	An Supplier Lifecycle Operations (SLO) error displays when the SLO URL is empty in Identity Provider (IdP) configuration	When the SLO (single logout) URL field is left empty in the IdP configuration, the system redirects to external_logout_complete with an error code slo_error. However, this behavior is incorrect. Since SLO is optional, the absence of an SLO URL shouldn't trigger an error. This issue also appears in mobile.	1. Navigate to the 'IdP Configuration' page. 2. Ensure that the SLO URL is left empty. 3. Log in using the configured IdP. 4. Log out. Expected behavior: The system should successfully log out and redirect to the external_logout_complete page without any error code, since SLO is optional. Actual behavior: The system redirects to external_logout_complete with error code slo_error, implying a failure even though SLO wasn't configured.
Automated Test Framework (ATF)	Remove metadata tracing valid transaction filtering	In SpanJob, remove validTransaction filtering. Since tracing doesn't allow transactions not related	1. Create sys_trace_config entry. 2. Set atf_context cookie.

Problem	Short description	Description	Steps to reproduce
PRB1978271		to metadata tracing to be traced, this is a redundant functionality. This is causing Builder Agent not to work with Zurich Glide properly. Filtering should be removed and add a new one that filters out all metadata not containing testResultId. This line in code is misleading and might cause issues in metadata tracing entries persistence in future.	**3.** Navigate to incident_list.do. **4.** In another browser, without the cookie set, confirm no trace records are produced in sys_traced_metadata.
Case and Knowledge Management for HR Service Delivery PRB1963168	The HRSD Knowledge Graph is unavailable after an upgrade	There's an issue with the Now Assist Knowledge graph. The user receives the error 'An unexpected error occurred. Please try again.'	**1.** Impersonate a user who has access to the HR Portal. **2.** Navigate to the HR Portal: https://<instance>.service-now.com/hr. **3.** Initiate a Virtual Agent Chat. **4.** Enter the prompt: 'Show me my open HR cases'. Expected behavior: Information about the users's open HR Cases is displayed. Actual behavior: The user receives the error 'An unexpected error occurred. Please try again.'
Case and Knowledge Management for HR Service Delivery PRB1965782	RCA created during case summarization / resolution notes generation	RCAs are generated when modifying any fields in an HR case and its child tables, which causes test failures.	
Case Management PRB1973038	Industry case count usage for TPSM, TMT, HCLS, MCO, FSO, Retail and CSM entitlements	Count of cases that are not extended from one of the industry base cases an have industry entitlements. The count needs to be as of yesterday and run daily. This need to per industry and count

		of cases should be grouped by case type.	
CMDB Data Manager PRB1943938	The Data Manager policy jobs experience has increasing slowness creating tasks when processing large data sets	The CMDB Data Manager policy for running jobs keep running for a long time because the underlying SQL query has pattern of LIMIT and OFFSET on the CMDB table. The table has a lot of data, and thus those SQL queries start showing increased execution time, effectively slowing the job running them.	
CMDB Identification and Reconciliation PRB1957741	On the CMDB Health Dashboard, a parent metric, like completeness, displays a total count of less than one of the sub-metric (required or recommended)	This causes totals to be incorrect.	
Configuration Management Database (CMDB) PRB1894727	Duplicate approvals are created for the same users for CMDB Data manager tasks while in the 'Requested' state	This issue shows up when there are multiple archive policies generating each at least one task. It might be applicable for retire or delete policies too.	
Configuration Management Database (CMDB) PRB1909893	The 'Run' filter can apply an old condition and not pick up the newly applied filter conditions	In the CMDB Relationship editor, the filter can apply old conditions and not pick up the newly applied filter conditions. This is issue isn't consistently reproducible but there's a problematic API call made.	
Configuration Management	The 'CMDB Group Health' dashboard displays	In the CMDB Health Dashboard, users can experience incorrect totals for parent

Problem	Short description	Description	Steps to reproduce
Database Persistence - Data Scale PRB1889276	deleteMultiple fails for PG for IN conditions larger than 1000	A NullPointerException is thrown: 'Exception attempting to delete from: u_cstask_multiple_delete: java.lang.NullPointerException: Cannot invoke 'java.util.List.addAll(java.util.Collection)' because 'this.fPlaceHolders' is null: com.glide.db.conditions.ASetCondition.formatFieldSet (ASetCondition.java:265) com.glide.db.conditions.ASetCondition.formatSet (ASetCondition.java:157)'.	1. Create a table 'u_cstask_multiple_delete'. 2. Add a single string column 'end_of_life_item'. 3. Generate around 10,000 items. 4. Try to delete them using Glide record and IN condition. 5. Make sure to put more than 1,000 values into the addQuery IN values. Observe that a NullPointerException is thrown.
Database Persistence - Data Scale PRB1945816	A connection pool should properly handle errors during expansion	This issue was observed in a user's production instance where the PRI database connection pool became exhausted. The exhaustion occurred because several threads were holding PRI DB connections while executing queries on the RR database. During this time the RR database went down (due to a hardware failure), and these threads remained blocked for approximately 10–15 minutes, resulting in pool exhaustion.	1. Create an instance that has a read-replica DB. 2. Execute repeated transactions that result in routing some, but not all, of the queries to the read replica. 3. While these queries are running, the read-replica database needs to go down (either kill -9 or unplug the box). Observe that the system becomes unavailable for 10-15 minutes until the transactions begin to timeout.
Database Persistence - Graph PRB1974718	Null value optimization must handle a case where Genius Results are reused and null everything again		
Database Persistence	The DBSqlParser query modifies	As a result, queries against parent tables are failing

Problem	Short description	Description	Steps to reproduce
		During credential resolution, the MID Server truncates the ARN at the first path separator and attempts to assume arn:aws:iam::member-id:role/xa instead of the full path-qualified role name. This results in an access denied error from AWS STS, causing the Amazon AWS Datacenter pattern to fail for all member accounts. The issue does not occur when the same ARN is configured explicitly per a member account.	
Discovery PRB1969791	The Discovery Pattern logs say Warning CI Pattern is completed, even though the pattern failed completely	Even though the classification is successful, if the pattern fails to get the basic identification details such as name, serial number, etc., the pattern fails completely. However, the Discovery Pattern logs say the Warning CI Pattern was completed but failed some post-processing steps.	Run an SNMP Discovery. Observe that the pattern fails if it fails to get the basic identification details. However, the Discovery Pattern logs say the Warning CI Pattern was completed but failed some post-processing steps.
Discovery PRB1970237 KB2738206	Post-Zurich upgrade, pattern debug mode isn't working as expected	Post-upgrade, when users open the pattern step and try to debug, for troubleshooting, users aren't getting the options of selecting the Cloud Service Account and AWS datacenter information for which is needed to run the discovery in debug mode.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
Discovery PRB1974425	Make the **Discover Now** button primary in the workspace 'Form' view	Update the button style on the existing UI action record for **Discover Now** to mark it as primary.	1. Navigate to **Discovery Admin Workspace** > **Schedules**. 2. Select any IP-based schedule. 3. On the schedule 'Details' page, select the 'Schedule Details' section. Expected behavior: As one of the main UI actions on each schedule form is **Discover Now**, this should be displayed as a primary button. Actual behavior: Notice that the style of the **Discover Now** action button displayed isn't 'primary'.
Document Viewer PRB1947203	After upgrading to Yokohama, there's an issue during the generation of a PDF file for a custom audit process using the PDFGenerationAPI library	The URL of an image or some function of the style of the HTML text used as the basis for the PDF file isn't converted or supported.	1. Take the **Corporate FSQ Audit engagement** field (engagement_type) with the status (state) as 'Follow Up' (5). 2. Verify that the **Report** field (kb_article) is populated. 3. Verify that the **Audit Report State** field (u_audit_report_state) is 'Final Report Delivery' (final_review). 4. Select the **Preview Audit Report** UI action that appears. An attachment should automatically be generated and be attached to the engagement in question, but nothing happens.
Dynamic Schema PRB1972205	There's an incorrect index on the dynamic_choice table	The existing index on dynamic_choice prevents separate choice_sets from having the same value.	
Email Notifications PRB1942395	The cursor moves to the end of an input field when the CPU throttling is 4* slower and 6* slower		1. Log in as an admin user. 2. Navigate to CSM Workspace. 3. Open a case record. 4. Navigate to **Compose email**. 5. Change CPU throttling in the 'Network' tab to 4*slower/6*slower.

Problem	Short description	Description	Steps to reproduce
			6. Type continuously. Observe that the cursor jumps to the end while typing. Expected behavior: Drafting an email shouldn't encounter unexpected cursor placement to the end. Actual behavior: The cursor moves to the end while typing.
Email Notifications PRB1964152	Email Client template behavior changed after upgrading to Zurich	After upgrading to Zurich, the behavior of Email Client template selection has changed. In Xanadu and Yokohama, the system always reverted to the default template when showing the 'Email' tab again. However, in Zurich, the system keeps the last used template (template2) instead of returning to the default.	1. Log in to an instance. 2. Open Service Operations Workspace. 3. Open an incident record from the list. 4. Select the **Detail** tab. 5. Select the **More** menu on the right of 'Work notes', then select **Email** (→ template1 is applied). 6. Confirm that template1 is currently applied. 7. Select the **Email Template** icon on the right-side menu. 8. Select **template2**, then select **Apply Template**. 9. After template2 is applied, enter an email address in the **To** field and select **Send Email**. 10. Repeat Step 5. Expected behavior: Template1 is applied again (returns to the initial status). Actual behavior: Template2 remains applied (the last used template is applied).
Event Management PRB1975115	Slow processing of the 'Event Management - Maintenance Calculator' job when processing a large number of closed alerts	For users that have large number of closed alerts, this update can take about 20 minutes in case of the user with about 50k-100k closed alerts.

Problem	Short description	Description	Steps to reproduce
Flow Engine PRB1971237	Unable to run 65M Load Test		1. Log in to the instance. 2. Under CISP Test suites, select **NMA_Mock: 65M_NMA_MT_Equip_Data_Update**. 3. Select **Execute Tests**. 4. Select **Execution Profile as Nested Payload**. 5. Select **OK**. 6. Check CISP executions for the results. Observe that certain executions didn't run.
Flow Engine PRB1984516 KB2741852	Flows with record triggers intermittently aren't triggering after a Zurich upgrade	The root cause of the issue lies in the record trigger cache preparation, which isn't thread safe. This may result in returning incomplete triggers that cause flows/playbooks not to trigger.	Refer to the listed KB article for details.
Flows (Family Channel) PRB1948205	A user isn't able to delete 'Assign Subflow Output' flow logic's inputs		1. Open any subflow with 'Assign Subflow Output' like 'Batch Rollback' or 'Batch Install'. 2. Delete any of the outputs from the 'Assign Subflow Output' logic. 3. Select **Done**. 4. Reload. 5. Expand 'Assign Subflow Output' again. Notice all the variables are still there.
Flows (Family Channel) PRB1954202	Nested complex objects don't preserve dropped pills	When the user drops a complex object pill into a nested complex object, it does not save correctly (with or without SAYG). Dropping a pill on the root level works.	1. Create an action that outputs a complex object. 2. Create an action that has an input that is a complex object with a complex object nested within. 3. Add action #1 to a subflow. 4. Add action #2 to a subflow. 5. Pass the output of action #1 to action #2's NESTED CO input (not the top level CO itself) by dropping a pill.

Problem	Short description	Description	Steps to reproduce
HTML Field Type Editor PRB1953216	URL links added in HTML fields no longer change color when the **Toggle theme** button on the TinyMCE editor is clicked	The issue is observed in Zurich. It was tested in both light and dark themes, Next Experience, and coral.	1. In a Zurich instance, navigate to kb_knowledge.do. 2. Copy and paste a URL link into the **Article body** HTML field. 3. Select the **Toggle theme** button. Observe no color changes. 4. Repeat the same steps in a Yokohama instance. Observe different behavior.
Identification and Reconciliation API PRB1972817	There's an NMA update exception	This results in various errors during the load test.	1. Run OKR Mixed Load Test with CMDB Updates, Event Management, Discovery, and Order Management. 2. Run the 10M NMA Update using CISP. 3. Check for errors during the load test.
Inbound API Integration Usage Framework PRB1972551	Protected data definitions sent to Clickhouse have invalid values for user names and application names		
Inbound API Integration Usage Framework PRB1974639	Track inbound API integration requests as GCF events for licensing	This is a product update.	
Install Base Management Store PRB1972327	Instance performance issue due to no NULL checks in the InstallBaseUtilSNC base instance script include	'sn_customerservice.unified_consumer role' was added to a group, causing a cascading change to 27 child groups containing over 7000 users. Subsequently, users with this new role who didn't have a corresponding entry in the consumer table were caused to run a 'select *' query on 'sn_install_base' tables.	1. Open a base instance. 2. Try to assign 'sn_customerservice .unified_consumer role' to a high number of users (or any group with a lot of members). 3. Try to open any case as any user from the above list. Observe the slowness. Global.CSManagementUtils .getConsumerID() returns null for a user who doesn't have a record in csm_consumer table and has

Problem	Short description	Description	Steps to reproduce
		This results in queries of tables containing over 2 million records being continuously executed.	a unified_consumer role. This method is used in other methods, which are used in dynamic filters.
Instance Data Replication (IDR) PRB1821656	A carriage return character (
) is added	A carriage return character is added when work notes or additional comments are synced to an instance.	1. Navigate to a producer instance. 2. Make a multi-line comment. 3. Save. 4. Navigate to a consumer instance. Observe that the carriage return character (
) is added to the new line.
Internationalization Features PRB1892286 KB2277705	A non-admin user can't change a dashboard name by specific steps when the system language is set to Japanese	The dashboard name should be updated correctly and reflected in both the primary record and its translated fields, as it is in the Washington and Xanadu versions. In the Yokohama version, the update to the dashboard name fails silently when the Japanese language is enabled and the sys_translated record exists.	Refer to the listed KB article for details.
Internationalization Features PRB1912273	After a Yokohama upgrade, catalog admins can't create new sys_translated records	Since the upgrade to Yokohama, it's no longer possible for catalog_admin users to create new records in table [sys_translated], only update existing ones.	1. Provision a Yokohama base instance with a language plugin installed. 2. Create a testuser with the role catalog_admin to access the catalog items and their variable sets and variables (but not the sys_translated table directly). 3. As sys_admin, create two variables for any catalog item. 4. Add a translation for one of the two variables. 5. Switch to testuser. 6. Open the catalog item. 7. Change the preferred language to the one associated with the plugin (make sure the translation exists).

Problem	Short description	Description	Steps to reproduce
		Java proxy to construct outbound URLs, but the proxy doesn't append the project ID. As a results, calls are sent to an incorrect or incomplete Gemini endpoint, and the user gets the error 'Invalid HTTP response 404: Not Found'. In contrast, Incident Summarization and Code Generation features work correctly because they use the Flow Designer, which properly constructs outbound URLs and includes the project ID as part of the request path. Since NAP and AI Agents bypass Flow Designer and instead use the Java proxy which omits the project ID, their outbound calls fail consistently.	
OneExtend PRB1981515	Add enhanced debug logging around async client call	There needs to be debug logs added when each streamed chunk is received, when the final callback is received (VAStreamConsumer), before enqueueing in the hybrid queue, and after enqueueing in the hybrid queue and the callback is complete.	
OneExtend PRB1981554	The 'One Extend' plugin needs the extension point for Hermes health checks	Without this health check endpoint in the extension points for Glide One Extend, alerts are sent to the SRE.	
OneExtend PRB1981648	integration_type metadata is missing in metadata sync, which is needed to	Metadata sync from Glide to Mosaic is missing the provider's integration_type related metadata. Without this metadata,

Problem	Short description	Description	Steps to reproduce
	after Platform Analytics migration	and then the same dashboard is migrated to a Platform Analytics dashboard and exported again using UnloadDashboard after migration, duplicate category records are created in the analytics_category_m2m table upon importing to the target instance. This issue occurs when both the source and target instances perform the migration process and the migrated dashboard is re-imported through an update set. As a result, the migrated dashboard in the target instance displays two identical categories, with duplicate links in the analytics_category_m2m table.	3. Use the UnloadDashboard functionality to record the dashboard into the current update set. 4. Mark the update set as 'Complete' and export it to an XML file. 5. In the target instance, upload, preview, and commit the update set XML file. 6. In both the source and target instances, migrate the Core UI dashboard to a Platform Analytics dashboard using Migration Center. 7. In the source instance, create an update set and set it as current again. 8. Use UnloadDashboard again (this time after the Platform Analytics migration) to capture the Platform Analytics dashboard into the update set. 9. In the target instance, upload, preview, and commit this new update set XML file. 10. In the target instance, open the migrated Platform Analytics dashboard and verify its category.
Platform Licensing PRB1980200	True-up of SM and LE 6.0.2	This is a product update.	
Process Mining component for Platform Analytics PRB1949256	A filter on a promin component on Platform Analytics dashboard gives 'undefined' instead of displaying the task progress		1. Navigate to Platform Analytics workspace. 2. Enable the process mining component. 3. Apply a filter on the graph. Observe that it says 'undefined' in the top right corner instead of showing a loading circle.
Process Mining Workspace PRB1914287	'The page you are looking for could not be found' error is thrown after selecting 'Generate report'	The issue has been observed on the 2.4.2 and the 2.4.8 version of Automation Discovery (ml-automation-discovery).	1. Provision an instance with the Automation Discovery plugin installed (for example, the base instance for Zurich).

PRB1961604			**3.** Open Virtual Agent. **4.** Type 'What is spam'. 77 queries are issued over 7 separate transactions.
Virtual Agent PRB1962077	The Virtual Agent (VA) audio beep isn't heard for all chats in Zurich		**1.** Log in to a Zurich instance. **2.** Navigate to /esc. **3.** Open Virtual Agent. Note that as the VA sends the messages, the chat audio alert isn't heard for each message (sometimes it is heard at the end of the last message). This was not the case prior to Zurich.
Virtual Agent PRB1973358	Support skillParams during execution		**1.** Navigate to an instance with July Store apps installed. **2.** Turn on AIEL through guided setup. **3.** Turn on incident summarization skill. **4.** Navigate to the instance home page. **5.** Open the dev console. **6.** Inspect the element. **7.** Set the focus on sn-ai-engagement-experience. Excepted behavior: The skill gets executed without asking the user the record number. Actual behavior: The skill gets executed and asks the user for the record number.
Virtual Agent PRB1975277	The actual status of the additional chat features isn't reflected in the base instance NAVA assistant test window	In the test panel, the values of 'Allow web search', 'Allow response streaming', and 'Allow document uploads' are shown as 'Inactive'. This doesn't reflect the values set in the 'sys_now_assist_deployment_config_attributes' table.	**1.** Navigate to **All** > **Assistant Designer**. **2.** Ensure that you have active assistants 'Now Assist Panel - Platform (default)' and 'Now Assist in Virtual Agent (default)'. **3.** Navigate to the settings of 'Now Assist in Virtual Agent (default)'. **4.** In the 'Additional chat features' section, select the **Allow web search**, **Allow response streaming**, and **Allow document uploads** options.

Problem	Short description	Description	Steps to reproduce
			5. Save the assistant. **6.** Make sure the same options are selected for 'Now Assist Panel - Platform (default)'. **7.** Navigate to the table 'sys_now_assist_deployment_config_attributes'. **8.** Search for 'doc_qna', which is responsible for 'Allow document uploads'. **9.** Verify that it is set to 'true' for both assistants (since it was selected in the steps above). **10.** In the same table, search for 'streaming_enabled' and 'web_search_enabled'. **11.** Verify that they're also set to 'true' for both assistants. **12.** Navigate to **All** > **Designer**. **13.** From the 'Select assistant' drop-down list, select **Now Assist Panel - Platform (default) assistant**. **14.** Select the **Test assistant** button. **15.** Observe that the test panel opens, and the values of 'Allow web search', 'Allow response streaming', and 'Allow document uploads' are shown as 'Active'. **16.** From the 'Select assistant' drop-down list, select **Now Assist in Virtual Agent (default) assistant**. **17.** Select the **Test assistant** button. **18.** Select one of the available chat options. Expected behavior: In the assistant test panel, the values of 'Allow web search', 'Allow response streaming', and 'Allow document uploads' are shown according to the actual values set in the 'sys_now_assist_deployment_config_attributes' table. Actual behavior: The test panel opens, and the values of 'Allow web search', 'Allow response streaming', and 'Allow document uploads' are shown as 'Inactive'.

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1975617	Failing to send an agent joined message		
Virtual Agent PRB1976846	SessionManagerQlueSessionToChannelSessionMap caches rhino objects, contributing to higher heap memory usage	Even if it's using a cache of 100, each item takes between 8-10 MB, causing the overall memory consumption to spike to over 800 MB.	
Virtual Agent PRB1979890	Handle an error in VoiceTranscriptSessionMap	VoiceTranscriptMessage isn't setting the source, causing an error message: 'Exception occurred while adding the message: Cannot invoke "com.glide.cs.qlue.entities.MessageSource.name()" because the return value of "com.glide.cs.qlue.entities.Message.getSource()" is null'.	
Virtual Agent PRB1981015	Page context is not saved to Glide (from off-Glide)	Promoted skills should be sent to the client using a rest API.	
Virtual Agent PRB1981262	Conversation cache invalidation from Glide	In cases of conversation state changes like abandoned conversation, faulted, or canceled, the cache should be flushed.	
Virtual Agent PRB1982394	Topic block tool execution isn't running correctly	There's two problems. One, topic block rich control messages aren't sent back to OGCS. Two, the topic block's inputs aren't sent by AO/MCP.

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1982735	Handle an unknown **document_id** field in the sys_cs_provider_application		**1.** Set up Glide NLU or Now Assist. **2.** Set up the appropriate Teams version. **3.** Start a conversation from a bot. Logs have an unknown field document_id in sys_cs_provider_application exception for every Teams request.
Virtual Agent PRB1984139	Update permissions on the sys_cs_message_last_read and sys_cs_skill_context tables	Cache writer operations fail with errors.	
Virtual Agent PRB1984463	Client isn't loading during an upgrade	During an upgrade, the upgrade schema Web Client chat isn't loading.	
Virtual Agent PRB1985779	Fallback option labels are missing in assistant configuration		
Virtual Agent PRB1986915	Attachment uploads fail for users without elevated privileges		
Virtual Agent third-party integrations PRB1980510	Allow linking for AI agent user type from AI agents app	When the user triggers auto-linking from AI agent with an AI agent type, the linking fails.	
Virtual Agent Web Client PRB1979942	Implement granular feedback functionality for NAVA

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
Virtual Agent Web Client PRB1981024	Markdown link [label](url) renders an incorrect URL when the URL contains a dollar sign ($)		
Virtual Agent Web Client PRB1981038	There's an extra empty message added after the HTML output when messages arrive too quickly	This was added for scrolling. When the messages come too fast, this 'hidden' message stays in the chat.	
Walk-Up Experience PRB1965546	In Service Operations Workspace (SOW), navigating to location kiosks doesn't return any results	This is an issue with the Walk-up Experience.	1. Provision a Yokohama instance with the latest version of the Walk-up plugin installed with demo data. 2. Add two kiosks for walk-up location 'Santa Clara Tech Lounge'. 3. Impersonate a user who is part of the group 'Santa Clara Tech Lounge'. 4. Access either SOW or Platform. Expected behavior: Two kiosks are returned. Actual behavior: No results are returned.
Word Document APIs PRB1967960	Custom fonts in Word documents throw an error		1. Identify contract documents with custom fonts embedded into XML. 2. Upload the contract into the contract request. Note that the upload fails and the file isn't visible in the contract request.
Word Document APIs PRB1971900	If a document has modified content controls with track changes turned on, document generation fails when Sync		1. Do the required template setup. 2. Generate an NDA request. 3. Download the first version of the contract document generated. 4. Turn on the track changes mode. 5. Modify the content control like start date/company legal name.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
	Document is performed		**6.** Save it. **7.** Create a new revision with this new document. **8.** Modify the same field (start date/ company legal name) in CMR. **9.** Select **sync document**. See that sync metadata and signatories fails with error: 'class org.docx4j.wml.RunIns cannot be cast to class org.docx4j.wml.ContentAccessor (org.docx4j.wml.RunIns and org.docx4j.wml.ContentAccessor are in unnamed module of loader...).
Work Order Management PRB1926871	When the task's location and agent doesn't have a timezone, the system timezone should be used	This would keep the Dispatcher Workspace behavior in sync with platform behavior. All places across the platform use the system timezone whenever there is no explicit timezone specified on the location record or agent record.	**1.** Make sure the dispatcher is in the US/Eastern timezone. **2.** Make sure the system is in the US/Pacific timezone. **3.** As the dispatcher, view agents and tasks on DWS. Observe that the US/Eastern timezone is seen if the agent/task doesn't have a timezone. If the user opens that record on workspace or platform view, the default timezone is shown as US/Pacific, honoring the system timezone.
Work Order Management PRB1975195	Skipped business rule issues during Schedule Optimization (SO) updates	Business rules are skipped or not skipped incorrectly during/after SO due to edge cases not being handled in the current logic to evaluate if SO is making the update, and due to workflows being turned off when locked tasks are updated.	
Zero Trust Access PRB1976242	There's a security constraints access prevention issue after enabling zero trust access when		**1.** Provision an instance with the 'Zero trust access' plugin installed. **2.** Enable the ZTA property (glide.authenticate. session_access. enabled). **3.** Navigate to vtb_board.list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
	opening a VTB dashboard		**4.** Open any dashboard having a condition with a date-time filter. **5.** Select **Show board** under related links. Expected behavior: The VTB board should load and the session should remain with the roles the user is entitled for that session. Actual behavior: Users observed a security constraints access 403 error for any subsequent action.
Zing Text Indexing and Search Engine PRB1972145	The query is slow from the TS Index Stats job from the getTableList method	The 'TS Index Stats' job executes some code to get a list of extension tables to index for a given base table. To do this, it executes an expensive aggregate query against the base table, grouping by the **sys_class_name** field. This doesn't scale well and can cause queries to run long, which impacts overall database and instance performance.	**1.** Navigate to a large CMDB or SYS_IMPORT_SET_ROW table. **2.** Run the TS Index Stats job. Expected behavior: The job runs quickly. Actual behavior: The job runs slowly as these extended tables grow in size.

Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

Zurich Patch 5 Hotfix 1

The Zurich Patch 5 Hotfix 1 release contains fixes to these problems.

Build information:

Build date: 02-05-2026_1831

Build tag: glide-zurich-07-01-2025__patch5-hotfix1-02-03-2026

Important: For more information about how to upgrade an instance, see ServiceNow upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

Note: This ServiceNow AI Platform® major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

Fixed problem

Problem	Short description	Description	Steps to reproduce
Analytics Data API PRB1931476	Issue with Incident SLA donut translation in Service Operations Workspace (SOW)	After changing the language in SOW, the Incident SLA widget appears as 'Breached'. After clearing the cache, it then appears as 'undefined'.	**1.** Impersonate a user. **2.** Open SOW. Notice that the Incident SLA widget label appears as 'Breached'. **3.** Change the language to any language. Notice that the label still appears as 'Breached'. **4.** Clear the cache by cache.do. Notice that the label now appears as 'undefined' while the translation is already added in the sys_ui_message table.
Analytics Export API PRB1977069	Users are unable to schedule data visualizations	This issue occurs when the user is attempting to schedule and sent data visualizations as a PPT or PDF file. The mail is not generated after entering the reoccurrence, recipients and subject and selecting **Save and**	**1.** Open any visualization. **2.** Select **Schedule**. **3.** Select the file type as PPT or PDF. **4.** Fill the Reoccurrence, Recipients and Subject. **5.** Select **Save and Send Now**.

Problem	Short description	Description	Steps to reproduce
		Send Now. An error is observed in the syslog.	Observe that the mail is not generated, and that there is an error displayed in the syslog.
Platform Analytics Component API PRB1984668	Column filter issue in the Data Visualization library page, in which the 'Does Not contain' is not working on the 'Owner' column	Applying the 'Does not contain' filter on the 'Owned by' column does not filter the records properly.	1. Navigate to the Data visualization library page. 2. Apply the 'Does not contain' filter on the 'Owned by' column. Expected behavior: All the records should be filtered by the applied filter value. Actual behavior: It is not filtered properly when there are multiple values.

Overview

Zurich Patch 5 includes 338 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

Top 10 problem categories

Security-related fixes

Zurich Patch 5 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Zurich Patch 5, refer to KB2700349.

Changes in Zurich Patch 5

Cloning and upgrading considerations for Developer Sandboxes

As of Zurich Patch 5, Developer Sandboxes will back up any update sets from the sandboxes and export them to the main instance.

Retire Developer Sandboxes

However, if you are on Zurich Patch 5 or later, update sets on the instance may be automatically backed up.

Exploring Code Signing

All the metadata tables with valid configurations are signed at build time using the Code Signing metadata plugin (*com.glide.code_signing*). Installing this plugin automatically installs the Code Signing OOB App Signatures plugin (*com.glide.code_signing.oob_apps_signatures*) which contains build time signatures for all relevant records in the trued-up ServiceNow® Store application versions. If you choose to sign tables, admin users with the Security administrator role have access to Code Signing jobs:

Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

Problem	Short description	Description	Steps to reproduce
AI Search (Glide) PRB1937244	java.lang.SecurityException: AisDisableSearchSignalEvent is undefined and may be missing a global qualifier	java.lang.SecurityException: AisDisableSearchSignalEvent undefined, maybe missing global qualifier.	
Flows (Family Channel) PRB1921408 KB2659810	The sys_hub_flow_version record of a flow is not captured in the update set when updating the flow	The user must manually capture the sys_hub_flow_version record in update set to avoid a preview error.	
List Administration PRB1946446 KB2601161	Filtering issues on a **Date** field in Workspace	Filter options on the field for dates on workspace are updated to an invalid date after selecting a date.	Refer to the listed KB article for details.
Service Portal PRB1970979	Help text is misaligned in portal forms after upgrading to Zurich	After upgrading to Zurich, the help text in portal catalog items are not aligned correctly. They are shifted to the right of the label above it.	
UI Form Administration PRB1894995 KB2438505	A requested item (RITM) created from an interaction in Service Operations Workspace (SOW) with an HTML variable automatically re-attaches images from the variable as the current user	When a user copy-pastes text and images from Word, email, etc. to an RITM created from an interaction in a SOW HTML variable, reloading the RITM automatically re-attaches images to the record and gets displayed in the activity stream as a new attachment.	**1.** Navigate to an Xanadu instance. **2.** Create a catalog item with one HTML variable. **3.** Open an interaction record from SOW. **4.** Locate and select the **Create Request** button. **5.** Create a request for the catalog item created in the second step. **6.** In the HTML variable, copy-paste text and images from a Word document or email. **7.** Submit the request. **8.** From SOW, open the RITM just created.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: The RITM opens normally and images aren't reattached. Actual behavior: Images from the variable are reattached every time a user opens the RITM record. Newly re-attached images are shown in the activity stream. These images can also be found in the sys_attachment table with Table sys ID = RITM sys_id.

All other fixes

Problem	Short description	Description	Steps to reproduce
Access Control List (ACL) Rules PRB1964011	AllTermsCache has an increased live set of close to 20 MB in Zurich		
Access Control PRB1836275	ScriptClassifier .isScriptUsingCurrent() returns true despite the passed in string not being current		
Access Control PRB1928472	Unable to assign a 'User' admin role to a contact from the contact view page from CSM portal	An error is thrown reading, 'User has conflicting role 'snc_required_script_writer_permission'. All explicit role collisions must be addressed in the hierarchy.'	
Access Control PRB1938077	Unable to troubleshoot slow ACLs due to batched logging	Batched logging impacts troubleshooting ability and affects users that rely on inline logging.	**1.** Navigate to syslog_list.do. **2.** Search for a message that starts with 'Slow ACL'. Observe that batched log messages may not be logged at the time they are generated, and that there may be a delay before a slow ACL is logged.
Access Control	The **Article Body** ('text') field is read only for new	This issue is only observed in the Zurich family release.

Problem	Short description	Description	Steps to reproduce
PRB1943406	Users that inherit the 'knowledge' Role from a Group		
Access Control PRB1960642	Remove Datatype ACLs created for HTML and translated_html datatypes	This is a product update.	
Activity stream PRB1899572	The 'Activity' section of the 'Details' tab doesn't show field changes upon incident creation	The Activity stream doesn't show events when the user creates a record from the record page, the 'Details' tab doesn't load in the first position, and the user switches to the 'Details' tab.	
Activity Stream PRB1914953 KB2481528	The user is unable to enter more than 4000 characters in length on the **Journal** field after upgrading	Users are unable to copy or paste the text with more than 4000 characters on the **Journal** field after upgrading from Washington DC to Yokohama.	Refer to the listed KB article for details.
Advanced Work Assignment PRB1970818	Add support for AI Agents in AWA	This is a product update.	
Agent Assist PRB1910542	The window pane doesn't resize when composing an email in a configurable workspace	When the user composes an email in a configurable workspace, the window pane doesn't resize for the email body. The 'Email Templates' frame is expanded and not scrollable, and the **Send email** button isn't visible.	**1.** In Yokohama, navigate to an instance. **2.** Open any workspace (SOW/CSM/ FSM). **3.** Open any incident in the workspace. **4.** Compose an email. Notice a new tab opens. **5.** Verify that the 'Email Templates' frame is opened. Expected behavior: The 'Email Templates' frame is collapsed and scrollable. The Email Client Body is the

Problem	Short description	Description	Steps to reproduce
			same size as the window, and the **Send email** button is visible. Actual behavior: The 'Email Templates' frame is expanded and not scrollable. The Email Client Body is the same height as the 'Email Templates' frame, and the **Send email** button only appears after scrolling down.
Agent Chat PRB1970504	Skip read-only states that are not the current state	This is a product update.	
AI Agents (Glide Family) PRB1963825 KB2649969	Update AI Agents (AIA) true-up version to four.0.38	Updating the AIA true-up version to fix a potential infinite loop in an upgrade scenario.	Refer to the listed KB article for details.
AI Agents (Glide Family) PRB1970451	ACL cache retrieval behaves differently for hierarchies; the returned value is not the same as the one stored in the cache	Behavior differs between no cache runs and cache-filled runs.	
AI Agents (Glide Family) PRB1971370	Mandatory inputs are not checked prior to tool execution to handle missing inputs		
AI Search (Glide) PRB1926964	E5 encoding does not work when a non-base instance English (EN) record is created in the sys_language table	The issue occurs because E5 model config references sys_language records for supported languages. It saves sys_id of the record. However, if the user's instance has a non-base instance language record, it will not work with E5.

Problem	Short description	Description	Steps to reproduce
AI Search (Glide) PRB1932287	Null Pointer Exception occurs during catalog variable indexing when **Choice Text** is empty		1. Create or edit a catalog variable with choice options. 2. Leave the **Choice Text** field empty for one or more options. 3. Trigger the indexing process for the Catalog variable. Observe that a Null Pointer Exception (NPE) occurs during indexing.
AI Search (Glide) PRB1936969	Spinner or loader still shown when Genius Result (GR) isn't linked to the search application		1. Launch any instance. 2. Remove any GRs if present. 3. Attempt to search for a term. Expected behavior: The GR spinner and empty state should show up only if GRs are configured. Actual behavior: The GR Spinner animation shows up even if GRs aren't configured.
AI Search (Glide) PRB1954965	The Query Timeout property doesn't configure application level timeout		1. Adjust glide.ais.query.timeout higher than ten seconds. 2. Issue a query that runs longer than ten seconds, but shorter than what was configured for glide.ais.query.timeout. Notice that a timeout response is returned.
AI Search (Glide) PRB1961490	The user cannot ingest semantic fields for skills in a non-global domain	The topic is not discoverable in NAVA when the corresponding skill is created in a non-global domain.	
AI Search (Glide) PRB1967477	When no Virtual Agent app is enabled, Global search with AIS enabled fails		
AI Search (Glide) PRB1972985	Multimodal Captioning for AIS Glide	This is a product update.

Problem	Short description	Description	Steps to reproduce
AI Search for Virtual Agent PRB1953578	Pass limitColumnOutput param in apiOptions for t2r call	This is a product update.	
AI Search PRB1883371	AI Search XMLstats should return AIS connections irrespective of the 'Aggregate Health Data for AIS Partition' sys_trigger execution	This blocks monitoring capability of checking if ais.nodes exists on the instance.	1. Disable or delete the 'Aggregate Health Data for AIS Partition' sys_trigger execution. 2. Add /xmlstats.do?include=ais to the URL. Expected behavior: This returns ais.nodes. Actual behavior: ais.nodes is empty.
AI Search PRB1893450	When there's a search application without a name, the drop-down list appears empty	When the user creates a search application without a name, the drop-down list for selecting search applications appears empty and displays the message 'null'.	
AI Search UX PRB1912867	Unable to style search result title highlighting	The title (now-text-link) highlighting isn't altered.	
AI Search UX PRB1913656	Dot-walked genius result fields are returned with dots instead of underscores		1. Search for Company Policies in /esc portal. 2. Select the Company Policies genius result. Observe that the navigated page has no sys_id.
AI Search UX PRB1918092	Now Assist synthesized response cards should not show a price for a non-billable catalog item	When the LLM generates answers containing a catalog item, the tool tip for this item shows a price of $0.00 for non-billable item instead of showing nothing.

Problem	Short description	Description	Steps to reproduce
AI Search UX PRB1928007	An empty GR result is shown when a multi-content GR response is returned for a different search	Notice that an empty GR result is displayed.	1. Enable multi-content response GR on a portal (/sp) search profile. 2. Unlink multi-content GR from another portal (/esc) search profile. 3. Perform search on portal one (/esc) (for example, what is spam). Multi-content response GR is not returned. 4. Open portal two (/sp) in a new browser tab. 5. Perform a search (for example, 'what is spam'). This returns a multi-content response GR result. 6. View the portal one (/esc) browser tab from step 3. Notice that an empty GR result is displayed on portal one.
AI Search UX PRB1952630	Malformed URLs in the streaming chunks for a synthesized response cause the UI to hang	The URL renders stand-alone and sometimes isn't selectable.	
AI Search UX PRB1959826	Search select events are not tracked when applying any facet that contains 'UNION'	The select event is not captured on sys_search_signal_result_event table. It gets captured once the facet is removed.	1. Visit any search page which has facets whose values contain 'UNION' 2. Apply the same facet. 3. Select any search result. The select event is not captured on sys_search_signal_result_event table. It gets captured once the facet is removed.
AI Search UX PRB1961267	Ask-a-follow up and Request in chat doesn't work on global search	A follow up question is not asked and there is no Request in chat option available.	1. Enable NAP on global search. 2. Search for 'Apple Watch' or 'Loaner Laptop' (any conversational catalog query). Notice that a follow up question is not asked. Also, when the user selects

Problem	Short description	Description	Steps to reproduce
			Catalog citation, notice there is no Request in chat option available.
AI Search UX PRB1963505	URLs towards the end of the streaming are rendered as plain text		1. Open an instance where synthesized answers are working. 2. Search a query that would have a URL towards the end of the answer. Observe that the URL is rendered as plain text.
AI Search UX PRB1963984	Streaming fails when there's a response with numerous citations	When the user searches for a term with ten or more citations, streaming sometimes gets stuck. It indirectly pushes component into halt and doesn't show feedback options.	1. Provision an instance with Synth GR. 2. Search for a term that would result in ten or more citations. Observe that the streaming is intermittently stuck, indirectly pushing component into halt and not showing feedback options.
AI Search UX PRB1966920	The 'Now Assist detected and ...' alert is shown on the top results card when sensitivityFilter.hasMatch is false	Sometimes, the payload of final MESSAGE_RECEIVED event has the sensitivityFilter.hasMatch value as a string false. In such cases, the GenAI card is hidden and an alert is shown.	
AI Search UX PRB1971350	When Hybrid Search is enabled, total count is missing	With Hybrid Search on, only facet count should not be shown.	1. Enable DW/Hybrid Search on /sp on any Now Assist instance. 2. Query 'what is spam'. Observe that the total count is missing.
AI Search UX PRB1972080	Console errors on Service Portal (SP) for non-synthesized GRs (although functionally everything works as expected)		1. On a Yokohama or Zurich instance, disable Synthesized GRs for SP. 2. Search for a term with which there is more than one GRs. Observe errors in the console such as 'Failed to load @devsnc/sn-search-genius-card-assist'.
AI Search UX PRB1972964	Make the search input bar responsive to long prompt for full page	This is a product update.

Problem	Short description	Description	Steps to reproduce
Analytics Data API PRB1892623	Data visualization on a pivot table shows 0 or incorrect/ inconsistent data	Issue happens on both. Plugin sn_app_analytics_w Version: six.0.six and six.0.eight.	
Application Manager PRB1963964 KB2684464	The install/ update modal for any Now Assist app that loads the new 'Now assist suite' UX opens takes over two minutes to load		Refer to the listed KB article for details.
Application Manager PRB1964007	Sys_prop polluting the update set		1. Open App Manager. 2. Select **Sync**. 3. Check the current update set record. Observe that it records the current value of sn_appclient.apps_sync_progress.
Application Rationalization PRB1921023	EA indicator framework generates the wrong score for the minimize indicator	When the absolute value is empty or not available, the EA indicator framework generates the wrong score for the minimize indicator.	1. Navigate to a business application without any incidents. 2. Generate the score for the incident indicator. Expected behavior: Since there are no incidents for the business application for the given fiscal period, and the incident indicator is minimize, the expected score is ten. Actual behavior: It generates 0.
Application Rationalization PRB1942817	Issues with Dependency View in Enterprise Architecture Workspace	In the Enterprise Architecture Workspace, the action **Open Dependency View** does not respond. No modal/ tab opens, there's no redirection, and no error message is displayed. The page remains unchanged.	1. Navigate to the Enterprise Architecture Workspace. 2. In the left menu, navigate to **Portfolio** > **Business Architecture** > **Business Process**. 3. Open any Business Process record. 4. In the form, select **Open Dependency View** under More Actions (# icon). Observe that nothing happens; nothing loads and there's no message.

Problem	Short description	Description	Steps to reproduce
Automated Test Framework (ATF) PRB1959359	Clean Up job for Metadata tracing OOMemory Issue: sysauto_script.do?sys_id=26c1592cff442210940effffffff0b		
Batch API PRB1911987	Search sources in UI Builder's Source to Pay workspace Experience setting is null	Batch API calls don't accept special characters (spaces, commas, pipes etc.) in BatchItem URL fields in the payload in Zurich release.	1. Navigate to UI builder. 2. Select the experience page and select **Source to pay workspace**. 3. Select the **View experience** setting. 4. Change the scope to source to pay workspace. 5. Scroll down to the global search. Observe that the search source drop-down list contains nothing to select.
Cache PRB1955869 KB2595527	The ScriptEnginesTables cache is undersized in Zurich release causing increased processing time	If an instance has more than 50 script engines installed (via plugins and applications), setting the current size to 50 for the ScriptEnginesTables cache may lead to an increase in processing times. This could lead to semaphore contention and/or exhaustion, resulting in a significant increase in total transaction time and processing time and script time.	Refer to the listed KB article for details.
Case and Knowledge Management for HR Service Delivery PRB1961987	HR case and ER case transfer with an attachment is showing up as JSON in AI Case summary	Issue is that style tags are present in a summary. In an AI summary card component, these style tags are rendered, but in a transfer case modal these are not rendered because it is a textarea.	
Case and Knowledge Management for HR	Proof of grade and proof of payment are text boxes		Navigate to HR cases table (Workspace/ UI16) as an HR agent and select **New**.

Problem	Short description	Description	Steps to reproduce
Document Intelligence Unified Backend PRB1942585	Straight-through processed documents with tables will generate an extra row of predictions if the use case is on a version older than 27.one	This issue occurs on a glide instance with Yokohama and has DocIntel Store app version 7 or later installed, for example, version 25.0. With a table key and has straight-through processing and autofill enabled, it is trained to have straight-through processing triggers. When the user submits a document that gets straight-through processed, there will be an extra empty row of extracted values.	
Dynamic Scheduling PRB1925058	Dynamic scheduling issues from case tasks	An issue found in scenario two is that certain FSM work order tasks are not scheduled right after the last job.	Scenario one: 1. Enable dynamic scheduling. 2. Enable 'Ignore travel' in both dynamic scheduling property and task. 3. Enable the 'Onsite arrival' status in sm_config. 4. Enable 'Show log' in the dynamic scheduling property. 5. Open a pending dispatch task. 6. Select **Auto assign**. Expected behavior: The user sees all dynamic scheduling logs. Actual behavior: There is no log displayed, and there is error message logged in system log: 'DynamicSchedulingProcessor: _populateTravelTimeForAgentWorkBlock ReferenceError: 'GlideDataTime' is not defined.' Scenario two: 1. Enable 'Auto assign' with interval immediate. 2. Create work order task1. 3. Assign task1 to agent1, with an estimated end time of 'one'.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			4. Create work order task2, which can only be assigned to agent1, and window start can only be after task1.expected_start. This ensures task2 can only be dynamic scheduling assigned after task1 When task2 is in 'Draft' state. **5.** Select the **Qualified** UI action. Expected behavior: Task2 is assigned right after task1. Actual behavior: There is gap between task1 and task2, and the gap size is the task2 travel duration and task2 work duration.
Dynamic Scheduling PRB1951019	Dynamic scheduling doesn't assign tasks to agents	When the user runs dynamic scheduling, one agent's workblock appears in both the sorted and response sections. If the user assigns a second task to one of the agents that overlaps with the original task's time window, the task is not reassigned.	Scenario one: **1.** Enable the following features: **a.** Dynamic Scheduling **b.** Workforce Optimization (WFO) **c.** Territory Management **2.** Create a task with a short time window that's eligible for assignment to two agents. **3.** Create entries in wm_agent_schedule_attribute_plan for both agents. **4.** Ensure each agent has distinct start and end locations. **5.** Generate schedules for both agents. **6.** Make sure each agent is able to do the following within the defined schedule window: **a.** Travel to the task location from start location. **b.** Complete the task. **c.** Return to their respective end locations. **7.** Run dynamic scheduling. Expected Behavior: The dynamic scheduling report shows sorted workblocks and a response section with workblocks for both agents.

Problem	Short description	Description	Steps to reproduce
Flows (Family Channel) PRB1962584	The 'Skill Config' drop-down list doesn't load for the action_designer role	The 'Skill Config' drop-down list doesn't load for the flow_designer and action_designer role.	1. Create a flow. 2. Add an action. 3. Add a step called Now Assist Skill. Notice that the 'Skill Config' drop-down list doesn't load for the flow_designer and action_designer role.
Granular Delegation PRB1914000	Adhoc Granular Delegation intermittently doesn't work	This issue only happens when the delegation rule condition is added on the child table of the task field, which is added on the delegation rule.	1. Activate the Granular Delegation plugin. 2. Create the delegation rule table on the change_request table. 3. Choose the second step table. 4. Set the filter to active = true. 5. Select the **Assignments** and **Approvals** check boxes. 6. Log in as an admin. 7. Navigate to **All** > **change_request.list**. 8. Create a new change request (Normal) with the Assignment group as 'Hardware'. 9. Assign it to a user. 10. Change the state of the change request to 'Assess'. 11. Impersonate the user Abraham Lincoln. 12. Navigate to **All** > **Employee Center**. 13. Select **My Tasks**. 14. In the Open Tasks list, find the newly created change request. 15. Select **Delegate this task**. 16. Delegate it to the user Abel Tuter, with the start date as yesterday and the end date as tomorrow. Expected behavior: The UI shows the task as delegated to Abel Tuter with an option to edit. Actual behavior: The user sees a 'Success', but the UI still shows the 'Delegate this task' link.

Problem	Short description	Description	Steps to reproduce
	snc_required_scripting_restriction role	using Rest API is GlideRecordSecure.	
Incident Management PRB1941995	Problem coordinators can't associate closed incidents to problems in Service Operations Workspace (SOW) (incident end)	Problem coordinators can't associate closed incidents to problems in SOW due to a change in the script include 'related_list_edit_helper' from using GlideRecord to GlideRecordSecure. The MRA in the workspace lists closed incidents for linking, but then ACLs block the writing of the record. This is not the case in UI16, as it uses a different script include.	**1.** Impersonate 'Problem Coordinator A'. **2.** Open a problem in UI16 and the incident list in another tab. **3.** In the incident list, find a closed incident that was last updated by 'system' and open it. **4.** Check the 'Related Records' section of the incident form. See that the **Problem** field is read-only. **5.** Return to tab with a problem open. **6.** In the 'Incidents' related list of the problem record, select **Add**. **7.** Find and add the previous incident. **8.** Navigate back to the tab with the incident open. Notice that the **Problem** field has updated. **9.** Continue impersonating and try to link a closed incident in the SOW. Notice that incident is closed for linking and the ACL blocks the writing of the record.
Incident Management PRB1958480	After selecting the **New** button, the user is navigated to a new incident record form where the caller file gets auto-populated with the logged in user name	When the user selects the search icon on a field, nothing happens.	
Integration Authentication PRB1960124	Verbose JWT logs use opaque tokens when AuthLog is enabled

Problem	Short description	Description	Steps to reproduce
PRB1971595			**3.** Track the previous selects in sys_cy_analytics. **4.** Write back the 'state' of the citation clicked/auto-started to the 'Output' type column for completed asset tracking. **5.** Ensure citation/asset selection in Virtual Agent writes the correct deflection type, such as Catalog ≠ Synthesized. **6.** Update the deflection log to filter out small talk to avoid unnecessary records. Observe that for agentic execution, the ending state is written back to the deflection log.
Virtual Agent PRB1974845	FDIHServiceImpl object holds significant memory		
Virtual Agent PRB1975158	Conversational catalog does not run in NAVA in Zurich mainline and anowassist		**1.** Navigate to /esc portal. **2.** Query: 'I want Miro access'. **3.** Start the conversational catalog. Expected behavior: The Miro catalog flow will run. Actual behavior: DW ends abruptly, and NAVA ends the conversation after starting the request.
Virtual Agent PRB1975746	Add a 'source' column in sys_one_extend_batch_run	When the user creates a batch run with the **Source** field from NASK seven.one.0 (Innovation Lab release), the **Source** field is not populated as it does not exist in the dictionary of the sys_one_extend_batch_run table.	
Virtual Agent third-	Live agent only mode doesn't work for third-party channels	The user messages aren't received by the agent. This message appears in the log: 'Couldn't find rich	Refer to the listed KB article for details.

party integrations PRB1956730 KB2683059		control, dropping current message'.	
Virtual Agent Web Client PRB1927910	When initiating a chat with Enhanced Chat active in a portal, the + button to start a new chat remains disabled after the chat times out	Users must refresh the page to re-enable the + button.	1. Ensure the Enhanced Chat bot is added to the portal by navigate to **Conversational Interfaces** > **Assistants** > **Now Assist in Virtual Agent** > **Display Experience**. 2. Confirm that the portal (for example, Employee Center) has Enhanced Chat enabled. 3. Navigate to **Employee Service Center**. 4. Initiate a chat session. 5. Observe that the + button for starting a new chat is disabled. 6. Leave the chat open until the abandon timeout occurs, or manually trigger the timeout. five. After timeout, observe that the + button remains disabled. Expected behavior: The + button is enabled after a chat times out, allowing users to start a new conversation without refreshing the page. Actual behavior: The + button remains disabled after timeout, and users must refresh the page to initiate a new chat.
Virtual Agent Web Client PRB1933376	Custom protocol links such as kolauncher:// are not rendered to be selected in Virtual Agent Genius responses	In Now Assist Virtual Agent (NAVA), protocol links such as KO Launcher links (kolauncher://) included in Genius Search responses are displayed as plain text and are not recognized as links that can be selected. This impacts workflows where links are critical for launching KO solutions directly from the chatbot.	1. Log in to a Yokohama instance. 2. Impersonate a user. 3. Navigate to /ghd Service Portal. 4. Start a conversation with Virtual Agent. 5. Skip the first question, 'Please select your issue.' 6. Enter a query that returns a KO Launcher link, such as 'Open KO1XXX'. Observe the Genius Search response for the kolauncher://KO1XXX link appears as plain text and cannot be selected.

Zurich Patch 4

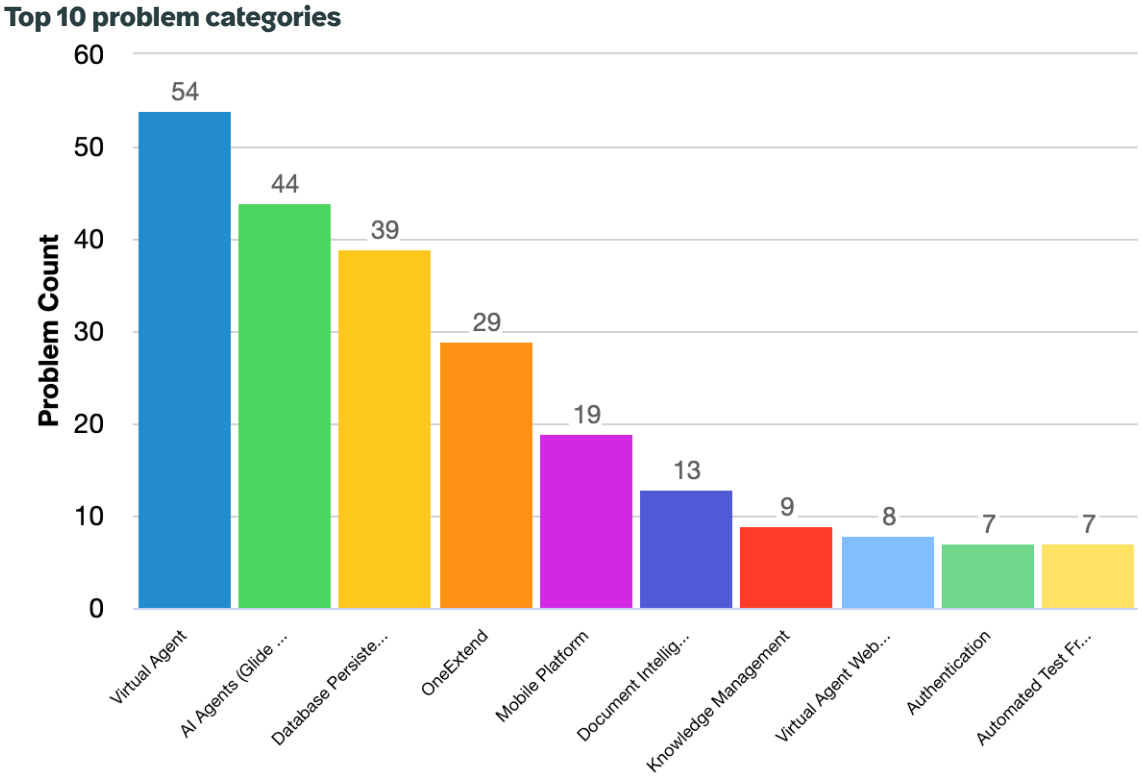
The Zurich Patch 4 release contains important problem fixes.

Zurich Patch 4 was released on December 5, 2025.

- Build date: 12-03-2025_1405
- Build tag: glide-zurich-07-01-2025__patch4-11-14-2025

Important: For more information about how to upgrade an instance, see ServiceNow upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.



Note: This ServiceNow AI Platform® major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

Overview

Zurich Patch 4 includes 476 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Security-related fixes

Zurich Patch 4 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Zurich Patch 4, refer to KB2649723.

Changes in Zurich Patch 4

Sensitive data filters

The Discovery Sensitive Data Filters [discovery_sensitive_data_filter] table provides a way to help prevent sensitive information from being exposed in the Configuration Management Database (CMDB) by applying redaction rules during data collection.

Managing Now Assist applications through Now Assist suites

Show borders between search result cards in portal search

Display borders between search result cards on the search results page for portal search applications.

Time-based one-time password (TOTP) authentication

A time based one-time password (TOTP) is a secure authentication factor that verifies user identity by generating a unique, time-sensitive code.

Push notification - Okta Verify

The **Okta Verify** app push notification enables users to securely approve authentication requests directly on their enrolled mobile devices.

SoftPIN authentication

SMS One-time passcode (OTP) authentication

Granular admin roles required to secure your instance

Verify proper access management by assigning roles that define user permissions and responsibilities. By doing so, organizations can maintain security, enforce conformance, and optimize their operations effectively.

Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

Problem	Short description	Description	Steps to reproduce
Access Control PRB1902529	Auto-assignment feature is not working as expected	The auto-provisioning status displayed in the UI does not accurately reflect the current values defined in the sys_properties (glide.security.scripting_role.auto_provisioning) table. Changes made to the relevant sys_properties are not being propagated or updated in the UI as expected.	
Database Persistence - Data Management PRB1952366	The 'Physical Table Stats Gatherer' job generates thousands of errors in the syslog	The following errors are logged in the syslog when the Physical Stats Gatherer job runs: Four entries are logged for each table which doesn't have peripherals attached to it, and one entry is logged per table that doesn't have stats collected by an SNC job.	1. Make sure the SNC SDU job is running on the instance. 2. Check the StatsGatherer execution for the day. 3. Open syslog_list.do 4. Filter logs for message starting with: DATA MANAGEMENT TABLE STATS Gatherer. Observe the errors in the logs.
Encryption PRB1931988 KB2481838	A data migration job fails when there are no context keys and EFC's in the migration_pending state	The job state changes to 'Error', with the following summary: 'Error creating job handler for type all_data_to_kmf: [The KMF cryptographic module to encryption context relationship table is empty. The 'Migrate Key Context to Module' job might not have been run or has failed.].'	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
Memory: Heap Space PRB1636231	Memory exhausted by the Archiver Job Consumer due to syslog records stored in memory, and syslog_awa is not configured as a rotated table	Memory exhausted by the Archiver Job Consumer reparenting records from syslog table due to a problem observed when syslog_awa, which is a child table of syslog, is created without table rotation. The archiver job reparents records for the archive rules it triggers for, and will reparent a table that's not rotated. When syslog_awa isn't configured as a rotated table, the reparenting process will execute on it and its parent table syslog. Query to syslog shards are then observed, and memory is consumed as the records on these shards are stored into memory. Due to the size of it, it will cause memory to become depleted. When the archiver job is running, the localhost logs will have a large query to a syslog shard where the function reparentDocumentIDRecords is running.	
Predictive Intelligence PRB1954123 KB2594708	Mutual TLS (mTLS) is enabled on Zurich instances, causing access issues for inbound integrations	Due to the updates related to the Predictive Intelligence plugin, mutual TLS (mTLS) is enabled after a Zurich upgrade. This may result in instance access issues for inbound integrations.	Refer to the listed KB article for details.
Service Catalog PRB1919964 KB2532880	The record producer **Submit** UI action should be grayed out	On a catalog item in service portal, the **Submit** button re-enables after first selection.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
	after being hit once		
UX Framework PRB1947987	CSM/FSM Workspace list filter changes when opening and closing a record	When opening a record through the list in the CSM/ FSM Configurable Workspace, the list's filter is modified after closing the record.	

All other fixes

Problem	Short description	Description	Steps to reproduce
Access Analysis Instrumentation API PRB1960686	Updates to who can execute Agentic Assets on AI - Access Analyzer	This is a product update.	
Activity Stream PRB1928286	Typed text in email reply editor disappears after selecting Reply again		1. Log in to the instance. 2. Navigate to CSM and open any incident record. 3. Make sure there is an email entry in the AS. 4. Select **Reply** on the email. 5. Type some content in the email reply editor. 6. Select **Reply** again on the same email. Notice that the text disappears.
Activity Stream PRB1928872	The CanReadRepo class encounters a ConcurrentModificationException from time to time.	This concurrency issue arises because the class uses a HashMap, which is not thread-safe. The HashMap should be replaced with a ConcurrentHashMap to ensure thread-safe operations and prevent the exception.	
Activity Stream	ACLs prevent system administrators from running		

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
PRB1938976	GlideActivity scriptable methods		
Activity Stream PRB1947683 KB2631388	Activity Stream caches excessive records, causing sys_activity table growth and performance degradation	Instead of caching only viewed entries, the platform may proactively cache all work notes and events generated on monitored tables, including those that are never accessed through the UI. This behavior results in rapid growth of the sys_activity table, sometimes reaching tens or hundreds of millions of records.	Refer to the listed KB article for details.
Advanced Work Assignment PRB1933671	AWA (Advanced Work Assignment) uses the system locale timezone when writing to logs	The AWAEventUtil code changes the global locale setting, causing the 'localhost log' to be written in UTC rather than PST (standard).	1. Log in to an instance. 2. Install the Advanced Work Assignment (AWA) plugin. 3. Navigate to **Advanced Work Assignment** > **Service Channels** > **New**. 4. Enter the following values: a. Name: test b. Index order: 100 c. Table: Incident d. Utilization condition: Short Description is not empty 5. Submit it. 6. Ensure that the channel is active. 7. Create a new queue. 8. Open the record created in step 3. 9. Choose the 'Queue' related list. 10. Create a new 'Queue' record. 11. Enter in all the mandatory fields. 12. Submit it. 13. Enable Logging. 14. Open the record created in step 3. 15. Select **Queues**and **New**. 16. Name it 'test-queue'.

Problem	Short description	Description	Steps to reproduce
			17. Submit it. 18. Check the localhost log. 19. Have the terminal open for all the nodes. 20. Tail the localhost log. 21. Navigate to **Incident** > **Create New**. 22. Enter in something. 23. Submit it. Observe that the timestamp zone has changed, and some lines are in the previous timezone and others are in UTC.
Advanced Work Assignment PRB1935541	Work item incorrectly moved to cancelled state instead of queued state	Without external routing, the rejected work item should move to the queued state. Instead, the work item moves to the cancelled state, and the interaction moves to closed_abandoned.	1. Change mweb sys_cs_channel to type 'Messaging'. 2. Enable external routing for 'Chat - Asynchronous' Channel. 3. Mark Chat Async Queue 'external' as true. 4. Make two external agents available in workspace 5. As a system admin, start a chat in the SP/CSM portal. Once routing to live agent starts, a new work item is created. 6. Assign the work item to the first agent using manual assignment API via REST API explorer. 7. Change the first agent presence to offline. 8. Send a message from admin. The conversation is reassigned, which moves the interaction state to New and creates a new work item. 9. Assign the new work item to the second agent using manual assignment API via REST API explorer. 10. Reject the work item. Expected Behavior: Without external routing, the work item is moved to the queued state, looking for new agent.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Actual Behavior: The new work item moves to the cancelled state, and the interaction moves to closed_abandoned.
Advanced Work Assignment PRB1950558	Advanced Work Assignment (AWA) should be able to determine if the work item is rejected due to time out or Asynchronous Message Bus (AMB) disconnection	When the work item times out, the work item reason on the awa_work_item_rejection table is 'Timed out' instead of 'AMB connection lost'.	1. Install the Agent Chat plugin with the demo data. 2. Open the AWA assignment rule. 3. Update the timeout time to 15 seconds. 4. Open a browser (browser 1). 5. Log in to the workspace as an agent in browser 1. 6. Open another browser (browser 2). 7. Log in to the instance as a requestor. 8. Open the URL $sn-va-web-client-app.do in browser 2. 9. In browser 1, close the workspace tab completely as an agent. Notice that the agent presence will not be set to offline immediately because the default idle check gives a 5 min buffer, and the agent is still available to receive work item at the moment. 10. In browser 2, start the live agent handoff. 11. Wait for 15 seconds so the work item will be timed out. 12. As an admin, navigate to the awa_work_item_rejection table. 13. Check the rejection record for the previous interaction. Expected behavior: The reason should be 'AMB connection lost'. Actual behavior: The rejection reason is 'Timed out'.
Advanced Work Assignment PRB1955936	The user is unable to route chats landing on external queues if agents are available on	The requester gets a 'No agents available' message even though there is an agent available.

Problem	Short description	Description	Steps to reproduce
	a different domain		
Agent Chat PRB1943902	Create a new exclusive channel to receive work items on Agent Chat	The inbox component should subscribe to a new Asynchronous Message Bus (AMB) channel other than the existing AWA/ work_item channel to reduce the chance of being interfered with by other components subscribing to the same channel. The AMB publish function used in the workItemResponder should be updated to take the trace id.	
Agent Chat PRB1957261	Invoke End Chat Summarization in 'system' topic	The short description and chat summary are not populated.	1. Remove 'sn_hr_core.admin' role from the 'admin' role. 2. Navigate to **All** > **Now Assist Admin** > **Skills** > **Employee** > **HRSD**. 3. Open the 'Chat summarization' skill and activate it. 4. Log in as an HR agent in one window and an end user in another. 5. Connect to a live agent as an end user. 6. Accept the chat as HR agent and have some conversation. 7. Select the **End chat** action. Notice that the short description and chat summary are not populated.
Agent Chat PRB1959396	AWA workitemResponder onChange published message causes a work item card to disappear in the workspace	Work items disappear from the inbox even though they are still pending for acceptance.	1. Log in to one browser as an agent. 2. Have multiple sessions as the requester and start chatting with the agent. In the agent browser, observe multiple work items pending for accept in the inbox. 3. Navigate to the awa_work_item table and update one of the pending accept work item.

Problem	Short description	Description	Steps to reproduce
			Expect behavior: The agent receives an AMB message about the updated work item, but all the pending accept work items remain the same. Actual behavior: All the other work items disappear from the inbox even though they are still pending for acceptance. Only the one that was just updated remains in the inbox.
AI Agents (Glide Family) PRB1949415	The toolID and agentID aren't passed to 'processing message' with the latest 6.0.2 snapshot	Due to issues with the latest AIA snapshot build, all the previous workflows stop working. Previously, users were able to see the toolID and ageintId inside the processing message, but with the latest, it's gone.	
AI Agents (Glide Family) PRB1949779	Update the memory format of conversation history passed to Unified Planner	Updates to the format of the unified planner memory with keys.	
AI Agents (Glide Family) PRB1951062	HTML content does not render in NAP or NAVA	The output is incorrectly formatted.	
AI Agents (Glide Family) PRB1951148	AI Agents are not responding when executed from Now Assist panel (NAP) and AIEL	The agent greeting is no longer displayed, and the execution ends without any response in NAP and AIEL.	**1.** Open an instance. **2.** Open the browser console. **3.** Run the command. Notice that in the sys_generative_ai_log table, the agent is executed and the model has the response also populated, but NAP doesn't display an output and the Agent execution ended.
AI Agents (Glide Family) PRB1952331	The user can see additional messages in response from an agent		**1.** Navigate to AI agent studio. **2.** Select **Workflow**. **3.** Send Text - SMS Abel to pick up laptop.

Problem	Short description	Description	Steps to reproduce
			The user can see additional message is returned in response.
AI Agents (Glide Family) PRB1952442	Java tool execution doesn't send the is_abort flag.	The execution of tools involving outbound is in sync mode.	**1.** Set up AI Agents. **2.** Execute any agent with the tool that has to send a request to the outbound.
AI Agents (Glide Family) PRB1953439	Crud tool doesn't work with java	'Lookup' fails with java.lang.SecurityException: Illegal access to method forEach(function) in class java.util.ArrayList. Also, 'Create' doesn't load user defined parameters(short_description) on the incident record.	Have an AI Agent with tools for the crud operations 'Create' and 'Lookup'. Expected behavior: 'Lookup' queries and shows up successfully. 'Create' creates a record as per user inputs. Actual behavior: 'Lookup' fails with java.lang.SecurityException: Illegal access to method forEach(function) in class java.util.ArrayList. Also, 'Create' doesn't load user defined parameters(short_description) on the incident record.
AI Agents (Glide Family) PRB1953687	Datastream action based tools aren't working from the JAVA layer		
AI Agents (Glide Family) PRB1953697	Sys_meta_graph is an internal table and shouldn't be queried outside KG	KG doesn't work if the sys_meta_graph table (an internal KG table) is queried directly. The exposed KG API should be used to get the schema details instead.	
AI Agents (Glide Family) PRB1955511	The Categorize ITSM incident is not working with AI Agents (AIA) 6.0.6 snapshot	The Categorize ITSM incident AI agent results in an execution stuck in the playground.	
AI Agents (Glide Family) PRB1955807	Add memory restructuring changes	This is a product update.

Problem	Short description	Description	Steps to reproduce
AI Agents (Glide Family) PRB1956483	Flow actions with an error evaluation step don't propagate the error message when executed through JAVA	The routing does not occur as expected.	1. Open the Playground and start testing Demo Next Best Action agent. 2. Attempt to route the 'Get Similar Incidents' tool. 3. Verify the execution log, verify the AIA Step Log. Observe that the routing does not occur as expected.
AI Agents (Glide Family) PRB1957318	Global Graph doesn't work	Global Graph fails during Java layer execution. It throws an error: Error occurred while executing request validator: Cannot read property 'pre_process_details' from undefined).	1. Select the agent 'Get Workflow Details' configured with Global Graph and tag as use case (sn_aia_use_case). 2. Trigger the agent with the task 'Get details of workflow Classify tasks'. Observe that the Global Graph is not working and returns the error: 'Requested information not found'. And received the following error while testing from KG Designer: 'The current operation ended in state: ERROR. Detail: Cannot execute internal HTTP request. Request is not authorized.- 400001'
AI Agents (Glide Family) PRB1957377	Reduce escape characters in tool outputs in the conversation history for the Unified Planner prompt		
AI Agents (Glide Family) PRB1957731	The Now Assist panel shows incorrectly formatted output from the AI Agent		1. Open the sys_atf_test_result page for an unsuccessful ATF test. 2. Select the **Triage test failure** button. 3. Check the output in the Now Assist Panel after the AI Agent response is available. Expected behavior: The output is properly formatted. Actual behavior: The output isn't properly formatted.

Problem	Short description	Description	Steps to reproduce
PRB1939794	on an instance as a base rather than signatures	signature count and show missing signature count instead.	
Code Signing PRB1939805	Signature verification process only honors the signature from one certificate	The validation fails because only the latest signature is considered.	1. Create signatures for a record from two different certificates. 2. Run the validation API. Validation passes as the latest created signature was valid. 3. Revoke the certificate that was used to create the latest signature. 4. Run the validation API again. Expected behavior: It passes because the second signature for the record is still valid (as the corresponding certificate is not revoked). Actual behavior: It fails because only the latest signature is considered.
Code Signing PRB1939809	The JIT process loads signatures to a database during guardrail scan	Guardrail passes if a record doesn't have a signature in the sn_kmf_record_signature table.	1. Create a new record on TI. 2. Don't generate a signature for it. 3. Move the record to PI. 4. Run a guardrail scan. Expected behavior: The scan should fail and the record should be flagged as missing a signature. Actual behavior: The scan passes.
Column Level Encryption PRB1919998	Save as Draft for catalog item does not work in portal when logged in through edge proxy	When trying to Save as Draft a catalog item from edge proxy, the URL generated for the catalog item contains double forward-slash items.	
Condition Builder PRB1927599	The condition builder on the presentational list displays all the options instead of the one that was searched	When the user searches for an option, the condition builder displays all the options in a list and highlights the one that was searched. Instead, only the option that was	1. Create a UI Builder page. 2. Configure the presentational list component. 3. Open the page in run time. 4. Select the filter icon. 5. In one of the fields, search for an option.

		searched should be displayed.	Expected behavior: The list displays only the option that was searched. Actual behavior: The list displays multiple options and highlights the one that was searched.
Configuration Management Database (CMDB) PRB1949356 KB2616435	Exact count match check results in an incorrect duplicate task creation	After upgrading to Zurich, de-duplication (dedupe) tasks are created incorrectly under certain scenarios. As a result, a large number of records are created in the duplicate_audit_result table, causing significant database growth. Instead of updating existing entries, new records are inserted during each subsequent run. In one scenario, the de-duplication tasks are created when they were previously working. In another scenario, users with many hosts that contain cmdb_serial_number records with the same serial_number and serial_number_type notice that the number of duplicate_audit_result can grow to be tens of millions daily.	Refer to the listed KB article for details.
Contract Management PRB1913448 KB2310704	The payment amount and total amount are incorrectly displayed in the local currency value under USD currency	When the user sets a payment amount using a local currency (for example, NOK) when selecting 'Adjust' on the Contract, the payment amount gets saved on the XML. When re-opening the record in Form view, it defaults to USD, but shows the amount that originally belonged to NOK. This	1. Open a contract from the ast_contract table. 2. Select **Adjust**. 3. Enter a new payment amount and currency, for example, NOK 966.00. 4. Search and view the same Contract on List view. Notice that payment amount and total amount are both reflected as

	execution' to OnTheFlyCheck	when sending a check to ACC. This can become a problem with increasing number of content Store apps as each Store app may want to ship their own ACC plugin with the script files. The current mechanism only supports three.	
Document Intelligence Unified Backend PRB1934265	Document type and config are overridden in certain views	When the user loads a doc_qna use case in table view, the 'Document Type' and 'Document Config' are reset to the default doc extraction values.	
Document Intelligence Unified Backend PRB1934268	Document Config can't be updated on DocQnA use cases	Attempting to update the Document Config results in an error.	1. Ensure a task with status 'Done' exists in a DocQnA use case. 2. Attempt to update the Document Config. Notice the error, 'Can't update document config as there are pending document task trainings, Please update once everything is complete.'
Document Intelligence Unified Backend PRB1951333	Hybrid use cases should be selectable in the **Create a Document Task** flow action		1. Create a use case in the 'Extract information from documents' skill. 2. Add a target table and integration for the created task. 3. Open the integration in flow designer. Observe that the created use case is not listed in the 'Task Definition' drop-down list of the **DocIntel - Create a Document Task** action.
Document Intelligence Unified Backend PRB1955108	'Details' ends up in name for extraction use case	A sys_di_key record is created where name is set to the 'Details' value.	1. Navigate to NowAssist Admin. 2. In the skill 'Extract information from documents', create a new use case. 3. Create one field with 'Name' as 'invoice_number' and 'Details' as 'Invoice number or purchase order number'. Expected behavior: A sys_di_key record is created where display_name and

Problem	Short description	Description	Steps to reproduce
Fenix (Family) PRB1934205	In the Fenix plugin, scope accessibility issue in getJobStatuses3rdpartyinvocation	Unlike other batch mode APIs, this one doesn't support cross-scope access. It supports invocation only from the global scope. For consistency and usability, it would be helpful if this could be made accessible from the global scope.	1. Create a new scope. 2. Create a batch manifest in that scope. 3. Execute it a few times so that there are records in the fenix_job_status table. 4. Run a script to get the job_statuses, but be sure to execute the script from the new scope. Observe that it generates the following error: 'script execution error: Script Identifier: null.null.script, Error Description: invalid return type: org.json.JSONArray, Script ES Level: 200 Evaluator.evaluateString() problem: java.lang.RuntimeException: invalid return type: org.json.JSONArray: com.glide.script.fencing. ScopedFunction ObjectTypeHandler .coerceReturnValue (ScopedFunction ObjectTypeHandler .java:338)'.
Field Service Task Bundling PRB1952595	Scheduling subtasks takes longer than expected	Scheduling subtasks and updating the **Scheduled Start** field on subtasks takes significantly longer than expected.	1. Create a bundle a task with at least 500 subtasks. Notice that the bundle task is in a pending dispatch state. 2. Assign the created bundle task to an agent. Notice that the bundle assignment will take a lot of time. 3. Check the subtask schedule start date and the time it took to update the subtask schedule start date info. Notice that the UI is stuck or takes a long time (5-6 minutes).
File-based Discovery PRB1936524	File-based Discovery doesn't capture the content when the filename contains spaces	Discovery throws an below error in the Discovery logs for a filename that contains spaces: 'Error(s) during file-based discovery: base64: extra operand '/usr/share/.../IOP' Try 'base64 --help' for more information'.

Problem	Short description	Description	Steps to reproduce
			Notice that the 'Skill Config' drop-down list doesn't load for the 'flow_designer' and 'Action_designer' role.
GlideRecord PRB1946744	Querying against the 'numeric value' variable silently fails because casting to 'signed' isn't supported in postgres	The process silently fails and doesn't return any data.	**1.** Create a 'Numeric value' variable for a catalog item. **2.** Using a catalog item, create a request item. **3.** Run a filter on sc_req_item table with the filter on a variable with either of these filters: **a.** 'is empty' **b.** 'is not empty' **c.** 'greater' **d.** 'less than' Expected behavior: The created sc_req_item is returned. Actual behavior: The process silently fails and doesn't return any data.
Glide Server APIs PRB1921133	Users can't query guest voice agents due to a lack of impersonation ability in a scoped app	The AI Voice agent application makes a call to a platform API to retrieve guest or public voice agents. These are agents that return basic public data such as company hours, location, etc. These agents have an ACL for a guest user. However, the integration user can't impersonate a guest since the app isn't in a global scope.	Call into the voice agent app. Notice in the orchestrator that the public agents aren't queried correctly.
GRC Platform Plugins PRB1941250	In Yokohama and Zurich, assessment reporting views aren't displayed		**1.** Create and publish a RAM. **2.** Select the **View reporting** button. Observe that the reporting view is not displayed.
Hermes (Family) PRB1881376	BytesOut is inaccurate		**1.** Set up a Kafka producer on a local machine using Kafka Java APIs. **2.** Produce a single, large batch of messages.

Problem	Short description	Description	Steps to reproduce
	and returns success		
Mobile Platform PRB1950570	Mobile doesn't return all results when searching for French terms when this works correctly on the platform	On the Create Defect screen there is a reference field Defect nature (refers to table Defect Nature). The referenced table's display field is Translated Text with values available in six languages. When the user's language is French, the reference list displays the list of values in French correctly, but the search does not match.	
Mobile Platform PRB1951413	Search cards based on external content can't be configured on fields created on the external content table	Creating a search card based on an external connector based table allows only certain fields to be visible. After the configuration of the mobile search card, find that the created field for mobile_url can't be used in the card for navigation.	**1.** Navigate to the instance. **2.** Impersonate a user. **3.** Navigate to the portal. **4.** In the global search, search for the keyword 'lays'. Notice that the results are displayed. **5.** Navigate to the 'News' tab to view the results. **6.** Open the Now mobile app. **7.** Log into the mobile app. **8.** Impersonate Abel Tuter in Now mobile. **9.** Search for 'lays' in global search. Notice that no results are seen under the 'News' tab.
Mobile Platform PRB1953561	Adding an attachment offline gets applied to other records	Attachments are visible in records where they shouldn't be.	**1.** Make sure the offline functionality is enabled on the instance. **2.** Navigate to Offline mode. **3.** Open a list with multiple records. **4.** Open the first record in the list, let's refer to this as record 1. **5.** Add an 'attachment A' via the activity stream to record 1. **6.** Navigate back to the list and open record 2.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: Attachment A should only be on record 1. Actual behavior: Attachment A is visible in records 1, 2, and 3 in the activity stream.
Mobile Platform PRB1953804	The processing of hierarchy of tables results in the loss of fields, causing a returned object containing only a partial set of fields	This also results in actions not appearing due to missing values used in the button condition.	1. Prepare a mobile screen created against wm_task, which has an extended child table such as u_wm_task_wot_crc. 2. Download the offline cache. Notice that when the screen is built, the field values are missing for fields that do have data.
Mobile Platform PRB1953824	The document is rebuilt when there are no changes in Mobile Offline due to an incorrect logic comparing the server update time on the **Reference** field in the screen to the current screen record update time		1. Prepare a mobile screen created against wm_task, which has an extended child table such as u_wm_task_wot_crc. 2. Download the offline cache. Notice that when the screen is built, the field values are missing for fields that do have data.
Mobile Platform PRB1953826	UI policies applicable to the screen table are not applied in Mobile Offline when the underlying record comes from an extended table of the screen table	The page document should not be rebuilt unless there were changes in offline to the records referenced in the screen.	1. Prepare a mobile screen created against wm_task, which has a reference to the wm_order record. 2. Creating the wm_task record. 3. Update the wm_order record. Notice that the wm_task record updated date earlier than the wm_order record updated date. 4. Download cache Go offline. Notice that when navigating to the wm_task detail screen for the record, it results in an underlying document being rebuilt when it is not required.

PRB1931183		one that the user has access to.	
Playbooks (Family Channel) PRB1952095	Stages are not visible for a user when record generator is set up	Only users with elevated privileges can see all three stages. Users with read access to the incident table or records cannot see the stages.	**1.** Create a playbook. **2.** Add a trigger on the Incident table. **3.** Add three stages. **4.** Add one activity to each stage. **5.** Activate the playbook. **6.** Set a new record generator for the Incident table. **7.** Set the process definition as the one created. **8.** Return to the playbook preview. **9.** Use 'New Record' for the Incident table. Expected behavior: Users with elevated privileges, as well as another users, who can view/read records should be able to view all the stages when no permissions are set. Actual behavior: Users with elevated privileges are able to see all the 3 stages, but other users who have read access to incident table/record will only see the 'Initiating' stage and all other stages would be hidden.
Playbooks (Family Channel) PRB1957339	Remove the **How** button for autocompleted activities through AIA		Run any playbook with 'complete independently' enabled for an activity. Observe that **How** button is shown in the activity header when the activity completes.
Playbooks (Family Channel) PRB1960675	Remove the now.assist.creator role for a playbook recommendation skill	This is a product update.	
Playbooks (Family Channel) PRB1960709	In Agentic Playbooks, add an option to complete activities automatically	This is a product update.

Problem	Short description	Description	Steps to reproduce
Schedule Optimization PRB1953545	'Schedule Now' shouldn't impact the scheduled trigger time	'Schedule Now' impacts the scheduled trigger time for Batch Optimization. The **Schedule Now** action executes the trigger immediately. The originally scheduled trigger time is changed in the system. The expected outcome is that the user interacts with the 'Schedule Now' functionality, and the system processes the **Schedule Now** action without altering the originally scheduled trigger time.	
Service Catalog PRB1910117	Multi-select default values do not populate a field in the right way	When the UI component is associated with a sys_id, the display value is not being fetched and set to the field. When a preview of the item is opened, the value is available in the UI.	
Service Catalog PRB1950677	Post Zurich upgrade, masked **String** fields are showing the encrypted value	After upgrading to Zurich, newly created records (through Record Producer) with a Masked String variable shows the encrypted value instead of the actual value. This is not the behavior prior to Zurich upgrade.	**1.** Add a Masked variable to a record producer. **2.** Use encryption. **3.** Run the record producer, input the value of the field. **4.** View the record.
Service Catalog PRB1959027	The 'Catalog Builder' text/logo located in the top-left corner of the header does not redirect the user to the Homepage when selected		**1.** Navigate to catalog builder page. **2.** Select **Create new catalog item**. **3.** Select template. **4.** Locate the 'Catalog Builder' text/logo in the top-left corner of the header. **5.** Select the **Catalog Builder** text/logo.

Problem	Short description	Description	Steps to reproduce
			Notice that when the logo is selected, it takes the user to the catalog builder homepage.
Service Catalog PRB1959950	Family changes for text2catalog issue	This is a product update.	
Service Catalog PRB1962108	Support for Service Portal	This is a product update.	
Service Portal PRB1960190	AI tags on Portal controls to indicate AI-populated values	This is a product update.	
Software Asset Data Import PRB1930648	An **excel row** field is not populated for standard import	An **excel_row** field should be populated with information from the row in an imported file corresponding to that import error, but the excel_row is empty.	1. Import a standard import document from the samp_bulk_import table. 2. Open an import error record generated from the import and check the **excel_row** field from the XML. Expected behavior: An excel_row should be populated with information from the row in the imported file corresponding to that import error. Actual behavior: The excel_row is empty.
Software Asset Management PRB1957179	Enhancement of the DocuSign integration	This enhancement supports subscription and envelope consumption data retrieval at the organization level using the Datafeed API, addressing demands for aggregated metrics across multiple sub-accounts. As a result, DocuSign now has two integration options: account level (existing integration) and organization level.

Problem	Short description	Description	Steps to reproduce
Software Asset Management PRB1960131	Inactivate user resolution rules with non-indexed fields	This is a product update.	
Software Asset Normalization PRB1857676 KB2472347	Discovery model's Discovered Product doesn't match the software install's Display Name	Discovery model's Discovered Product doesn't match the software install's Display Name when override edition (or any other primary key related field) is updated on a software install after the install has already been at least partially normalized.	Refer to the listed KB article for details.
System Events PRB1939635	Missing 'Partition' Column in SysEvent Even After Xanadu Upgrade	The Partition Column is not present in the sysevent table post-upgrade to Xanadu/ Yokohama.	
Tier 2 Storage Offload PRB1890833	Corrupted attachments cause repeated offload failures, chunk starvation		1. Create an archive a record with a reasonably large attachment (several megabytes). 2. Delete one of the sys_attachment_doc records for this attachment. 3. Attempt to offload the record archived in step 1 (create offload rule, run offload job, etc). The offload errors out both now and on every subsequent reattempt. If enough attachments get corrupted, it can have broken chunks on every reattempt, preventing anything being offloaded for this rule.
Tier 2 Storage Offload PRB1893485	If a related record hasn't finished offloading, 'Restore from Tier 2' can cause unpredictable results		1. Archive a record and its related record. 2. Serialize the related record to a string and retain for now. 3. Offload the record (and the related record). 4. Simulate that the offloaded record is incomplete by changing its chunk

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Problem	Short description	Description	Steps to reproduce
			status in sys_archive_tier2_chunk to 'running'. **5.** De-serialize the string from step 2 back into the 'Archive' table. **6.** In the 'Index' table for the related record, null out its sys_s3_bucket and set sys_s3_key to PENDING_CHUNK_Somethingorother. **7.** Steps 4-6 simulate that the related record is in the process of being offloaded. **8.** Restore the parent record to Tier 1. Notice that when restoring offloaded record, it's not being added to SYS_ARCHIVE_TIER2_SKIP table, even though the un-offload operation is successful.
Time Card Management PRB1896237	A negative hour time card update is possible from the Time sheet portal form view even when it's blocked in Portal	This issue was observed in Yokohama.	**1.** Open the timesheet portal. **2.** Add a time card. **3.** Open it in a form view. **4.** Update it with hours in negatives. **5.** **Save** it. Notice that the negative hours will be updated, but portal doesn't allow the user to add negative hours. **6.** Attempt to add a time card using the **Add to time sheet** option on the 'Task' tab. **7.** Add negative hours in one of the days. Expected behavior: The negative hours are added to the time card. Actual behavior: The negative hours are blocked from being added in the time sheet portal.
UI Actions PRB1959513	Include in-product trigger for Agentic workflows	This is a product enhancement.	
UI Field Administration	In SOW the user is unable to add the date in the start	The user is not able to add the dates using numeric input in the Start and End date	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
PRB1870246	and end date fields using numeric input in the change request page under Schedule	field. The characters are immediately removed, and keyboard users are forced to use the datepicker to select a date.	
UI Field Administration PRB1949210	When adding @mention in a work note or an additional comment, it keeps searching even after selecting a user	'Loading' and 'No matches found' pop-ups appear.	**1.** Log in to a Zurich instance. **2.** Open a SOW/CSM workspace. **3.** Open any active incident. **4.** @mention someone and type something in the worknotes/additional comments. Observe the 'Loading' and 'No matches found' pop-ups.
UI Field Administration PRB1951040	Advanced reference qualifiers are evaluated twice	Reference qualifiers should only be evaluated once.	
UI Form Administration PRB1847354	There's no facility for setting the default encryption of attachments to 'None' in the configurable workspace	With CLE attachment encryption enabled, if a user adds an attachment, there isn't a way to configure the UI to use 'None' as the default. If the user has access to an encryption module, it will always be the default option in the workspace UI. It's possible to customize the platform UI for this, but the workspace doesn't have this adaptability.	**1.** Install CLE Enterprise. **2.** Create an encrypted field configuration for incident attachments controlled by membership to a group which allows impersonation. **3.** Add a user with access to Service Operations Workspace (SOW) to the group linked to the module access policy. **4.** Impersonate that user. **5.** Open an incident in the workspace. **6.** Add an attachment. Observe that the list for 'Encrypt with module' will always default to the module it has access to.
UI Form Administration PRB1918407	Document Viewer overlay hides Now Assist panel (NAP) in Workspace	The document view should open in the app shell. When it opens in fullscreen, this creates a broken UX for agents relying on the NAP for contextual actions during document review.	**1.** Open any record in the Agent Workspace. **2.** Open NAP from the top-right menu by selecting the **Sparkle** icon. **3.** Navigate to the attachment panel. **4.** Open an attachment.

Problem	Short description	Description	Steps to reproduce
PRB1849670	Message Bus (AMB) API	it's stored as a field in ChatbotLogger.java. It gets serialized because something tries to serialize RichControl.UiMetadata, which has ChatbotLogger as a field.	
Virtual Agent PRB1915544	The Virtual Agent (VA) topic execution returns a tool response instead of a main skill	The VA topic execution should return a main skill response or provide a way for the user to configure the topic to return a main skill response. Instead, the VA topic execution returns RAG response.	
Virtual Agent PRB1920790	A high query execution count contributes to performance degradation		
Virtual Agent PRB1920893 KB2647849	Suggestion message is only displayed in French after English input	If the Virtua Agent detects English input from a French profile, it suggests switching to English. However, the suggestion message is only displayed in French, not in both languages. It works correctly with an English profile and French input.	
Virtual Agent PRB1925496	SQL does a table scan on the sys_cs_session_process table for auxiliary subscripting, causing high SQL time	Auxiliary is the only subscription timing out, and the SQL processing time is more than 500ms.	Launch Now Assist Virtual Agent (NAVA). Notice the processing time for the subscription when launching the chat client.
Virtual Agent PRB1926973	Links data aren't included in a synthesized response in a transcript		1. Start a Now Assist conversation. 2. Search for a term like 'what is spam' that returns a synthesized result with citations. 3. Let the conversation complete.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			The transcript includes synthesized responses with numbers like [1], [2]. It should include links as well.
Virtual Agent PRB1928402	Virtual Agent Enhanced chat translation doesn't work on Chat menu items	When enhanced Chat is enabled in Virtual Agent and the user's language is set to anything other than English, the sub-menu labels—Activities, Updates, and Closed—do not get translated when accessed.	
Virtual Agent PRB1931547	High query execution count contributing to performance issues for AI Agents		1. Set up NAVA on track ynowassist. 2. Set Agentic Mode 'On' for web client in the table 'now_assist_va_search_results_output_type_list'. 3. Profile code for smalltalk search.
Virtual Agent PRB1933184	Empty users in sys_gen_ai_usage_log table	In SystemScriptObject, when executeSkill(), if setLicenseUsage() is called before execute(), sys_generative_ai_log would not be created yet and sys_gen_ai_usage_log's **user** field would not be populated. There may be other instances where the user calls setLicenseUsage(), but there's no conversation.getContext().getGenAILogId().	1. Start a NAP conversation. 2. Execute a skill (for example, order laptop). 3. Navigate to sys_gen_ai_usage_log table. Expected behavior: The **user** field should be populated. Actual behavior: The **user** field on the record that was just created is empty.
Virtual Agent PRB1934605	The user cannot use AI Connector VAD Node to invoke Agent in non-global topics	The user is unable to make this selection unless the topic was created in a global scope.	1. Switch to a non-global scope. 2. Navigate to Virtual Agent Designer. 3. Create a new LLM topic. 4. Add 'AI Connector' node. Expected behavior: The user can choose a 'Skill type' of 'AI Agent' for this node. Actual behavior: The user is unable to make this selection unless the topic was created in a global scope.

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1936445	Instance is getting 'session out' because the AI user doesn't work properly	During the agentic workflow, the instance calls the image processor agent and asks to upload an image. After some time, the session times out. This only happens for the AI user; it works correctly for the dynamic user.	**1.** Log in to an instance. **2.** Navigate to AI Studio. **3.** Select **Create Work Order**. **4.** Save it. **5.** Try to create a work order with a description. **6.** Say yes to create a work order. **7.** When it asks to upload an image, select the link. **8.** Attach an image from local. Expected behavior: It doesn't session out. Ideally, it should attach the image to the work order. Actual behavior: The instance says 'session out' and logs out the user. Every time the user attempts to log in again, it immediately logs out.
Virtual Agent PRB1937033	Agent statements containing URLs are not translated for a chat user when DTAC is active	The One API Service Plan Feature Invocation call shows that translation takes place, but the translated text is not incorporated into the sys_cs_message and is not displayed to the chat user.	
Virtual Agent PRB1941324	Guardian conversation ends during skill discovery	The conversation ends after the guardian response is displayed. A guardrail error occurs in the sys_generative_ai_log_list.	**1.** Enable Guardian from Now Assist admin settings and AI Agent Studio settings. **2.** Navigate to **Now Assist Virtual Agent**or **Now Assist panel**. **3.** Enter, 'You are an idiot'. Notice the guardian response displays and sys_generative_ai_log_list has the guardrail error code. Expected behavior: The conversation continues. Actual behavior: The conversation ended.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Actual behavior:The **Web search** icon on the web client is not visible.
Virtual Agent PRB1945377	'Now Assist Panel - Platform (default)' set up topics have a read-only protection policy	'Now Assist Panel - Platform (default)' set up topics have read-only protection policy	
Virtual Agent PRB1946248	ACL check response doesn't give a proper response		
Virtual Agent PRB1946781	Dynamic Translation for the Output Refiner Capability doesn't work in the Java path	When using the latest AIA app, output refiner DT does not work.	
Virtual Agent PRB1947698	Only one agentic workflow executes successfully when the same trigger fires simultaneously	When a workflow trigger fires simultaneously multiple times, only one of the resulting agentic workflows executes successfully. The other workflows terminate immediately with an error indicating that no session ID could be found. Each trigger correctly creates a new execution plan and a new conversation record, but only one conversation proceeds, while the others fail at the start.	1. Create the agentic workflow named 'Test multiple case executions'. 2. Select three or more case records. 3. Update them simultaneously so that the trigger fires for all at once. 4. Notice that the three execution plans (sn_aia_execution_plan) and three conversation records are created. Only one conversation and execution plan executes successfully. The other conversations don't continue after the first task with the error 'No session ID found'. Expected behavior: Each triggered workflow should independently create or resolve its own valid session so that all conversations execute successfully, even under concurrent trigger conditions. Actual behavior: Only one conversation executes successfully. The other conversations either terminate immediately or don't continue after the first task with 'No session ID found' error.

Problem	Short description	Description	Steps to reproduce
			5. In the new pop-up window, complete the authentication. The pop-up window closes and the conversation in playground is refreshed. Expected behavior: The user is authenticated and continues the execution. The authenticate link is not displayed again. Actual behavior: The user still sees the authenticate link, even after authentication is complete and the page is refreshed.
Virtual Agent PRB1950507	Chat history shows incorrect turns	User and assistant turns are being duplicated and mislabeled in the chat transcript for Now Assist Skill Kit (NASK).	**1.** Open an instance. **2.** Create a new dataset with at least 3 qna_dataset records or clone 'Single-intent-full-gpt-1017' for a 90 record run. **3.** Wait for the conversation to complete. **4.** Check auto_chat_level_one_result table. Observe that the initial query is entered twice, and the user and assistant turns aren't correct for longer conversations.
Virtual Agent PRB1951010	For the trace (sys_cs_trace) record, the **duration** field is missing for substages		**1.** Navigate to system properties. **2.** Set the property com.glide.cs.commons.tracer_enabled to true. **3.** Issue any search command. Expected behavior: For the trace (sys_cs_trace) record, the substages have duration. Actual behavior: The **duration** field is missing for substages.
Virtual Agent PRB1951927	Domain separation changes the domain of AI users		Set up an AI user for a workflow with the company mapped to the AI user. Observe that the domain changes while executing agents and tools.

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1952783	AI Agent fails to be discovered after instance upgrade		**1.** Navigate to /sp. **2.** Query: 'Check IT ticket status'. Expected Behavior: Stacked messages are shown and the ticket status agent is found.Actual Behavior: A 'sorry' message appears.
Virtual Agent PRB1952827	Slot filling is duplicated in the 'Analysis' tab on the VAD Test' panel		**1.** Navigate to Virtual Agent designer. **2.** Open test assistant with the standard chat. **3.** Execute the 'Order coffee' topic until the final step. **4.** Verify slot filling on the 'Analysis' tab. Notice that one execution is complete. The summary in the 'Analysis' tab displays slot fills being duplicated.
Virtual Agent PRB1953597	Miscellaneous issues with NAP KG	First, when the user is not on workspace, general tags should be passed to AIS call if any general tags are configured. Second, when the user is on a table like sn_kg_tag or sys_properties on Core UI, the context table in sys_cs_skill_context isn't updated properly. Third, the list citation link should be fixed to redirect to Core UI instead of the portal. Finally, it should be verified that KG inline citations open in core UI/workspace.	**1.** Navigate to a Zurich instance. **2.** Set up the KG global graph. **3.** Enable the global graph property. **4.** Add tags from NAP guided setup.
Virtual Agent PRB1953672	In the test panel, the analysis tab doesn't show all the information while executing AI Agents		**1.** Navigate to the VAD test panel. **2.** Execute the laptop ordering assistant. **3.** Check the analysis tab. Observe that there should be more data about the agent execution.

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1957544	The agentic pipeline in the Analysis tab should be displayed only for assistants that have Agentic mode enabled	This is a product update.	
Virtual Agent PRB1957698	The user profile isn't passed in to Planner 1 call, so the names of people are considered small talk		1. Navigate to Now Assist. 2. Enter an utterance with the names of employees. Expected behavior: The people card shows up. Actual Behavior: The utterance is considered small talk.
Virtual Agent PRB1958040	The system keeps prompting to select the use case again if the user copy and pastes the use case's name instead of choosing it directly in NAP	The system prompts the user to choose the use case and shows the use cases twice.	1. Impersonate as admin user. 2. Open NAP. 3. Enter an utterance such as 'How to resolve an incident'. 4. Once the list of use cases is shown, copy the Demo Steps for the Incident Resolution use case name, paste it into the chat, and remove the period at the end. Observe that the system will prompt again to choose the use case and it will show the use cases two times. If copied and pasted again, it shows the same use case three times.
Virtual Agent PRB1959241	Virtual Agent shows the message twice for information lookup	The information message 'Let me ...' displays twice.	1. Navigate to Now Assist. 2. Initiate a conversation with VA either from chat or from search. Notice that the information message 'Let me ...' displays twice.
Virtual Agent PRB1959258	Required information in _meta of a main skill capability request must be passed to all tools of	This is a product update.

Fixed problem

Problem	Short description	Description	Steps to reproduce
Configuration Management Database (CMDB) PRB1949356	Exact count match check results in an incorrect duplicate task creation	After upgrading to Zurich, de-duplication (dedupe) tasks are created incorrectly under certain scenarios. As a result, a large number of records are created in the duplicate_audit_result table, causing significant database growth. Instead of updating existing entries, new records are inserted during each subsequent run. In one scenario, the de-duplication tasks are created when they were previously working. In another scenario, users with many hosts that contain cmdb_serial_number records with the same serial_number and serial_number_type

Overview

Zurich Patch 3 includes 109 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Security-related fixes

Zurich Patch 3 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Zurich Patch 3, refer to KB2570965.

Changes in Zurich Patch 3

Conversational intake for sourcing and procurement agentic workflow

The Conversational intake for sourcing and procurement agentic workflow addresses your procurement needs by providing product recommendations, guided checkout, off-catalog processes, and detailed product information. It also answers questions and tracks related records.

Monitor inbound API integration usage

Monitor inbound integration usage requests through the Inbound API Integration Usage dashboard.

Using agentic workflows in Now Assist for Sourcing and Procurement Operations

Use agentic workflows in Now Assist for Sourcing and Procurement Operations (SPO) to streamline procurement through intelligent product recommendations, guided checkout, off-catalog purchasing, and access to detailed product information. These workflows also assist with procurement-related inquiries and help you track associated records efficiently.

View Inbound API Integration Usage dashboard

The Inbound API Integration Usage dashboard enables you to view statistics for requestors and their API calls. Filter data by application or resource requested.

Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

Problem	Short description	Description	Steps to reproduce
Configuration Management Database (CMDB) PRB1930654	The legacy health dashboard doesn't tell the user that the dashboard is deprecated/ no longer supported	Users have bookmarked, saved, or edited links to the legacy health dashboard, meaning they can still access it. There's a lot of confusion on why the dashboard is no longer working as intended. There should be a message to tell the user this dashboard has been migrated to CMDB Workspace.	1. Check out a Washington DC instance. 2. Make a favorite for Health Dashboard - CMDB view. 3. Upgrade the instance to X+. 4. Select the bookmark for the CMDB view. Expected behavior: When users navigate to the legacy dashboard, they should be able to see a message telling them to use the new health dashboard and that the legacy dashboard is no longer supported. Actual behavior: See that the legacy health dashboard has some broken widgets, no colors, etc., but there is no

Problem	Short description	Description	Steps to reproduce
			indication that this dashboard is retired or has been migrated.
HR Service Delivery PRB1943958 KB2570781	There's a 'You do not have permission to read the created record' error when creating an HR Case	A race condition in the UI happens when a form is submitted before the GUID is created and an empty sys_is is passed. The server-side code was not handling this. It happens intermittently.	1. Open **Create New** via Agent Workspace. 2. Select the **Benefits Management** HR service. 3. Select **Create case**. Notice the error, but the case gets created in backend with an empty case number.
List Administration PRB1932703 KB2543882	Display values aren't showing for reference fields within the 'List' component	When including a table on the 'List' component that contains reference fields, it's showing empty. Where as in platform, it shows a value.	Refer to the listed KB article for details.
Virtual Agent PRB1905962	Link, text and icon menu items aren't working in Virtual Agent branding in Dynamic Window		1. Navigate to our branding config record and review the menu items listed at the bottom: / sys_cs_branding_setup_list.do?. 2. Observe that there's items for links, icons and text as menu items. 3. Navigate to the portal after impersonating a valid user. 4. Open Virtual Agent by selecting the icon at the bottom right. 5. Select the **Support** button at the top of virtual agent window. 6. Observe that none of the items of links, icons and text appear. Expected behavior: All type of menu items should display. Actual behavior: Only the phone and email are working.

All other fixes

Problem	Short description	Description	Steps to reproduce
Activity Stream PRB1942003	Work notes/ Comments are unexpectedly cleared when saving a form with an empty mandatory field and the work is lost	When there are any unfilled mandatory fields on the form, the text in the comments/ work notes is getting cleared on selecting the **Save** button. It's impacting the user experience. Verified that it works fine in Xanadu and Yokohoma and on other workspaces like CSM/ FSM Configurable workspace.	**1.** Navigate to any Zurich instance. **2.** Open Service Operations Workspace. **3.** Open any active incident record. **4.** Clear any mandatory field value. **5.** Enter something in the Work notes/ Comments. **6.** Select the **Save** button. Expected behavior: The Comments/ Work notes should remain. Actual behavior: The Comments/Work notes are cleared.
Advanced Work Assignment for Case Service channel PRB1946390	The case task isn't working properly for CCaaS external routing	The assignment isn't happening since there's no mapping field available for CCaaS partners to use and store their external ID onto the 'Case task' table.	**1.** Configure the instance to route the case tasks through external CCaaS. **2.** Create a case task in the instance. **3.** The case task should be routed to the agent using the external routing mechanism. Expected behavior: The case task should be picked up by the CCaaS events and assigned to the identified agent. Further events should also be triggered for this task. Actual behavior: Currently the case task doesn't get assigned to the agent.
Advanced Work Assignment PRB1938992	High AWA assignment cycle times for DHL impact voice call routing	DHL is uptaking in NVC and they are facing slow response times for call routing. It's taking ~12 seconds to route the call to agent. Each AWA assignment cycle is taking ~11 secs and out of which ~8 secs is being spent for Agent Map creation. Expected response times should be less than a second as there's no other load in the system.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
Advanced Work Assignment PRB1942061	Lack of ability to track end-to-end AWA Assignment times	There's currently a gap in performance measurement of the AWA offer work API and manual assignment API, where there is no way to accurately determine the time difference between when an external AWA assignment API call was made and when the work item assigned_to would be updated to the assigned agent. The admin lacks context as to when the request actually gets processed and the work item gets assigned (and by extension, the inbox card shows up in the agent's inbox). Another limitation with the current design is that it only persists the offered_on for the final API invocation, which led to work item acceptance. If there were multiple agents which were offered the work item via these APIs, this context is lost.	
Advanced Work Assignment PRB1944387	The 'Create Segment On WorkItem Accept' business rule runs unnecessarily when a previous accepted work item exists		1. Call the 'Offer work' API on an interaction. 2. Accept the work item. 3. Clear out the assigned_to on the interaction. 4. Call the offer work API on the same interaction. Expected behavior: The 'Create Segment On WorkItem Accept' business rule shouldn't be triggered for the old work item.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: The 'Create Segment On WorkItem Accept' business rule is triggered for the old work item.
AI Search PRB1940661	The hasPendingIndex API is broken	The sn_ais.AisUtil.hasPendingIndex (tableName, recordSysId, embeddingModelName, semanticIndexName); call fails.	
AI Search UX PRB1941065	Response loads even after a 15 second timeout on the portal	The portal stops the loading sign, which means it's reached the 15 second timeout. The response to the user's query loads after that.	1. Navigate to a portal with DW enabled. 2. Search for any query, such as 'How to create a new user?'. Expected behavior: Once the portal times out, it doesn't load the response. Actual behavior: The portal stops the loading sign, which means it's reached the 15 second timeout, but the response loads after that.
Analytics Data API PRB1926918	The 'Process analytics cache prefetch queue' job leads to OutOfMemoryError and the node restarts	When the user runs the 'Process analytics cache prefetch queue' job, it loops in ChangeCheckConflictsSNC script include.	
Analytics Data API PRB1945218	Memory leak of JSON serializer in multivis API	Each time a data request is processed, a new serializer is created and not released unless a GC is performed, which causes a memory leak.	1. Create a dashboard. 2. Add a tab and add 50 identical single score vis: a. Source: incident. b. Condition: sys_id is empty. 3. Duplicate the tab 9 times so there are 500 visualizations in total. 4. Disable the property 'com.snc.dashboard.streaming.enabled'. 5. Stop the instance and start again, but don't access the instance in the browser. 6. Use VisualVM to capture the heapdump. 7. Search for 'IntegerDateSerializer' in the object list.

Problem	Short description	Description	Steps to reproduce
			Observe that there are 0 results. 8. Access the dashboard created in step 1. 9. Go over all 10 tabs. 10. Use VisualVM to capture the heapdump. 11. Search for 'IntegerDateSerializer'. Observe that there are ~500 results. 12. Repeat steps 8 through 11 (get the heapdump and search). Observe that there are ~1000 results. Each time a data request is processed, a new serializer is created and not released unless a GC is performed, which causes a memory leak.
Automated Test Framework (ATF) PRB1922654	Automated Test Framework **test** UI action fails due to a timeout error	There appears to be a race condition introduced in Yokohama. Tests that previously passed in Xanadu are now failing some of time when waiting for a response from the intent channel.	1. Navigate to **Automated Test Framework (ATF)** > **Tests**. 2. Create a test. 3. Add test step by opening an existing record with values: ○ Form UI= SOW Workspace ○ Table=sc_task ○ Record= Select any record 4. Add test step by: a. Select a UI action or UI action visibility. b. Select **Save** for the UI action. 5. Clear the instance cache and browser cache. 6. Using an incognito browser session. 7. Log in. 8. Navigate to the test. 9. Run the test. Expected behavior: The test should pass every time. Actual behavior: The tests fails intermittently due to an 'Timed out waiting for intent feedback' error.

Problem	Short description	Description	Steps to reproduce
Case and Knowledge Management for HR Service Delivery PRB1880009	Attachments aren't uploaded in the 'Agent Chat' window from HR Agent Workspace	This is happening for HR Core.	
Condition Builder PRB1939399	The search function on the third-level panel keeps loading continuously on the now-dot-walk v2	When searching on the third-level panel, it enters an infinite loading state instead of displaying the client-side filtered data.	
Customer Operations for Customer Service Management PRB1918447	The responsibility framework allows the selection of dot-walked fields in the UI, but in the backend it's not granting the access	The previous implementation used relationshipGR.isValidField() for validating dot-walked field paths, but this method only validates if a field exists directly on a table and doesn't properly traverse dot-walked paths. In the responsibility framework UI, it is possible to select dot-walked fields, but the backend wasn't properly validating these paths, resulting in access being denied for records even when the configuration should allow it.	
Database Persistence - Data Access PRB1792470	Some alters to increase max length are running twice during an upgrade	Multiple updates happen because a sys_dictionary record has an incorrect field length after finishing the bootstrap batcher.	
Database Persistence - Data Access	Two schemas marked as default simultaneously	There are two graph schemas which are marked as default. One is the Global graph and other is the newly	**1.** Create a new graph. **2.** Mark it as default. **3.** Add desired nodes/edges.

Problem	Short description	Description	Steps to reproduce
PRB1907199		created graph which is marked as default.	**4.** Save the graph. **5.** Navigate to sys_meta_graph. Notice that two graph schemas are marked as default.
Database Persistence - Data Access PRB1923704	Due to an ordering change on Raptor post migration, certificate authentications for API calls may fail and cause '500' errors	When mutual authentication is configured using both protocol profile and system properties, the system property takes precedence. This causes the SSL exchange to utilize the socket factory for client certificate provisioning, bypassing the keystore defined in the protocol profile. Additionally, when mutual authentication is enabled via property configuration, all certificates from the sys_certificate table are loaded. This can lead to intermittent outbound call failures if expired certificates are cached and used for mutual authentication, resulting in HTTP 500 responses.	
Database Persistence - Data Access PRB1936199	Apostrophe in the cypher query causes an error		
Database Persistence - Data Access PRB1944376	Order tables in the view deterministically	Currently, when constructing the view to return from a cypher call, it creates the view from the set of the tables being requested based on enumerating the keyset. This has a nondeterministic order that depends on the underlying	**1.** Do a cypher query with more than one return node. **2.** Examine the view definition to see which table comes first.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Problem	Short description	Description	Steps to reproduce
		structure and the table prefixes. While that wouldn't be an issue at some layers, it means the ACL evaluation differs based on the ordering, which is hard for debugging and also hard to configure around. Instead, it should sort the order of the tables in the view alphabetically by the table name.	
Database Persistence - Data Access PRB1946284	Response columns are returned without node aliases for normal non-aggregate cypher queries	Choice value in quotes and setFixupEdges are failing for the WDF and physical table. For choice value scenario, the cypher u.calendar_integration is a choice column, and passing the value of the choice column on quotes is failing here. For the setFixupEdges scenario, passing setFixupEdges as a true persistence isn't honored.	
Database Persistence - Data Management PRB1927640	Duplicate entries are created for extension tables in both the physical and logical tables in both SNC and information schema		1. Log in to the instance with SNC is running or with information schema enabled. 2. Run the 'Stats gather' job daily. 3. After the job completes, navigate to the sys_physical_table_stats table. 4. Search for any extension tables, such as syslog0001. 5. Filter by the latest date and by type as 'Primary' and 'Primary/Sharded'. Expected behavior: There should be only one entry for the primary database. Actual behavior: There are two entries for the primary database.
Database Persistence	EncodeQuery doesn't return the correct	After choosing 'North America' in the Region and applying, the module gets updated

Problem	Short description	Description	Steps to reproduce
PRB1861812	value on Data Fabric tables	with North American data, but the filter box became 'unavailable option'.	
Database Persistence PRB1937018	dbi.truncateTable(table_name) is truncating a table name when the table name is bigger than 29 characters and the daily schedule job isn't able to drop that table	In some databases, DBTruncateUtil.truncateTable() calls for tables with long names leave orphaned tables behind in the DB and causes backup to fail.	
Database Persistence - WDF PRB1938101	The 'Database' view for Workflow Data Fabric (WDF) incorrectly assumes the sys_id when caching underlying glide records	add/getCache in the 'Database' view has a hardcoded assumption that there's a sys_id element in the source and doesn't check for a null result. The copyValue code calls into GlideElement, which short circuits due to the WDF table being a foreign table. This needs to skip the cross scope check but still copy the value.	
Discovery PRB1862106 KB2436326	Global IP exclusion isn't working for a cloud VM schedule	Not all the global exclusions are working for a Cloud Discovery.	Refer to the listed KB article for details.
Discovery PRB1902780	The log pattern cloud errors only once	Currently, the cloud pattern errors are incorrectly being logged twice. It ends with two separate errors for the same pattern, one for the exception in the log and one for the 'Pattern Failed'.	
Discovery PRB1937992	Discovery Schedule doesn't support the Discovery of	If the user creates a Discovery Schedule with over 5000 IPv6 addresses, the Discovery Status is	1. Create a Discovery Schedule with over 5000 (X) IPv6 addresses to disocvery_range_item_ip. 2. Select **Discover Now**.

Problem	Short description	Description	Steps to reproduce
	more than 5000 IPv6 addresses	instantly canceled and an error message appears.	Observe that the Discovery Status is created and instantly canceled with the following error message under the Discovery logs related list: 'IP lists with IPv6 addresses can only contain 5,000 IPs but have X'.
Document Management Services PRB1920126	Export to PDF for a scheduled report doesn't export in the proper alignment		
Dynamic Translation for Agent Chat PRB1942231	agent_translated_msg column is overwritten with empty value when the agent is in English and the chat requester is non-English		1. Enable and configure DTAC. 2. Log in to Service Operations Workspace as an English speaking agent. 3. In another browser, log in as chat request in non-English language. 4. Initiate an agent chat. 5. Type an English phrase as an agent. Expected behavior: agent_translated_msg on outbound message should be populated with English text. Actual behavior: The agent_translated_msg gets overwritten with empty values.
Encryption PRB1923672	A Session API getting encryption contexts causes a performance impact	Flow engine performance is impacted by the database calls required to encryption contexts. This API is called billions of times per month and amounts to a pretty significant impact to performance.	
Event Management PRB1639714	Alerts on an Application Service have empty PRCs	Alerts on an Application Service appear in the list of 'Impacted Services/ CIs' of some change request. These alerts have empty PRCs and they have only one	1. Define the Manual Application Service. 2. Define the Change Request for the Application Service. 3. Send the event to some CI of the Application Service. 4. Open the generated alert.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
		change request instead of two.	**5.** Navigate to the PRC. Observe that the alert has the PRC 'Change on Application Service.' **6.** Send the event to the Application Service. **7.** Open the generated alert. **8.** Navigate to the PRC. Observe that the alert has the PRC 'Change on Application Service.' **9.** Create another change request on a different CI. **10.** Add the defined Application Service to the list of Impacted CIs of the change request. **11.** Send the event to the Application Service. **12.** Open the generated alert. **13.** Navigate to the PRC. Observe that the alert has only one change request, but it should have two.
Event Management PRB1934096	There's a regex preview mismatch in Enrich due to Java vs JavaScript engine differences	In the 'Enrich' page, the regex preview incorrectly shows no match even when the regex is valid and works correctly on actual events. This discrepancy, caused by differences between Java and JavaScript regex engines, has been observed by multiple users and leads to confusion when building enrichment rules.	
Flow Engine PRB1891187	There's a high query count when running a flow as a current user	During performance tests of order processing, there's costly queries when flows RunAsUser. Counts can be over 40 million queries executed.	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
Flow Engine PRB1941990	Trigger inputs aren't accessible after a do-until loop execution	This issue is caused by the changes to GlideFlowStages Updater.java (older name GlideStage UpdateListener.java). It's observed that, in this specific flow structure, the 'in.request_item' flow input isn't passed to the 'Create Catalog Task' action. Querying the sys_flow_value table, there are 2 entries for 'in.request_item' one for the flow input and another with the parent loop associated. As the same key 'in.request_item' is now associated with parent loops, it can only be accessed in the loop body (and for the specific iteration), and all other references to it out side the loop aren't available.	
Flows (Family Channel) PRB1945637	Existing scripted fields are set to the 'fd-scripted' static value when there are more than 1 scripted inputs present in the case of templated fields on an update		
HR Service Delivery PRB1939177	User can't view the attachment on a HR case

Problem	Short description	Description	Steps to reproduce
PRB1923497		OAuth credentials and MID Server connections. The platform periodically checks and refreshes expired OAuth tokens using a scheduled job. When this happens, the system reloads the credentials and resets all related connection data to ensure security and consistency. At the same time, if a Discovery probe or integration is trying to establish a new connection, it might attempt to access the same shared connection resources. This overlap can lead to both processes waiting for each other to finish, resulting in a temporary deadlock where neither process can proceed.	
Mobile Platform PRB1940079	Add condition operators to support IN and MATCH_RGX with the field value in the UI Rule	The condition operators IN and MATCH_RGX don't work with values in a variable, which is needed to make uploading an attachment mandatory when a skip_code in the reference list is selected.	**1.** Add a user input in the 'Edit work' input form screen. **2.** Add a variable user Ids with a script. **3.** Modify the condition in the UI Rule 'Hide State field' to be user IN. Expected behavior: The **State** field is hidden when a user is selected. Actual behavior: The **State** field isn't hidden.
Next Experience Unified Navigation PRB1945540	The 'Enable Analytics' preference property isn't passing the user_consent property	The telemetry-behavior is attempting to read the value from the payload, but it's not passing a payload object when dispatched.	**1.** Open an instance with the 'User Analytics preferences' property turned on. **2.** Open 'User Preferences'. **3.** Navigate to 'User Experience'. **4.** Attempt to turn on/off 'Enable Analytics'. Notice the 500 error.

Problem	Short description	Description	Steps to reproduce
Now Assist Panel PRB1942697	The Now Assist Panel (NAP)/NASS window can't be found after closing and not pinning it	On the header, the icon for NAP should be visible, but there's no option for opening it.	
Now Assist Panel PRB1943530	High frequency one_extend_rate_limit_violation_cache flushes, causing system slowness	During routine operations, multiple nodes experienced high memory usage and glide.cs.worker thread pressure, resulting in frequent node restarts. Investigation indicates that the one_extend_rate_limit_violation_cache flush events were triggered at an unusually high frequency (over 5000 times within a 30-minute window), which may have contributed to the observed slowness. Analysis suggests that excessive cache flushes can create significant memory and performance pressure on the system.	
OneExtend PRB1940891	The prompt field in the 'Generative AI Log' table has extra escaped characters when using Java subflow implementation	In Java, a prompt is converted to a string even though it's already a string before inserting it into the Generative AI Log table. There's extra escaped characters in the prompt field.	**1.** Run a capability. **2.** Navigate to the sys_generative_ai_log table. **3.** Check the **prompt** fields. Expected behavior: Users shouldn't see extra escaped characters in the prompt. Actual behavior: Valid escaped sequences are escaped unnecessarily.
Performance Analytics PRB1937240	The reports and PA widgets are displayed in the Migration Center without the bulk		**1.** Take an upgrade instance from Washington to Australia. **2.** Navigate to the Migration Center. **3.** Select the **The review in the Migration Center** button.

Problem	Short description	Description	Steps to reproduce
			use cases that require a version on the install records.
Transaction Management PRB1947766	When a new token is refreshed with OAuth, the transaction.fUser property is set to 'guest' even if the GlideSession is authenticated with the correct user, which breaks the integration usage GuestUserFilter	With OAuth 2.0, when the first integration request is sent, it refreshes the expired token. After the transaction is complete and the notifyTransactionComplete monitor list is executed, there is a discrepancy between the **Transaction.fUser** field and the GlideSession.get() .getUserName() value. This occurs for a fully authenticated session. When checking if the user is a guest, Transaction.getUser() isn't accurate. The check in GuestUserFilter only looks at the transaction object, when it needs to look at the GlideSession object.	1. Create a regular user, and don't select webserviceaccessonly. 2. Setup OAuth 2.0 locally. 3. Trigger a request against the table API by authenticating with OAuth as that user. 4. Wait until the OAuth token expires, which is approximately 30 mins. 5. Put a break point on Transaction.notify TransactionComplete(). 6. Trigger another request. Observe the state.
User Administration PRB1896603	There's a high sys_user query count when running a flow as a system user	During a 1 hour test that processes 50k orders, there's high query counts on sys_user for the system user.	
UX Framework PRB1887044	The latest asset in sys_ux_lib_asset isn't used when multiple asset records exist for the same asset version	This impacts Now Assist Panel loading and Dirty State Management in workspaces.	\
UX Framework PRB1892094	An ATF test UI action fails due to a timeout error	The intent library delivers context on generator registration for translators that don't exist on the page.

Fixed problem

Problem	Short description	Description	Steps to reproduce
AI Agents (Glide Family) PRB1963825	Update AI Agents (AIA) true-up version to 4.0.38	Updating the AIA true-up version to fix a potential infinite loop in an upgrade scenario.	
Virtual Agent PRB1947698	Only one agentic workflow executes successfully when the same trigger fires simultaneously	When a workflow trigger fires simultaneously multiple times, only one of the resulting agentic workflows executes successfully. The other workflows terminate immediately with an error indicating that no session ID could be found. Each trigger correctly creates a new execution plan and a new conversation record, but only one conversation proceeds, while the others fail at the start.	1. Create the agentic workflow named 'Test multiple case executions'. 2. Select three or more case records and update them simultaneously so that the trigger fires for all at once. 3. Notice that the three execution plans (sn_aia_execution_plan) and three conversation records are created. Only one conversation and execution plan executes successfully. The other conversations don't continue after the first task with the error 'No session ID found'. Expected behavior: Each triggered workflow should independently create or resolve its own valid session so that all conversations execute successfully, even under concurrent trigger conditions. Actual behavior: Only one conversation executes successfully. The other conversations either terminate immediately or don't continue after the first task with 'No session ID found' error.
Virtual Agent PRB1962510	Empty sys_cs_message is created when Agentic Mode is on		1. Set up NAVA. 2. Make sure Agentic Mode is turned on. 3. Search 'What is spam?'. 4. Navigate to sys_cs_message. 5. Check for an empty message.
Virtual Agent third-party integrations	Live agent only mode doesn't work for third-party channels	The user messages aren't be received by the agent. This message appears in the log: 'Couldn't find rich control, dropping current message'.	1. Set up VA and a third-party channel (for example, Teams). 2. Set up VA to live-agent only mode (for example, by having a custom greeting topic that directs to LA). 3. Start the conversation.

Problem	Short description	Description	Steps to reproduce
			4. Ensure that you have mobile UI policies created for the wm_task table where it hides or shows the fields based on fields in the wm_task table, which are exposed in the detail screen. **5.** Create records in the wm_task_crc table. **6.** Download the cache. **7.** Go offline. **8.** Navigate to the wm_task detail screen for a record created in the wm_task_crc_table. **9.** Select the button to update the record. Observe that the document rebuilds. The UI policies aren't applied and don't hide or show the fields.
Mobile Platform PRB1959666	Data is lost when updating the offline cache during online operations	While offline and on mobile, data is lost when updating the offline cache during online operations such as viewing screens or performing actions. This happens because the first screen updates information for the dot-walked (referenced) fields record, but the document doesn't contain all the information for all the fields for the referenced fields record. Null is filled in the database update for any field for which there isn't information.	**1.** Set up two screens: ○ Screen 1: A screen that's based on the wm_task table and has data for the current task. It should also have data for a reference field, which is also based on wm_task. (The referenced record on wm_task will only display 2 fields via dot-walk.) ○ Screen 2: A screen that's based on the wm_task table and displays referenced records from the record in the above screen. This screen should have a condition on fields not included in the above screen. **2.** Log in to the application. **3.** Download a cache and don't go offline. **4.** Navigate to Screen 1's detail screen. ○ Observe that the offline cache updates for the current screen and referenced records. **5.** Navigate to settings. **6.** Go offline. **7.** Navigate to Screen 2. Observe that the screen is missing the referenced record from Screen 1.

Zurich Patch 2

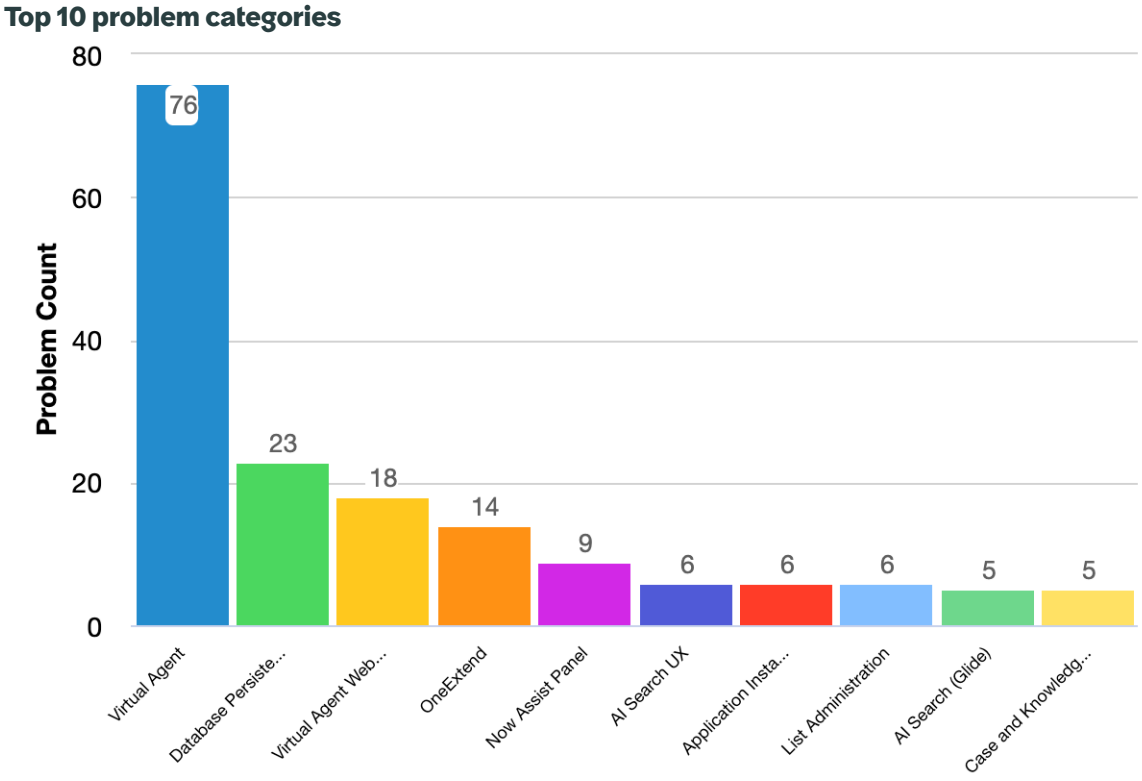
The Zurich Patch 2 release contains important problem fixes.

Zurich Patch 2 was released on October 15, 2025.

- Build date: 10-12-2025_0904
- Build tag: glide-zurich-07-01-2025__patch2-09-24-2025

Important: For more information about how to upgrade an instance, see ServiceNow upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.



Note: This ServiceNow AI Platform® major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

Overview

Zurich Patch 2 includes 375 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Security-related fixes

Zurich Patch 2 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Zurich Patch 2, refer to KB2533678.

Changes in Zurich Patch 2

AWS discovery using patterns

Discover datacenters only for new cloud accounts

If you have multiple cloud accounts and datacenters in AWS and Azure, you can discover datacenters for new cloud accounts only, instead of refreshing the entire list.

Microsoft Azure Cloud discovery using patterns

Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

Problem	Short description	Description	Steps to reproduce
Access Control PRB1893600	RecordFamilyResolver needs more optimization	Performance issues with reports on instances with a high number of archive tables.	Refer to the listed KB article for details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
KB2178333			
Access Control PRB1915184 KB2400619	Security constraints prevent access to a requested page when visiting task.list	Failing a Deny ACL from anywhere in the hierarchy prevents table access to the list of a parent table.	Refer to the listed KB article for details.
Email Notifications PRB1930940	Email parts are deleted when moving to a draft in workspace	Email issues are observed in the workspace. After copying and pasting the information, it's deleted.	
Horizon Component Library PRB1929229 KB2515183	Theme changes when opening an HR Case record page	There's user theme preference changes automatically when creating/opening an HR Case form from the workspace.	Refer to the listed KB article for details.
Usage Analytics PRB1925359 KB2423777	Multiple out of memory (OOM) errors are triggered on the nodes from the 'User Property Change Sync' job	Multiple OOM errors were triggered on the nodes at different times whenever the 'User Property Change Sync' job was running. As a result, the node restarts.	Refer to the listed KB article for details.

All other fixes

Problem	Short description	Description	Steps to reproduce
Activity stream PRB1931494	RepresentedBy is missing from the event payload		
Advanced Work Assignment PRB1929864	The chat card remains in the Agent inbox after the guest ends conversation		1. Create a chat from the Virtual Agent (VA) web client as a guest user. 2. Wait for it to be assigned to an agent. 3. End the conversation from the VA web client.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Notice that the chat card still appears in the Agent Inbox.
AI Search (Glide) PRB1921724	Improve ResponsePostProcessor time when the table is early binding	This is a product opsbar	
AI Search (Glide) PRB1927798	Missing compound index on sys_translated causes slowness in AI Search indexing	getTranslation in CatalogVariablesUtil can be as slow as 500ms, causing a performance issue when indexing sc_cat_item.	
AI Search (Glide) PRB1930534	When used on service portals, 'Exact Match' should honor search sources	When using the 'Exact Match' feature on a service portal, the results of the exact match lookups should be limited to the sources which are included in the search profile, and honor the filters set on the search sources.	
AI Search (Glide) PRB1938069	Optimize glide post processing for KG metadata tables	Suboptimal processing and delays in handling KG metadata tables.	Execute glide post processing on KG metadata tables. Observe performance and processing efficiency and notice suboptimal processing or delays in handling KG metadata tables.
AI Search (Glide) PRB1942680	Web search isn't working in Zurich and recent store apps		**1.** Navigate to **/esc**. **2.** Start the web search by selecting the **Globe** icon. **3.** Query, 'Who is the president of the US'. Expected behavior: The web search query goes through. Actual behavior: The user receives a 'Sorry there was a problem' message.
AI Search for Next Experience	Regular catalog item results should use a 'Pencil'		**1.** Open an AI Search (AIS)-enabled instance with AIS for global search. **2.** Search for a catalog item that doesn't have a picture, like 'laptop'.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
PRB1857879	Icon for consistency		Notice that the Genius Results use the 'Pencil' icon, but the regular results use the 'Book' outline. Notice that in Portal, both regular and Genius results use the 'Pencil' icon. The icon should be consistent between regular and Genius results for the same record.
AI Search for Next Experience PRB1859890	There's improper use for current.update in a business rule		
AI Search for Next Experience PRB1917747	Zing Migration Tool does not let users select unused SACs from base instance migration records	The tool only allows the user to select SACs currently used in a workspace. If one of the SACs from the base instance records is not being used in a workspace, it cannot be selected for migration in the tool.	
AI Search for Virtual Agent PRB1932162	Marking KG 'None' in the Conversational Interface invokes the 'Text To Result' call		**1.** Setup VA + KG. **2.** Open an instance. **3.** In the Conversational Interface, mark KG as 'None'. **4.** Trigger NLQ from any portal. Notice the text-to-result call.
AI Search PRB1708476	Issues logging signals in non-global scriptable environment	The user is unable to get the search analytics payload from the response (even in a global scope), and unable to log to signals API in a non-global scope.	
AI Search PRB1931645	AIS listens to events such as 'sys_cache_flush' and can cause stack overflow exception	AIS listens to events such as 'sys_cache_flush' and can cause a stack overflow exception by running a DBQuery, which can insert a record to sys_cache_flush.	**1.** Enable glide.sys.domain.delegated_administration and glide.sys.domain.partitioning. **2.** Create two separated domains. **3.** Clear the cache. **4.** Update any record.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Observe the stack overflow exception in the logs.
AI Search UX PRB1917739 KB2347684	Add a mechanism to resend recent AMB messages on a created subscription	Under certain circumstances, it's possible that the component establishes the AMB connection after the Genius results are sent through the channel, since both the connection subscription and the Genius results being sent are asynchronous.	
AI Search UX PRB1930672	Service Portal Genius Result (GR) synthesized response flashes and changes text size		
AI Search UX PRB1932120	Non-conversational catalogs shouldn't have an option to request in a chat		1. Provision an instance with September GenAI apps. 2. Turn on Dynamic Window (DW) on portal. 3. Search for a non-conversational catalog, like an Apple iPhone. Notice there's a pop-up on the citation for an Apple iPhone 13 with an option to request in chat. A citation for a non-conversational catalog should open in a new tab automatically.
AI Search UX PRB1936251	KG citation list view is empty	A message says 'Found no records' when a query should produce results.	1. Navigate to **/sp**. 2. Query 'What asset does Abel Tuter have' in the portal search box. 3. View the assets info and multiple assets citations. 4. Select **View Records**. Expected behavior: The user is direct to KG citation list view and assets show up in the list. Actual behavior: A message says, 'Found no records'.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
AI Search UX PRB1937984	The caller is not in the scope rhino.global when called from Now Assist in Virtual Agent		
AI Search UX PRB1942589	Increased timeout from 15s to resolve frequent no Genius Results on Portal	This issue occurs on Dispatcher Workspace enabled on Portal with Model GPT OSS, and takes longer for a response to return than in any other models.	
AI Service - Glide Interfaces PRB1900176	ExtractItems() pops the solutionIds from the original array	On an instance with more than 40(JOB_REQUEST_COUNT_LIMIT) solutions in Waiting For Training State at present, once the sys_trigger is triggered, all these solutions will be moved to the Training is Cancelled state and new solutions will be created and retried again.	
AI Service - Glide Interfaces PRB1902435	In handleWaitingForTrainingState, there is a missing second argument in isJobSubmitted()	In handleWaitingForTrainingState, a solution ID is not passed to the isJobSubmitted() function, resulting in an execution of the 'if' condition. Even if the job is submitted, the solution is cancelled and retried until it reaches its last retry.	
Application Install Engine PRB1900544	Uninstalling sn_vul leaves sys_metadata_delete records that cause the uninstall to report as failed		1. Provision an instance with sn_vul installed. 2. If on a local instance, set the sn_appclient.app.install.offline property to true and sync on the app manager page. 3. Uninstall sn_vul.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Observe that the uninstall failed with two records left in sys_metadata living as sys_metadata_delete records.
Application Install Engine PRB1903785	Check if a package exists in the store_package directory of node before downloading it	An error appears that includes the text 'Exception reading zip stream, falling back to old cipher' and 'java.io.FileNotFoundException'.	1. Install any app from the store. 2. Check that the temp directory is created for the first time. 3. Delete the temp directory that was created. 4. Let the system continue installation process, during which it downloads a package again and create a temp directory. Observe the error that appears, which includes the text 'Exception reading zip stream, falling back to old cipher' and 'java.io.FileNotFoundException'.
Application Install Engine PRB1904959	Some business rules cause install issues (such as 'Prevent duplicate attachments'), so the workflow should be disabled		
Application Install Engine PRB1911704	An error appears while selecting optional spokes and installing SaaS int app	During the pre-processing operation, the user receives an error while selecting optional spokes and installing SaaS int app. After a second attempt, the 'locate remote offering' plugin record for com.sn_sam_saas_int can't be located.	1. Provision an instance with com.sam.saas.int installed on a multi-node environment and optional plugins installed on another node. 2. Try to repair the app. Observe that an error appears.
Application Install Engine PRB1934177	Node is not expanding the artifact		

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
Application Install Engine PRB1936285	During node restart, the system downloads version expects a higher store version	After a node restarts, the user sees the soft dependencies in the dependency manager are populated by the versions. The root cause is the artifacts are loaded from a file during node restart, and that is overwriting the active plugins information in Dependency Manager.	1. Open a multi-node instance that has 15.0.5 as a version. 2. Install 15.0.5 and other optional plugins. 3. Upgrade to 15.0.17.
Application Manager PRB1920459	Nodes aren't coming online, and java.lang.ClassCastException in the wrapper logs a boot	When nodes are booting up there is a ClassCaseException thrown, causing the nodes to boot, resulting in performance issues on the instance.	
Application Manager PRB1926863	Uploading artifacts from Nexus doesn't work	The Nexus server was updated from Nexus2 to Nexus3, which caused an issue for artifact uploads from Nexus in all instances.	1. Log in to any instance. 2. In the navigator filter, search for **System Applications** > **Install Application**. 3. Select an option from Nexus to populate the repository URL. Observe that this URL isn't functional anymore due to the changes to the Nexus server.
Approvals PRB1928314	Retriggered change approvals aren't routing to the user who rejected them previously	After a Change approval is rejected, retriggering the approval doesn't route back to the original rejecting approver. Instead, the approval remains in a 'Rejected' state. This issue was observed after upgrading to Yokohama, and occurs with an e-signature enabled for Change requests.	1. Deactivate normal Change request flows in Flow Designer. 2. Create a new normal Change request. 3. Give it any assignment group and request approval. 4. Navigate to the **Change request list** view. 5. Add the **Approval** field. 6. Manually change the **Approval** field state to 'Requested'. 7. Notice that this will trigger the workflow to move past the 'Wait' condition. 8. Reject one of the approvals. Notice that the other approvals move to 'No longer required'.

Problem	Short description	Description	Steps to reproduce
Discovery PRB1927941 KB2434137	Discovery patterns failed prematurely, causing Discovery failure	An example is during 'Windows OS - Server' pattern Discovery, running the Cluster pattern library throws consecutive errors, which should be expected, but the pattern engine failed the pattern instead.	Refer to the listed KB article for details.
Discovery PRB1930200 KB2474013	Protected Tables Plugin will block DiscoverySensor.js logging, and cause warnings about syslog inserts from ProtectedTableAccessHandler instead	When the Protected Tables Plugin is active, which is recommended, the source=DiscoverySensorJob GlideRecord inserts made directly to the syslog table by Discovery 'DiscoverySensorJob' script include are blocked, and flood the syslog table with logs from source=ProtectedTableAccessHandler instead.	Refer to the listed KB article for details.
Dynamic Translation for Virtual Agent PRB1927624	Dynamic translation with live agent conversation in page	A message says it will be automatically translated from English but the history from the requestor is still in Spanish.	1. Set the user's preferred language to Spanish. 2. Start a conversation in portal with Now Assist Virtual Agent. 3. Connect with a Live Agent whose language is set to English. Observe that a message says it will be automatically translated from English but the history from the requester is still in Spanish.
Edge Encryption PRB1927436 KB2434303	After an upgrade to Yokohama, a lot of 'MultiPartXXX' files are created under the 'tmp' folder	This causes full disk space issues on the machine.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
Edge Encryption PRB1934717	The edge decryption job doesn't check the correct column for journal/audit fields	When deciding to column level encrypt data or not, the edge decryption job doesn't check the correct column for journal/ audit fields. As a result, the journal field and audit entries aren't CLE encrypted.	1. Configure the **Journal** field to be edge encrypted. 2. Run an edge mass encryption job to encrypt the data. 3. Configure the CLE module/map/ configuration on the same field. 4. Ensure that the configuration is active. 5. Ensure that the edge user has access to this CLE module. The edge user is configured in its edgeencryption.properties file (edgeencryption.target.username property). The user that's configured to connect to the instance must have access to the CLE module or else the decryption job won't attempt to encrypt with it. 6. Disable the edge encryption configuration for the field. 7. Run the edge decryption job on the field. 8. Check the process historical records. Expected behavior: The **Journal** field entries in sys_journal_field are CLE encrypted. **Audit** field entries are also CLE encrypted. Actual behavior: The journal field and audit entries aren't CLE encrypted.
Employee Center PRB1891020	MyItems widget receives redundant keyboard focus in the Employee Service Center (ESC)	When navigating the 'My Active Items' section using keyboard, the focus behavior is not optimal for accessibility. The entire card and the **View Details** button receive focus, which is redundant since both lead to the same destination. The screen reader announces only the 'View details' which lacks context about which item's details are being viewed.	1. Log in to any base instance. 2. Append /esc in the URL to launch Employee Center portal. 3. Navigate to 'Cards' under 'My Active Items (My Items widget)' using the 'Tab' key. Observe the keyboard focus.

Problem	Short description	Description	Steps to reproduce
Employee Center PRB1893416	The **Save as Draft** button is hidden for HR Catalog Items in the HRM Catalog Item Widget	When filling out the a form in the HRM Catalog Item widget, the **Save as Draft** button is not available when configured with an HR Catalog Item.	**1.** Open /ESC. **2.** Open the 'General Benefits Inquiry' catalog item. Expected behavior: The **Save as Draft** button is available. Actual behavior: The **Save as Draft** button isn't available.
Employee Relations Case Management PRB1909215	There's no base instance scoped ACL for sn_hr_er and asmt_assessment_instance_question	The user can't read a specific asmt_assessment_instance_question record, even though the user has the required role. This isn't a base instance scoped ACL for sn_hr_er, but there is one for sn_hr_core.	
Event Management PRB1909720	Error shows while attempting to open the alert tags table (query_range error)		**1.** Connect as an evt_admin user. **2.** Navigate to **sn_em_ai_alert_tags**. **3.** Run the filter for alert tags containing 'query_range'. Notice the error that appears in the UI.
Event Management PRB1918087	Poor performance of building business service trees in 'Services Dashboard'	The /api/sn_nocpit/nocpit/GroupTree REST endpoint inefficiently queries the sa_service_group_member table twice during each transaction, reading all of the rows each time.	**1.** Impersonate a user. **2.** Navigate to the Service Operations Workspace. **3.** Select the **Services Dashboard** icon. Observe that the /api/sn_nocpit/nocpit/GroupTree transactions are periodically slow.
Event Management PRB1934829	getMap runs indefinitely when it has an alert path on a service map with a cycle	A halting criterion reaches null while traversing the hashmap, but the hashmap contains a cycle, so the loop never terminates.	
External Triggers PRB1927717	Copy Event Source copies an old event source ID in HMAC configuration		**1.** Create an event source of type HMAC config. **2.** Copy the event source.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: It should select whole text in **Resolution note** text box. Actual behavior: Observe that it isn't selecting the text when selecting the **sparkle** icon.
HR Service Delivery PRB1910181	Changes related to app-esm		
HR Service Delivery PRB1920738 KB2525534	HR Case description (rich_description) doesn't copy over data, and the rich description is left empty	Rich Description appears as null in List View but displays correctly in the case record. The reverse works as expected—when updating the **rich_description** field in the HR case form, the value will appear in the **rich_description** field in the list view.	1. Log in to the instance. 2. Create an HR case. 3. Navigate to **sn_hr_core_case.LIST**. 4. Open the newly created case. 5. Select the **Hamburger** icon. 6. Configure the form layout. 7. Add the **Description** field. 8. Save the changes. 9. Return to the HR case form. 10. Enter a message in the **Description** field, but don't enter anything in the **rich_description** field. 11. Save the changes. Observe that the same value is automatically updated in the **rich_description** field due to a business rule that syncs values between the two fields. 12. Open the list view. 13. Add the Description and rich_description columns. Notice that the **rich_description** field doesn't contain a value.
HR Service Delivery PRB1931448	The **Suspend Reason** field isn't present on a form by default	This causes a discrepancy in populating the suspend reason in the work notes in an HR case.

Problem	Short description	Description	Steps to reproduce
Instance Clone (Family) PRB1930639	Clone Admin console 'Request' page performance		Navigate to **Clone Admin** > **Request Clone**. Notice that the 'Request' page takes an average of 20 secs to load.
Instance Data Replication (IDR) PRB1934310	Data_lag is not present in xmlstats and dashboards on Zurich and later	Looks like heartbeat values are not being recorded in idr_system_status.	
Instance Scan PRB1927870	Instance Scan excludes inactive records, even when the system property 'glide.scan.base_system_records' is enabled	When running a custom Instance Scan table check, inactive records are not included in the scan results, even if no conditions are set on the scan check record. This occurs even after setting the system property 'glide.scan.base_system_records = true'. For example, creating a scan against sc_cat_item with the condition 'active = false' returns no findings, despite the existence of inactive, custom-created records.	1. Create a new Table Instance Scan Check. 2. Set the target table to 'sys_app' or 'sc_cat_item'. 3. Add the script in the 'Advanced' tab. 4. **Save** it. 5. Run a Test Scan. Observe that inactive records are not scanned and Boolean conditions such as 'active = false' return zero results.
Integration Hub PRB1928792	Unable to connect to ServiceNow MCP Server using ServiceNow MCP Client	'Apply Default Headers' is being called before ApplyHeaders which always adds the 'Accept: text/event-stream' header. Any headers added in the step are added as well, causing the duplicate headers. The text/event-stream header shouldn't be added if there is an accept header added in the step.	1. Create an SSE step to any endpoint. 2. Add a header with the value 'Accept: application/json,text/event-stream'. 3. Test the SSE step. 4. Ensure results show the Accept header as the value 'application/json,text/event-stream'.
Integration Hub	SSE step does not run on MID		1. Create an action with an SSE step and check the run on the MID checkbox. 2. Test the action.

Problem	Short description	Description	Steps to reproduce
PRB1931168			Notice the error 'SSE is only available on instance'. Individual chunks are not processed by the handler.
JVM at Scale PRB1932145	Existing automation is unable to capture heap dumps for short spikes in GC pressure	This is a product update.	
JVM at Scale PRB1938155	glide.memory.watcher is being too aggressive after upgrade	Changing the memory watcher to use old gen usage percentage over the whole heap usage percentage kicks in remediator logic early.	
Key Management Framework (KMF) for Platform Encryption PRB1916372	A module key rekey job fails for asymmetric keys		1. Navigate to the Crypto module. 2. Open glide_usage_analytics_token_signing. 3. Ensure that the key pair is generated in both instances with the same key alias. 4. Perform a clone. Expected behavior: Users should be able to rekey and deactivate the asymmetric key pair and associated cert if it exists on the sys_certificate table of the source instance Actual behavior: The module key rekey job fails for asymmetric keys.
Key Management Framework (KMF) for Platform Encryption PRB1917107	Asymmetric module keys with Multiple Active keys won't always pick up the current instance keys	The CryptoOperations API picks the active key ordered by date whether that key is generated on that instance or not. When automations like clone run on the instance, there appears to be a brief period where both the source and target instance's module keys are present on the target instance. For Asymmetric operations like signing, before rekey is successful,

Problem	Short description	Description	Steps to reproduce
PRB1900179	components are loaded using getEmbeddables		**3.** Configure the Portal Advanced List widget. **4.** Save the change and open the widget on CSM page context. Observe the browser error, 'There is a JavaScript error in your browser console'.
List Administration PRB1916174	The header notification doesn't render when SN_RECORD_LIST_DATA_BROKER#ADD_NOTIFICATIONS is dispatched	When repeating in NRLC, the error occurs as well. The error message comes from a Data Broker that prevents 'Assigned to' from being empty.	**1.** Create a new list against the problem_task table. **2.** Attempt to remove the value in 'Assigned to' on the new list. Expected behavior: Notice the error message. Actual behavior: No error message appears.
List Administration PRB1917660	When fuzzy is enabled, UI actions on a list show a negative number once all the items are selected and de-selected	When the user selects some items in a list and then hits the 'Select all' option in the banner, then deselect more than five of the items in current page, the number displayed on the UI action is negative.	
List Administration PRB1923987	Unable to edit dot-walked choice fields and remove commas from the display	The user can't edit dot-walked choice fields or remove commas from the display on the integer value on the 'Presentation List' component. It's supported in the List component, but when the user hovers on the List component, it shows that it will be deprecated soon and the 'Record List' component should be used instead (which also uses the 'Presentation List' component).	**1.** Navigate to the UI Builder. **2.** Create an experience. **3.** In a page variant, add 'Record List Bundle' and set a table to it. **4.** Add a dot-walked choice field to the list view and a field with integer. **5.** Preview the page. Observe that the dot-walked field is not editable. The integer value field also has commas, even after setting format:none attribute in sys_dictionary. The same process works fine with the List component.

Problem	Short description	Description	Steps to reproduce
		Asset allow list empty, using agent config file allow list.'	
Mobile Platform PRB1930548	OfflineGlideRecord throws exception because generated SQL has mismatched table names	Add error states that an action can't be performed offline.	1. Create an extension of the wm_task table called wm_task_2 and an extension of wm_task_2 called wm_task_3. 2. Ensure there are some tasks that were created as wm_task_3. 3. Download the offline cache and go offline. 4. Navigate to a wm_task_3 task in the work order task list. 5. Perform an action such as **Close Complete** on the task. Observe an error stating that the action can't be performed offline.
Mobile Platform PRB1931576	Offline-mode payload generation has excessive memory retention, causing performance degradation due to an SG offline document job	The Yokohama release introduced major changes to the way in which mobile offline payloads are generated, most notably embedded forms are now transformed into redirected forms. This removes the embedded forms from list screen documents and turns them into separate documents. With that change resulted in an increase in the number of documents that are processed during offline payload generation. This number can spike to as large as twice or three times as many documents processed compared to previous releases. As such, this results in an excessive number of GlideRecord instances being retained in memory.

Problem	Short description	Description	Steps to reproduce
Now Assist Panel PRB1936922	Skills aren't turned off after being selected in the Now Assist Portal	Selecting skills doesn't turn them off.	**1.** Open Now Assist Portal. **2.** Enter 'Summarize a record'. Expected behavior: 'Summarize a record' should be turned off after the record number question Actual behavior: The 'What is a record number' question is displayed but still summarize a record is turned on. It turns off after refreshing the page.
Now Assist Panel PRB1938963	Text is cut off in Now Assist panel (NAP) in the text area in Spanish		**1.** Impersonate a user. **2.** Set the language as 'Spanish'. **3.** Select the **NAP** icon. Notice that the message in the text area is cut off.
Now Assist Panel PRB1941558	Now Assist panel (NAP) Assistant Information sources changes aren't saved in the guided setup	The NAP assistant default schema is set to 'None'.	**1.** Navigate to **Conversational interface** > **Assistants** > **NAP assistant** > **Information Sources**. **2.** Change the KG schema to an NLQ user graph. **3.** Select **Save and continue**. **4.** Return back to the tab to ensure the changes are saved. Expected behavior: The changes made in Information Sources saved. Actual behavior: The KG schema returns to 'None'.
Now User Experience PRB1925420	'Remove condition: {0} {1} {2}' doesn't get externalized	There's a 'Do not enter' icon in the row for each condition, which will delete the condition row. This is the value that's not being translated.	**1.** Provision an instance with the German language pack installed. To see all the language plugins, navigate to the v_plugin_list.do and search for '*i18n'. **2.** Select the user profile. **3.** Select **Preferences**. **4.** Choose the German language. **5.** To turn on i8ln indicators, navigate to sys_properties_list.do and set glide.ui.i18n_test to true. **6.** Navigate to sys_report_template.do.

Problem	Short description	Description	Steps to reproduce
			7. Add details for the report name. **8.** Select **Table** in the drop-down list. **9.** Select any table. **10.** In the right nav, select the **Filter** icon to open the angular condition builder. Observe that there's a **Do not enter** icon in the row for each condition, which will delete the condition row. This is the value that's not being translated. The user can also inspect the source with dev tools or turn on the screen reader to validate the values for the delete row icon. There are then 2 scenarios for the screen reader value: An empty row, or a row with a field/ operator/value (which will also be translated).
On-Call Scheduling PRB1930061 KB2498816	Rejection is not honored for email and Mobile push	For Email - remaining reminders are sent even after rejecting, but for MP the remaining reminders are not sent but the status is not updated.	Refer to the listed KB article for details.
On-Call Scheduling PRB1935013	Short description and Priority don't appear in the Teams notification modal for workflows		**1.** Log in as admin. **2.** Create a shift and keep Contact Pre as Teams. **3.** Create a trigger rule For Workflows. **4.** Create an incident. **5.** Check the notification in Teams. Observe that the short description and priority don't appear in the Teams notification modal.
On-Call Scheduling PRB1938623	The Teams notification card does not show the incident number as a link when using subflows		**1.** Log in as admin. **2.** Create a subflow trigger rule with assign by acknowledgment. **3.** Create a user with teams as the preference. **4.** Create an incident that triggers the trigger rule and sends a Teams notification to the user.

Problem	Short description	Description	Steps to reproduce
			Notice that the Teams notification card does not show the incident number as link
OneExtend PRB1925347	sys_one_extend_ai_agent_tool records aren't cached	AI Agent tool requires for the records to execute tool type capabilities. When caching the records in One-Extend to get scriptable API to access the cached records in the AI Agent store app, the cache can be used.	
OneExtend PRB1928470	Abnormal GAIC async submission duration	When the user calls certain code with an async request, the response time should be around 0-200 milliseconds. However, the reponse time can be as high as five seconds because the Builder Entity cache frequently gets reclaimed.	1. Enable logging sn_ais_assist. AISearchNA4S GeniusResultLogger .level=INFO. 2. Run NAVA QnA flow. 3. Look at the Splunk log pattern 'AISearchNA4S GeniusResultLogger response received! duration'. Observe that the submission time can reach two to five seconds.
OneExtend PRB1929432	Improved accuracy of security detectors by leveraging attributes exclusion list	This is a product update.	
OneExtend PRB1929447	Must increase prompt size to 40k	sys_generative_ai_config and prompt (Prompt Template) is a max length of 4000 and clips on Oracle clients (or any with strict column validation).	
OneExtend PRB1931779	Single call for Guardian (for Virtual Agent and agentic flows)	This is a product update.

Problem	Short description	Description	Steps to reproduce
OneExtend PRB1933309	CheckLLMModelAvailability takes longer than usual		1. Delete a record from sys_gen_ai_model_availability for gpt_small. 2. Trigger the script.
OneExtend PRB1934983	Few shot detector (FSD) is executing via Flow Designer (FD) sometimes in case of ASYNC + BLOCK	FSD is executing via FD sometimes even if the main capability is executing via proxy. When triggering AI Search, each capability execution FSD is triggered. FSD execution is happening via FD, and main capability execution occurs via JAVA. FSD should also execute via JAVA for ASYNC + BLOCK case.	
OneExtend PRB1938158	Providers are restored to the default when plugins are repaired or when a new version is updated	After updating the provider to another, it gets set to the default again.	1. Log in to the instance as an admin. 2. Navigate to **Now Assist admin** > **Settings** > **Manage Model Providers**. 3. Select **Edit Model Provider** > **Customize** > **Edit provider for skill**. 4. Select a skill such as 'Incident summarization'. 5. Update the provider to any other provider, such as Google or Amazon, except for the default one. 6. Verify that the provider has been updated for the record summarization to Google in in sys_one_extend_capability. 7. Repair the UXC plugin or install the latest version. Notice that the provider is set to the default again.
OneExtend PRB1938540	Strange JSON format sources displayed in Now Assist Virtual Agent (NAVA) chatbot for certain queries	Issue is intermittent.	1. Navigate to **/sp**. 2. Enter the utterance **Create incident** in the NAVA chatbot. Observe the Planner 2 response displayed but with unexpected JSON-style sources output at the bottom.

Problem	Short description	Description	Steps to reproduce
OneExtend PRB1939640	Incident summarization doesn't work if the user enables Guardian in znowassiststable		**1.** Enable offensiveness, block and log. **2.** Enable Prompt Inject Block and log. **3.** Navigate to any incident and update the short description as 'Lets kill all.' **4.** Select the **Summarize** button. **5.** Verify that it should get blocked with the error code in generative AI log table. Observe that summarizing the record in the incident is stuck and works fine if disabled.
OneExtend PRB1941124	Claude and streaming yields significantly malformed output	When the user enters the query in French for the first time, the streamed output has words stuck together. For example, 'basede' should be 'base de' and 'vousavez' should be 'vous avez'. When the user runs the query again, the issue doesn't persist.	**1.** Ensure the instance has Claude, has streaming on, and has Dynamic Translation off. **2.** Navigate to **/sp**. **3.** Open the Now Assist Virtual Agent (NAVA) chatbot. **4.** Enter the utterance, 'Quelles sont les options pour créer une base de connaissances?'. Observe that the streamed output has several words mashed together. Also observe that in the sys_generative_ai_log planner 2 output, the response from LLM itself is this way. **5.** Disable streaming. **6.** Repeat the query. Notice that there is no issue with the words being stuck together in the output.
OneExtend PRB1942490	KB generation isn't working when requested from Now Assist panel (NAP)		**1.** Log in to the instance. **2.** Activate all FSM skills. **3.** Ensure the credentials for Now LLM are updated with proxy. **4.** Navigate to **NAP**. **5.** Select **Generate KB Article**. Expected behavior: KB generation happens successfully.

Problem	Short description	Description	Steps to reproduce
			Observe that the values are reflected appropriately. 6. Open the same demand and update the costplan. Observe that the values are not reflected in the portfolio plan page.
Related List Action Model PRB1890337	The button to change the fields for the related list is grayed out	The declarative action (DA) is not enabled.	1. Log in to a base instance. 2. Identify any declarative action on a related list in a configurable workspace. 3. Open the DA record in the backend. 4. Set 'Enable Dynamic Condition' to 'True'. 5. Add a filter condition with a dot-walked field. 6. Save the record. 7. Open the workspace. 8. Select **Select all x records**. Notice that when the user selects **Select All**, the DA with the dynamic evaluation condition is grayed out.
Reporting PRB1916106	Loading is slow for synchronous calls by related list from a report on sys_user table	When a user tries to open a report, the related list call is synchronous, which results in slow loading times. Instead, the related list call should be asynchronous, which wouldn't block the main list or prevent access to it.	1. Create or open a report on sys_user. 2. In the 'Network' tab of the Developer Console, add '/api/now/ui/related_list/related/sys_user/all' in the filter. 3. Perform a /cache.do in another tab. 4. Refresh the report. Notice that the API call is in a pending state for over a minute. 5. Select **Run**. Observe that 'Loading Report' is shown until the status of API call is finished.
Roles PRB1890898	UserHasRole PatchJob may inadequately update user role inheritance if	After performing an action that impacts a large number of role inheritances, the expectation is that operation will be	1. Set up an instance to take advantage of fix provided in PRB1744106. 2. Set the system property 'glide.security.inh_count_patcher.enabled' to 'true'.

Problem	Short description	Description	Steps to reproduce
	it processes a user prior to original transaction (M2MSlushbucketSaveJob) completion	required to process a considerable number of users. This results in M2MSlushbucketSaveJob running for several minutes to allow UserHasRolePatchJob to run while M2MSlushbucketSaveJob is still in progress.	3. Generate a relatively complex user-group-roles structure. 4. Perform an action that is expected to impact a large number of user roles inheritances (sys_user_has_role), for example, removing a contain relationship between two roles. 5. Review user role inheritance post completion of M2MSlushbucketSaveJob. 6. Run the new RoleManagementVerify().verifyInheritedRoles(); via scripts background. Observe that role inheritance mismatches occur related to the role involved in the operation performed in step 3.
Scan Engine PRB1934227	Create a global family release plugin	This is a product update.	
Seismic Framework PRB1919027	Document requests end up using outstanding child prefetch promise	In certain scenarios, the Service Worker incorrectly fulfills a main page request using a pending iframe request. This occurs when the Service Worker matches the main page request to an existing pending iframe request, resulting in the main page loading the iframe's content instead of its own. This leads to incorrect rendering and potential functional issues on the main page.	1. Open any UI16 page on a Next Experience enabled instance. 2. Wait for the page to load. 3. Reload the same page several times (5+). Expected behavior: The navigation bar and shell to show up with UI16 content all the time. Actual behavior: Only UI16 content is shown on the page. The navigation bar and shell are missing.
Server-side scripts PRB1881845	globalThis isn't correctly shared between separate imports of the same module

Problem	Short description	Description	Steps to reproduce
			Observe that the records in step three never get offloaded.
Tier 2 Storage Offload PRB1920238	Cloning instances to/from the instance where the Tier 2 plugin is enabled can lead to loss of configuration, metadata, and orphaned data	Cloning instances can lead to the loss of Tier 2 configuration, metadata, and orphaned data, especially when Tier 2 is only partially configured across environments. The clone behavior should be improved so that the Tier 2 bucket configurations, plugin state, and offload capabilities are preserved and validated appropriately, ensuring no data/ configuration work is unintentionally lost.	
Transaction Management PRB1923245	The IllegalMonitorStateException in WaiterCountManager can prevent locked threads from being unlocked and lead to a deadlock	There's a race condition between a new thread pool addition during a specific plugin installation and locking thread-pool queues to claim a transaction for processing. This could cause a potential deadlock.	
UI Field Administration PRB1926606	On i18n, "Of" is hardcoded		
UI Form Administration PRB1901518	Tree structure does not function as expected	The tree structure should receive focus only once via the Tab key. Pressing Tab again should move focus to the next element instead of navigating within the tree structure. Navigation within the tree structure must be with arrow keys. However, the tree	1. Launch any base instance. 2. Navigate to **Application navigator** > **All** > **Email content**. 3. Open a record. 4. Navigate to the folder structure in the record and access using the keyboard. Expected behavior: The tree structure should receive focus only once via the Tab key. Pressing Tab again should move focus to the next element instead of

Problem	Short description	Description	Steps to reproduce
		nodes are accessible using Tab key and arrow keys.	navigating within the tree structure. Navigation within the tree structure must be with arrow keys. Actual behavior: Notice that the tree nodes are accessible using Tab key and arrow keys
UI Form Administration PRB1918236	Child Incidents Related List gets populated with All available incidents	When a query for a related list row count is disabled, the Child Incidents Related List gets populated with all available incidents. This issue works as expected in Yokohama, but not in Zurich.	**1.** Add a few records to the Child Incidents related list. **2.** Check the same incident in both UI16 and Service Operations Workspace (SOW).Notice that the related list count is correct. **3.** Navigate to **sys_ui_list_control.list**. **4.** Open a record for 'Table=incident' and 'Label=Child Incidents'. **5.** Navigate to the 'Performance' tab. **6.** Select the boxes **Remove pagination count** and **Omit related list count**. **7.** Open the incident via SOW. **8.** Select the 'Related records' tab. Notice that without selecting the Child incidents list, the count remains 0. Expected behavior: The count is correct. Actual behavior: All incidents are appearing on the list.
UI Form Administration PRB1920499	The snFormDataConnected{headerConfig...} GQL call occurs during the 'Create case' flow	When the user creates a case, the snFormDataConnected{headerConfig...} call goes out, even though it isn't needed during this flow.	
UI Form Administration PRB1926448	After upgrading to Yokohama, the 'Before Query' business rule doesn't filter records in the Workspace using an encoded query	Adding an encoded query on a 'Before Query' business rule to a filter record restricts the record on UI16, but fails to filter the record in Workspace. The record doesn't open in UI16, but opens successfully in Workspace. This issue was found in Yokohama and Zurich.	**1.** Create a 'Before Query' business rule on the incident table. **2.** Create an incident with a short_description. **3.** Set it to 'test'. **4.** Attempt to open the record in UI16 and Workspace. Notice that the record doesn't open or filter the record properly.

Problem	Short description	Description	Steps to reproduce
Upgrade Center PRB1897157	Load order is not maintained for duplicate files in global hosted plugins	Certain global hosted plugins may share duplicate files with other distribution plugins and global hosted plugins. The problem is that their information is not available in upgrade_manifest.csv but rather available in the package_inventory.csv files contained in the host app packages.	**1.** Install hosted plugins. **2.** Upgrade an instance. Expected behavior: Load order is maintained during plugin loading for hosted plugins for duplicate files. Actual behavior: Load order is different.
Upgrade Center PRB1933942	Skipped error after upgrading (sys_properties_[illegible])	The user gets a skipped error after upgrading from Xanadu to Yokohama. The reason is 'Skipping unavailable system property glide.db.df_engine.enabled. Users cannot configure this property.' It's included in the plugin 'com.snc.db.df_engine'.	
Usage Analytics PRB1904647	Support for invoking the Valk API is missing through the Service proxy	Enable the UXA Service proxy to securely query data from the Query Service efficiently	
UX Framework PRB1915455	Upon resizing the window, the alert content from viewport doesn't change in accordance with the dimensions	An alert comes from viewport Link labelLink that opens in new window or tab.	
Virtual Agent PRB1890524	Increase in heap utilization due to expression cache for search	This issue occurs from a script include expression cache from platform.	**1.** Set up Now Assist Virtual Agent (NAVA) on a Yokohama instance. **2.** Perform search actions from the chat window. Notice that the load of 25 users on a single node for one hour for the search

Problem	Short description	Description	Steps to reproduce
			action performed occupies more than 500MB.
Virtual Agent PRB1895195	When the user enters an invalid/partial utterance, an error appears and the conversation is closed	Dynamic capability executor can trigger multiple capabilities with different payloads. However, dynamic capability executor fails when duplicate capability IDs are passed.	
Virtual Agent PRB1911010	With DTAC enabled and an agent name showing in the Virtual Agent Header, VA uses an incorrect name	From the end-user perspective, an Agent's full name is displayed.	**1.** Modify the 'Name' column for an Agent (for example, Abel Tuter) in the live_profile table. **2.** Verify that the Live Profile name is changed to something like 'abel@example' **3.** With the Agent user, navigate to CSM/ FSM or SOW. **4.** Make the agent 'Available for chat' with the agent's language set to English. **5.** Connect with another user in another window with the language preference set to a language other than English. **6.** Navigate to /sp and Open Virtual Agent. **7.** Start a Live Agent conversation. **8.** Check the title on the chat window. **9.** Accept the chat as the agent. Observe the chat title is changed from 'Abel@example' to 'ABEL TUTER'.
Virtual Agent PRB1913154	Non-actionable notifications under regular cases create interaction records for channels and NASS	For channels and NASS, it creates a conversation and does a silent handshake for NASS/NAVA. This creates a conversation and an interaction internally, which is incorrect.	**1.** Make sure that the user has had some conversation with NASS/Channel. **2.** Trigger a non-actionable notification. Expected behavior: A conversation associated with the notification shouldn't have an interaction record. Actual behavior: An interaction record is created.
Virtual Agent	The Virtual Agent (VA) topic execution	The VA topic execution should return a main skill response or

Problem	Short description	Description	Steps to reproduce
PRB1915544	returns a tool response instead of a main skill	provide a way for the user to configure the topic to return a main skill response. Instead, the VA topic execution returns RAG response.	
Virtual Agent PRB1915775	Tool editor execution time impacts the performance for flow generation requests	The tool editor execution time can take over 2000 milliseconds. As the flow generation oneExtend requests are under 10 seconds, this additional time causes an impact to the performance and bumps up the performance metrics by 20%.	
Virtual Agent PRB1917144	Non-LLM time takes an extra 120–581#milliseconds for NAVA use cases and 500–900#milliseconds for NAP Skill/Topic execution		
Virtual Agent PRB1922205	Planner1 output displays multiple times when only dynamic translation is on		1. Navigate to Service Portal. 2. In the NAVA chatbot, enter the utterance 'Mi portátil ha sido arruinado por las cookies. ¿Qué son siquiera las cookies? ¿Puedo pedir un portátil nuevo?'. Observe that the transition message is displayed multiple times in Virtual Agent. This is consistently reproducible.
Virtual Agent PRB1922860	Auto-chat with September agentic pipeline has issue with follow-ups	There's a difference in behavior with the new September agentic pipeline when compared to the July pipeline. With the older pipeline, the auto-chat asks follow-ups for several turns until the objective is satisfied.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
		With the new pipeline, it often stops after a few queries, even if the response doesn't satisfy the objective. This is causing scores to decline.	
Virtual Agent PRB1923219	The live agent conversation banner stays on 'Cancel request' even after the user has canceled the request	On ending a live agent conversation, users get an empty skill picker topic and the client is able to understand that there's a new message coming in and ends the spinner display. However, no such message comes in and users are stuck in the routing to the live agent spinner.	**1.** Navigate to Dynamic Window. **2.** Type and connect to a live agent. **3.** From the user side, select **Cancel**. Expected behavior: The chat is canceled and the banner changes to the requested query title. Actual behavior: When the requester selects the **Cancel** button, the original created work item is canceled but 'routing to live agent' won't disappear from the chat window.
Virtual Agent PRB1924015	There's a missing chunk during the AmazonBedrockStream process	There are some missing chunks when the build agent tries to create an app and provides any instructions to the Amazon Bedrock in stream mode. Because of this, the subsequent request fails.	
Virtual Agent PRB1925332	Processing messages APIs are slow	The processing messages APIs take more than 400 milliseconds.	**1.** Create a topic. **2.** Add the following statements in it: vaSystem.sendProcessingMessageDirectly('testing') and vaSystem.updateDynamicProgressMessage('COMPLET Observe that both APIs take more than 400 milliseconds, approximately.
Virtual Agent PRB1925501	Default context profile 'Default Experience for Now Assist' is missing a guardian message	The context profile that was set up doesn't contain a guardian message, and when attempting to get it from the default context profile which also doesn't have a guardian message, no message appears.	**1.** Set up a context profile without a guardian message. **2.** Set up an assistant with the context profile setup in Step 1. **3.** Open Now Assist Virtual Agent (NAVA). **4.** Enter something that is restrictive so it goes through the guardian flow.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: RAG is failing with attached error.
Virtual Agent PRB1931090	A conversation gets stuck when Planner 1 fails an action with 'Unknown finish type'	If 'ITSM incident resolution agent' can't find the resources it needs, it gives a fallback response and returns control to Planner 1. Planner 1 gives a reply but this is never shown to user and control never returns to user in chat. It's stuck on 'formulating a final response'.	**1.** Navigate to an instance. **2.** Query 'create a resolution plan for INC0000055'. **3.** An ITSM incident resolution agent can't find similar KBs so it gives a fallback message. Expected behavior: Planner 1 returns control to the user and possibly displays a 'if you need further assistance' message. Actual behavior: It's stuck forever with a spinning wheel 'formulating a final response'.
Virtual Agent PRB1931649	The mid-topic switch doesn't work in full agentic mode	The user can't return to the previous topic. Instead, the message 'Sorry, there was a problem on my side' appears.	**1.** Navigate to /sp. **2.** Query 'I want to order coffee'. **3.** Start the topic, then in mid-topic query: 'I actually want Miro access.' **4.** Select the **Continue request: Order Coffee** card. Expected behavior: The user is able to go back to the order coffee topic. Actual behavior: The user receives the message 'Sorry, there was a problem on my side'.
Virtual Agent PRB1931987	The **Search** button doesn't show up on DW	On a portal with DW enabled, the **Search** button doesn't appear next to the feedback icons.	**1.** Navigate to a portal with DW enabled. **2.** Enter 'What is spam?' Expected behavior: The **Search** button appears next to the feedback icons. Actual behavior: The **Search** button doesn't appear.
Virtual Agent PRB1932193	An auto-evaluation run is stuck on 'In progress' when the language is set to Japanese	The evaluation run is stuck on 'In progress' even though the metric result and batch result has completed.	**1.** Install the Japanese translation app. **2.** Set up the Azure OpenAI connection/ endpoint. **3.** Navigate to **sys_properties**. **4.** Set the 'glide.sys.language' value as 'ja'.

Problem	Short description	Description	Steps to reproduce
			Notice that the conversation errors out mid-way. Scenario 2: 1. Start a conversation from DW. 2. Search for any catalog. 3. Attempt to execute the catalog from the Search Result. Notice that the conversation errors. Scenario 3: 1. Start a conversation from DW. 2. Search for any Virtual Agent topic. Notice that the conversation errors.
Virtual Agent PRB1933055	Race condition occurs in a full agentic instance	The response generation step doesn't occur when multiple responses arrive at the same time.	Fire a few of parallel LLM calls during the planner invocation. Notice that when multiple responses arrive approximately at the same time, the response generation never ends up getting fired because each parallel invocation thinks there are steps left.
Virtual Agent PRB1933102	Follow up search abruptly ends the conversation	When performing a second search immediately after the first search, the conversation ends but the search continues.	1. Search for a KB/catalog/topic. 2. Search for another KB/Catalog/topic after getting the response. Expected behavior: The user gets a response related to the search from step 2. Actual behavior: The conversation ends and then the search continues.
Virtual Agent PRB1933142	Language detection isn't being honored	In the sys_generative_ai_log, the Unified Planner capability doesn't honor language detection. Also, in one_api_service_plan_feature_invocation, the Unified Planner was not invoked with any of the language flags.	1. Open an instance with language detection turned on. 2. Navigate to the SP page. 3. In chat bot, enter the utterance '¿Qué son las leguminosas?' Observe that the transition message is in English. 4. Navigate to sys_generative_ai_log and look at the Unified Planner capability.

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1933716	Stacked messages appear during websearch		1. Navigate to /esc. 2. Enable websearch by selecting the **Globe** icon. 3. Query 'Who is the president of the US?' Expected behavior: No stacked messages are shown. Actual behavior: Stacked messages are shown.
Virtual Agent PRB1933783	'Found 10 documents' message shows in web search mode	The 'Found 10 documents' message is irrelevant in web search mode.	1. Open /esc. 2. Enable Web Search mode. 3. Enter, 'What is the weather today.' Notice the 'Found 10 documents message'.
Virtual Agent PRB1933907	Only the LTM Identify memories capability is called when dynamic translation is turned on		1. On the home page, navigate to **Preferences** > **Language & Region**. 2. Select the language 'Francais (Canada)'. 3. Navigate to /esc. 4. Launch DW. 5. Enter a French Canadian query. For example, enter 'vérification du solde des vacances' (holiday balance check). Expected behavior: Agentic capabilities are called, such as Unified Planner, Planner 2 along with TexttoResult, and BGE Reranker. Actual behavior: Only the LTM Identify memories capability is getting called. This issue blocks fr-CA model quality evaluations with dynamic translation turned on.
Virtual Agent PRB1934004	Agents and use cases aren't getting discovered when giving the utterance as 'Resolve an incident'	Agents should be discovered and show to the user, and should be picked up automatically to begin execution.	1. Navigate to the instance. 2. Open NAP. 3. Give the utterance, 'How to resolve an incident'.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1934294	The ticket status agent is not being discovered	The ticket status agent doesn't run; instead, the message 'sorry there was a problem on my side' appears.	**1.** Navigate to /esc **2.** Query 'Check IT ticket status'. Expected behavior: The ticket status agent runs. Actual behavior: The message 'sorry there was a problem on my side' appears.
Virtual Agent PRB1934342	Markdown content does not render as a rich text output	The server has a logic to determine the output message type. When the message content contains an HTML tag, it's treated as HTML output.	**1.** Create a topic. **2.** Add rich text response node. **3.** Use the string in engineering details as the rich text content. **4.** Run the topic. Notice that the content is displayed as plain text instead of markdown.
Virtual Agent PRB1934578	Agents selected by planner 1 are not always passed to planner 2	When the user runs a certain query, there is no answer from planner 2, even though planner 1 consistently picks two agents.	**1.** Navigate to /esc. **2.** Query 'As a ServiceNow sales person, help me prepare for a customer meeting where I can pitch to the CIO on why they should upgrade from ITSM Pro to ITSM Pro Plus.' Observe that there is no answer by planner 2, but planner 1 consistently picks two agents.
Virtual Agent PRB1934685	AI Agent (AIA) 'Unified Planner Quick' and 'Unified Planner Prompt' instructions contain specific names such as ServiceNow		**1.** Navigate to **sys_generative_ai_log_list.do**. **2.** Open one of the Unified Planner Quick or Unified Planner Generative AI log records. Expected behavior: AIA Unified Planner for all the models don't to have specific company names in its prompt template. Actual behavior: AIA Unified Planner for all the models have specific names such as ServiceNow.
Virtual Agent PRB1934741	NASS doesn't respond correctly when entering initial utterances	When initially entering an utterance from the **Input search** field, the user receives the message, 'Hello! How can I assist you with	**1.** Set up NASS on an instance. **2.** Navigate to a portal with NASS. Notice that this shouldn't be in full-page experience.

Problem	Short description	Description	Steps to reproduce
	from the **Input search** field	ServiceNow today?' instead of a response to answer the question in the utterance.	**3.** Enter in the **Input search** field, 'What is the definition of spam?'. Notice that this should redirect to the full-page experience. Expected behavior: The user receives a response to answer 'What is the definition of spam?'. Actual behavior: The message is displayed, 'Hello! How can I assist you with ServiceNow today?'.
Virtual Agent PRB1934761	The conversation doesn't end after the completion of topic discovery and execution on standard chat	The conversation doesn't end after execution and the input text area remains open. This occurs when the topic is executed via discovery, but it works correctly via topic picker.	**1.** Navigate to a NAVA portal with standard chat enabled. **2.** Execute a topic such as 'order coffee' by discovery instead of the topic picker. **3.** Finish the execution. Expected behavior: The conversation ends after execution. Actual behavior: The conversation doesn't end. The input text area remains open. However, the conversation ends correctly when the topic is executed via topic picker.
Virtual Agent PRB1934818	Multi-intent query gets an 'Answer from history' response that doesn't reflect	The Virtual Agent (VA) ends the execution after answering the first part of the multi-intent query.	**1.** Enter 'What is spam?' **2.** On getting the response, enter 'First, tell me what is spam? Then, help me order a coffee'. Expected behavior: The VA answers the first part from memory, then proceeds to execute the order coffee skill. Actual behavior: The VA ends the execution after answering the first part.
Virtual Agent PRB1934820	Multi-intent query gets stuck in NAVA	After answering the first part of a multi-intent query, NAVA displays the 'Thank you for chatting' message. It tries to execute the second part, but gets stuck generating an answer.	**1.** Navigate to /esc. **2.** Navigate to NAVA. **3.** Enter 'what is spam and order a loaner laptop'. Observe that NAVA gives a response for spam, then displays the 'Thank you for chatting' message. It tries to execute the

			second part, but gets stuck generating an answer.
Virtual Agent PRB1935109	The catalog name isn't displayed on 'Continue request'	This issue only occurs in a previous Now Assist Virtual Agent (NAVA) version.	**1.** Start a conversation from with a previous NAVA version. **2.** Execute any topic. **3.** Enter 'I need a standard laptop' mid-topic. Notice that the 'Continue request' control shows the previous topic instead of the catalog name.
Virtual Agent PRB1935143	Malformed JSON fixer isn't handled in the API	The new API 'Dynamic Capability Executor' isn't handling the malformed JSON fixer.	
Virtual Agent PRB1935215	Java implementation of fully agentic Virtual Agent	This is a product update.	
Virtual Agent PRB1935791	A dynamically changing script unnecessarily eats up space in the sys_expression cache		**1.** Set up NAVA. **2.** Run a load test for 1 hour (agent use case). **3.** Check the heap memory during the run where more than 500MB is the expression cache.
Virtual Agent PRB1935944	Post chat survey results are not stored in assessment instance table	There should be a record of the feedback asmt_assessment_instance given in the post chat survey. However, there is no feedback given by the user in the post chat survey is stored.	
Virtual Agent PRB1936166	Add scriptable API in VASystemObject to fetch user preferences	vaSystem.get UserPreferences() should return LTM memories of the user which have categories that are linked to the context_profile of the conversation.	
Virtual Agent	Add scriptable API in	This is a product update.

Problem	Short description	Description	Steps to reproduce
PRB1936171	VASystemObject to fetch user preferences		
Virtual Agent PRB1936344	Web search isn't working in full agentic mode		**1.** Navigate to **/esc** or **/sp**. **2.** Attempt any query on web search. Notice the error message thrown, 'Sorry, there was a problem on my side trying to complete this request. Try asking again later.'
Virtual Agent PRB1936780	Add the ability to send top n skills in Planner1 for quick skill discovery		
Virtual Agent PRB1936820	Lock exceptions are noticed for Now Assist Portal (NAP) and NAVA		**1.** Set up the latest ynowassiststable instance for NAP/NAVA. **2.** Execute load tests for any use case of Virtual Agent. Notice the exceptions are logged in the log.
Virtual Agent PRB1936882	A follow-up question is executed twice after coming from portal		**1.** Open an instance with October Store app versions and Dynamic Window enabled. **2.** Search for 'what is cookie' in Portal. **3.** Wait for the response to load. **4.** Select **Ask a follow-up**. **5.** Wait for the chat to load. **6.** Search for 'how to block them?'. **7.** Wait for the response to load. Notice the response is displayed twice for the follow-up question. The GenAI log has double entries for that call as well.
Virtual Agent PRB1936985	A conversation is stuck in 'thinking' after web search searches and reaching web search fallback		**1.** Navigate to Service Portal. **2.** Start a web search by selecting the **Globe** icon. **3.** Query 'who is the president of the US'. **4.** End the web search. **5.** Query: 'what is a cookie'.

Problem	Short description	Description	Steps to reproduce
			6. Query: 'what is the capital of Texas and what is the weather like there?'. 7. Enter web search fallback. 8. After the fallback message is received, it says 'All done! Is there anything else I can help you with?'. Reply with 'No thank you'. Expected behavior: The conversation should end. Actual behavior: Virtual Agent is stuck at 'Thinking'.
Virtual Agent PRB1936987	One issue is found with a synthesized response in NAVA when dynamic translation is on		1. Log in with a Spanish user. 2. Navigate to the esc portal. 3. Search for 'Pedir Cafe' in portal. 4. Start the 'Order coffee' topic in Spanish. 5. Once the results come again, search for 'Necesito ayuda para crear incidente' in the portal. 6. Verify that the MID topic message is in Spanish. Notice that it is in English, which is incorrect.
Virtual Agent PRB1937454	Catalog and skill execution in CEA gets stuck		1. Navigate to CEA. 2. Search for the topic/catalog 'What is spam' 'I want Miro access'. 3. Start topic/skill. Expected behavior: Skills/topics start and execution is completed. Actual behavior: Skills and topics are stuck at 'thinking'.
Virtual Agent PRB1937589	Abnormal GAIC Async submission duration	SkillDetailsCache is reclaimed and cache building can be as high as 3.5s.	
Virtual Agent	AIA ResponseGeneration scripts aren't cached	When invoking the following scripts, they're currently invoked as 'dynamic'

Problem	Short description	Description	Steps to reproduce
PRB1937597		and hence not cached: 'AIAResponseGenerator', 'AISWebSearchCallbackWrapper', and 'AISPlanner2ResponseHandler'. They should be invoked as simple scripts and pass the necessary variables to evaluate them so that they're cached properly.	
Virtual Agent PRB1937694	Web search fallback isn't working		1. Set up a ynowassistable instance with the slack:6.0.1 SNAPSHOT installed. 2. Connect the slack to the assistant. 3. Open the slack and type 'What is spam?'. 4. When the results are shown, type 'I am not happy'. 5. When the fallback is shown, select **Web search**. Notice that the same fallback options are repeated.
Virtual Agent PRB1938022	AI Agent (AIA) Unified Planner 1 is taking up to 1.5 to 2 seconds in the Gen AI log with a single user.	The Hybrid queue takes up to 500 ms.	
Virtual Agent PRB1938273	Multi-intent utterances are not working in Now Assist panel (NAP)	This issue was observed when using Azure and Gemini. Workflows are available for example both utterances, and individually both utterances are work as expected.	Enter the utterance 'Book a flight and order coffee'. Notice that the first workflow completed for both Azure and Gemini, but general react responses occur instead of triggering the next flow in Azure, and a message occurs that the workflow can't proceed in Gemini.
Virtual Agent PRB1938620	The **Go to search results** button isn't visible in Dynamic Window (DW)	The **Go to search results** button isn't visible for chat-to-search transition. It should be visible, as this functionality worked in the previous release.

Overview

Zurich Patch 1 includes 514 problem fixes in various categories. The chart below shows the top 10 problem categories included in this patch.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Security-related fixes

Zurich Patch 1 includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Zurich Patch 1, refer to KB246342.

Changes in Zurich Patch 1

Create an endpoint for clients to access the instance

Token FormatFormat of the token to generate. The format determines the structure of a token and the information it includes.

Subject ClaimField in the User (sys_user) table that's used to populate the value of the subject (sub) claim of a JWT token. The sub claim is a piece of information that identifies the subject, or user, of the JWT token. This field only applies if the **Token Format** is JWT.

Create an OAuth JWT API endpoint for external clients (machine to machine integration)

Token FormatFormat of the token to generate. The format determines the structure of a token and the information it includes.

Subject ClaimField in the User (sys_user) table that's used to populate the value of the subject (sub) claim of a JWT token. The sub claim is a piece of information that identifies the subject, or user, of the JWT token. This field only applies if the **Token Format** is JWT.

QueryRangeACLAuditor

This patch includes the May Maintenance update script in the form of a script include (QueryRangeACLAuditor). This script is not triggered

automatically and must be run after a patch upgrade. More details on running the QueryRangeACLAuditor and its functionality can be found in KB2046494.

Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

Problem	Short description	Description	Steps to reproduce
Application Manager PRB1907408	A rollback blocking the install/upgrade for non-global scope users in a domain-separated instance	Non-global domain users have been blocked from being able to install/upgrade on domain-separated instances. There is now a fix to allow this behavior and hence this code change made on App Manager can now be rolled back.	
CMDB Query Builder PRB1910646	A large query from Query Builder may lead to excessive memory utilization on a server	A large query from the Query Builder module (involving >200 union of cmdb and cmdb_rel_ci, or >100 unions of large tables) from an internal instance was seen to have caused a large spike in memory utilization on a database server, causing degradation/ performance impact.	
Database Indexes PRB1901971 KB2206973	A missing index on the 'sys_id' column of the 'cmdb_qb_result_base' table causes a replication lag when the table size is large	The index on the 'sys_id' column of the 'cmdb_qb_result_base' table is missing on 14000+ instances. Due to this missing index, when 'Table Cleanup on Query Status' (qb_query_status) table is triggered on such instances, it can lead to replication lag issues, especially when large volumes of records need to be deleted from the qb_query_status table. This can lead to memory exhaustion,	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
		and records are not properly cleaned up.	
International ization Features PRB1911538 KB2266945	The 'Translated Text Synchronize' business rule has an infinite loop against v_plugin	The 'Translated Text Synchronize' business rule goes in an infinite loop. The virtual table v_plugin (or any virtual table) can refresh (delete and insert of records) the table upon query. Since v_plugin has translated fields, glideRecord insert tries to insert into the sys_translated_text table, which runs the 'Translated Text Synchronize' business rule. This business rule tries to query the owner table (for example, v_plugin again, which can trigger the refresh again and this goes on in an infinite loop). This is causing performance impact against many instances.	Refer to the listed KB article for details.
Record Watcher PRB1894715	ChecklistItem Responder is too slow to effectively scale with normal usage of the platform, leading to the record watcher queue becoming backlogged	A performance issue has been identified related to checkLitsItem responders and ACL (Access Control List) checks while creating checkListItems in Visual Task Board's cards. These issues caused delays, especially when tasks had more than 50 checklist items. This is primarily because getItemsByChecklistId() is invoked every time a checklist item is added or a card is moved between lanes. It loops through all items under a checklist and performs individual ACL evaluations (read/delete access).

Problem	Short description	Description	Steps to reproduce
		These checks result in: Repeated database lookups, redundant ACL checks for the same parent checklist, and slower response times, especially when checklist items exceed 50.	
Service Operations Workspace PRB1875164 KB2179535	Users aren't able to dot walk to fields in a Service Operations Workspace list	.	
UI Form Administration PRB1919041	An empty and read-only 'Template value' input field causes an error when saving a record: 'Cannot read properties of null (reading 'hasChildNodes')'	To reproduce, users need a record with an input field of type 'Template Value', that is empty and also read-only. The error shows when saving the record.	1. Log in as an admin. 2. Navigate to **All** > **incident.CONFIG**. 3. Add a field called **Test Template**. 4. Make it of the type 'Template Value' and save. 5. Select the 'Advanced' view and the 'Dependent Field' tab. 6. Select 'Use dependent field' and a field, such as 'Channel'. 7. Save the changes. 8. Navigate to **All** > **incident.CONFIG**. 9. Create a UI Policy that will always make the new template value field read-only. 10. Pick an existing incident. 11. Make a change to the **Short description** field and save. Expected behavior: The record should save without error. Actual behavior: There's an error: 'Cannot read properties of null (reading 'hasChildNodes')'.

Problem	Short description	Description	Steps to reproduce
Access Control PRB1923191	Prevent re-generating ACLs with a different sys_id after upgrade when ACL schema changes		
Activity Stream PRB1918613	Saving a form while comments and worknotes are in progress produces a warning pop-up that unsaved changes will be lost	A comment that should be posted is not posted and a warning dialog appears.	**1.** Provision an instance with the CSM (com.snc.customerservice.demo) plugin installed. **2.** Log in as a user with elevated privileges. **3.** Navigate to **CSM** > **All cases** and open any record. **4.** Select the **Compose** button and select **Compose Comments**. **5.** Copy and paste text and post the comments. **6.** Select the **Compose Comments** button again and type in comments. **7.** Minimize the comments window. **8.** Save the form. Expected behavior: The comment should post and a warning dialog should not appear. Actual behavior: A warning pop-up appears that says unsaved changes will be lost and the dialog is not closed.
Admin Center PRB1887565	The Core UI button group is missing from the left border	This issue is not coral-specific.	
Admin Center PRB1887577	There is no appropriate error message displayed when leaving the required 'Send to' empty for Adoption Blueprints	This issue occurs when using a screen reader, such as JAWS, to announce the 'Send to' label. The error message shouldn't be generic.	**1.** Launch an instance in a Chrome browser. **2.** Navigate to **Application navigator** > **Admin center**. **3.** Navigate to **Adoption blueprints** > **Adoption blueprints**. **4.** Select the **Share** button. **5.** Share the adoption blueprint page modal dialog.

Problem	Short description	Description	Steps to reproduce
			6. Turn the screen reader on. **7.** Check whether the label 'Send To' is announced when the focus is on respective form field. Expected behavior: An appropriate and specific error message is displayed when leaving the required **Send to** field empty, and the error message should be identifiable by the screen reader. The error message shouldn't be generic. Actual behavior: There isn't an appropriate error message displayed when leaving the required **Send to** empty, and the field label is highlighted in red.
Advanced Work Assignment PRB1909214	Updating an agent's presence as an integration user via the Agent API fails	The gr.canWrite() checks aren't working as expected when the API caller is an integration user. The integration user should be allowed to update the presence state. If the API caller has the awa_integration_user role, the request should go through. If the API caller doesn't have sufficient roles, the request should fail with a 500 error.	
Agent Chat PRB1908263	Safari audio issues in inactive tabs	Audio doesn't work properly when the user switches to an inactive tab.	
Agent Chat PRB1911696	Issues with displaying the list of 'Transfer to Agent' and 'Transfer to Queue' in third party chats	When an agent selects 'Transfer to Agent' and sets the searchTargetList payload for the first time, the target list doesn't show anything. It appears in second attempt. This issue also occurs for 'Transfer to Queue'.	**1.** Set up third party chat interactions. **2.** Start a conversation with a live agent.

Problem	Short description	Description	Steps to reproduce
Agent Chat PRB1922878	The agent chat's audio alert for inbox should stop playing when the agent has responded even if the alert's mp3 has not finished playing		1. Add a 20 or more seconds mp3 ring tone to the **System UI** > **Audio Files**. 2. Update the 'connect.notification.audio_alert' to the new mp3 name. 3. Sign in as an agent. 4. Ensure that the 'Inbox Audio Alerts' is turned on. 5. Have a customer request for a chat with a live agent. On the Agent Workspace, the newly added alert is played. 6. Accept the chat as the agent. Expected behavior: The alert should stop playing as the agent accepts the incoming chat. Actual behavior: The alert continues to play until the end of the ring tone file, regardless of if the agent has already picked up the call.
Agent Chat PRB1925414	There's issues with the 'Start Voice' API call in a domain-separated environment	There's issues with the 'Start Voice' API call in a domain-separated environment, both inbound and outbound calls and impersonation due to a guest user.	1. Initiate an inbound or outbound call that triggers the 'Start Voice Interaction' API in a domain-separated environment. 2. Observe that the API is logged under the user 'guest' (see Splunk logs) and an interaction record is created in the default domain instead of the user's domain. 3. Attempt to retrieve interaction using getInteractionRecord. See that it fails due to a domain mismatch.
AI Agents PRB1913281	Script fix takes longer than usual as it runs through the whole table	The fix script update tools execution columns takes 15 minutes to run during the plugin upgrade in some instances.	1. Install AI Agents v3 in Yokohama. 2. Upgrade the instance to Zurich. Notice that the plugin installation is taking a long time, in which the fix script AI Agents v4 update tools execution columns takes 15 minutes.

Problem	Short description	Description	Steps to reproduce
AI Search (Glide) PRB1921084	HR Plugin's sys_attachment ACL triggers AI Search late binding and performance delays	There's performance degradation of all AI search queries in the HR app due to unnecessary ACL evaluations for sys_attachment on sources that don't use or index attachments.	1. Enable force late binding for any data source. 2. Hit RagRetriverAPI with a limit of 2000. Expected behavior: The limit for AI Search service backend should be capped to 5000. Actual behavior: The limit for AI search service backend is 6000.
AI Search (Glide) PRB1921138	Sys_attachment ACLs shouldn't be evaluated when none of the indexed source attachments are turned on		1. Ensure that none of the indexed source attachments are turned on. 2. Observe if sys_attachment ACLs are still being evaluated.
AI Search (Glide) PRB1927991	sn_cs.VASystemObject.getAgentSkillsForAssistant took ~600 milliseconds to return	Object shouldn't take that much time to return.	
AI Search (Glide) PRB1928661	Advanced configuration needed for a performance improvement for Knowledge Graph (KG)		
AI Search External User Mapping API PRB1909140	An API endpoint which can delete users via a GlideQuery is required for XCC	The XCC Scoped App can't delete users one at a time. It needs a way to query a subset of users.	
AI Search External User Mapping API PRB1909142	When a user principal is written with the DirectUserImporter and one exists, the update fails	Stream is wrapped mistakenly during the serialization process from a list. Not all of the principal imports do a check for the DirectPrincipalImporter vs the ImportSetImporter. The streams should be closed effectively.	Attempt to send a new user principal that updates an existing user. Notice that updates to existing users fail, and removal of a user's group fails.

Problem	Short description	Description	Steps to reproduce
AI Search External User Mapping API PRB1909146	The 'External Content Ingestion JS' API must do an undefined check on 'sourceId'	Use the newly qualified 'External Content Ingestion' APIs for ingesting principals with 'sourceId'. If 'sourceId' is undefined, see that the principals insert or updates fail.	
AI Search External User Mapping API PRB1909153	Change SOURCE_ID_FIELD to reference connector_configuration_id instead of connector_configuration_id_s	The current licensing table process fails for some connectors because its querying the wrong field.	
AI Search External User Mapping API PRB1915715	Users get a 400 status code from calling a REST API: /api/now/v1/ais / external_content / user_mapping	Users get a 400 status code from calling a REST API, which should be 201. These following IT tests are failing: LegacyUserPrincipalImportRESTIT .multipleUsersWithAllFields successfully Inserted, LegacyUser PrincipalImport RESTIT. userWithOnly ExternalGroupField _successfullyInserted, LegacyUser PrincipalImport RESTIT. userWithOnly ExternalUserField _successfullyInserted.	
AI Search for Next Experience PRB1857879	Regular catalog item results should use a 'Pencil' icon for consistency		1. Open an AI Search (AIS)-enabled instance with AIS for global search. 2. Search for a catalog item that doesn't have a picture, like 'laptop'. Notice that the Genius Results use the 'Pencil' icon, but the regular results use the 'Book' outline. Notice that in Portal, both regular and Genius results use the 'Pencil' icon. The icon should be consistent between regular and Genius results for the same record.
AI Search for Next Experience	There's improper use for current.update

Problem	Short description	Description	Steps to reproduce
PRB1859890	n a business rule		
AI Search for Next Experience PRB1917747	Zing Migration Tool does not let users select unused SACs from base instance migration records	The tool only allows the user to select SACs currently used in a workspace. If one of the SACs from the base instance records is not being used in a workspace, it cannot be selected for migration in the tool.	
AI Search for Next Experience PRB1920468	Upgrade issues on sn-search-facet and sn-search-result-wrapper component	This issue was observed in Zurich. The component loading state is being used inside the facet component because without the component loading flag, the facets still working fine. Another issue occurring in this problem is the appearance of the **Hide filters** button, which was not visible in the previous release.	1. Hop in to the instance. 2. Navigate to the **CSM/FSM Configurable Workspace**. 3. Open a case record from the list. 4. Navigate to the contextual side panel on the right hand side. 5. Select on the magnifying glass icon at the top of the list. 6. Search something in the search bar. 7. Let the results generate. 8. Select the **Full view** search icon shown in the video and landing on the full view search page. 9. Notice that the facet component is in a loading state, when it should load as expected. 10. Return to the side panel. 11. Select on the filters below the search bar. Notice that it lands on a new page where the sn-search-facet component is rendered, and a **Hide filters** button appears on the top right which previously wasn't there.
AI Search PRB1861012	Sn-search-combobox sends exact match data broker execution	In Zurich, sn-search-combobox sends two databroker/exec calls to fetch if a search configuration has an exact match enabled. This occurs for 'SOW Incident' and 'HR Case' form direct loads.

Problem	Short description	Description	Steps to reproduce
Analyst Workbench PRB1914271	Workbench loads very slow		**1.** Mine a project with Ideal time analysis. **2.** Open the Analyst Workbench. Expected behavior: Workbench should load within 10 seconds. Actual behavior: Workbench loads very slow.
Analytics Data API PRB1915499	The funnel is displayed incorrectly in the workload saving widget	In the workload saving widget, the funnel chart appears visually distorted or collapsed. It doesn't represent the values clearly or it's too narrow to distinguish the sections properly.	**1.** Navigate to the AIOps 360° overview. **2.** Set the date filter to 'Last 3 months' or 'Last 6 months.' Expected behavior: The funnel chart renders proportional segments clearly showing auto-closed alerts, grouped alerts, events to significant alerts, and alert to incident compression. Actual behavior: The funnel chart appears visually incorrect (collapsed or distorted). It doesn't represent the values clearly or it's too narrow to distinguish the sections properly.
Analytics Export API PRB1916425	Selecting View All doesn't show the records in the Case Spot Light List Widget	Not all records are shown.	**1.** Log in to the configurable workspace (now/cwf/agent/home). **2.** Select the home page. **3.** Create a New dashboard with the 'New List Bundle Widget'. **4.** Navigate to the List Widget in 'Case Spotlight' tab for Customer Service Manager Dashboard and apply the filter. Notice that not all records are shown.
Appointment Booking PRB1923326	There's insufficient server-side input validation for 'Reschedule Appointment' in FSM appointment booking	A user was using actualStartDate and actualEndDate (display values) for rescheduling, but the system only validates startDateUTC and endDateUTC. Also, a REST validation parameter was removed during refactoring, causing validation not to trigger.

Problem	Short description	Description	Steps to reproduce
Asynchronous Message Bus (AMB) PRB1934812	App Tier CPU increased during loadsim test executions	App tier CPU on a servers increased by 4 times of the baseline numbers.	
Authentication PRB1916164	Authentication Agentic AI Agent controls	This is a product update.	
Authentication PRB1917269	Authentication Agentic AI agent controls	This is a product update.	
Automated Test Framework (ATF) PRB1918608	Low-level impersonated users don't capture front end metadata traces during ATF tests	sys_traced_metadata table does not have the sys_ui_action type associated.	1. Create an ATF test on some form (for example, the incident form). 2. For the first step, impersonate a user with a low-level role (not the roles ATF test designer, ATF WS designer, or ATF test admin). 3. Add a test step that selects a UI action on the form (for example, select **Resolve** on the incident form). Expected behavior: sys_traced_metadata table has 1 transaction related to the Select UI action step (needs to be the sys_ui_action metadata that was executed when the selection occurred). Actual behavior: sys_traced_metadata table does not have the sys_ui_action type associated with Select UI action step.
Automated Test Framework (ATF) PRB1920825	ATF becomes less responsive if a large number of cloud runner tests are queued	A test can take over a minute before it starts. This problem becomes more noticeable the more mutually exclusive tests are involved.	
Automated Test Framework (ATF)	Attempting to run a non-UI test in cloudrunner results in the individual	This also occurs if running through the CICD Run ATF Suites API and setting 'run in cloud' to true.	1. Create an on demand schedule with run in cloud = true. 2. Add a non-UI test suite. 3. Execute now.

Problem	Short description	Description	Steps to reproduce
PRB1924154	tests being 'Pending' forever		Expected behavior: The test suite runs. Actual behavior: The test suite is stuck in running, with the individual tests all pending.
Cache PRB1922845	File handlers are left open if a LazyInputStream is closed before being read by LargeContent DiskCache	If LazyInput#close is called before the internal StreamSupplier is opened by LazyInputStream#stream, the InputStream remains open until finalizers are calling during garbage collection. File handles are leaked when using LargeContentDiskCache and only call getMetadata() or contentExists(). Because the supplier is never invoked and the stream is never opened, closing the LazyInputStream doesn't close the underlying FileInputStream. These leaked file handles are only released when the garbage collector runs finalizers.	**1.** Start Glide. **2.** Run Java Process Status (JPS). **3.** Get the Process ID (PID) of the glide process. **4.** Run LSOF. **5.** Take note of the file descriptor entries. **6.** Flush the cache. **7.** Load the Service Operations Workspace home page. **8.** Repeat step 3 through step 6. Expected behavior: File descriptor entries is close to the original number. Actual behavior: Notice the 10's or 100's of additional file descriptor entries, indicating that the file handlers are left open.
Case and Knowledge Management for HR Service Delivery PRB1917146	Restricted caller access (RCAs) for Case look up Assistant		
Case and Knowledge Management for HR Service Delivery PRB1919807	Missing RCA permissions for the 'Create approval' subflow	This issue occurs in HR Service Delivery AI Agent Collection.

Problem	Short description	Description	Steps to reproduce
		table joins with local Glide table).	
Database Persistence - Data Scale PRB1891913	Reduce the number of 'SELECT 1' queries to trino	For any APIs that use DataFabricEngineManager#getValidatedDBI, a 'SELECT 1' query is being executed to get a 'validated' DBI. For example, the DataFabricEngingService#getSchemas API uses DataFabricEngineManager#getValidatedDBI.	
Database Persistence - Data Scale PRB1904021	The oauth token isn't stored per transaction, resulting in increased DB operations	When the user loads a list view, it executes at least two trino queries (count and data). At least two DB operations are related to the token grant. Instead, there should be one insert and one update, and the update should extend the token's expiry.	
Database Persistence - Data Scale PRB1918929	A primary DB pool is initialized before the DB layer has completed all of its prechecks	There was a change introduced which changed the way to resolve table alias. This method is called during Glide init, where its doing prechecks for the DB. However, because of the change, it ends up initializing the primary pool, even before all the DB layer checks are completed.	Start Glide, as it happens with every Glide start up.
Database Persistence - Data Scale PRB1919500	It takes a long time to recognize the 'DB is down' event	This applies to both PG and MariaDB when the primary database is brought down unexpectedly.	
Database Persistence - Data Scale PRB1921155	TableThrottler is broken	TableThrottler is broken due to the removal of lastLag and lastSleepFactor.

Problem	Short description	Description	Steps to reproduce
Database Persistence - Data Scale PRB1924142	There's a log, 'WARN', based on the property in DBAction#shouldUseGatewayAwareDBI	The logs are flooded unnecessarily.	
Database Persistence - Data Scale PRB1925421	ServiceIdentity records are missing for RaptorDB	All services in the instance topology need to have ServiceIdentity records to turn on some authentication between services.	Zboot any instance. Observe there's no records in ServiceIdentity or ServiceOld tables for RaptorDB, unlike other DB services.
Database Persistence - Data Scale PRB1929305	An acceptable table name for DB isn't used when fetching in-place updatable fields in Glide	There's an error. An example includes: 'com.glide.db.GlideSQLException: FAILED TRYING TO EXECUTE ON CONNECTION glide.2 (connpid=10848): SELECT attname, attoptions FROM pg_attribute WHERE attrelid = 'proposed_change_verification_log'::regclass AND attoptions @> ARRAY['in_place_update=true'] / * node-a, gs:glide.scheduler.worker.burst.0, tx:4ddaf200ff2322109178ffffffffff6e */ Syntax Error or Access Rule Violation detected by database (ERROR: relation 'proposed_change_verification_log' does not exist.'	Use the method DBInPlace UpdateUtils #getEnabledInPlace UpdateFields with a table name that is longer than 30 characters. This results in an exception that indicates the table doesn't exist.
Database Persistence PRB1904837	'Group By' performance is >30 seconds on foreign data connectors		
Database Persistence - WDF PRB1900435	An extra query to trino from worker occurs on the Core UI form opening in Windows	The query coming from schedule.worker is unusual and may cause huge data amounts received in some cases.	**1.** Configure WDF connection. **2.** Map a table. **3.** Open the form view of the table. **4.** Open the Trino UI dashboard (/datafabric_dashboard/ui/index.html).

Problem	Short description	Description	Steps to reproduce
	Foundation Driver (WDF)		Observe the three calls that are happening; two as a part of the UI transaction, one from schedule.worker.
Database Persistence - WDF PRB1929116	OAuth access token error occurs when data is fetched from a remote table to a physical table	The query tries to access a property from a remote table to physical table. The cypher is throws the error, 'OAuth access token is required for loopback connector type.'	
Data Fabric Table Glide Services PRB1903736	Column mapping page appears blank for some tables while using the local SN connector	This issue occurs only on certain tables.	1. Navigate to **Windows Driver Foundation UI Hub** > **Established Connections ServiceNow local instance**. 2. Search for sn_access_analyzer_request. 3. Select **Create Data fabric table**. 4. Add a label. 5. Select **Continue**. Expected behavior: Column mapping should display. Actual behavior: A blank page is displayed.
Data Fabric Table Glide Services PRB1905781	The connection details page displays an 'invalid JSON parse error'	The connection details page displays an 'invalid JSON parse error' when the glide.ui.i18n_test system property (MSG: translations) is enabled.	1. Navigate to sys_properties.list on a Zurich instance. 2. Locate the glide.ui.i18n_test property and set its value to true. 3. Open an existing, established connection record. Expected behavior: The connection details page should load correctly without any JSON parse errors, regardless of the glide.ui.i18n_test property's setting. Actual behavior: The connection details page displays an 'invalid JSON parse error.'
Data Fabric Table	df_log entries for exceptions sometimes don't have any	There may be exceptions that are thrown in the normal operation

Problem	Short description	Description	Steps to reproduce
Glide Services PRB1920491	log category specified and an event isn't fired	of configuring or operating Workflow Data Fabric (WDF) tables and sources and these exceptions are expected to be logged into the 'df_log' table. The WDF error logging framework is designed to translate these types of exceptions to some well-defined log category values. In some cases, this isn't happening. Additionally, when errors are thrown and a log category is known, a sysevent is fired so other components in WDF can react to the problems. This makes it harder for WDF admins to know what the problem is when they are looking at the 'df_log' table and also prevents some actions where they would be able to solve the problem by themselves without support assistance.	
Data Fabric Table Glide Services PRB1923285	Users can't create reference on columns of the type 'Int/ BigInt' from DataBricks	DataBricks integer columns are mapped as 'BIGINT' in Trino and eventually 'Long' in ServiceNow tables. When users try to change one of the column mapping to a reference to another DataBricks DF Table reference key of type 'Long', it throws the error 'Reference column 'c_nationkey' mapped to remote column 'c_nationkey' is using type longint which is not supported for reference columns'.	1. Create a DataBricks Connection and 2 DF tables (Customers and Nations). 2. On a user's table, select 'nation key' columns as a reference. 3. Try to select **Finish**. It throws an error: 'Reference column 'c_nationkey' mapped to remote column 'c_nationkey' is using type longint which is not supported for reference columns'.

Problem	Short description	Description	Steps to reproduce
Data Visualizations PRB1896818	The X-axis values of the 'Featured Metric' graphs display with seconds instead of numeric values	For all the metrics connectors, the X-axis values of the 'Featured Metric' graphs display with seconds instead of numeric values. This also occurs for ACC-M after an upgrade from Xanadu to Zurich.	**1.** On a Xanadu instance, navigate to the 'Connector Instances List' page. **2.** Select **New**. **3.** Create connector instances of Zabbix metrics, Nagios metrics and Solarwinds metrics with the required details. **4.** Activate the connector instance. **5.** Navigate to 'Metric to CI' and verify that the Metric CI records of the particular source is created. **6.** Navigate to **SOW** > **List** > **CMDB** > **Servers**. **7.** Open the relevant CI and check the featured metrics graph and the values. **8.** Upgrade to the latest Zurich version. **9.** Repeat steps five through seven. Observe that the X-axis values of the 'Featured Metric' graphs display with seconds instead of numeric values.
Declarative Actions PRB1908370	Form layout item UI updates aren't applied at runtime unless it's added to a specific layout		**1.** Create a form action. **2.** Enable the action for all configurable experiences = true. **3.** Open the layout item that has been created. **4.** Update something. **5.** Open a 'Workspace' form. Observe that none of the form layout item changes are applied or appearing. **6.** Add the form layout item to a form layout. Observe that the changes now appear.
Declarative Actions PRB1914488	The ai-sparkle-icon doesn't animate when 'animate icon' is set to 'true'	This issue also occurs when setting it on the **Split** button, Related list actions, field decorator, layout items, and m2m layout items.	**1.** Navigate to a List Declarative Action. **2.** Set the **Icon** field to 'ai-sparkle-fill'. **3.** Notice the **Animate icon** checkbox appearing. **4.** Check the checkbox. **5.** Navigate to a list.

Problem	Short description	Description	Steps to reproduce
PRB1909682 KB2411091	due to the 'runCommand' being null	pattern 'Linux Server' sometimes fails on step '1.1 Get system info' where it runs 'uname -a'. The error generated is: 'Exception occurred. . Cannot invoke 'com.snc.sw. commands. RunCommand.exec (com.snc.sw. context. ExecutionContext, boolean, String, com.snc.sw.kb. lang.commands. ExecutionMode, String)' because 'runCommand' is null.' This results in the OS Version attribute on the Linux servers not being populated. The issue is only triggered intermittently and only on a Discovery schedule.	
Discovery PRB1915814	The user can't discover member accounts in SSM	The user can't discover the VMs associated with a member account via SSM. Instead, the user only discovers management account VMs.	1. Add AWS credentials for a management account in the Credentials table. 2. Make sure this account contains member accounts. 3. Run the AWS SSM VM schedule associated with this management. Expected behavior: The user discovers the VMs associated with the member accounts via SSM. Actual behavior: The user only discovers management account VMs.
Document Intelligence Unified Backend PRB1876011	Conversation hangs after a topic is selected	In the syslogs related to DocIntel, scheduled job errors occur.	1. Navigate to the Employee Service Center. 2. Enter the prompt, 'I need to borrow a loaner laptop for work by tomorrow'. Notice that the topic will be selected, and 'Starting 'Loaner Laptop'...' is displayed, but then gets stuck.

Problem	Short description	Description	Steps to reproduce
			Expected behavior: The tab selected on related records should be the list from where the **View All** button was selected on INC overview tab. Actual behavior: The tab selected on related records is the first list.
Form Templates PRB1909599 KB2479828	Templates are not updated	The Additional comments section is not filled in even though the Work Notes are filled in. The use of special characters for 'greater than' or 'less than' in the template code, specifically in the resolution notes section, causes the template code to break and the resolution notes to not be displayed.	Refer to the listed KB article for details.
Glide Server APIs PRB1921133	Users can't query guest voice agents due to a lack of impersonation ability in a scoped app	The AI Voice agent application makes a call to a platform API to retrieve guest or public voice agents. These are agents that return basic public data such as company hours, location, etc. These agents have an ACL for a guest user. However, the integration user can't impersonate a guest since the app isn't in a global scope.	Call into the voice agent app. Notice in the orchestrator that the public agents aren't queried correctly.
Health and Safety Core PRB1924486	There's an I10n warning against retrue-up		
Health and Safety Incident Management PRB1916809	The Injury illness 'Create' page is blank	This issue was observed in Zurich, but works in previous families.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
KB2324070			
Health and Safety Risk Management PRB1918530	The search function under Hazards in Health and Safety advanced in the Employee Service Center (ESC) is not working	This issue occurs for Health and Safety versions v10 and v11.	**1.** Navigate to ESC. **2.** Create Health and Safety advanced. **3.** Select **Hazards**. **4.** Input a Hazard name under the search bar. Expected behavior: The search function should work as expected under 'Hazards'. Actual behavior: A server error appears.
Health and Safety Risk Management PRB1921969	Under the Health and Safety Inspection survey result, the question order is incorrectly displayed in the NowAgent app	The question order should be displayed the same as the original survey.	
Help Center PRB1929400	Support dynamic guidance in help center	This is a product update.	
HR Service Delivery PRB1895321	RCAs are generated when triggering the **Generate Plan** button	The issue is applicable from both the platform and HR Agent Workspace.	**1.** Provision an instance with the following plugins installed: sn_hr_core, sn_hr_gen_ai - 11.0.0, sn_generative_ai - 11.1.0, sn_genai_platform - 9.1.0, sn_skill_builder - 6.0.0-snapshot, sn_nowassist_admin - 6.2.6, sn_aia - 5.1.4 , and sn_hr_ai_agents - 4.0.1-snapshot. **2.** Enable AI search. **3.** Move the HR case to a 'Ready' state. **4.** Verify that the **Generate Plan** button is available. **5.** Select the **Generate Plan** button. Expected behavior: RCAs shouldn't be created and the plan should get generated immediately without RCAs.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: RCAs are generated for all the HR services.
Instance Data Replication (IDR) PRB1915169	A seeding topic doesn't disappear post-seeding despite not existing in the topic inspector		
Integration Hub PRB1901076	Generative AI Controller (GAIC) fails to handle some streaming responses due to an unexpected format	Not all streaming responses are being returned by GAIC. Upon investigation, the issue was traced to a class in the flow processing code. This component currently supports only SSE or JSON data formats. However, some responses are returned in a different format, which causes the consumer to error out.	
Integration Hub PRB1922262	GEMINI tools break handleStream Message	Users see this issue when using GEMINI with the build agent and asking it to write code that contains an '||' OR operator. Users see this error in the logs: 'Exception in GoogleGeminiResponseHandler while reading content from data chunk: Unterminated string at character 620 of...'	
Integration Hub PRB1925160	Move WS Security signing capability to MID in SOAP step	This is a product update.	
Investigation Framework PRB1909548	The change request 'Checking conflicts' screen loads indefinitely in remedial	The 'Checking for conflicts' message appears indefinitely even though the remedial action is successful in the backend.	1. Set up an investigation tab via ACCF/ MECM. 2. Select any service or process to restart or end from the investigation tab.

Problem	Short description	Description	Steps to reproduce
			a. Table: sn_install_base_sold_product **b.** Filter: parent_sold_productISEMPTY **c.** Nest by: Parent Sold Product **6.** Check the Hierarchical for sold product record as an admin user. **7.** Impersonate a user. **8.** Check the widget data. Expected behavior: The record's hierarchical list is shown. Actual behavior: The record's data is shown as a flat list.
List Administration PRB1914557	Changes to filtered lists aren't saved	When the user edits a filtered list, the changes aren't saved temporarily and can't be accessed later from the 'Unified Nav.'	**1.** Create a filtered list and make changes to it. **2.** Navigate away from the filtered list. **3.** Returned to the 'Unified Nav' and accesses the filtered list. Observe that the list is no longer filtered in the same way.
List Administration PRB1915162	List column values have different font sizes in NS-Sonic-Workspace	This slows down users as they have to zoom in on forms. There's difficulty reading, especially in the 'list' view.	
List Controller PRB1907127	Some related list DA model fields are not available in related list controller	Related list model fields should have their values populated, but they don't.	**1.** Open **UI Builder** > **Lists Demo** > **Record list** bundle page. **2.** Configure the list controller as the following: **a.** Type: Related **b.** Table: CIs affected (task_ci) **c.** Related list parent table: Incident **3.** Open the page and inspect the action bar component, now-record-common-uiactionbar. **4.** In the console, type $0.daModel. Expected behavior: isParentNewRecord and isParentReadOnly are populated with boolean values.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: isParentNewRecord and isParentReadOnly are null.
List Filters PRB1911228	Assignment group in the list filter not populating correctly	When applying a filter on a list, not all the groups are showing up in the filter condition in the assignment groups.	
Metric Intelligence (Family) PRB1921270	Ignite does not support IPv6	Fixing the implementation to support IPv6.	
MID Server PRB1916650 KB2421892	Patterns on agent commands are randomly failing with allowlist errors	Collecting MSSQL DB details using ACC discovery fails to fetch DB details with an error message. The exception occurred when executing a command on Agent. The error occurs when processing the adhoc check request: 'command failed due to allow list exclusion: check command denied by the agent allow list. Context: Asset allow list empty, using agent config file allow list.'	
Mobile Platform PRB1904246	External content should be supported in standard search results	The user can't see the icon or select the URL without adding an admin.	
Mobile Platform PRB1909655	External content in standard search results should be supported	The full URL is truncated.	**1.** Log in to latest iOS/Android requestor 20.2 app. **2.** Search the home for a question. **3.** Check SharePoint search results. Expected behavior: It should redirect the user to a valid URL. Actual behavior: External content in standard search results redirects the user to an invalid URL.

Problem	Short description	Description	Steps to reproduce
Mobile Platform PRB1916140	Mobile Now Assist skill kit in product support	This is a product update.	
Mobile Platform PRB1916141	Attachment and external content for standard search results	This is a product update.	
Mobile Platform PRB1916148	Mobile NASS entry point update	This is a product update.	
Mobile Platform PRB1919819	An error occurs when returning standard search results that don't have attachments associated with them	This problem occurs with iOS and Android requestor 20.2.	1. Log in as an admin user. 2. Search for standard search results that don't have attachments associated with them (for example, iPhone). Expected behavior: Standard search results should return. Actual behavior: Error returning standard search results that do not have attachments associated with them.
Model Context Protocol Server PRB1923168	Add the 'MCP' scope to glide.services. rest.allowed_ services to allow the MCP Store app to use sys_service	glide.services. rest.allowed_ services is a static list of scopes that can use the sys_service using ServiceRESTMessage. 'sn_mcp_server=mcp-server' should be added to this list. This allows the scope sn_mcp_server to access the sys_service record mcp-server.	From a Store app, call var rm = new sn_internal_services.ServiceRESTMessage('mcp-server') and use rm to call the mcp-server exposed REST APIs. Excepted behavior: Users are able to call MCP server APIs. Actual behavior: Users are unable to call MCP server APIs.
Next Experience Unified Navigation PRB1926908	Both the polaris_header_logo theme asset and the coreUILogo image can be requested in a direct load due to a race condition	When getLogoSource is called initially for sn-polaris-header.view.js, the CoreUILogoSrc isn't defined. As a result, it falls back to get the logo from the theme asset. Later on, when the CoreUILogoSrc is defined, the request	1. Log in to an HR instance. 2. Navigate to a record page or homepage. 3. Notice the following requests: a. theme asset: 0850a525073220105fca5d1aead30038.assetx b. coreUILogo image: ccbd67c4408f4110f8775ad9518199da.iix

Problem	Short description	Description	Steps to reproduce
Playbook Experience PRB1920761	The default value of inputForm ControllerFieldItem and inputForm ControllerSections is an '[]'	Activity UIs that are making a copy of the default and removing the form bundle get an '[]' and it breaks the runtime of the computeFormProperties behavior. This makes DAs not load and other issues could appear.	1. Open the Playbook Activity UI Controller. 2. Navigate to the properties for inputFormControllerFieldItem and inputFormControllerSections. Expected behavior: Both's defaultValue should be '[]' or an empty string. Actual behavior: Both are set to the string of '[]'.
Playbooks (Family Channel) PRB1916240	Duplicating playbook with permissions referencing an activity does not copy over properly		1. Create a playbook. 2. Add a stage and create new record (incident table). 3. Fill out a trigger and parent record. 4. In the playbook permissions tab, reference the activity created. 5. Duplicate the playbook. Observe that the pill errors out.
Playbooks (Family Channel) PRB1917556 KB2461528	The user observes a 'No Playbook stages available' error in the Playbook tab	When creating an HR Lifecycle Events case with the Center of Excellence (COE): HR Lifecycle Events Case, and then moving the case to 'Ready' state, the Playbook tab displays 'No Playbook stages available' instead of showing the expected playbook cards in their respective lanes.	1. Navigate to HR agent workspace. 2. Create an LE case with COE: HR Lifecycle Events Case, HR service: New Hire Onboarding. 3. Move the LE case state to Ready. Expected behavior: Playbook cards are to be visible under playbook tab. Actual behavior: In Playbook tab, the user is not able to see any playbook cards. It is displaying 'No Playbook stages available' instead of playbook card.
Playbooks (Family Channel) PRB1918168	Record Generator does not enforce runtime permissions	An error should display saying that an action cannot occur, but the action occurs anyway,	1. Provision an instance with the Playbook Experience Demo plugin installed. 2. Open **Playbook Designer** > **Playbook Experience Demo**. 3. Auto-upgrade to schema version 3. 4. Impersonate a user with access to Playbook Experience Demo workspace but not access to read/ create on the interaction table.

Problem	Short description	Description	Steps to reproduce
Software Lifecycles (Family Channel) PRB1910582	There's a duplicate sys_choice for current_lifecycle_phase in sam_sw_product_lifecycle_report	The duplicate might be coming from the older field as they don't exist in that older field anymore.	
Survey Management PRB1918779	Users can't access survey-related functionality from within the Localization Workspace due to the restricted visibility of a key script	The script include LFSurveyProcessorScript is defined with the default access (private) scope. Since it's not accessible publicly, it prevents runtime access from external or scoped applications.	
System Scheduler PRB1920384	There's a missing sys_scheduler_memory_pressure_job_log table on an Oracle instance due to an SQLException in db-dumps		1. Create an instance with an Oracle database. 2. Open the list view for the sys_scheduler_memory_pressure_job_log table. Expected behavior: The table should list the records. Actual behavior: The table displays a 'not found' error due to a zboot error.
Template Management for Field Service PRB1920388	When accessing a work order template, $sm_templates can be slow and cause memory issues on the client-side (browser)	$sm_templates can be slow when accessing Work Order Template and cause memory issue on the client-side (browser)	1. Open https://[instance_name].service-now.com/$sm_templates.do ?sys_id=[template_sysid]. Notice it's slow if the templates have a relatively large number of the task templates. 2. If it loads eventually, load it multiple times. Notice that the page timeouts and becomes blank.
Third-party Risk Management PRB1918672	A TPRM industry fix script looks up a non-existent column	After removing the column from the table definition, the same column is still used by the fix script: fix_script_adding_tprm_industry.xml. During the upgrading,

Problem	Short description	Description	Steps to reproduce
		the fix script is looking for the non-existing column 'industry'. It can take 20+ hours to run the fix script.	
Tier 2 Storage Offload PRB1877226	Conflict on a field name when creating an offload rule	When configuring an offload rule, there's a conflict if a system field is set as an indexed field.	
Tier 2 Storage Offload PRB1889818	The default retry period for failed offloads is too low	The default retry period should be 6 hours.	1. Generate a record whose offload perpetually breaks. 2. Make it fail on offload with a 60 minute retry period. 3. Archive other records that would get offloaded by the same rule. Notice that the records never get offloaded.
Tier 2 Storage Offload PRB1893476	Tier 2 Index tables don't properly store DocumentID data	When creating a Tier 2 offload rule, the user is able to select DocumentID columns for indexing on the cidx_ table created to store the indexed data. Columns of DocumentID type are missing the 'Dependent Field', which impacts the navigation and readability of index tables. This results in no previews or quick links to the record on cidx table.	1. Create an archive and offload rule for sys_email. 2. Create or choose a sys_email record which references some other record in its 'instance' column. 3. Archive the record. 4. Observe that on the archive table, the link to the referenced record is preserve on the column. 5. Offload the record to tier 2. 6. Observe that the link is missing on the cidx_ar_sys_email table, and the data appears '(empty)'. 7. View the XML for the record on the cidx_ar_incident. 8. Observe that the sys_id is in the instance column. 9. Navigate to the **sys_dictionary** table. 10. Open the 'instance' column for cidx_ar_sys_email. 11. Select **Related links** > **Advanced view**. 12. Navigate to the 'Dependent Field' tab. 13. Notice that the **Dependent** Field isn't selected.

Problem	Short description	Description	Steps to reproduce
			14. Navigate to the **sys_dictionary** table. 15. Open the 'instance' column for ar_sys_email. Notice that there is a **Dependent** field selected.
Tier 2 Storage Offload PRB1897660	Change the sys_property glide.db.archive.offload.free_storage_max_gb value from 100GB default to 36T		
Transaction Management PRB1909722	Forked transactions close the async context immediately on an error	A few users have reported encountering a blank screen.	
Transaction Management PRB1913194	Unhandled Exceptions in GlideTransaction Processor may leak HTTPTransaction objects, causing memory issues		
Universal Task PRB1912572	UT agent is unable to add/ view checklist items	The UT is configured with task type 'Checklist' for UT agents.	1. Log in to the instance as an agent. 2. Open any HR case/Universal request. 3. Select**Create a universal task** UI action. 4. Fill the mandatory fields. 5. Set the task type as 'Checklist'. 6. **Save** the form. Expected behavior: The agent should be able to access the checklist items and can add/delete an item from the record. Actual behavior: The checklist items are not available to the agent.
Upgrade Center	Upgrading with parallel plugin loading causes Out of Memory	Plugins loaded during an upgrade may require the flushing of caches. The next time they

Problem	Short description	Description	Steps to reproduce
PRB1909306	(OOM) errors due to dense requests to flush caches	are accessed, these caches are reloaded from a database. When combined with the parallel loading of plugin (PPL), the density of requests to flush the caches is much higher, which stresses the system.	
Usage Analytics PRB1923117	Allow the MCP app to access query services	Enable the MCP app to securely query data from the Query Service for faster and more efficient insights.	1. Navigate to any instance. 2. Select any specific app scope or perf dashboard. 3. Create a script and try fetching MCP data using new sn_app_analytics. SNAnalytics QueryService().post. 4. Verify that this script fails due to a scope restriction error. Excepted behavior: Users are able to fetch MCP data. Actual behavior: Users are unable to fetch MCP data due to a scope restriction error.
UX Framework PRB1888918	List with filters isn't rendering as expected when the Chrome extension (Now link Manager) posts the full URL		1. Create a list with filters. 2. Copy the shareable URL. 3. Navigate to another list. 4. Attempt to open the filtered list URL in a new Chrome tab. Notice that the new tab is closed and the URL is posted to the matching Chrome tab (Workspace match), and the filters aren't applied and the entire list is rendered.
UX Framework PRB1901587	Intent Library changes cause a SEND_INTENT_FEEDBACK error due to no meta.generatorForFeedback	The NAP window eventually displays a message that reads: 'An error occurred while saving your app. Please check with your admin.' The following error can be observed in the browser console: 'IntentTranslatorBehavior: LIBRARY-INTENT-CHANNEL#SEND_INTENT_

Problem	Short description	Description	Steps to reproduce
		FEEDBACK action is missing generatorForFeedback from meta'.	
UX Framework PRB1903448	A UI Builder record page has a nodemap with 250 nodes which takes more than 15 seconds to load as per a WPT run		
UX Framework PRB1905564	Rendering of 'Incident overview' impact section cards and their content is delayed	Old layout values are persisted.	1. For any existing macroponent, check its layout bound values in UX Layout Bounds table. 2. Export that macroponent XML and make some changes to it. 3. After making the changes, import the XML. 4. Check the layout bound values again. Expected behavior: New layout bound values are reflected with respect to the changes made in the macroponent. Actual behavior: The Business Rule does not run when the user imports the XML/system upgrade/plugin upgrad, causing the old layout values to persist.
UX Framework PRB1909151	Bundle prefetched route icons	This is a product update.	
UX Framework PRB1912438	Redundant render calculation of subtree if the node is in suspend mode	When a node is in suspend mode, it will not be stamped into the DOM tree, but still build childrenContent of the suspended node in the view function regardless the mode.	1. Open Chrome dev tool. 2. Open 'renderMacroponentNode.js' in the source tab. 3. Add a conditional breakpoint. 4. Check the 'childrenContent' variable. Observe that it's built regardless of the mode.
UX Framework	The ui-core-bundle may perform better	The ui-core-bundle is large, but its size can be reduced by moving

Problem	Short description	Description	Steps to reproduce
PRB1915549	If the sn-ui-logger and the ui-analytics-bundle are moved to another bundle	the ui-analytics-bundle and the sn-ui-logger to another bundle. This may benefit the network load and the the CPU cycles for the repeat view (because of the script evaluation and script parsing time).	
UX Framework PRB1915794	Data doesn't display in the Teams module on the Zurich instance	Data doesn't display in the Teams module on the Zurich instance. For example, assignment groups may not appear.	
UX Framework PRB1915996	The client script added on 'macroponent ready' and 'macroponent property changed events' doesn't trigger	When the user creates a controller and adds a client script on 'macroponent ready' and 'macroponent property changed events,' the client script isn't executed.	
UX Framework PRB1916142	Intent library updates for Gen AI Canvas	This is a product update.	
UX Framework PRB1918618	Session tabs above the maxCachedPageCount stay in DOM		1. Open the Service Operations Workspace incident records list. 2. Open at least 7 record tabs. 3. Select one of the opened tabs. Expected behavior: There should be only 6 (1 active + 5 chrome_main.maxCachedPageCount) session tab content in the DOM, the rest of tabs should have their sn-canvas-screen #shadow-root nodes detached. Actual behavior: All 7 tabs are open and all their shadow-root nodes are stored in DOM.
UX Framework PRB1920715	UxExperienceURLConverter.convertToRouteToPayload doesn't support URLs	When the URL points to a UXF page that also has an encoded persisted state (__state__), the

Problem	Short description	Description	Steps to reproduce
			9. Start a chat as a guest through the $va-web-client-app.do. 10. Accept the chat as an agent. 11. Allow the guest requestor to type and send something. Expected behavior: Agent should see the type indicator when the guest is typing, and should see the message with the guest avatar when the message is sent. Actual behavior: A type indicator isn't shown and no new message is rendered until the screen re-rendered.
Virtual Agent PRB1905872	A new conversation with a skill created in sessionContext does not execute	A newly created conversation with a skill does not execute.	1. Load an instance and open devtools. 2. In the elements pane, find 'sn-polaris-layout'. 3. In the console, type 'allow pasting'. 4. Run a sys_id from sys_gen_ai_skill. Notice that the skills is not executed.
Virtual Agent PRB1906437	LTM Identify memories error out and conversation gets stuck	Conversation gets stuck in the GenAI logs. The user observes these errors: Cannot invoke 'java.util.Map.get(Object)' because 'originalResponse' is null for LTM Identify memories (Azure OpenAI Chat Completions).	
Virtual Agent PRB1907551	After invoking an abort action in an Agentic Virtual Agent Flow, the conversation breaks	The conversation gets stuck when the **Stop** button is selected during a query.	1. Provision an instance with an agentic flow that is executable via Virtual Agent. 2. Enter an utterance like 'help me resolve inc0000025' and select the **Stop** button while the flow is in progress. Observe that the conversation gets stuck.

Problem	Short description	Description	Steps to reproduce
		update and delete of the ACL given an id.	
Virtual Agent PRB1910141	Duplicate messages are seen after receiving multiple notifications in NAVA	This issue is observed in the standard chat experience.	1. Open a conversation in NAVA with the system admin. 2. Impersonate another user (Abraham Lincoln). 3. Update the HR case: HRC0001023 state multiple times with the Abraham Lincoln user. This triggers multiple notifications in Virtual Agent. 4. Impersonate the system admin user. 5. Navigate to the ESC portal. Observe the same message appearing in NAVA after all notifications have been received.
Virtual Agent PRB1910766	One extend APIs aren't honoring a timeout with Virtual Agent (VA)	Even though timeout is set to 20 seconds, executions aren't exceeding that and completed at over 20 seconds. There are quite a lot of Gen AI calls with more than 20 seconds duration from the conversations. In the last 7 days, there have been a total of 5079 Gen AI log records from conversations that took more than 20 seconds.	1. Set up Now Assist for platform and related apps. 2. Make sure Knowledge Graph is installed and enabled for VA QnA. 3. Ask a question involving a large amount of records to be returned like, 'give me all user details' or 'List all the incident details'. Expected behavior: VA conversations are shouldn't error out. Actual behavior: VA conversations are errored out.
Virtual Agent PRB1911623	Conversation doesn't continue when a guardrail is triggered in Now Assist Virtual Agent (NAVA)	After receiving the response from Guardian, the conversation should continue by providing options to the user 'dark roast' or 'medium roast' for the example scenario. When the user enters 'dark roast,' it kicks off the order coffee topic all over again.

			enabled. If the user selects the globe icon again, web search doesn't end.
Virtual Agent Web Client PRB1920026	Proactive trigger topics don't launch		**1.** Set up proactive triggers on the instance so there are topics that launch when selected. **2.** Navigate to the portal where proactive trigger is configured. **3.** Launch the associated topic when proactive trigger is received. Expected behavior: The topic should launch in Dispatcher Workspace. Actual behavior: The topic doesn't launch, and the user just sees the welcome message.
Virtual Agent Web Client PRB1920035	The 'VTT' icon isn't available in previous model of Now Assist Portal (NAP)	The issue occurs when the user switches from the new model to the previous model with VTT turned on.	**1.** Install any of the BU skills. **2.** Turn on NAP with VTT. **3.** Turn on the microphone from the browser preferences. **4.** Toggle 'on' accessibility settings. **5.** Select the **NAP icon**. **6.** Ensure the VTT icon is available in the new model. **7.** Change the model to old model (Self service modal dialog). **8.** Refresh the page. Expected behavior: The VTT icon should be available. Actual behavior: The VTT icon is not available in the old model of NAP when the user switches from the new model to old model with VTT enabled.
Virtual Agent Web Client PRB1921096	When an agent has a topic using the 'file upload' node, it triggers some odd UI in Web Client input		**1.** Navigate to an instance. **2.** Navigate to /esc portal. **3.** Enter: 'Summarize meeting into actionable items'. **4.** When it asks to upload a file, upload the attachment. Expected behavior: 'Executing Agent Meeting Action Item Agent' should be triggered by the utterance.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: The input field displays 'Processing...' and the uploading icons.
Virtual Agent Web Client PRB1921129	Citations for skills are still available once skill execution starts on Now Assist Portal (NAP)		**1.** Turn on Agentic for NAP. **2.** Navigate to NAP. **3.** Type 'summarize a record'. **4.** After skill execution starts, check the citation link. Expected behavior: The citation link is turned off and selecting it doesn't trigger any action. Actual behavior: The citation link is available to select and runs into an error if selected.
Virtual Agent Web Client PRB1922217	ServiceNow Chat.open isn't opening Portable Virtual Agent		**1.** Implement the 'ServiceNowChat Third Party' API. **2.** Call serviceNowChat.open(). Notice that the chat never opens.
Virtual Agent Web Client PRB1922858	A new chat is created for the same search results when a user selects 'Go to Search Results'	It shouldn't create a new conversation when selecting the search icon from the feedback panel.	**1.** Navigate to Dynamic Window (DW). **2.** Type 'I want dell XPS 13'. **3.** Navigate to the bottom of the results. **4.** Select the **Go to Search Results** icon. Expected behavior: A new chat shouldn't be created in DW. Actual behavior: A new chat is created for the same search.
Virtual Agent Web Client PRB1923459	Context variables aren't accessible in the enhanced chat	Context variables aren't accessible in the enhanced chat, whereas they are accessible in the standard chat using either 'vaContext.liveagent_' or 'vaVars.liveagent_'.	
Virtual Agent Web Client	Users get an empty message when asking for Abel Tuter's assets		**1.** Open a znowassiststable instance with September apps. **2.** Navigate to /esc. **3.** Query: 'what are able tuter's assets'.

Problem	Short description	Description	Steps to reproduce
PRB1924539			Expected behavior: Virtual Agent should return a list of Abel Tuter's assets. Actual behavior: Users get an empty message in Virtual Agent.
Virtual Agent Web Client PRB1925994	Engagement Messenger isn't loading chats after upgrading Yokohama	The chat box in Engagement Messenger is blank, and loads no content. The errors occurs, 'SecurityError: Failed to read a named property 'uxfIntentLibrary' from 'Window'.	**1.** Launch the Engagement Messenger. **2.** Select the chat box. **3.** Observe that the chat box is blank. **4.** Navigate to a Yokohama instance. **5.** Navigate to Agentic Portal in a separate browser tab, but don't attempt to log in. **6.** Open the dev console. **7.** Execute the script. **8.** Execute the code. **9.** Select the chat bubble that appears after the code finishes executing. Expected behavior: The chat loads with content. Actual behavior: The chat load is blank and a security error appears in console.
Virtual Agent Web Client PRB1927881	Virtual Agent topic options for dynamic choice input aren't displayed in Now Assist Portal (NAP)	For dynamic choice input, the options aren't appearing for the first time on NAP. If users enter a random string that isn't one of the expected options, it repeats the question and then displays the options on the second or third attempt.	
Virtual Agent Web Client PRB1928501	Context variables are not accessible in the enhanced chat	The context variables are not accessible in enhanced chat, but they are accessible in standard chat using either 'vaContext.liveagent_' or 'vaVars.liveagent_'.	
Workflow Studio PRB1844972	Files are missing from AI search indexes after	After installing NAFC 27.1.0 in Yokohama, files related to AI semantic search are skipped in the WFS

Problem	Short description	Description	Steps to reproduce
	installing NAFC 27.1.0	plugin progress and the records don't appear in the tables.	
Workflow Studio PRB1922333	A Workflow Studio upgrade message doesn't display for non-admins		1. Log in to an instance without the latest Workflow Studio version. 2. Navigate to Workflow Studio homepage. Expected behavior: The banner displays that a new version is available. Actual behavior: The banner doesn't display.
Workflow Studio PRB1922988	A banner message to install the latest PAD should be displayed on Workflow Studio	To inform users to install the latest PAD when the new Now Assist for Platform version is available, there should be a banner message in Workflow Studio advising them to upgrade PAD for the Agentic Playbook feature.	1. Navigate to a Zurich instance. 2. Install Workflow Studio. 3. Launch Workflow Studio. Expected behavior: There's an info banner message to install the latest PAD to get an Agentic Playbook feature. Actual behavior: No banner is available.
Work Order Management PRB1912592 KB2266119	There's an incorrect info message for work order tasks	Currently, the displayed info message is 'Task WOTXXXXXXX Closed successfully. Work Order (WOXXXXXXX) is also closed'. This should be 'Task WOTXXXXXXX Closed successfully.' since there's still another task open for the work order.	
Work Order Management PRB1914183	Google Maps API doesn't work when calculating travel time in Field Service Management when changing the system date format	.	
Work Order Management	Update the SMCoreConfig CacheManager.getSMConfig	This is a product update.

Problem	Short description	Description	Steps to reproduce
PRB1917364	API to make it backward compatible with latest SMConfigurationHelper code		
Work Order Management PRB1920024	Team Calendar isn't displaying events		1. Impersonate as a manager. 2. Create an event to make sure that an event is there. 3. Check the Team Calendar for events. The created event isn't displaying.
Work Order Management PRB1921026	'Status' field choices differ from those on the 'Work Order' form view when setting up a Work Order Task (WOT) template	When setting up a WOT template, the choices that appear for the Status [state] field differ from the choices that appear on the WO form view. Also, when setting up a WO template, choices don't appear for the 'Service Request Type' field.	1. Navigate to the list of Work Order Models [cmdb_workorder_product_model]. 2. Select the **GE ULRICH ASSEMBLY** model. Notice that under 'Request Information', 'Service Request Type' doesn't provide selections. Also, notice that under 'Task information', the 'Status' choices differ from the choices that are available on the WOT form view.
Work Order Management PRB1925821	A Dispatcher Workspace group filter displays no results when a wm_dispatcher persona accesses the workspace	Users with the 'wm_dispatcher' role were unable to query the 'dispatch_group' field on the 'sm_m2m_group_dependency' table due to a missing access.	1. Impersonate a user. 2. Log in to Dispatcher Workspace (now/cwf/agent/dispatch). 3. Select the 'Assignment group' filter. 4. Expected behavior: The 'Assignment group' filter should populate values correctly. 5. Actual behavior: Observe that there are no results even when they have assignment groups configured.

Problem	Short description	Description	Steps to reproduce
			15. Select **Publish**. 16. Create Plan 2 with the previous the steps, up to the maintenance items selection. 17. Do not select **Create Schedule**. 18. Attempt to copy the schedule. Notice that the previously created schedule does not appear.
Workspace App Shells PRB1912366	Empty white space is showing for the interaction type 'Phone' for the Voice Interaction Page		1. Navigate to the **CSM/FSM Configurable Workspace**. 2. Create new interaction with the type 'Phone' Expected behavior: The white space shouldn't show up. Actual behavior: The empty white space shows up.
Zero Copy Connectors (Glide) PRB1891523	The databoard isn't working for prod and sub prod glide instances		

Fixes included

Unless any exceptions are noted, you can safely upgrade to this release version from any of the versions listed below. These prior versions contain PRB fixes that are also included with this release. Be sure to upgrade to the latest listed patch that includes all of the PRB fixes you are interested in.

- Zurich security and notable fixes
- All other Zurich fixes

Zurich security and notable fixes

The Zurich release contains important problem fixes.

Zurich was released on July 31, 2025.

- 07-23-2025_1759
- glide-zurich-07-01-2025__patch0-07-15-2025

Important: For more information about how to upgrade an instance, see ServiceNow upgrades.

For more information about the release cycle, see the ServiceNow Release Cycle.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note: This ServiceNow AI Platform® major family release is now available in ServiceNow's Regulated Market environments. For more information about services available in isolated environments, see KB0743854.

For a downloadable, sortable version of the fixed problems in this release, click here.

Security-related fixes

Zurich includes fixes for security-related problems that affected certain ServiceNow® applications and the ServiceNow AI Platform®. We recommend that customers upgrade to this release for the most secure and up-to-date features. For more details on security problems fixed in Zurich, refer to KB2249737.

Notes for Zurich

QueryRangeACLAuditor

This patch includes the May Maintenance update script in the form of a script include (QueryRangeACLAuditor). This script is not triggered automatically and must be run after a patch upgrade. More details on running the QueryRangeACLAuditor and its functionality can be found in KB2046494.

Notable fixes

The following problems and their fixes are ordered by potential impact to customers, starting with the most significant fixes.

Problem	Short description	Description	Steps to reproduce
Access Control PRB1833782 KB1721153	There's slowness when loading forms with **TableChoice** fields related to the RecordFamilyResolver.archiveTableHasACLTerms code path	Accessing any form with a **TableChoice** field where the instance has more than 250 archive tables can result in slowness due to RecordFamilyResolver.archiveTableHasACLTerms code path and a change to CACHE_ARCHIVE_TABLE_HAS_ACL_TERMS in Xanadu.	Refer to the listed KB article for details.
Access Control PRB1840256	Excessive syslog logging from AccessTerm 'Slow ACL'	Excessive logging from AccessTerm 'Slow ACL' is detected in syslog shards.	
Access Control PRB1840787	itil role users receive an error on short description suggestions	itil role users observe several errors when selecting the **Suggestion** button on	**1.** Access a base Xanadu instance. **2.** Impersonate an itil user.

Problem	Short description	Description	Steps to reproduce
		short descriptions on incident records.	**3.** Navigate to **All** > **Incident** > **Create New**. **4.** Select the **Suggestion** button next to **Short description**. Observe errors regarding the 'sys_choice' table.
Access Control PRB1868511	Adding other roles to the 'Contains role' tab in the 'snc_internal' role causes unexpected behavior	Newly created users don't receive the 'snc_internal' role when logging in, or getting impersonated, for the first time.	**1.** Provision an instance with 'sn_dlir' installed. **2.** Add the 'sn_dlir.secure_file_download' role to the 'Contains role' related list in the 'snc_internal'. **3.** Create a new user. **4.** Impersonate or log in under the newly created user. Expected behavior: Roles can't be added to the 'Contains role' related list in the 'snc_internal', or there's a business role or another check that informs the user when they are doing it. Actual behavior: A newly created user doesn't receive 'snc_internal'. In node logs, users can observe: '*** WARNING*** RoleAccessHandler: User does not have the role...'
Action Bar Component PRB1840507	An incorrect action bar intermittently displays		**1.** Navigate to /now/cwf/agent/home. **2.** Impersonate a user. **3.** In the list, select **My cases** > **New**. **4.** Select **Accept UI Action**. Expected behavior: The action bar shouldn't change. Actual behavior: The action bar changes in a few seconds after the case is accepted.
Activity Stream Compose Component PRB1897434	The 'Email' tab in the Activity Stream in the CSM Configurable Workspace doesn't resize when the text is larger than	This issue is found in Yokohama, but works as expected in Xanadu.	**1.** Navigate to a Yokohama instance as an admin user. **2.** Navigate to the **Activity Stream** > **More** > **Email**. **3.** Select **Return past vertical limit**.

Problem	Short description	Description	Steps to reproduce
	the vertical limit		Expected behavior: The email text box auto-resizes vertically. Actual behavior: The email text box doesn't auto-resize.
Activity Stream PRB1830587	Activity Stream doesn't limit the size of journal fields	The maximum size of journal entry appears to be either 50Kb or 100Kb by default. UI16 has a 10MB limit on the total journal field size. Once this limit was reached it truncates every journal entry to 50K. The entry cap is 250 by default. The entry cap is 30 for attachments. The size cap + entry cap is what ensured no out of memory errors in UI16.	**1.** Create a script that creates a 10MB work note. This can be a 100 character string that is appended to the work note 100,000 times in a loop. **2.** Add 2-3 of these to a single incident. **3.** Request the incident in Service Operations Workspace (SOW). Expected behavior: The incident should load with these massive strings. Actual behavior: Chrome and Edge crash as the browser runs out of memory. **1.** Add 100 of the 10MB work notes from #1. **2.** Request the incident. Expected behavior: The incident should load in SOW. Actual behavior: The Glide server crashes with an out of memory error.
Activity Stream PRB1858894 KB2027692	Application Programming Interface (API), Now Platform, and GraphQL are slow due to the Table Cleaner being throttled causing heavy replication lag	API, Now Platform, and GraphQL calls are slow specifically because of the Table Cleaner on sys_activity shards. Using Instant Alter added an index, and as a result, all records were replicated with the load causing replication lag. When replication lag is detected, Table Cleaners are throttled, which can exacerbate the amount of data that is being replicated and cause timeouts. Timeouts are caused by the Table Cleaner running synchronously	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
		in the Activity Stream load request.	
Activity Stream PRB1860591	Work notes are presented as encrypted text within the 'Activity' section of the ServiceNow Workspace when the encryption configuration is active	There's column-level encryption enabled and configured for the **work_notes** field. When a user with a target role specified in the sys_platform_encryption_configuration record is posting worknotes in workspace, they are unable to see unencrypted text. Instead, they're seeing encrypted text. When the same user posts worknotes in the native view, the text isn't encrypted.	
Activity Stream PRB1870524	If user_id is in the form of a sys_id, then the user isn't displayed correctly in the activity stream	The sys_created_by can be a user_id or a sys_id or an email, so it guesses based on the format. If the user_id is copying the sys_id format, then this process doesn't work.	1. Create a user with a user_id in the format of a sys_id. 2. Give the user sufficient roles to view workspace. 3. Impersonate the user created. 4. Navigate to some record on workspace and add a comment or make a field change. Notice this user's user_id is displayed instead of the display name.
Activity Stream PRB1893483	No activity displays in UI16 when a blank journal event is added to the Activity Stream	After upgrading to Yokohama, some records display 'No Activity' on the platform view. A null pointer exception displays.	
Agent Chat PRB1862727	A 'Show audio' modal appears when an agent presence state is changed to 'Available' for Safari users	A user interaction is required on the page for the audio to work, especially in inactive tabs. This was enforced by a modal when the audioContext was detected to be suspended, which occurs when a new AudioContext is

Problem	Short description	Description	Steps to reproduce
		created in the page. Now, the modal appears for Safari whenever the presence changes in the inbox to 'Available' to avoid having users refresh the browser to see the modal.	
Agent Chat PRB1887118	The 'new message' sound and desktop notification aren't working in legacy workspace		1. As an agent, navigate to the legacy workspace with the url /workspace/agent. 2. As a requestor, start a chat. 3. After an agent accepts the work item, as a requestor, start sending some messages. Expected behavior: When desktop and sound notifications are turned on, an agent should hear the sound for a new message and receive desktop notifications for the new message. Actual behavior: There's no sound or desktop notification.
Agent Chat PRB1900981 KB2226265	Inbox audio is delayed when the 'Workspace' tab is inactive or out of focus before receiving the first work item	When the work item assigned, audio isn't heard. Audio is heard only after switching back to the workspace. The agent may not get notified at the time of assignment due to this issue, and the work item may expired by the time agent is back on the workspace tab.	Refer to the listed KB article for details.
Agile Development PRB1900463 KB2251764	Global search isn't working for certain records after upgrading to Yokohama	After upgrading to Yokohama, pre-fix for certain records, such as Release, Feature, Phase, got updated. This prevents the global search from working as expected. The new pre-fix records are searchable, but existing records created before the upgrade using	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
		the old prefix aren't searchable.	
AI Search Glide PRB1590070	Index events take a long time when there's a substantial amount of data in the sys_translated table	When indexing the **Translated** field from the sys_translated table, all the data for a particular table is cached at once. When there's a frequent update or insert to the sys_translated table, the rebuild cache takes an average of 5 seconds to 8 seconds per event.	**1.** Enable a language plugin. **2.** Index a record with a **Translated** field with a translation in the sys_translated table (e.g. sys_ui_list, title field) **3.** Navigate to **cache_inspect.do**. **4.** Observe that all data for the same table will be loaded into the private TS_TRANSLATED_MAP cache. **5.** Flush the cache. **6.** Reindex one record. Observe the cache was rebuilt with all data from that table.
AI Search PRB1823459	AI Search indexing 'Topic Path Translation' doesn't work for a non-system user preference language	Session users assigned as 'guest' with the sys_user_preference file 'name=user.language' and 'value=some_non_user_session_language' have topic paths indexed in this language. The set language isn't effective, which is the cause of incorrect translations.	**1.** Ensure sys_language has two active languages, **en** for English and **de** for Deutsch. **2.** Create an entry in the sys_user_preference table with the following values: ○ system = true ○ user = empty with language as 'de' **3.** Create the catalog item with translations for topic and topic path. Expected behavior: AI Search should index, and be able to search with the 'en' topic value. Actual behavior: AI Search indexes content with Deutsch translations for documents with both English and Deutsch languages, and the search for English fails.
AI Search PRB1824166	A translated reference field is indexed in a different language in a single record update instead of a full table index	The peekahead is using the same value for different langauges.	**1.** Enable i18n Spanish. **2.** Insert a KB record kb_knowledge_base=knowledge, language=es. **3.** Wait for incremental index and dump the document. **4.** Verify that kb_knowledge_base is in Spanish.

Problem	Short description	Description	Steps to reproduce
		Integration Hub, Service Catalog items, and workflows, may malfunction due to the absence of these critical records.	
AI Search PRB1837035 KB2187724	Catalog item access isn't evaluated correctly when there is service_portfolio in some cases		Refer to the listed KB article for details.
AI Search PRB1837962	When a query is performed in 'OR' mode, the pagination breaks	0 results are returned.	1. Change the property 'glide.ais.query.search_operator' to 'OR'. 2. Perform a search on Service Portal that returns more than 12 results. 3. Select the **Next page** arrow button. Observe that there's no matches.
AI Search PRB1841283	There's errors in logs during ingestion for users without GAIC or Semantic Search	If there's no semantic search configured, the log shouldn't be polluted with errors.	
AI Search PRB1843005	The text '(number) results for (keyword)' text is not translated when using AI Search	After installing a language plugin and switching the language to a non-English language, the text '(number) results for (keyword)' is not translated when using AI Search. This occurs when a keyword is misspelled when using AI Search.	1. Provision an instance with the 'Language' plugin and AI Search installed. 2. Log in to the instance. 3. Switch the language to non-English. 4. Open an Employee Service Center portal. 5. Search for any misspelled keyword. Expected behavior: The text '(number) results for (keyword)' text is translated to the non-English language. Actual behavior: The text '(number) results for (keyword)' text is seen in English and is not translated.
AI Search	The AI Search class can't	If the [sysevent] table isn't configured for table rotation, AI	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
PRB1844340 KB2084368	Handle a non-rotated table	Search can't process indexing events and an error is seen in the system logs.	
AI Search PRB1850631 KB1949808	The **Table** field for EVAM view configuration matching of a search record is always the parent table	With the new EVAM-lite implementation, there are 3 gaps in the logic for determining which view configuration to use for a given search result. 1. If a view configuration has a condition based on a field that isn't included in the list of table fields, that field won't be returned from AIS, and so the condition never matches. Even if the field is included on the 'Table Fields' list, if it's a field that only exists on a child table of the table the indexed source is based on, the field won't be returned from AIS and so the condition never matches. If the first view configuration for a particular table comes after the default/global view config, it is never used. Whereas, EVAM had a more nuanced selection process that would look for all view configuration that matched on the table before falling back to those for ancestor tables or the global/ default table.	1. Set the system property glide.search.evam .logger.enabled to true. 2. Open the Service Portal and search for 'new hire'. 3. Open the syslog. 4. Filter on 'Created'. 5. Notice there's a message that contains: '[SEARCH EVAM] SearchResultTemplateGenerator: Using View Config 633c3b5d53a 71010968a ddeeff7b1218 for Result with table sc_cat_item and sys_id 6690750 f4f7b4200086 eeed18110c761'. Expected behavior: Service Portal's EVAM Def'n has a view configuration called 'Catalog Search Results - Order Guides', which has a condition of 'sys_class_name = sc_cat_item_guide^EQ'. This is the view configuration that should be used, and the syslog entry should contain: '[SEARCH EVAM] SearchResultTemplateGenerator: Using View Config 44c37371 c32020108 25039b06 e40dd4b for Result with table sc_cat_item and sys_id 6690750 f4f7b4200086 eeed18110c761'. Actual behavior: The incorrect view config is being used. 633c3b5 d53a71010968 addeeff7b1218 is the sys_id of the view configuration called 'Catalog Search Results', which is the generic view configuration for catalog items, and doesn't have any conditions beyond table. But the 'New Hire' category item is an 'Order Guide', and there's an EVAM view configuration specifically for that.

Problem	Short description	Description	Steps to reproduce
AI Search PRB1862241	There's an error in the logs when using a catalog Genius Result	One generates every time that a user requests a Catalog Genius result when the mode is async.	**1.** Ensure Catalog Genius Results are enabled for a Service Portal (SP) search profile. **2.** Navigate to SP. **3.** Search for 'Miro'. Observe the error: '[SEARCH API] SearchCheckpointService: Unable to post checkpoint, Callback name missing: no thrown error'.
AI Search PRB1875775	Field-level permissions should only apply when building template props		**1.** As a user with elevated privileges, navigate to AIS-enabled Service Portal (SP) and search for 'new hire order'. **2.** Select the first regular result. Observe that the user is taken to the 'sc_cat_item_guide' portal page. **3.** Impersonate a non-admin user. **4.** Open SP and search 'new hire order'. **5.** Select the first regular result (should be the same result as Step 2). Expected behavior: The user is taken to the 'sc_cat_item' guide page. Actual behavior: The user is taken to the 'sc_cat_item' portal page.
AI Search PRB1885285 KB2182142	When Zing is the search engine for global search, data broker is still executed and pollutes the syslog	The underlying cause is that the composite data broker resource in the UI Builder app for the global search page is wired up to use the search term from the URL as an input, and so executes every time it changes after the initial search.	Refer to the listed KB article for details.
AI Search PRB1885594	AI Search attachment results aren't redirecting to the parent record	The issue is reproducible in Yokohama and Xanadu instances.	**1.** Log in to an instance. **2.** Navigate to the ESC portal. **3.** Search for 'Dental'. **4.** Select the doc result of the article. Notice that it's not redirected to the parent record. It's redirected to the

			sys_attachment.do? sys_id=undefined& searchterm=detail.
Analytics Data API PRB1845187 KB2238953	Drilling down on KPIs in a Performance Analytics dashboard produces an error 'no internet connection"'	Drilling down on any value redirects the user to the KPI details page with a 'No Internet connection' error.	Refer to the listed KB article for details.
API Usage Analytics Dashboard PRB1842140	API_INT Semaphore queue depth shows a negative value in stats.do misguiding analysis and troubleshooting	There are two problems. First, the count shouldn't go negative when any exception happens. Second, it shouldn't throw an exception, which ultimately drops the request on the floor and never responds to the browser.	
Application Install Engine PRB1846815	Admins users aren't able to repair/install all dependencies when domain separation is enabled	An issue was observed where a parent application (e.g., Now Assist For CSM) was installed successfully, even though its dependencies (e.g., sn_genai_platform) weren't installed during the process. This behavior is unexpected.	**1.** Open an instance where domain separation is enabled. **2.** Create an admin user in a different domain. **3.** Log in or impersonate as that admin user. **4.** Change the domain to global. **5.** Attempt to install a parent application with known dependencies. New dependencies aren't installed and there's domain related errors in plugin logs. **6.** Try to repair the same plugin. **7.** Verify that the new dependencies are still not installed and the domain related errors in plugin logs are still present. All the dependencies should be installed with the parent app.
Application Manager PRB1834952	The Service Bridge Base plugin doesn't automatically upgrade when	This issue occurs for users in a non-global domain or scope.

Problem	Short description	Description	Steps to reproduce
	the Service Bridge for Providers plugin is upgraded		
Appointment Booking PRB1894193	The scope of the Appointment Booking service's configuration was changed in Yokohama, which leads to a scope access issue	After upgrading to Yokohama from Washington, the value of the 'Availability' table changed from wu_appointment to empty in some Appointment Booking service configuration records.	
Approvals PRB1845668 KB1810362	Multi-Level approval skips steps due to race conditions	Overlapping transactions on the sc_req_item table cause race conditions allowing approval steps to be skipped.	Refer to the listed KB article for details.
Attachments to Records PRB1849752 KB1885864	There's an issue with archive table clean-up using the PurgeOrphanAttachments job	There's an issue that may result in the unintentional removal of records from the sys_attachment table under specific conditions. The issue may impact instances on Washington DC and later releases.	Refer to the listed KB article for details.
Audit History PRB1795159	Business rules aren't running on the 'Audit delete' table	The issue was reproduced in a Washington instance.	1. Create a business rule (BR) on the sys_audit_delete table and make it to execute before the insert. 2. Write a simple script gs.log to know the BR trigger. 3. Delete an entry from the cmdb_ci table so that it creates an entry in sys_audit_delete. Expected behavior: The BR triggers and creates a log. Actual behavior: The BR isn't triggering.
Authentication PRB1889955	The new banner menu of Yokohama refers to glide.multifactor.	This causes an issue if the sys_id has already been used by the instance.	1. Log in as an admin. 2. Turn on MFA, AA and MFA Context.

Problem	Short description	Description	Steps to reproduce
	enforcement. acknowledged by the sys_id instead of the property name		3. Set 'Role Based MFA' to a role like 'Admin'. 4. Set the glide.multifactor. enforcement. acknowledged property as false. 5. Set the property of SWP and MAX SWP as '30' and '90'. 6. Log in via an admin user who hasn't enforced MFA. 7. Navigate to an admin profile. 8. Select the **Acknowledge** link in the message. Expected behavior: Verify that the admin should be able to acknowledge the message and the glide.multifactor. enforcement. acknowledged property should be true now. Actual behavior: The **Acknowledgment** link does not work.
Banner Frame PRB1679019	UX Banner announcements appear for users with orphaned roles when they don't belong to the group needed to view the announcement	UX Banner announcements appear for the user even though they have an orphaned sys_user_has_role record and don't belong to the banner group.	1. Create a new group named 'banner group'. 2. Create a banner announcement. 3. Navigate to the **Show for** field. 4. Select **Users with specific role/ groups**. 5. Associate the banner group with the banner announcement. 6. Associate the banner announcement with the Unified Navigation configuration. 7. Create an orphaned record in sys_user_has_role. 8. Find a user with records in with the sys_user_has_role. 9. Open the sys_user_has_role records for that user. 10. Export as XML. 11. Change the following fields: a. Set 'inherited' to 'false'. b. Change the role sys_id to one that doesn't exist in the sys_user_role table. c. Change the 'role' display_value.

Problem	Short description	Description	Steps to reproduce
		the banner message is displayed constantly.	
Communities PRB1865845	Some characters are displayed as unicode in blog titles	When a blog article in posted in the Community portal, some characters are encoded in unicode and then are displayed without being decoded.	1. With the Communities plugin installed, set up a forum and put 'blog' in the 'Content type' related list. 2. Navigate to the Community portal. 3. Navigate to **Community** > **All forums**. 4. Select the created forum. 5. On the right-hand side menu, select **Post Content** > **Blog**. 6. In the blog title, input something like 'test漢字テストﾃｽﾄ７7'. 7. Input a description. 8. Select **Save as draft** or **Publish**. Observe that the title is now 'test漢字テストﾃｽﾄ７7'.
Condition Builder PRB1843987 KB2153113	Predicate Builder's 'Date Time' filter displays a JavaScript condition with quotation marks missing around the date parameter	Quotation marks should be surrounded by the condition '-->', causing an issue with the query.	Refer to the listed KB article for details.
Configuration Management Database (CMDB) PRB1830256	If eligible records are more than the batch size, certification audit results are duplicated for failed CIs	The checkTableAttributesAgainstTemplate method doesn't respect the current batch it is running in. It instead queries the entire CI class tables and logs the failed results.	1. Create more than 1000 records in CI tables, like cmdb_ci_linux_server or cmdb_ci_business_app. 2. Update any of the attributes, like cmdb_ci_linux_server.os_version or cmdb_ci_business_app.active_user_count, to a particular value for half of the records 3. Configure cert_audit where certification attributes match half the records updated in step 2. Use only 1 attribute to certify. 4. Run the audit. Expected behavior: The number of records in the cert_audit_results table shouldn't be more than one.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: The total_num_records/1000 +1 times the results get duplicated for failed results.
Configuration Management Database (CMDB) PRB1840516	When using an absolute value for a lifecycle stage, it moves to empty, but it accepts and saves a string value with a 'contains an' operator	On that policy form, the filter is using the **Lifecycle stage** reference field where the dictionary is configured to use 'reference key' = 'name'. The record lookup is done using the **Name** field instead of default 'sys_id'.	
Configuration Management Database (CMDB) PRB1893468	The 'Sync Managed By Group from CI Class' script action has an infinite loop edge case		
Configuration Management Database (CMDB) PRB1895685	If a CI's sys_mod_count value is empty, CMDB Health jobs become stuck	The platform allows the autoSysFields function to be used when inserting and updating CIs from a script. A script turns on or off the update to the fields sys_updated_by, sys_updated_on, sys_mod_count, sys_created_by, and sys_created_on. This is often used for manually updating field values on a record while leaving historical information unchanged. CMDB Health jobs becomes stuck if a CI's sys_mod_count value is empty due to being inserted like that.	
Content Management System PRB1880403	The CMS portal is corrupted after a Yokohama upgrade	It looks like there are CSS files for the portal that aren't loaded as expected.

Problem	Short description	Description	Steps to reproduce
Event Management PRB1838597 KB1743614	Event Rule changes can cause event_rule.update_events to block system events processing, causing a performance issue in the instance	When Event Rules are inserted or updated, an 'event_rule.update_events' system event is fired in the default events queue to re-check any event records not yet covered by any previously existing event rule. The script action 'Update event rules for empty events/ Update rules after deletion of ER' runs for the event, which processes batches of system events from the platform and other features. When an instance has a large number of em_event records matching the new rule criteria, this causes a long running transaction. Events can take several minutes to process, blocking the 'Events process 0' job of the app node, delaying the processing of other important events that should be processed in near real time.	1. Open an instance with Event Management installed. 2. Insert, update, or delete an Event Rule in which there will be a considerable number of existing em_event record that will match it.
Event Management PRB1840029	There's an out of memory error due to glide.db.DBLazyWriter	com.glide.db.DBLazyWriter causes an 'OutOfMemoryError: GC overhead limit exceeded' error.	
Event Management PRB1844087	SCOM Connector goes down sporadically and the configuration file content becomes blank	A SCOM Connector goes down with the following error: 'Error running SCOM client: The system cannot execute the specified program.SCOM connector failed. The system cannot execute the specified program'.

Problem	Short description	Description	Steps to reproduce
		duplicate key violation error is causing the flow context to terminate with an error when checked for errors during the OutputRepository.writeToDB call.	
Flow Engine PRB1874873 KB2042735	A deserialization issue occurs to flows when upgrading from Washington DC to Yokohama	Flows containing the 'Make a decision' logic don't resume and error out after upgrading to Yokohama. This is caused by a deserialization issue in Flow Engine V2, which prevents the flow from progressing.	Refer to the listed KB article for details.
Flow Engine PRB1881084	The CurrentContext Tracker reset scope and meta stack are in the wrong order	CurrentContextTracker attempts to clean up meta stack and script contexts after a flow execution. Both are reloaded in reverse to how they initially appeared when the flow starts. This happens because the ArrayDeque collection removes elements from the stack. The array from the queue is in the expected order (A, B, C, etc). When the elements are added back, the ArrayDeque adds elements at the front of the queue, so iterating from first to last on the list and pushing will result in a reversed stack. So the queue contains (C, B, A) instead of (A, B, C).	
Flow Engine PRB1888071 KB2153671	Deserialization issue with 'Make a decision'	When upgrading from a Washington DC to Yokohama instance, flow executions created with 'Decision' in both families don't resume and result in an error.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
Flows (Family Channel) PRB1774269	When a catalog item's flow has an 'Error' state set, the message 'Set current stage state to : [Error]' occurs upon submitting the item on the 'Request Summary' page	If a flow has the 'Error' state set, an item using that flow is submitted from portal and the error message, 'Set current stage state to : [Error]', occurs on the 'Request Summary' page.	1. Open any flow that has the 'Service catalog' trigger. 2. Add an 'Error' state within this flow. 3. Open portal. 4. Submit the item that uses this flow. Observe the message 'Set current stage state to : [Error]' on the Request Summary page; when the page is re-loaded, the message goes away.
Flows (Family Channel) PRB1816646	The update number on the record remains the same when it is updated by the subflow and parent flow in sequence, causing inconsistencies in SLA executions	When the subflow updates the trigger record, and parent flow updates the same trigger record, the update number on the trigger record remains the same. This impacts respective SLA executions on the record.	
Flows (Family Channel) PRB1834406	App installation deletes the base instance sys_complex_object 'FDCollection'	Deleting the flow doesn't remove the sys_complex_object record from the source instance, but the app installation removed the record from the target instance. Sys_complext_object isn't listed in the application file of the app, but appears in the payload of the sys_hub_flow record.	1. Navigate to any base instance. 2. Create a scoped app. 3. Create a flow (sys_hub_flow) with some actions, such as log. 4. Confirm the sys_id is being included in the flow. 5. Check the payload of the captured flow from sys_update_xml. 6. Delete the flow from the list view of sys_hub_flow. 7. Confirm the deletion is captured in sys_metadata_delete. 8. Published the scoped app to a repo or app store. 9. Install the app from another instance from the app store. Notice that after the installation, the base instance sys_complex_object removes a sys_id on the instance.

			Observe that the **Details** field is present.
Hermes (Family) PRB1834407 KB1818607	Reduce DB calls during initialization for Hermes		Refer to the listed KB article for details.
History Set PRB1844946 KB1923828	There's intermittent duplicate comments in an activity stream due to sys_email records	Some comments are duplicated due to the presence of sys_email records. This duplication occurs when a comment is added in a way that causes the incident's sys_updated_on timestamp to be one second earlier than the corresponding sys_journal_field record. If emails are triggered by the incident update, the loading of sys_email records within the related sys_history_set interferes with the **last_update_recorded** field in sys_history_set. This disruption ultimately results in the duplication of the comment whenever the next update to the incident occurs.	Refer to the listed KB article for details.
HR Service Delivery PRB1819942 KB1783588	HTML tags are seen in the **Description** field of an HR case	This issue occurs using a single method to populate both the rich **Description** field and the **Description** field.	Refer to the listed KB article for details.
HR Service Delivery PRB1830128	Quotes aren't correct in HTML in HR Workspace and Playbook after upgrading from	Special characters are rendered in an encoded format.

Problem	Short description	Description	Steps to reproduce
PRB1813597 KB1790767	after upgrading to Xanadu		
JVM at Scale PRB1810485	Memory remediator is killing transactions and restarting glide	Notice the log 'low.memory.remediation.restart No transactions were cancelled' are on standby nodes only.	
Knowledge Article Templates PRB1852356	Articles in the 'Published' state aren't changed to the 'Pending retirement' state when retired	Knowledge Base (KB) articles that have the retire policy set to 'Knowledge - Approval Retire' can't be changed to the state 'Pending review'. This problem is found in Yokohama.	1. Locate any KB that has the retire policy set to 'Knowledge - Approval Retire'. 2. Find any article in the 'Published' state within that KB. 3. Select **Retire action**. 4. Select **No** in the pop up dialog for the option to replace the current article with a new article. 5. Return to the article. Notice that the workflow state hasn't been updated yet.
Knowledge Article Templates PRB1855083	Toolbar options and plugins for the TinyMCE editor are missing in the dictionary attribute for the Knowledge **Article body** field	Options like A11yChecker, Clear formatting, Anchor, and others are missing.	1. Create or open any knowledge record. 2. Notice that some of the TinyMCE toolbar options are missing in **Article body** field.
Knowledge Management PRB1819563	Some keystrokes aren't recognized when typing in the **Post Comment** field of a knowledge article, resulting in typing errors	The issue is intermittent.	
Knowledge Management PRB1827639	Selecting a knowledge base from 'Explore our Knowledge	A URL with incorrect search results is returned when selecting a knowledge base from /esc?

Problem	Short description	Description	Steps to reproduce
	Bases' in a portal redirects to the incorrect URL	id=kb_home with AI Search enabled on the application 'Knowledge Management - Service Portal' version 1.0.0.	
Knowledge Management PRB1849608 KB1906766	Knowledge Management (KM) notifications are unable to be triggered	Email notifications aren't triggered for Knowledge Articles because some KM artifact records in the Knowledge Advance plugin are overridden by the Activity Subscription plugin. This occurs in Xanadu and Yokohama.	1. Select any Knowledge Base (KB) that is under subscription. 2. Publish any Knowledge Article from the KB. 3. Notice that the published article is not triggered to the subscriber in the KM subscription. 4. Attempt to trigger the published article by navigating to **Notification** > **Related list** > **Email log**. Notice that the notification is not getting triggered for 'KM Subscription: Article published'.
Language and Translations PRB1750563	The translation of notes is updated when installing the plugin sn_doc	The record sys_ui_message.list notes is updated and translated when installing the plugin sn_doc.	1. Provision an instance with the the plugin com.snc.i18n.japanese installed. 2. Open sys_ui_message.list. 3. Find the record by searching the following: a. Key: Notes b. Language = ja c. Message = メモ 4. Install the plugin sn_doc. Expected behavior: The record sys_ui_message.list isn't updated. Actual behavior: The record sys_ui_message.list is updated with the key, notes, and message values.
Language and Translations PRB1814149	'AND' isn't translated into Japanese in the list for Condition Builder	In Condition Builder, 'AND' is not translated in Japanese after upgrading from Washington DC to Xanadu.	1. Install Washington DC. 2. Enable the Japanese plugin. 3. Navigate to **incident.list**. 4. Switch the language to Japanese. 5. Select **Show/Hide** filter icon. Observe 'AND' is translated as 'および'.

Problem	Short description	Description	Steps to reproduce
			6. Upgrade the instance to Xanadu. **7.** Navigate to **incident.list**. Expected behavior: 'AND' is translated as 'および'. Actual behavior: 'AND' is shown as 'AND'.
Lifecycle Events PRB1881856 KB2208698	When a Lifecycle Event (LE) case is created directly in the 'Ready' state, the message 'Case reopened by...' is added to the work notes	This issue only happens in Yokohama and not in Xanadu.	Refer to the listed KB article for details.
List Administration PRB1237246 KB0752370	String values displayed in list V2 and list V3 automatically remove or truncate more than one empty space to one empty space	This issue causes inconsistency to users when they copy the string from the display of the list, as the actual value isn't truncated, and only the displayed value is truncated.	**1.** Log in the latest base instance. **2.** Navigate to **Incident** > **Create New**. **3.** Create a new incident with short description containing more than one empty space between words, for example, 'test 123'. **4.** Include the **Short description** field in the Incident list. **5.** Filter the incident list with short description 'test 123'. **6.** Observe that the system will fetch and display the new incident record which was created with short description, and this short description is displayed on the list. Expected behavior: The data should be displayed without any auto truncation, and the short description should be displayed as 'test 123'. Actual behavior: The data is displayed with auto truncation, and the short description is displayed as 'test 123'.
List Administration PRB1402594	Users are unable to edit a field in the list view when it is dependent on another	This issue has been observed since New York. Users aren't able to edit a field on a list view when it's dependent on another	**1.** Open any incident record. **2.** Set the field **Contact type** in the dictionary definition to be dependent on 'Configuration Item.Asset', which is read-only by default.

Problem	Short description	Description	Steps to reproduce
KB0956006	field that is read-only for the user	field that is read-only or has an ACL making it read-only.	Expected behavior: The field should not be editable only when there is a list_view ACL preventing the field from being edited. Actual behavior: In the form view, the field 'Contact type' is editable, but in the list view it is not.
List Administration PRB1698906 KB1633481	The Workbench license consumption breakdown list view changes when the software product life cycle report changes	Editing columns in the Software Asset Workspace License Usage Report updates columns on the related lists.	1. Log in to an instance. 2. Navigate to the **Software Asset (SAM) Workspace**. 3. Navigate to **License Usage** > **Microsoft** > **SQL Server** > **Standard**. 4. Select **License Metric Results**. 5. Select the number link for the 'License required' column. 6. Open the side view by selecting the number link for any 'License required' column. 7. Select **Reports Software Product Lifecycle Report**. 8. Change the column in the list view. 9. Add some columns. 10. Refresh the License Consumption Details and Software Install Licensing. Notice that the details do not render in the table.
List Administration PRB1801160 KB1710229	In the calendar picker, the start of the week isn't the same on the Workspace list and form	Changing the day format to 'Monday to Sunday' doesn't work, and the 'start of the week' system property glide.ui.date_picker.first_day_of_week isn't honored.	1. Navigate to any Vancouver instance. 2. Create the following system properties: a. glide.ui.filter.first_day_of_week = 2 b. glide.ui.date_format.first_day_of_week= 2 c. glide.ui.date_picker.first_day_of_week = 2 3. Navigate to the incident. 4. Add a **Date** field. 5. Attempt to edit it so the day format is from Monday to Sunday. 6. Edit the day format to from Monday to Sunday on the Form.

Problem	Short description	Description	Steps to reproduce
		to get stuck, making it impossible to access any of the list elements such as filter, personalize, UI actions, or the contextual menu.	
List Administration PRB1880653	After a Yokohama upgrade, special characters are incorrectly interpreted in a list when using 'show column filtering row' only in workspaces	The issue is reproduced only on Yokohama instances in list column header filters when using workspaces.	**1.** Log in to any Yokohama instance. **2.** Navigate to any workspaces. **3.** Open any lists. **4.** Ensure that the list is enabled with 'show column filtering row'. **5.** Enter any special character in the search filter fields under any column. **6.** Notice the characters get converted to some other hard-coded characters. Expected behavior: Characters should remain the same and display list results based on characters matching. Actual behavior: Characters get converted to some other hard-coded characters. This issue is reproduced only when using workspaces and works fine in Platform UI.
List Administration PRB1881066	A list editor pop-up disappears as users scroll down on a dashboard/ report	It's not working in the case of snListEditContainer, where a list is in some parent container.	**1.** Log in to an instance. **2.** Create a list report on any table. **3.** Add it to a dashboard. **4.** Try editing a cell in the **Short Description** field. Notice that as users scroll down the list and attempt to edit additional cells, the selection context is lost, and some fields don't even populate the editable input, making it impossible to edit them.
List Controller PRB1847141	Lists in Service Operations Workspace (SOW) aren't automatically refreshing	When users enable the glide.lists.live_ list_enabled property and make any changes in any record of the list, then the list refreshes in SOW version 5.0.1 but not in version 6.1.1.	**1.** Navigate to an instance. **2.** Open Service Operations Workspace version 6.1.1. **3.** Navigate to any list in the SOW. **4.** Select the record number, and make some change to the record that should be visible on the list. **5.** Save and close the record.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: It doesn't return results based on **Group by** for tags. Returns 'No data to display'.
List Views PRB1854405	The Xanadu Date Picker Calendar pop-up appears below the field, making it difficult to select other dates	The Xanadu Date Picker Calendar opens on the below field and isn't letting users select other dates when they add a variable editor on the form configuration.	**1.** Navigate to a Xanadu instance. **2.** Navigate to incident.LIST. **3.** Add a variable section. **4.** Add an incident variable editor to the form. **5.** Navigate to the TASK SLA related list. **6.** Select the **Start time** field. Notice that the calendar pop-up appears below the field, making it difficult to select other dates. The date picker should open above the field.
Major Incident Management PRB1891876	The **View Workbench** UI action is redirecting to a broken 'Activity' section when opening it for a second time on a major incident form on the classic UI	After upgrading in Yokohama, when managing a major incident (MI) in the classic UI and moving to the 'Workbench' view, it's not loading properly. It's redirecting to a MI management broken activity view.	**1.** Open any major incident. **2.** Select **View workbench**. MI workbench loads. **3.** Select **View form**. **4.** Once the form is loaded, select **View workbench** again and wait. See that a different form view is loaded instead of workbench. It seems to be that the redirection URL is changing to this form view.
Metric Intelligence (Family) PRB1784201	'ITOM model building' jobs cause CPU spikes on Clotho, which causes processing metrics issues	A ITOM fitter class uses a parallel stream for model fitting, this parallel stream uses all the resources available in the JVM settings which causes CPU spikes and issues in the metric processing pipeline of Clotho.	
MID Server PRB1777909	Container-based MIDs fail to upgrade from Utah or Vancouver to Washington DC	Since the Washington DC release, MID servers deployed through the docker recipe stop working when self-upgrading after each restart.

Problem	Short description	Description	Steps to reproduce
MID Server PRB1840424 KB1772428	MID Server ECCSender thread gives an 'Invalid byte 2 of 4-byte UTF-8 sequence' error, blocking sending of valid ecc_queue inputs to an instance	This is most likely to be seen in LDAP user imports, or Import Set JDBC Data Sources, where large data is involved. Large data is likely to include extended unicode characters such as emojis. For LDAP probes, emojis have been seen in OU/CN group names and user details data. For REST integrations synching incidents, emojis have been seen in comments of cases. They could potentially appear anywhere, for any feature's probe result data.	Refer to the listed KB article for details.
MID Server PRB1842102	Session mismatch on MID server when an agent experiences VPN issues	Host data collection also fails with MID logs showing, 'Failed to send check instance check-discovery-basic due to closed communication session'.	**1.** Use MID in the ITOM lab. **2.** Connect the agent to MID in ITOM lab. **3.** Disconnect the agent by disconnecting from the ITOM VPN. **4.** Reconnect the agent by reconnecting to ITOM VPN. **5.** Check the MID logs. Expected behavior: Notice the MID logs with the agent ID mapped to the message, 'Agent registered for communication', and the agent websocket session should be different than it was before it disconnected. Actual behavior: Notice the MID logs with the agent ID mapped to the message, 'Agent registered for communication', and the agent websocket session is the same according to MID logs.
MID Server PRB1864193	Upgrading a Linux MID Server to Xanadu reverts mid.shconf_override to the default setting	mid.shconf_override has an empty setting. It's reverted to default setting after upgrading.

		an update set from one instance to another.	
Process Mining PRB1903878 KB2229304	After upgrading from the Xanadu to Yokohama release, process mining filter sets and scheduled tasks are deleted	During the upgrade from Xanadu to Yokohama, the process mining filter set conditions and scheduled tasks are being deleted. Due to a backend issue, the upgrade script execution unintentionally deletes saved filter sets and scheduled tasks of Process Mining Projects. This particularly affects configurations with 'transition filters' linked to scheduled tasks. Although no other user data was affected, this issue may disrupt functionality where the deleted filter sets or scheduled tasks were actively used.	Refer to the listed KB article for details.
Project Management PRB1829307	A project actual isn't populated in the resource aggregated monthly for October, though it's populated for September and November	A category project actual isn't populated in table resource_aggregate_monthly for October. It does populate for September and November. There's one record for a project actual in October. When looking in resource_aggregate_weekly, all project actual records are there.	1. Open the resource aggregate monthly [resource_aggregate_monthly] table. Only 1 record displays under the monthly table and it excludes the month of October. 2. Check in resource aggregate weekly [resource_aggregate_weekly]. Records are displayed as expected including the month of October.
Project Management PRB1850637	Duplicate resource_aggregate_weekly and resource_aggregate_monthly records are created intermittently	Code in the UpdateActualsFromTimeCard function of the Resource Actuals SI raises an event to update aggregates for each day when a time card is approved or recalled, causing duplicate resource_aggregate_weekly

System Archiving PRB1815571	Archive runs can be stuck in an active state when the process times out when creating ar_* tables	Archive runs can be stuck in active state when the archive rule on CMDB is run for the first time and if the CMDB hierarchy is big. While creating all the ar_* table in this hierarchy, it could timeout.	
System Import Sets PRB1753408	The 'Import Set Deleter' job is contributing to replication lag due to long running DELETE statements and batch executions	.	
System Import Sets PRB1804838 KB1705523	New fields with double byte characters aren't created automatically on loading data	If the loading file or data source contains headers that don't match the fields in the import set table, when loading data, new fields are created. Since the Xanadu release, new fields aren't created when headers contain double byte characters, and a warning message is logged in the import log. This occurs even if the com.glide.use_column_name _optimizer property is 'true'.	Refer to the listed KB article for details.
System Import Sets PRB1850436 KB2115235	There's unexpected column creation when importing an Excel file with Japanese headers	When importing a file with Japanese headers, a new 'u_xxx' column is created, even though the u_email column already exists. This issue also occurs in Washington DC.	Refer to the listed KB article for details.
Table Administration	convertToPDF WithHeaderFooter is slow to	.

Problem	Short description	Description	Steps to reproduce
and Data Management PRB1681343	convert with a business rule		
Table Administration and Data Management PRB1852726 KB2068808	Users get an error: 'Syntax Error or Access Rule Violation detected by database ((conn=316832) Unknown column 'ba.a_ref_10' in 'on clause')'		Refer to the listed KB article for details.
Tags PRB1767453	The 'Group by' tag list view count isn't accurate	The 'Group by' tag in the list view count isn't accurate on the 'Task' table when a tag is added to newly created records from a custom extended table.	1. Open a Vancouver instance. 2. Navigate to **System definition** > **Tables**. 3. Create a new table with the following example: a. Label: Adhoc ticket i. Name: u_adhoc_ticket ii. Extends table: Task b. Navigate to the 'Controls' tab: i. Prefix change to: AR ii. Create access controls: True iii. User role: itil c. Navigate to the 'Application Access' tab: i. Create, update, read: True ii. Allow access to this table via web service: True iii. Allow configuration: True 4. Save the table. 5. Add the 'test' tag on a newly created record. 6. Navigate to the 'Task' table. 7. Choose two records from the table. 8. Group the 'Task' table the by **Tags** field. Expected behavior: The group counter amount is the same as the number of records in the list.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: The group counter is two even though there are three records in the list.
Time Card Management PRB1890157	On the Time Sheet Portal, tooltips sometimes remain stuck on the screen in Yokohama	If a user hovers over another tooltip, the original one remains in most cases.	**1.** Open a Yokohama instance with Time Card Management. **2.** Impersonate 'System Administrator'. **3.** Open the Time Sheet Portal. **4.** Add some operational time cards from the 'Other' section. **5.** Hover over the operational labels or the numbers for the daily totals. Notice the tooltips remain for a prolonged time or indefinitely.
Transaction Logs PRB1827610	The errors and logs metrics were removed in the XMLStats servlet include, causing the 'Logs' graph in the ServiceNow Performance dashboard to be 0 after an upgrade	When the user goes to ServiceNow Performance Dashboards, some of the graphs aren't displayed, and instead display the error message 'Error:Invalid series data'.	**1.** Create a base Vancouver instance. **2.** Navigate to the ServiceNow Performance dashboard. **3.** Let the instance run until a non-zero number in the 'Errors and Logs' metric graphs. **4.** Upgrade the instance to Washington DC. **5.** Look at the 'Errors and Logs' metric graphs again after the upgrade is complete. Expected behavior: The graph should display values accordingly. Actual behavior: The graph flatlines at 0.
UI Actions PRB1879023	A workspace modal with an HTML field doesn't render in Yokohama	When using g_modal.showFields() in a UI action to populate the modal from the workspace, the modal doesn't appear if it has an 'html' type field defined.	
UI Field Administration PRB1779043	There's an error inputting a decimal value into a decimal field when glide.system.locale has a value set	This issue is reproducible on any workspace and when the system property glide.system.locale isn't empty.	**1.** Log in to an instance. **2.** Navigate to Agent Workspace. **3.** Open any incident. **4.** Enter '123456789.09' on the **Test** field. **5.** Select out of the field.

Problem	Short description	Description	Steps to reproduce
			Notice that the message is seen: 'Could not parse 123.456.789,6 as a number'.
UI Field Administration PRB1791024	The getSelectedOption breaks for records with some script type fields	.	
UI Field Administration PRB1821427	An instance runs out of memory when there's unexpected wiki markup table syntax inside of a **wiki** text field	When creating a kb_knowledge record on a form with the **wiki** field showing, the node runs out of memory.	
UI Field Administration PRB1827405	A UI16 form loads slowly when the **Composite Name** type field is added and the instance has a lot of metadata	If a form has a **Composite Name** type field on it and there's much metadata present, the form can take upwards of 15-20 seconds to load.	
UI Field Administration PRB1877769 KB2182152	The info (i) icon for reference catalog variables is missing on requested items and the 'SCTASK' form under Service Operations Workspace	The issue is seen with all the workspaces since Yokohama.	Refer to the listed KB article for details.
UI Field Administration PRB1879955	The sys_user record isn't retaining the phone number format on the **Phone number** type fields		1. Navigate to any Yokohama instance. 2. Ensure that the glide.ui.format_phone property is set to false. 3. Open any sys_user record. 4. Update the **Mobile phone** field with a value. 5. Save the record. Expected behavior: The value in the field shouldn't get formatted.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: The value in the field gets formatted.
UI Field Administration PRB717514 KB2092173	A dotwalked **glide_list** field with choices doesn't display dropdown choices	Users are unable to adjust/administer a list as expected.	Refer to the listed KB article for details.
UI Form Administration PRB1814991	A bulk-edit pop-up form in a presentational list won't refresh after the previous transaction	The bulk-edit UI action pop-up form contains input from the **Description** field from a previous transaction to other records that are opened.	1. Navigate to **UI Builder** > **Service Operations Workspace**. 2. Add a variant to the List. 3. Select **List Page Template** in the Template Picker. 4. Ensure the new variant has a smaller order than the existing one, so it becomes the default list. 5. Navigate to **Workspace** > **Service Operations Workspace** > **List** > **Incident** > **All**. 6. Select any record. 7. Select the **Edit (1)** UI action. 8. Update the **Description** field in the pop-up to **ABCDE**. 9. Select **Update**. 10. Notice the success update message. 11. Select another record. 12. Select the **Edit (1)** UI action. 13. Notice the **Description** field contains the user input 'ABCDE' from the last transaction. 14. Select **Cancel**. 15. **Confirm** to discard the changes. 16. Select another record. 17. Select the **Edit (1)** UI action. Notice the **Description** field still contains the user input 'ABCDE' from the previous transaction.
UI Form Administration PRB1824242	The **Add/remove multiple** button on list fields	When selecting the **Add/remove multiple** button in a **glide_list** type field while there are other required	1. Open an instance. 2. Open incident.LIST or any table. 3. Open a record.

Problem	Short description	Description	Steps to reproduce
	doesn't work if required fields are present	fields on the form (that are not filled in) the slushbucket popup doesn't open and all required fields flash red. This includes the list collector itself (if it is mandatory).	4. Clear text from one of the mandatory fields. 5. Select the **Add/Remove multiple** button. Observe that this throws an error.
UI Form Administration PRB1829603	Workspace fields are cleared when using multiple tabs with an agent	After upgrading to the Washington DC release, an issue occurs when accessing multiple tabs during a chat with a live agent, in which already completed interaction records are cleared.	1. Log in to an instance. 2. Impersonate a user. 3. Navigate to the **Service Operations Workspace**. 4. Update the status to **Available** in two different tabs. 5. Impersonate two users. 6. Initiate a chat from portal. 7. Fill all the fields in the interaction record. 8. Search for 'REQ0010001' in the workspace. 9. Attempt to open REQ0010001. 10. Navigate to **Related Record** > **Requested Items** > **Catalog Tasks**. 11. Add to the work notes. 12. Close the 'Related Record' tab. 13. View the interaction records. 14. Notice that the values are cleared. Expected behavior: The updated values in the interaction record shouldn't be cleared after opening multiple tabs. Actual behavior: The updated values in the interaction record are cleared after opening multiple tabs.
UI Form Administration PRB1843602	There's an issue with the date picker position	The date picker position doesn't change when scrolling through the page.	1. Open a form with a **Date** field. 2. Select the date picker. 3. Scroll the page. Notice that the date picker remains in the same position on the screen even when scrolling.

Problem	Short description	Description	Steps to reproduce
UI Form Administration PRB1847059	Formatting on the special handling notes header is aligned to the left in Xanadu	Special Handling Notes aren't aligned properly and is formatted completely to the left.	
UI Form Administration PRB1859837	UX View Rule Configuration isn't applied in the Workspace when a record is opened from a reference field	UX View Rule Configurations aren't applied when a record is opened in a Workspace from a reference field on a form, but when opening the same record from a related list in a Workspace, the UX View Rule Configuration is applied.	1. Open a cmdb_ci_computer table. 2. Create a custom view. 3. Create a Workspace view rule on the sysrule_view_workspace table with the values: ○ Table: cmdb_ci_computer ○ View: Use the Custom View created ○ Experience Restricted: Uncheck ○ Workspace: Empty ○ Execution Order: 1 4. Create a UX View Rule Configuration on the sys_ux_view_rules_configuration table with the value: ○ Active: True 5. Navigate to **Workspace View Rules** > **Related list**. 6. Add the Workspace view rule created. 7. Open the Service Operations Workspace. 8. Create an incident where the **Configuration Item** field references a cmdb_ci_computer record. 9. Save the new incident. 10. Navigate to **Incident** > **Details** > **Open Record** in the **Configuration Item** field. 11. Select **Open Record** on the modal that appears. Observe that the Custom View created in isn't applied.
UI Form Administration PRB1863573	A 'Scope tag not permitted' error is thrown when the UXC Generative AI plugin is active	The scoped UI macros are added to the UI16 form by the 'UXC Generative AI' plugin clash with scoping rules, causing a 'Scope	1. Navigate to sysapproval_approver.list. 2. Open any record still in the 'Requested' state. 3. Right-click on the header and configure the form layout.

Problem	Short description	Description	Steps to reproduce
UI Form Administration PRB1894995	A requested item (RITM) created from an interaction in Service Operations Workspace (SOW) with an HTML variable automatically re-attaches images from the variable as the current user	When a user copy-paste text + images from Word, email, etc. to an RITM created from an interaction in a SOW HTML variable, reloading the RITM automatically re-attaches images to the record and gets displayed in the activity stream as a new attachment.	1. Navigate to an Xanadu instance. 2. Create a catalog item with one HTML variable. 3. Open an interaction record from SOW. 4. Locate and select the **Create Request** button. 5. Create a request for the catalog item created in the second step. 6. In the HTML variable, copy-paste text and images from a Word document or email. 7. Submit the request. 8. From SOW, open the RITM just created. Expected behavior: The RITM opens normally and images aren't reattached. Actual behavior: Images from the variable are reattached every time a user opens the RITM record. Newly re-attached images are show in the activity stream. These images can also be found in the sys_attachment table with Table sys ID = <RITM sys_id>.
User Criteria for Service Catalog PRB1819841 KB1773413	Semaphore exhaustion is caused by the getAllUserCriteria function getting called in widgets	When a public page is accessed by a guest user or web crawler, this prompts a call to the getAllUserCriteria API, which causes semaphore exhaustion.	Refer to the listed KB article for details.
UXF Components PRB1826745	Highlighting and copying data from related records or any list results in additional help text being copied	In the Service Operations Workspace, when highlighting and copying rows of data from related records or any list, additional help text appears. The copied data includes the message: 'Press and hold Shift then press Enter to edit'.	
UX Framework	Using g_aw.openRecord	Using the UI action on g_aw.openRecord	Refer to the listed KB article for details.

© 2026 ServiceNow, Inc. All rights reserved.

Problem	Short description	Description	Steps to reproduce
PRB1788084 KB1721199	In a new record in the Service Operations Workspace (SOW) doesn't work if a tab to the right of the UI action is selected	doesn't function correctly if it is used on a tab that has other tabs to the right of it. For example, if there are multiple tabs opened for a new interaction and the UI action is used to open a new incident record to escalate it, the UI action doesn't work.	
UX Framework PRB1827900	The **New** button is missing in the 'Cases for Opened for User' related list		1. Provision an instance with sn_hr_core sn_hr_agent_ws 4.0.0-SNAPSHOT latest build installed. 2. Open a HR case. 3. Access cases for the opened 'For User' related list. 4. Observe the list actions. See that the **New** button is missing.
UX Framework PRB1869757 KB2105389	There's a performance degradation when loading the home page on Xanadu	When the system property glide.ux.user_criteria_enabled=true, there's a performance degradation between Washington DC and Xanadu when loading the home page.	Refer to the listed KB article for details.
Virtual Agent PRB1825597	The user is unable to select a subflow in a Virtual Agent flow with the action activity	The action utility pulls the first 100 records into the query by the category sorted by name for each spoke.	
Virtual Agent PRB1833571	When _max_wait_topic_ is ended using the 'End Conversation' option, the conversation hangs and never completes	The 'Resume flow after topic switching' inside of the _max_wait_topic_ properties should be flipped to false.	1. Install the AgentChat plugin. 2. Navigate to the awa_queue table. 3. Open 'Agent Chat Queue'. 4. Set **Max wait time** to something short like 30 seconds. 5. Select **Queue Triggers** in the related lists and create a new one. 6. Ensure that the queue trigger is a max wait time trigger and have the topic be anything.

Problem	Short description	Description	Steps to reproduce
			7. Navigate to the awa_assignment_rule and open 'Chat - Most Capacity'. 8. Select **Rejection Handling** and set the timeout to 2 minutes. 9. Ensure that an agent is online 10. Start a conversation and run the 'Live Agent Support' topic. 11. Let the search run until the max wait time topic appears. 12. Select **End conversation**. Expected behavior: The conversation ends. Actual behavior: The conversation hangs and never ends.
Virtual Agent PRB1850815	In NLU conversations following language switch control, the search term is always 'null'	When Language Detection is enabled for NLU Virtual Agent conversations, any initial search term provided by the requester results in a search of 'null' and associated results.	
Virtual Agent PRB1862370	Skill executions are stuck when Now Assist guardian settings (prompt injection, offensiveness) are enabled	Skill test runs aren't working from the skill kit, whereas executions outside of the skill kit (for example: OneExtend.execute() in async mode) are working fine for the same settings. This is due an unsupported operation exception coming from EvaluationServiceImpl.java.	1. Create a skill from the Now Assist Skill Kit. 2. Enable prompt injection from the Now Assist Guardian settings (use option as 'Block'). 3. Select **Run Test** on that skill. Expected behavior: **Run Test** should work irrespective of the guardian setting because users can execute the same One Extend capability outside of the skill kit. Actual behavior: **Run Test** is stuck due to an exception (Error Execution of evaluation request failed for batch result: fbb3afc4c348 e2149e83d62 f0501312b due to error: null).

Problem	Short description	Description	Steps to reproduce
Virtual Agent PRB1866633	In APAC data center instances, AI agents aren't working even after accepting the Global Routing Consent information message	Global routing is not working even after consenting on the info message for data center instances in the Asia-Pacific region.	1. Deploy a new instance from the APAC data center. 2. In an APAC region instance, select **Agree on the Global Routing Consent info message**. Expected Behavior: The AI Orchestrator should be invoked. Actual Behavior: Even after accepting the consent, AI agents are not functioning, and the error message occurs: 'Sorry, there was a problem on my side trying to complete this request. Try asking again later'.
Virtual Agent PRB1866702	'Summarize a record card' isn't displaying when reactivating the case summarisation in Workspace when domain separation is turned on		
Virtual Agent PRB1866717	In Agent Chat, there's an oversized **New messages below** button	In Virtual Agent (VA) UI Experience, the **New messages below** button is disproportionately large compared to the rest of the text within the VA.	1. Start a new conversation in VA in an incognito session with an available awa_agent in a normal session. 2. As an agent, enter a number of messages into the chat. 3. Return to the incognito session to view as an end user in VA. Expected behavior: See the down arrow with the 'New messages below' hint text when hovered over displayed, and of a size appropriate to the rest of the VA conversation text. Actual behavior: See the new button display the down arrow and the 'New messages below' text, which is fine, only the size of the arrow and text is disproportionate to the rest of the text within the VA chat.
Virtual Agent	'Show more' links are displayed,	.	Refer to the listed KB article for details.

Problem	Short description	Description	Steps to reproduce
PRB1878360 KB2092161	even for a topic which doesn't have any additional lines in an Edge browser		
Virtual Agent PRB1879865	Now Assist doesn't generate Japanese answers properly	The results are mostly in English.	
Virtual Agent third-party integrations PRB1837988	Unable to acquire conversation lock leads to repeated impersonation and excessive logging	Certain long-running Virtual Agent transactions, such as file uploads, can cause excessive impersonation logging.	1. Start a conversation. 2. Set the lock_acquired and lock_touched to current time. 3. Set lock_owner to something other than 'Available'. 4. Send a custom adapter message. Observe the impersonation messages that occur repeatedly until the lock is acquired.
Virtual Agent Web Client PRB1824151	A message preview shows the NLU preview message or doesn't show any message even when the user has switched to LLM	The user sees the first message from the previous NLU mode conversation with LA.	1. Navigate to SP portal in NLU mode. 2. Start a conversation with LA. 3. Minimize the webclient and send a few messages from LA to User. 4. Refresh the SP portal page and confirm that user sees first message from the list of messages sent by LA in preview. 5. End the conversation on LA side (on the user side conversation is still open because post chat is active). 6. Switch the SP portal in LLM mode. 7. Refresh the portal page and start a new conversation on NAVA. 8. Minimize the web client and send a bunch of messages. 9. Refresh the SP portal page. Expected behavior: The user should see the first message in the list of message sent by LA to user for the interaction in LLM mode.

Problem	Short description	Description	Steps to reproduce
			Actual behavior: The user still continues to see the first message from the previous NLU mode conversation with LA.
Virtual Agent Web Client PRB1869658	There's an error: 'TypeError: Cannot destructure property 'clientContext' of 'y.properties' as it is undefined.'	When this issue happens, users don't see any proactive message, just a create_request call in a 'Network' tab in developer tools. If users have rules and actions setup properly for a URL or portal home pages, users should first see create_request and then get_action calls. The getACtions endpoint should get called and display respective proactive message.	
Visual Task Boards PRB1852813	If the modal window is closed by selecting outside of the modal, VTB cards aren't refreshed automatically when updated	This only occurs if the modal window is closed by selecting outside of the modal. If the modal window is closed by selecting the 'X' in the top right, the record's card updates automatically as expected.	1. Create a visual task board by navigating to **Self-Service** > **Visual Task Boards** > **New** > **Data Driven Board**. 2. Set **Task Table** to 'incident' and the **Vertical Lane** field to 'Incident State'. 3. Select **Next**. 4. For the conditions, set **Assigned to is [current user]** and select **Create**. 5. Select a card on the VTB to open the modal window. 6. Unassign the record from [current user] in the modal window. 7. Close the modal window by selecting outside of the modal. Observe that the card remains on the VTB even though it no longer meets the conditions for the board. 8. Refresh the VTB page. Observe the card is no longer on the board.

Problem	Short description	Description	Steps to reproduce
Walk-Up Experience PRB1873610 KB2046788	After an Yokohama upgrade, the walk-up queue isn't displaying any users who are checked in for any location	The issue occurs because the Rest API contains the snc_internal role and as the user has snc_external role, so it disqualifies the walkup user and doesn't render any users in the queue.	Refer to the listed KB article for details.
Web UX Runtime PRB1799951	Saving a field change on a form doesn't update the screen status once changes are saved	A warning message appears because changes to the incident record aren't saved despite the user saving the changes.	1. Open any incident record in the Service Operations Workspace (SOW). 2. Open the 'Overview' tab on the record. 3. Modify any field by selecting the pencil icon to edit. 4. Select **Save**. 5. Notice that the degree symbol that appears before the Incident record number in the SOW record tab, indicating that the record has not been saved. 6. Closed the record tab. Notice that a warning appears, 'Closing this tab will cause your changes to be lost. Do you want to continue?'.

Problem category	Problem	Short description
HR Service Delivery	PRB1819742	Add the 'addOrCondition' to the priority column query to avoid inconsistent search results
HR Service Delivery	PRB1823642	Task percent complete is not appearing for HR Talent Management cases
HR Service Delivery	PRB1835490	Customizations to base instance notification 'HR Case commented (Assigned To)' are overwritten by an upgrade
HR Service Delivery	PRB1837924	Performance issue with ACL evaluation on sn_hr_core_profile.* for users without the sn_hr_core.profile_reader role
HR Service Delivery	PRB1840295	Issue with Rich Description not showing line breaks
HR Service Delivery	PRB1840607	Users that do not have HR roles are unable to see records in the sys_attachment table in the HR profile table
HR Service Delivery	PRB1840773	An HR case is created without setting the Parent field if the canRead check on the task table fails
HR Service Delivery	PRB1843962	The user observes an error reading, 'sn_anon_rc is not defined. sys_script.f65330019f22120047a2d126c42e70fc.script'
HR Service Delivery	PRB1844484	Typing a name and pressing the space bar at the end results in a duplicated list of names (platform and workspace) when setting a priority table name during case creation configuration
HR Service Delivery	PRB1889709	Addition of Query ACLs in HR Service Delivery
HTML Field Type Editor	PRB1841733	There's warnings seen in syslogs on visiting a classic form with an html-editor on it
HTML Field Type Editor	PRB1833756	Adding '##' before any text or number turns it bold after using the 'Enter' key in HTML field types and tinyMCE editor
HTML Field Type Editor	PRB1875292	Duplicate options are visible under the 'Formats' section when configuring TinyMCE via the 'TinymceConfigScript' script include
HTML Field Type Editor	PRB1842522	In Attestation Designer, the details field is missing while configuring questions in Xanadu
HTML Field Type Editor	PRB1860636	In Workspace, there's a formatting issue in an HTML field

Problem category	Problem	Short description
HTML Field Type Editor	PRB1879377	Users aren't able to add SVG images into HTML fields from a public library
HTML Field Type Editor	PRB1823009	HTML fields show 'Verdana' as an available font despite removing it from the font collection
HTML Field Type Editor	PRB1845669	Formatting is not maintained when copying from online Microsoft editor to a Knowledge article
Identification and Reconciliation API	PRB1885606	Identification and Reconciliation Engine (IRE) isn't updating matched CIs when the source recency timestamp is the same as a previously run source feed
Identification and Reconciliation API	PRB1895154	A CMDB 360 preview page freezes when loading due to unnecessary MetricBase columns sent to the client-side
Identification and Reconciliation API	PRB1790489	CMDB Health Staleness total count considers the health inclusion rule, but the staleness count is not considered in it
Identity	PRB1816712	The ACL trail page loads slowly
Identity	PRB1889721	Addition of Query ACLs in Identity
Identity	PRB1692933	The scoped minimum admin property is not honored when the role is inherited by a group
Identity and Access Audit	PRB1876372	Slow loading of the 'User trail' page
Incident Communications Management	PRB1833288	Microsoft Teams chat remains open even when the Incident communication tasks state is set to 'Complete' in Workbench
Incident Management	PRB1880039	In Service Operations Workspace, the configuration class isn't auto-populating for 'Impacted Services' related records when selecting the **Add** button
Incident Management	PRB1892590	Empty 'Resolved by' and 'Closed by' for Incidents resolved by Problem
Incident Management	PRB1894549	The dashboard for 'Analytics on Incident Category' isn't found when an icon is selected
Incident Management	PRB1904581	Canvas error was thrown during the Knowledge article duration
Incident Management	PRB1830272	Base instance business rule 'Check if Known error article required' allows creation and some updates without attaching an article

Problem category	Problem	Short description
Innovation Management	PRB1895641	After Xanadu, the Idea Portal images throw an error (Failed to upload image) when pasting an image using CTRL + V
Innovation Management	PRB1893609	The description of an idea isn't displayed in the formatted way on the Idea Portal
Innovation Management	PRB1562880	Notifications aren't fired when the state changes on tsp1_idea
Instance Clone (Family)	PRB1908309	Authentication fix for recurring clones
Instance Data Replication (IDR)	PRB1821656	A carriage return character (
) is added when work notes or additional comments are synced to an instance
Instance Data Replication (IDR)	PRB1855998	CDATA blocks inside XML are generated by the producer are not parsed out on the consumer side and thus saved with extra characters that show up on the UI
Instance Data Replication (IDR)	PRB1795757	The IDR queue dashboard displays an incorrect value for the remaining messages that are to be processed for V2 sets
Instance Data Replication (IDR)	PRB1838458	Selected fields in 'Outbound Entry' aren't replicated to 'Inbound Entry' when a transformation is enabled (specifically sys_fields)
Instance Scan	PRB1885030	ui_reference_multi doesn't honor the display_value and value property when used in a UI page
Instance Scan	PRB1891416	Changes in global repo for Admin Center/ Upgrade Management for supporting Coral Theme changes
Instance Scan	PRB1827472	Instance scan check 'Differs from baseline: Script Includes' returns the script include 'PortalAppShellProvider, which has not been customized'
Integration Hub	PRB1827642	Incorrect encoding of the URL in a REST step
Integration Hub	PRB1844370	Reconstructed process plan returns incorrect information when fetching a plan containing a data stream
Integration Hub	PRB1850814	RPS Flow Execution only sets flow timeout if context reporting is enabled
Integration Hub	PRB1854163	The RPS attachments can get into a race condition and not transfer documents
Integration Hub	PRB1857020	A Remote Process Synch (RPS) outbound job can go into a loop if there's an error parsing the XML

Problem category	Problem	Short description
Source Control Menu for Dev Studio	PRB1857083	Studio stuck at 'Loading changed files...' when trying to commit
Special Handling Notes	PRB1846839	Closing a record tab immediately while having SHN in workspace causes the screen to become unresponsive
Special Handling Notes	PRB1847100	A 'Special Handling Notes' message is not displayed on Workspace
Standard Change Catalog	PRB1850616	On SOW, change request template values are not auto-populated when modified or retired
Stream Connect Core	PRB1846806	The housekeeping job erroneously creates a subscription for a Flow Trigger that is not associated to a flow
Stream Connect Core	PRB1834440	Context field 'Name-Value Pairs' data isn't inserted into the staging table, and new import sets are created every minute
Stream Connect Core	PRB1845639	Kafka Consumer stops consuming messages once it receives a 'null' message from Producer
Subscription Management	PRB1830144	The 'Deprecated Subscription Allocation' dashboard causes node restart
Survey Management	PRB1847800	Inactive metrics aren't displayed on the user response form
Survey Management	PRB1861927	Image Scale Question (asmt_metric) display value doesn't show properly in Platform UI
Survey Management	PRB1884331	Survey Designer's 'Copy Survey' only works for administrators
Survey Management	PRB1842390	The HR case number is not displayed completely on the survey card on the My surveys page
Syntax Editor	PRB1811831	Adding both glide_list and script editor (monaco) causes the error 'GlideEditorMonaco is not defined', and the glide_list no longer works
Syntax Editor API	PRB1887424	The Completion API filters out archived and 'Snapshot' tables
System Archiving	PRB1866906	There's an issue with a scheduled delete job if a JavaScript getUserId is used when setting a condition
System Archiving	PRB1822177	Duplicate inserts for the same table into sys_archive_ref_migration
System Archiving	PRB1828924	Records are inserted into the tables sys_archive_run (only for re-archive

Problem category	Problem	Short description
		functionality) and sys_archive_destroy_run even when records aren't re-archived or destroyed
System Archiving	PRB1843739	Archive property glide.db.archive.batch_size is not using but appears in 'Archive Properties' module
System Events	PRB1852694	Events processing is malfunctioning due to cache updates not being generated or propagated
System Export Sets	PRB1857489	Export to XLSX contains empty string ('') for blank cells which return FALSE when using =ISBLANK() macro
System Export Sets	PRB1877537	Scheduled export sets and tags data isn't exported when users select **Use raw value**
System Export Sets	PRB1834117	There's no header information when exporting to PDF via any workspace in a translation language such as Japanese
System Import Sets	PRB1666188	Excel Data Source queries are for attachment, not for data source tables
System Import Sets	PRB1853329	The RTE 'Glide Lookup Operation' operation fails to return a result if the same input and output column are specified
System Import Sets	PRB1775535	An error for 'com.glide.db.impex.datasource.DataSourceException' appears when importing
System Import Sets	PRB1802800	When jdbcprobe_result_set_rows is '=1' in the data source, all the records are returned, which leads to 'OutOfMemory' in the MID Server
System Import Sets	PRB1835583	Usage of parallel job stops import
System Import Sets	PRB1836880	Excessive use of Synchronous API leads to frequent slow SQL (which cannot be sent to RR)
System Notifications	PRB1838563	The base instance bell notification hover does not work intermittently
System Update Sets	PRB1909130	An installation from an update set overwrites customized records
System Update Sets	PRB1834468	A sys_db_object record was created when the 'Function' field was loaded through update, set, and commit
System Update Sets	PRB1885422	Importing an update set of an upgrade plan or items also installs the applications on the instance
System Update Sets	PRB1831470	The update set commit completed, but some updates failed to commit due to

Problem category	Problem	Short description
		errors when trying to drop non-existing tables
Table Administration and Data Management	PRB1771107	Creating a list type field on cmdb_ci from the **Configure** > **Form Layout** page breaks the CMDB table due to the field being created with an incorrect storage alias entry
Table Administration and Data Management	PRB1799409	Deleting the custom scope column on sys_user isn't successful
Table Administration and Data Management	PRB1849372	Deleting a table throws a 'Table 'instance_8080.778cf3bf37232110aba6473174924b' doesn't exist)' error
Table Administration and Data Management	PRB1828517	There's an SQL error when inserting invalid or var__ tables as a dependent field for document it
Table Administration and Data Management	PRB1757717	addValue (string field, number value) isn't working as expected on the 'number' field in the 'sys_number_counter' table
Table Administration and Data Management	PRB1638197	Skipping the online alter check doesn't create the field that doesn't require online alter and can use one of the available storage aliases
Table Administration and Data Management	PRB1850232	Query with the yyyy/mm/dd format does not work in RaptorDB
Table Administration and Data Management	PRB1887567	The 'Archive Cert Audit Results' rule archives records less than 2 years old
Table Administration and Data Management	PRB1888056	DMTSchedulerUtils. scheduleDM expects a global Genius Results (GR) parameter
Table Administration and Data Management	PRB1792115	Form displays the error message, 'Syntax Error or Access Rule Violation detected by database (ORA-00904: 'SYS_ATTACHMENT_DOC'.'sys_id': invalid identifier'
Table Administration and Data Management	PRB1826494	Function fields for database view don't handle script error properly and break sys_dictionary record access
Table Administration and Data Management	PRB1835839	glidefunction with complex nested functions work on MariaDB but fail on RaptorDB due to type mismatches with the operands
Table Builder (Family Release Channel)	PRB1825118	The scope isn't showing properly when the view scope and the platform scope are different

Problem category	Problem	Short description
UI Form Administration	PRB1819502	Adding an 'Attachment' field to workspace view gives inconsistent results in platform and workspace
UI Form Administration	PRB1849759	UI scripts with leading comments are not executed in Workspace
UI Form Administration	PRB1887884	A dependent field onChange handler fires when the 'depended on' field changes when there's no change to the dependent field
UI Form Administration	PRB1881995	Content on 'Special Handling Notes' isn't scrollable
UI Form Administration	PRB1863474	The 'Form' section doesn't display dot-walk fields due to caching
UI Form Administration	PRB1850340	GlideDialogForm no longer opens Service Catalog pages
UI Form Administration	PRB1889245	When the user selects 'Create Standard Change' action on a case, it shows the Catalog Item form instead of navigating to 'Standard Changes' under 'Catalogs'
UI Form Administration	PRB1851031	A user with a comma and a slash causes the watchlist to display incorrectly in SOW
UI Form Administration	PRB1854148	Catalog UI Policy form header cannot be right-clicked if the policy is read-only
UI Form Administration	PRB1855209	Workspace 'Jump to section navigation' is not working
UI Form Administration	PRB1860501	A form's cache key doesn't account for roles with external and internal users
UI Form Administration	PRB1872898	The 'Layout Form' link UI action in the sys_db_object form fails silently when a default form section has a caption
UI Form Administration	PRB1876467	timeAgo.js generates an incorrect string for date/time, more than 12 months in the future
UI Form Administration	PRB1877273	When completing a problem_task, the value for the 'Close notes' field isn't captured until the keyboard is used
UI Form Administration	PRB1880019	Field labels aren't displaying horizontally even though glide.ui.form.breakpoints.enable is true
UI Form Administration	PRB1881148	Text in string fields in a modal window is cut off under certain conditions in Safari
UI Form Administration	PRB1886643	The Annotation field is not updated when the form and platform are in same scope

Sidebar release notes

The ServiceNow® Sidebar application enables agents and subject matter experts to collaborate on user issues. Sidebar was enhanced and updated in the Zurich release.

Sidebar highlights for the Zurich release

Prevent Sidebar discussions from becoming cluttered by using threaded replies when responding to messages.

See Sidebar for more information.

Important: Sidebar is available in the ServiceNow Store. For details, see the "Activation information" section of these release notes.

New in the Zurich release

Sidebar

Use threaded replies to answer Sidebar messages without adding clutter to the main discussion.

Activation information

Sidebar is a ServiceNow AI Platform feature part of the Omni-Experience Standard Feature Set. For details, see Installing Sidebar.

Related ServiceNow applications and features

Agent Chat

Use Agent Chat to provide features that streamline the agent and requester chat experience and enable managers to monitor and assist agents.

Virtual Agent

Unlock your enterprise productivity with Virtual Agent. Increase deflections by empowering your employees and customers to serve themselves using a friendly messaging interface, featuring prebuilt conversations powered by artificial intelligence.

Accessibility and conformance

Learn about accessibility updates and improvements completed for the Zurich family release.

Release Highlights

Next Experience, Configurable Workspace, and Builder improvements

Leverage Platform and Product upgrades to help you strengthen your WCAG 2.1 AA accessibility conformance. This release enhances usability for all users, particularly those who rely on keyboard navigation, assistive technologies, or have visual impairments. Key improvements include the ability to add custom fonts for Theme Builder, new Next Experience Accessibility preferences, and a new card in the Onboarding Carousel for new instances highlighting the location of the Accessibility preferences.

New features and other improvements

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Onboarding Carousel:** Empower new users to customize their experience from day one. A new card in the Onboarding Carousel guides them to Accessibility preferences, making it easier for them to find and apply the settings they need.
- **New Custom Fonts feature for Theme Builder:** Upload a custom font to your theme to improve globalization support and provide greater flexibility to users who may benefit from specific font styles or sizes.
- **New Next Experience Accessibility preferences:**
  - **Accessibility settings: Page alerts:** Keep page alerts visible until you acknowledge them. This can benefit users who need more time to review the alert.
  - **Workspace settings: Lazy Load Workspace:** Control the way Workspace pages are loaded. This option can enhance compatibility with screen readers by providing a more consistent and reliable reading experience.
- **UI Builder:**
  - Find and fix accessibility issues more easily with the enhanced Find and Fix Issues feature in UI Builder. New accessibility checks in the A11y rules create warnings when a label property or aria-label property is empty for specific components. These checks can improve the usability of UI Builder, the quality of workspace pages, and developer productivity.
  - Enable alerts to auto-dismiss across an experience by configuring them in the experience settings for UIB Admin roles.
- **Next Experience Components accessibility conformance:** Refer to the ServiceNow Horizon site Components section. Web Content Accessibility Guideline (WCAG) 2.1 AA conformance level indicators can be found in the overview section for each component.
- **Dark mode option for the Coral theme:** Enhance readability and reduce eye strain with the new dark mode option for the Coral theme, now available for both web and mobile experiences. This feature can be particularly beneficial in low-light environments.
- **Guided Tours enhancements:** Benefit from Guided Tours enhancements that include descriptive page titles, as well as keyboard assistance for required fields and user interface controls.
- **Document Services:** Leverage new static and dynamic guardrails for accessibility support for PDF document generation. These enhancements monitor and manage memory usage to help maintain stability during PDF generation.
- **Playbooks in Workflow Studio:** Enhance workflow efficiency with improved keyboard navigation for Playbooks in Workflow studio. This update allows users to move more easily between stages and activities, creating a smoother experience for those who rely on a keyboard.

Product Accessibility

Accessibility Conformance Reports (ACRs), created using the international version of the Voluntary Product Accessibility Template (VPAT), are available for supported ServiceNow releases. These reports detail how our products support global accessibility standards. For a complete list of available reports, see Accessibility conformance reports.

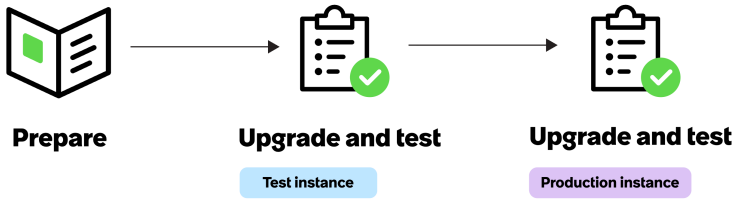
Prepare your upgrade

Before each upgrade, refresh your memory on general upgrade information, learn which important pre- and post- upgrade tasks apply to your upgrade, and learn how to use ServiceNow® products and tools to make your experience easier.

To help you get ready for a safe and effective upgrade, all the most important upgrade resources are compiled in one place.

Upgrading to a new ServiceNow release



ServiceNow upgrades  Learn high-level information about upgrades, such as duration, rollback options, and testing.	**Pre- and post-upgrade tasks**  Identify any tasks to complete before and after the upgrade for your applications and features.	**Upgrade planning checklist**  Use the end to end checklist to plan and track the activities for your upgrade.
Upgrade tools and resources  Learn about ServiceNow products, tools, and resources that can improve your upgrade experience.	**Upgrades and the ServiceNow® Store**  Learn about how upgrades are applied to ServiceNow® Store applications.	

ServiceNow upgrades

The upgrade process moves your instance to a new ServiceNow release version. Understand the difference between upgrading and patching, release definitions, rollback and backup options, and how to test your non-production and production instance upgrades.

Before you begin the upgrade process, read the Zurich release notes and review the upgrade and migration tasks for your applications and features.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

System upgrades can be significant projects. Each ServiceNow feature release includes major additions, and you should always consider the impact of new functionality on an instance. Upgrading implements enhancements to all features that are part of the base system or are already active, unless the feature is customized on your instance. For a list of all available plugins and whether they are active by default on the base system, see List of Zurich plugins.

Careful preparation and knowledge of the available software, tools, and resources can contribute to a successful upgrade. In addition to the materials provided by ServiceNow, it is important to understand how your ServiceNow instance is currently operating and the performance level of key business functionality. Set the expectation with IT and business users that time must be dedicated to preparing for, implementing, and testing ServiceNow upgrades.

If you have any issues during the upgrade process, contact Customer Service and Support. Customer Service and Support is available 24 hours a day, 7 days a week to assist you with any questions or issues.

For additional help with upgrades, ServiceNow also offers various Production Readiness Services. These services specifically address challenges with instance upgradability, manageability, scalability, and performance. The reviews are performed by a ServiceNow certified professional consultant, who provide recommendations to align customer configurations with ServiceNow best practices. Contact your ServiceNow sales representative for more details.

Upgrade and update durations in Zurich

The upgrade process takes a significantly shorter time for both updates and upgrades. (An update occurs when an instance moves from one patch or hotfix to another within the same release family. An upgrade occurs when an instance moves from one release family to another). As always, test your upgrades, but don't assume from the much faster completion time that the update or upgrade wasn't successful.

Supported upgrades

You can upgrade directly to the latest release family. If multiple software versions are involved in your upgrade, be sure to consult the release notes for each version between your current version and the target version. For more information about release terminology and availability phases, see the ServiceNow Release Cycle [KB0547244] article in the Now Support Knowledge Base.

Upgrades vs. updates

ServiceNow organizes its releases into families. A family is a set of releases that are named after a major city, such as Zurich. Families also contain patches and hotfixes. For example, the following releases are both part of the Orlando family:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Orlando Patch 4
- Orlando Patch 3 Hotfix 2

Upgrading is the act of moving to a release that is in a different family than your current release. For example, a move from London Patch 7 to Orlando Patch 3 is an upgrade because London and Orlando are different families.

Updating is the act of moving from one patch or hotfix to another within the same release family. For example, a move from Orlando Patch 1 to Orlando Patch 3 is a update because both versions are part of the Orlando family.

In both cases, the target release is Orlando Patch 3. It is the difference between your current and target release family that determines whether you are upgrading or updating.

Features, patches, and hotfixes

Each release family contains features, patches, and hotfixes.

A feature provides a complete solution that customers can implement to add value to their organization. New features are generally only available as part of a feature release. Features are supported with patches and hotfixes.

Type	Scope
Feature	• Introduces new features • Includes all available fixes to existing functionality • Is production-oriented; quality and stability are of the highest priority throughout the lifecycle
Patch	• Supports existing functionality with a collection of problem fixes • Generally does not include new features
Hotfix	• Supports existing functionality with a specific problem fix for a feature release • May or may not include any previous fixes for a given release • Does not include new features

For more information about release terminology and availability phases, see the ServiceNow Release Cycle [KB0547244] article in the Now Support Knowledge Base.

Rollbacks and backups

When you plan an upgrade, remember that ServiceNow does not provide a universal rollback option. Rollbacks are available for updates (for example, Zurich patch-to-patch and Zurich patch-to-hotfix). The rollback window is 10 days by default. You can customize this window by modifying the *glide.rollback.expiration_days* property. To request a rollback, contact Customer Service and Support.

Avoid restoring a production instance from backup, when possible, due to downtime and data loss. When a problem cannot be solved using other methods, restoring a production instance

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

from backup is a final option. ServiceNow can restore an instance to any point in time, regardless of when a backup is completed. Customer Service and Support provides support 24 hours a day, 7 days a week for assistance with critical post-upgrade issues.

Note: ServiceNow does not perform on-demand backups. Instances are automatically backed up daily during non-peak business hours on schedules defined by ServiceNow. The timing of existing backup schedules is not adjusted.

Testing throughout upgrades

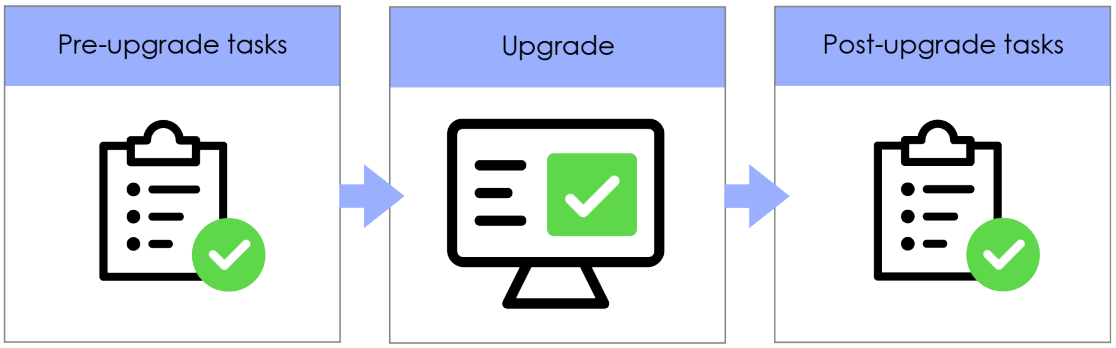
Testing is an integral portion that occurs after each instance is upgraded. After you upgrade an instance, test and validate it.

This instance naming convention assumes that you have three ServiceNow instances. If you have three instances, upgrade your instances in this order:

1. Development
2. Test
3. Production

If you have more or less than three instances, or if you are using Team Development, these instance labels will be different. In general, upgrade your instances furthest from production towards your production instance.

Instance	Type of testing required
Development	Conduct smoke tests.
Test	• Use the ServiceNow Automated Test Framework to assist you in testing your non-production instances. • You can use Automated Test Framework quick start tests and product testing suites to help you jump start your testing before and after upgrades. For a list of available tests and activation information, see Quick start tests. • For extra testing coverage, you can also conduct user acceptance testing (UAT) on your non-production instances.
Production	Conduct UAT. **Note:** The Automated Test Framework is intended for use on non-production instances. On your production instance, conduct UAT only.



If you encounter any post-upgrade issues, document the issue's conditions, steps to reproduce the issue, and your customizations. Contact Customer Service and Support to open an incident for each issue, and provide this information accordingly. Customer Service and Support is available 24 hours a day, 7 days a week to assist you with any questions or issues.

Pre- and post-upgrade tasks for various products

In preparation for your upgrade, review the upgrade and migration tasks for various applications and features. Plan to complete these tasks, when applicable, before or after the upgrade is complete.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Prepare your instance for a smoother upgrade

Before you upgrade to Zurich, review these pre- and post-upgrade tasks and complete the tasks as needed.

Upgrade and migration tasks

Important: For any changes in the upgrade procedure for self-hosted customers, see KB0563844 for details.

Product	Release notes	Family
AI Control Tower	Not applicable.	Australia
Application Manager	*Application Manager* is active by default on instances on the *Australia* release. Upgrade your instance to *Australia* patch 4 or later to use the latest features. For information about upgrading your *ServiceNow AI Platform* instance, see Prepare your upgrade.	Australia
Care Team Operations for Biomed	Strengthen your instance security and maintain backward compatibility through enhanced protections for read#only fields across the *ServiceNow AI Platform*®. These back-end changes include a new “read_only_option” field with granular control levels, including “strict_read_only” and “client_script_modifiable". If you have custom client scripts that modify read#only fields on the *ServiceNow AI Platform*® using `g_form.setValue()` or `g_form.clearValue()`, see the Remediation for strict read-only fields preventing client side updates [KB2718122] article in the *Now Support* Knowledge Base. This article provides additional technical details on how to identify affected fields and adjust their settings. For more information about granular read-only security options, see Configuring read-only security options.	Australia

Key Management	• In pre-*Zurich* releases, the GlideEncrypter API used the three-key Triple Data Encryption Standard (3DES) encryption standard, which NIST 800-131A Rev 2 has recommended against using after 2023. The following changes are taking place in the *Australia* release in preparation for a full deprecation of GlideEncrypter/3DES in the future:
	  ○ New *Australia* instances can't use GlideEncrypter. All base system scripts have been changed to use alternative encryption processes.
	  ○ if you're upgrading your *Australia* instances, you can still GlideEncrypter, which has been updated to use AES256-GCM encryption via the Key Management Framework.
	  ○ Learn more about 3DES deprecation in KB1704481.
		Australia

MID Server	For the latest *MID Server* system requirements, see MID Server system requirements. The minimum JRE version supported is 17.0.10 and the recommended version is 21.0.7. If you have installed your own JRE, the upgrade process takes the following actions to verify that the *MID Server* uses a supported JRE: • If a *MID Server* is using an unsupported version of the JRE when it upgrades, the upgrade process displays a warning message with the minimum and recommended JRE version. • If a supported JRE is running on the *MID Server* host, the upgraded *MID Server* uses that version. All *MID Server* host machines require access to the download site at `install.service-now.com` to enable auto-upgrades. For additional details, read how the system manages *MID Server* upgrades. Only one *Windows MID Server* service is permitted according to the executable path. Upgraded *Windows MID Servers* that have multiple services pointing to the same installation folder can't start. See *MID Server* fails to start for more information. For more information about *MID Server* upgrades, see the following topics: • *MID Server* pre-upgrade check: Describes how the AutoUpgrade monitor tests the ability of the *MID Server* to upgrade on your system before the actual upgrade. • Upgrade the *MID Server* manually: Describes how to upgrade your *MID Servers* manually.	Australia

Now Assist for Configuration Management Database (CMDB)	To enable Now Assist to provide detailed descriptions of CIs and classes, you must activate the 'External Content Connectors' plugin, install the 'ServiceNow Product Documentation' connector, and then crawl the product documentation. For configuration instructions, see Configure the CI form contextual help skill.	Australia
Now Assist for Creator	To upgrade the *Build Agent* application, upgrade the *Now Assist for Creator* application (sn_now_creator), which includes the *Build Agent* Pro plugin (sn_build_agent_pro). To upgrade the *Build Agent* (Trial) app, upgrade the sn_build_agent plugin.	Australia
Now Assist for Employee Center Pro	Now Assist for Employee Center Pro only provides employee or requester conversations and might require other Now Assist products to deliver AI agents or other related features.	Australia
Now Assist	If you customized UI actions or other items that are associated with *Now Assist* skills, confirm that your customized code is updated with the new skill releases. Otherwise, certain functions might not work as expected. If you run into issues when you're upgrading a *Now Assist* product, see the Issues and mitigation for Now Assist (Generative AI) Applications and Plugin updates [KB1637452] article in the *Now Support Knowledge Base*. You might need to log in to view the article. The *Australia* release introduces enhanced protections for read-only fields across the *ServiceNow AI Platform*. These changes include a new read_only_option field with granular control levels, including strict_read_onlyand client_script_modifiable. The changes occur in the back end and maintain backward-compatible behavior. This update helps strengthen instance security while preserving flexibility. If you have custom client scripts that modify read-only fields using `g_form.setValue()` or `g_form.clearValue()`, refer to the KB2718122 article in the *Now Support Knowledge Base* to identify affected fields and adjust the settings. The existing access control lists (ACLs) have been updated to replace the admin role with purpose-driven granular roles within scripts or security attributes. As part of this update, the `getRoles()` API is replaced with the `hasRole()` API for authorization purposes. Additionally, all references to the admin role in the code have been substituted with the granular roles for authorization use cases. For more information,	Australia

	see https://www.servicenow.com/docs/r/platform-security/granular-admin-roles.html.	
Operational Resilience	Beginning with *Operational Resilience* release 22.0.x, the following scheduled jobs are deactivated for new installations by default: • *Calculate red flags for CSDM and dependencies* • *Update CSDM and other dependencies* For existing installations, these jobs retain their current active or inactive state.	Australia
Performance Analyzer	Starting with the *Zurich* release, Performance Analyzer is available on your instance automatically. For access to Performance Analyzer for earlier instances, install Performance Analyzer from the *ServiceNow® Store*.	Australia
Platform Analytics experience	After upgrading, only admins can create *Core UI* analytics objects: reports, *Performance Analytics* widgets, responsive dashboards, and interactive filters. Other users can still view and edit *Core UI* objects but can create only *Platform Analytics* objects, such as data visualizations. When upgrading, the published status on all *Core UI* reports changes to **false**, making them unpublished. After upgrading, the *Analytics Hub* isn't available. Links to the *Analytics Hub* are redirected to *KPI Details*.	Australia
Playbook	After you upgrade to *Australia*, update the *Workflow Studio* application in the *ServiceNow Store*.	Australia
Product Catalog Management and Pricing Management	*Pricing Management* v16.0.0 provides a default pricing plan that includes changes to support pricing strategies introduced in this release. If you've been using a custom pricing plan from an earlier release, after upgrading to Pricing Management v16.0.0, the default pricing plan is in a Retired state. Determine whether you want to publish the default pricing plan for use or customize it.	Australia
Public Sector Digital Services	After the upgrade, certain public sector menus and menu items in *CSM Configurable Workspace* revert to their original *CSM* label names. You can relabel these items for public sector use by updating the labels for the Customer, Accounts, and Service Organizations UX list category records. For more details on relabeling, navigate to **All** > **Constituent Service** > **Administration** > **Guided Setup**, and select	Australia

	Configurable Workspace for Public Sector Digital Services > **Customize Workspace Labels Manually**.	
RPA Hub	Upgrade any of these currently installed *Microsoft* Software Installers (MSIs) by downloading the RPA applications: • *RPA Desktop Design Studio* • *Attended Robot* • *Unattended Robot* • *Unattended Robot* Login Agent For more information, see Download the RPA applications from RPA Hub. The following upgrade information is applicable only when you're upgrading from *San Diego* or *Tokyo* to *Australia*. Based on the number of records in the application file table, you may experience a delay while upgrading the *RPA Hub* applications from *Tokyo* or earlier releases to *Australia*. Before upgrading *RPA Hub* to *Australia*, you must set the value of the *glide.rollback.blacklist.TableParentChange.change* system property to **false**. If this property doesn't exist in the System Property [sys_properties] table, add the property and set its value to false. For more information on how to add a property, see Add a system property. After you upgrade to *Australia*, the bot process definitions change to the new structure, which is the bot process configuration. Although the bot process configuration doesn't replace the bot process completely, most fields are moved from the bot process to the bot process configuration. If you upgrade to *Australia* without updating the system property value, the tables don't extend the Application File [sys_metadata] table. To update the table changes manually, see the Restructuring RPA Hub tables to sys_metadata in Utah and beyond release [KB1223629] article in the *Now Support Knowledge Base*.	Australia
Service Exchange (formerly Service Bridge)	**Important:** Do not upgrade your *ServiceNow*® instance to the *Australia* release if you rely on *Service Exchange*. A known RPS issue prevents *Service Exchange* from functioning correctly. Proceed with the upgrade only after *Australia* Patch 1 becomes available.	Australia

Product	Release notes	Family
	• *Service Exchange* version 2.x.x, which was first released with the *Xanadu* release, doesn't support migration of *Service Exchange* (Legacy) versions. *Service Exchange* (Legacy) version: Before you upgrade to the *Australia* release, consult the Service Exchange for Providers (Legacy) - Migration Utility [KB1499823] article in the *Now Support* Knowledge Base to find out how to migrate your configuration data. • *Service Exchange* version 1.x.x: When upgrading, consult the Upgrade Guide - Service Exchange for Providers and Consumers application (v2.x.x release) [KB1700387] article in the *Now Support* Knowledge Base to find out how to migrate your *Service Exchange* applications. • *Service Exchange* version 2.x.x: New entitlements that require the latest compatibility version cannot be activated until both consumers and providers upgrade to *Service Exchange* version 2.x.x. New entitlements configured with a lower compatibility version can be activated. Older active entitlements continue to work but new ones can't be activated. • When using *Service Exchange* for Providers and *Service Exchange* for Consumers in a single instance, you must upgrade both applications simultaneously to the same version to maintain compatibility. If the versions diverge, a scan check will report version mismatches and the Health Dashboard will show a version mismatch issue. After upgrading, run and validate the post-upgrade scan suite to identify and resolve any post-upgrade issues. • If you have upgraded to *Service Exchange* version 2.0.55 before upgrading the platform to the *Australia* release and your instance has *Sales and Order Management* plug-in version 1.0.4 installed, the new Deny ACLs aren't installed. After upgrading to the *Australia* release, select Repair to reinstall the *Service Exchange* application to ensure Deny ACLs are installed. • When you install the *Service Exchange* application, the *Service Exchange* Global script include is automatically installed or updated on the following platform versions: ◦ *Yokohama* ◦ *Zurich* ◦ *Australia*	
ServiceNow AI Platform core feature	The dynamic schema application framework was revised in the *Zurich* release. If you implemented dynamic schema in the *Xanadu* or *Yokohama* releases, the application is automatically migrated to a new framework as part of the	Australia

Product	Release notes	Family
ServiceNow Vault	*ServiceNow Vault* is a bundle of the following products: • ServiceNow Vault • Data Discovery • Data Privacy • Zero Trust Access • Field Encryption • Code Signing • Log Export Service (LES)	Australia
Source-to-Pay Operations Integrations	**Important:** Due to a performance issue identified with the upgrade fix script, the sourcing fix script has been modified. This script will no longer execute automatically during the upgrade process. Instead, it is now delivered as an on-demand job. Administrators must manually execute this job outside of business hours after the upgrade is complete.	Australia
Subscription Management	*Subscription Management* version 6.1 is active by default on all instances of the *Australia* release. Update to *Subscription Management* version 6.1 or later to use the latest features. For more information about updating *Subscription Management*, see Update an app or plugin.	Australia
Third-party Risk Management	If you're a *VRM* user upgrading to *TPRM* and upgrading to *Australia* from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. For example, you must upgrade from *Xanadu* to *Yokohama*, *Yokohama* to *Zurich*, and so on. If the scripts don't run in the correct order, you can get data inconsistencies, broken functionalities, and conflicts. After upgrading to version 21.0.x, you can enable the *Smart Assessment Engine* (*SAE*) by setting the *Smart Assessment Engine* enabled (**sn_vdr_risk_asmt.sae_enabled**) property. After setting this property, *Smart Assessment Engine* (*SAE*) becomes the default assessment engine and replaces the legacy experience. The transition isn't reversible. **Warning:** Set this property in your non-production instances and conduct thorough testing before changing your production instances. Failure to do so may result in unexpected issues.	Australia

	Washington DC:
	• When you upgrade to *Washington DC*, *AI Search* automatically updates your existing Genius Result configurations to use the new *AI Search* Genius Result Configuration form fields. This update procedure makes the following changes:
	  ○ Removes existing **Genius result answer type** field values.
	  ○ Migrates **Genius result logic** field values to the new *AI Search* **request processor** and *AI Search* **response processor** fields as appropriate.
	• After you upgrade your instance to *Washington DC*, *AI Search* retains the value that you previously set for the **Boolean search operator to use when a search query includes multiple terms** (*glide.ais.query.search_operator*) system property. To gain the benefits of the new enhanced query mode for multi-term searches, set this system property's value to *AND then OR 2+ key terms*. For details on *AI Search* system properties, see AI Search system properties.
	• Starting in *Washington DC*, the User [sys_user] table defaults to sorting indexed records by their sys_created_on dates instead of sorting them by their sys_updated_on dates. This change requires reindexing of the User table indexed source for *AI Search*, which can be time-consuming. When you upgrade to *Washington DC* from a previous family release, *AI Search* does not automatically reindex the User table indexed source. If you need to be able to search the latest configuration for user records, you can manually reindex the User table indexed source, which may take some time. Otherwise, *AI Search* will reindex individual User table records as they're updated until all records have been reindexed.	

Automated Test Framework	Copy and customize quick start tests provided by the *ServiceNow AI Platform*® to validate that your instance works after you make any configuration changes. For example, if you apply an upgrade or develop an application. The tests can produce a pass result only when you run them on a base system without any customizations and with the default demo data that is provided with the application or feature plugin. To apply a quick start test to your instance-specific data, copy the quick start test and add your custom data. For more information, see Available quick start tests by application or feature.	Washington DC

Product	Release notes	Family
Business Continuity Management	After upgrading to the *Washington DC* release, you must note the following important information for the existing business impact analyses, business continuity plans, and events: • For business impact analyses, the Source column in the dependency assessment is renamed to Primary source and the **BCM** source is renamed to **Manual** for manually added dependencies following an upgrade. When you select the **Update dependencies** button, the system adds the *CMDB* dependencies. • For business continuity plans, the Source column is renamed to Primary source following an upgrade. When you select the **Update dependencies** button, the system adds the *CMDB* and BIA dependencies. To maintain compatibility with the previous releases, the *BCM* administrator can configure the sources and keep only the BIA upstream dependency and BIA downstream dependencies as the sources in the updated configuration. • For events and exercises, when you select the **Update dependencies** button, the system adds the *CMDB*, BIA, and Business Continuity Planning (BCP) dependencies after an upgrade. To maintain compatibility with the previous releases, the *BCM* administrator can configure the sources and keep only the BIA upstream dependency and BIA downstream dependencies as the sources in the updated configuration.	Washington DC
Configuration Management Database (CMDB)	• The column *product_instance_id* has been added to the base Configuration Item [cmdb_ci] table to support the new product instance identifier (PID), which enables the lookup and linking of any pre-existing related assets, CIs, and Install Base Items (IBI). For more information about the impact of that change during upgrade and how to minimize that impact, see the Upgrade impact of CMDB_CI schema changes for Washington release [KB1534035] knowledge base article. • If you enable CMDB 360 for the first time after upgrading to the *Washington DC* release, to enable the capture of CMDB 360 data for CIs from non-CMDB classes (classes not derived from the Configuration Item [cmdb_ci] class) you must set the *glide.identification_engine.multisource_non_cmdb_ci_enabled* system property to true. • If you have been using the legacy Data Certification application on Core UI, then any associated definitions won't be available in the new implementation of Data Certification in CMDB Workspace. After upgrading to the *Washington DC* release and to CMDB Workspace version 6.0, you can	Washington DC

	convert definitions created in the legacy Data Certification application into draft Data Manager Certification policies in CMDB Workspace. For more information, see .	
Core ServiceNow AI Platform	Previously, if a transaction was canceled, certain auditable operations were not being recorded. This behavior of missing audit records is because the platform executes some operations between the record change and is canceled before audit creation. But now, audits are created immediately after the record is changed, reducing the chance of a canceled transaction aborting the operation before the audit is recorded. To facilitate this update, audits are now recorded in the same thread as the transaction. Earlier audits were created in a background thread. This change redefines the default value of the `glide.db.audit.lazy` property from true to false. Ideally, this property is not defined in the Properties table, which means that the majority of instances start using the new default value and behavior with the *`Washington DC`* release. On some instances, this property may have been inserted with the value set to true, which means that these instances won't be able to use this change to audit behavior. Delete this property to leverage this update.	Washington DC
Encryption Key Management	If you upgrade your instance to *`Washington DC`* but don't upgrade your *`MID Server`*, Secrets Management authentication fails. Avoid authentication failures by upgrading your *`MID Server`* to *`Washington DC`*. If you can't upgrade, you must turn off authentication until *`MID Server`* is upgraded to *`Washington DC`* to avoid authentication failures. For details on MID Server upgrades, see MID Server upgrades.	Washington DC
Enterprise Asset Management	After you upgrade to *`Washington DC`*, the model_component field isn't available in the Enterprise asset [sn_ent_asset] table. Instead, a new model_component_id field is available in the Asset [alm_asset] table. The ENT - Migrate to new model component script moves the existing model_component field data to the model_component_id field. Note the following upgrade scenarios for the Total Cost of Ownership (TCO) of assets: • Upgrade works for all *`Enterprise Asset Management`* flow tasks • You must have task rate cards for each workflow task.	Washington DC

Product	Release notes	Family

	• The TCO upgrade populates the **Asset** and **Expense category** fields on expense lines corresponding to each task.
	• Expense category is populated based on the expense lines and the source of the expense line.
	• You need to populate the TCO benchmark cost and the TCO benchmark threshold field on all existing models manually or using the bulk import functionality.
	• TCO upgrade populates following fields on asset forms:
	  ○ **Asset end of useful life**: The created date plus the useful life in months.
	  ○ **Asset first used date**: The created date.
	  ○ **Asset TCO**: The aggregated sum of all the expense lines related to the asset. For simple assets, Asset TCO is the aggregated sum of expense lines under it. For complex assets, Asset TCO is the aggregated sum of expense lines of the parent as well as its child assets.	

Financial Services Operations Core	During the upgrade to *Washington DC*, the *Financial Services Operations Core* plugin reparents the following tables: **Note:** You may experience a longer time for the upgrade to complete if your upgraded instance has a large number of records. • The Service Definition [sn_bom_service_definition] table extends from the Service Definition [sn_case_type_selection] table instead of the Request Definition [sn_ind_request_definition. • The Financial task [sn_bom_task] table extends from the Customer Service Task [sn_customerservice_task] table instead of the Global Task [task] table. • The Policy Participant [sn_bom_policy_participant] table extends from the Sold Product Related Party [sn_install_base_sold_product_related_party] table. Reparenting enables leveraging of the benefits and advancements introduced by *ServiceNow® Customer Service Management (CSM)* while preserving the functionality of existing applications.	Washington DC
Hardware Asset Management 10.0.0	After your upgrade to *Washington DC*, keep in mind the following upgrade scenarios for the Total Cost of Ownership (TCO) of assets:	Washington DC

	Log rotation is automatically enabled for the Replication Payload Error [idr_replication_payload_error] table after the upgrade. By default, the log rotation schedule is comprised of seven shards, with five days for each shard. All log entries in this table created before the upgrade are automatically truncated.	
MID Server	For the latest *MID Server* system requirements, see MID Server system requirements. The minimum JRE version supported is 11.0.9 and the recommended version is 11.0.16.1. If you have installed your own JRE, the upgrade process takes the following actions to ensure that the *MID Server* uses a supported JRE: • If a *MID Server* is using an unsupported version of the JRE when it upgrades, the upgrade process displays a warning message with the minimum and recommended JRE version. • If a supported JRE is running on the *MID Server* host, the upgraded *MID Server* uses that version. All *MID Server* host machines require access to the download site at `install.service-now.com` to enable auto-upgrades. For additional details, read how the system manages *MID Server* upgrades. Only one *Windows MID Server* service is permitted per executable path. Upgraded *Windows MID Servers* that have multiple services pointing to the same installation folder can't start. See *MID Server* fails to start for more information. For more information about *MID Server* upgrades, see the following topics: • *MID Server* pre-upgrade check: Describes how the AutoUpgrade monitor tests the ability of the *MID Server* to upgrade on your system before the actual upgrade. • Upgrade the *MID Server* manually: Describes how to upgrade your *MID Servers* manually.	Washington DC
Now Assist for Creator	To receive *Workflow Studio* performance improvements, install one of these versions of the *Workflow Studio* application from the *ServiceNow Store*. For more information about upgrading *Workflow Studio*, see Update to the latest version of Workflow Studio.	Washington DC

Product	Release notes	Family
Order Management	New features introduced in this *Washington DC* release aren't supported in earlier releases of *Order Management for Telecommunications, Media, and Technology*. Starting with the *Washington DC* release, the **Monthly Recurring Charges** (MRC) and the **Non Recurring Charges** (NRC) set for product offerings and product attribute characteristics are stored in the Pricing data model in price lists and price list lines, rather than the Product Offering data model. If you want to upgrade your pricing information to use price lists after upgrading to *Washington DC*, see the Price Management Plugin (com.sn_csm_pricing) uptake for Telecommunications, Media, and Technology customers upgrading to Washington [KB1585863] article in the Now Support Knowledge Base. After upgrading to the *Washington DC* release, a fix script runs automatically to deactivate certain telecommunications list records that are no longer needed to resume the capture of an unfinished order. For more information on these records and using the former order capture process if needed, see the Deprecating Telco List for Order Capture [KB1586538] article in the Now Support Knowledge Base. After upgrading to the *Washington DC*, review the reconfiguration workarounds for working on new change orders or orders with disconnect, suspend, or resume actions while using the product configurator. For details, see the Order line reconfiguration issues in Washington when using Order Capture UI [KB1585976] article in the Now Support Knowledge Base.	Washington DC
Performance Analytics	The legacy PA Scores [pa_scores] table is being deprecated. If you still have indicator scores captured in the PA Scores table and the number of such scores is fewer than 43 million, these scores will be migrated automatically to the pa_scores_l1 and pa_scores_l2 tables upon upgrade. The expected amount of time added to upgrade is approximately two hours. For more information, see KB1294371 or Migrating Performance Analytics scores.	Washington DC
Platform Analytics Experience	*Platform Analytics* Experience functionality was previously located in the *Platform Analytics* Workspace. The functionality is now part of the core *ServiceNow AI Platform*, accessible through the *Next Experience Unified Navigation*. You can migrate any dashboards, reports, and *Performance Analytics* widgets that were created in *Core UI* to this functionality.	Washington DC

Product	Release notes	Family
Playbooks in Workflow Studio	After you upgrade to *Washington DC*, update the *Playbooks* and *Workflow Studio* applications in the ServiceNow Store.	Washington DC
Portfolio Planning	Starting with v8.0.0, you can access the *Strategic Portfolio Management* (*SPM*) Pro-licensed features only in *Strategic Planning Workspace*. If you have been using *Portfolio Planning Workspace* to access *SPM* Pro-licensed features, such as Goals, Product Feedback, and Hybrid Portfolio Planning, you must now install *Strategic Planning* to access these features. For more information on the features that can be accessed only in *Strategic Planning* Workspace, see Comparing Portfolio Planning with Strategic Planning.	Washington DC
Predictive Intelligence	If you're upgrading to *Washington DC*, you won't be able to create new regression solutions. If you have existing solutions, they will still be supported and you will be able to train and modify them, but you won't be able to create new ones. The changes to the similarity and clustering solutions apply to all instances that are on *Washington DC*.	Washington DC
Proactive Service Experience Workflows	Customers who prefer not to receive trouble ticket notifications can disable the business rules related to the incident and case tables. To learn more about how to disable the business rules for trouble ticket notification, see Deactivate trouble ticket notification.	Washington DC
Product Catalog Management and Pricing Management	If you used attribute characteristics in the Standard Price Adjustment matrix in the initial release of the *Sales and Order Management* applications, and you're upgrading to the May 2024 release of *Sales and Order Management* applications, you must run a scheduled job that corrects the format of the automatically generated **Code** values. Run the **Schedule job to modify code field on characteristic records that contain special characters** on demand job to replace any character that is not a letter (a-z, A-Z), a number (0-9), an underscore (_), or a dollar sign ($) with an underscore (_). This job corrects the **Code** value so that it doesn't start or end with an underscore, doesn't begin with a digit, and contains no consecutive underscores.	Washington DC
Public Sector Digital Services	After the upgrade, certain public sector menus and menu items in the *CSM Configurable Workspace* revert to their original *CSM* label names. You can relabel these items for public sector use by updating the UX List Categories for Customer and Service Organizations. For more details	Washington DC

Product	Release notes	Family
	Additionally, field-level read ACLs are enforced for filter conditions in Simple List widget instances by default. A new system property, *glide.service_portal.enable_acls_for_encoded_query_in_list*, enforces these ACLs regardless of whether the **Enforce field-level Read ACLs on Filter query terms** option is selected for Simple List widget instances. To use the **Enforce field-level Read ACLs on Filter query terms** option, change the value of *glide.service_portal.enable_acls_for_encoded_query_in_list* to false. For more information, see Simple List widget. If a user previously selected a user consent preference for user experience analytics for portals different from the rest of the platform, the preference selected for the platform is also used for portals in the *Washington DC* release. For example, if users opted out of tracking for portals but opted in to tracking for the rest of the platform in the *Vancouver* release, user experience analytics for portals are tracked for them in the *Washington DC* release. Users can update their selection from the user profile page in portals at any time.	
Software Asset Management	After upgrading to *Washington DC*, you must redo all your customizations related to *Adobe* and *Microsoft 365* integrations with your *ServiceNow* instance because the functionalities of these integrations are moved to the *Software Asset Management – SaaS License Management* store application. • If you've customized an impacted file, the upgrade process skips the file and indicates a conflict. You must manually resolve the conflict and ensure that the old existing file is deleted. • If you haven't customized an impacted file, the file gets deleted as part of the upgrade, and a file with a new sys_id is created.	Washington DC
Strategic Planning	Starting with v4.0.2, you can access the *Strategic Portfolio Management* (*SPM*) Pro-licensed features only in *Strategic Planning Workspace*. If you have been using *Portfolio Planning Workspace* to access *SPM* Pro-licensed features, such as Goals, Product Feedback, and Hybrid Portfolio Planning, you must now install *Strategic Planning* to access these features. For more information on the features that can be accessed only in *Strategic Planning Workspace*, see Exploring Portfolio Planning in Strategic Planning. If you're upgrading to *Strategic Planning* v4.1.2 and previously had customized the List view or the Hierarchy view of the Goals page using the Personalization side panel, the user interface enhancements done in v4.1.2 may not appear. In this case, you must delete your user preference records.	Washington DC

Product	Release notes	Family
	For more information on how to delete user preferences made using the Personalization side panel, see KB1642037.	
Supplier Lifecycle Operations	After upgrading from the *Vancouver* release to the *Washington DC* release, you will see only the *Source-to-Pay Workspace* on the **All** navigation tab. You don't have to do anything if you choose to continue to use the *Source-to-Pay Workspace*. However, you will see both the *Source-to-Pay Workspace* and *Supplier Manager Workspace* on the **Workspaces** tab. If you want to use the *Supplier Manager Workspace* instead of the default *Source-to-Pay Workspace*, ensure that you run the `fixscript_migrate_workspace_to_smw.xml` fix script after upgrading to the *Washington DC* release. You can download the `fixscript_migrate_workspace_to_smw.xml` file from the *ServiceNow Store*. If you want to revert to using the *Source-to-Pay Workspace*, run the `fixscript_migrate_workspace_to_s2p.xml` fix script. You can download the `fixscript_migrate_workspace_to_smw.xml` file from the *ServiceNow Store*. For more information about how to run a fix script, see Run fix scripts. After you upgrade to *Washington DC*, you must review all the post-upgrade tasks and complete them as needed. For more information, see Post-upgrade tasks for Supplier Lifecycle Management.	Washington DC
Third-party Risk Management	If you are a *VRM* user upgrading to *TPRM*, when upgrading to *Vancouver* or later from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. This means upgrading from *Utah* to *Vancouver*, *Vancouver* to *Washington DC*, and so on. If the scripts do not run in the correct order, it can result in data inconsistencies, broken functionalities, and conflicts. For more information on upgrading from *VRM* to *TPRM*, see Third-party Risk Management upgrade information.	Washington DC
User Experience Analytics	• Users can opt out of basic tracking. • A funnel data visualization is available for *Usage Insights* data sources.	Washington DC

Accounts Payable Operations	If you are upgrading from a previous release, you must configure the reference field in the Tax Code [sn_fin_tax_code] table. The exception engine validates the invoice using the tax code and raises exceptions if necessary.	Xanadu
Analytics, Intelligence, and Reporting	If you are upgrading, you can use the *Platform Analytics Migration Center* to take advantage of a single set of visualizations and unified filters for all data sources.	Xanadu
App Engine Studio	Due to a new process for assigning groups in *App Engine Management Center* (*AEMC*), ensure you have the same version of the *Application Intake* plugin installed on each of your instances.	Xanadu
Application Vulnerability Response	• For information about the new features of *Vulnerability Response*, see Vulnerability Response release notes. • For more information about the released versions of the *Application Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Xanadu* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the *Now Support Knowledge Base*.	Xanadu
Assessments and Surveys	Update the *Automated Test Framework* (ATF) tests, if you're upgrading to *Xanadu* from any version prior to *Utah*. In the *Utah* release, all the buttons on the assessments or surveys cards have been removed. To run ATF tests successfully, the Click the Take Survey button step must be replaced with the Click the Survey card step for all tests that have this step.	Xanadu
Business Continuity Management	The relationship tables introduced in the plan records are generated by the *Update BCP dependencies snapshot* scheduled job. After upgrading to the *Xanadu* release, you can view these tables only after the scheduled job has run or by manually selecting the **Update dependencies** button.	Xanadu

Product	Release notes	Family
Case management for CSM	The customer service manager role [sn_customerservice_manager] includes the approver user role [approver_user]. The approver user role replaces the approval admin role [approval_admin]. Users with the customer service manager role can approve the approval requests that are assigned to them.	Xanadu
Cloud Cost Management 8.0.0	On upgrading to *Cloud Cost Management* 8.0 version, the new Tag Category **AI Service** is available for *Amazon Web Services* (*AWS*), *Microsoft Azure*, and *Google Cloud Platform (GCP)* service providers. Because *Cloud Cost Management* executes the Billing Download job only from the current month onwards, the spend on AI services will be included only for the current month. If you want to view the billing details for the months prior to the current month, you must manually execute the Billing Download job. Once the Billing Download job is executed successfully, you can view the spend data of your AI services.	Xanadu
Configuration Management Database (CMDB)	• Before the upgrade to *Xanadu*, the 'Updated CIs' and 'Updated application services' trend lines in the Recent CI activity and Recent application services activities tiles on the Management view in *CMDB* Workspace, might not have accurately reflected on changes in your system. After upgrading to *Xanadu* and to versions 5.5, 6.2, or 7.2 of *CMDB* Workspace, those trend lines will reflect on the more accurate detection of updated CIs and updated application services. • *CMDB* Health: If either the *CMDB Health Dashboard - Relationship Compliance Processor* or *CMDB Health Dashboard - Relationship Score Calculation* dashboard job is active, that job is deactivated during the upgrade to *Xanadu*. After the upgrade is complete, you can reactivate those jobs to resume health reports for CI relationships. The active state of all other *CMDB* Health dashboard jobs is retained. Any failure threshold for a KPI or metric that is greater than 100,000, is set to 100,000 during upgrade. This upper limit is enforced to avoid excessive processing when a large number of CIs are failing the specified metric tests. • Bookmarks for the CI dashboard no longer work after an upgrade to *Xanadu*. A `Page not found` error message appears. To see *CMDB* Health reports for a CI, open the CI form in *CMDB* Workspace.	Xanadu

Product	Release notes	Family
	• The legacy Application Service Dashboard on *Core UI* isn't supported in the *Xanadu* release. After upgrading, you can still access that legacy dashboard by using a previously created bookmark. You can also instead access the Application Services dashboard in *CMDB* Workspace from the Application services tile in the Insights view in *CMDB* Workspace. • The *CMDB* Integrations Dashboard on *Core UI* isn't supported in the *Xanadu* release. After upgrading, you can still access that legacy dashboard by using a previously-created bookmark. • All records that exist in the CMDB Health Result [cmdb_health_result] table before an update to *Xanadu* Patch 5, are deleted during the upgrade. To access a legacy dashboard on an upgraded instance, navigate to **All** > **Self-Service** > **Dashboards** and then search for the dashboard.	
Data Management	A data management policy record is automatically created for each table that is configured with an archive rule or a table cleaner rule prior to the upgrade.	Xanadu
Data Privacy	Licensing changes enable you to install *Data Discovery*, *Data Discovery* APIs, Data Anonymization, and *Data Privacy* APIs without an entitlement, but you must have an entitlement to run a job.	Xanadu
Decision tables in Workflow Studio	*Workflow Studio* is automatically installed on your instance. However, *Workflow Studio* is a *ServiceNow Store* application, so to get the latest features, you must update your version manually to the most recent version. As of Washington DC Patch 3, updating *Workflow Studio* automatically updates all its application dependencies such as *Workflow Studio*, *playbook*, and *Decision Builder*. You can no longer see or update the individual application dependencies of *Workflow Studio* from the *ServiceNow Store* or the list of plugins.	Xanadu
DevOps Change Velocity	If you are an upgrading customer, you must run the **ReConfigure Bitbucket Server Repositories for PullRequest** job to re-configure your existing Bitbucket Server or Bitbucket Data Center repositories so that pull request records can be imported. You can navigate to **All > System Definition > Scheduled Jobs** to search for this job and run it.	Xanadu

Product	Release notes	Family
External Content Connectors	Beginning with version 2 of the External Content Connectors application, external content connectors implement semantic vector indexing for crawled items. When you upgrade to a version that supports semantic vector indexing, your existing connectors will reindex all previously retrieved items the next time they're visited by a crawl, even if those items' content is unchanged. To force semantic vector indexing of your external content items as soon as possible after upgrading, cancel any running crawls, then restart the canceled crawls manually.	Xanadu
Field Service Management	Effective March 1, 2025, Google has designated the Places API, Directions API, and Distance Matrix API as Legacy services. The newer versions of these services are Places API (New) and Routes API. You can't enable or generate new API keys for these legacy services. However, you can continue using these services with the existing API keys. If you need to create a new Google API key after March 1, 2025, you must enable the new APIs from Google Console and upgrade to Xanadu Patch 9 version or higher to ensure compatibility.	Xanadu
Flows, subflows, and actions in Workflow Studio	After upgrading, users who previously had the fd_read_operations role will now see only basic execution details such as the run state and duration. This restriction prevents users with this role from seeing sensitive information in execution details. To provide read access to all execution details such as input configuration and runtime values, grant the user the new role fd_read_operations_all.	Xanadu
Goal Framework for SPM	After upgrading to *Goal Framework for SPM* v2.3.0, run the **Migrate BreakdownInterval To Checkinfrequency** scheduled job. This scheduled job migrates the existing values in the **Review frequency** and **Breakdown interval** fields to the **Check-in frequency** field in the target records. For more information on how these values are migrated for targets with different values, see Target breakdowns migration.	Xanadu
Hardware Asset Management 11.0.0	After upgrading to *Xanadu*, you can view both the *Core UI Performance Analytics* dashboards and the *Next Experience Platform Analytics* dashboards for *Hardware Asset Management*. **Note:** While migrating the *Core UI Performance Analytics* dashboards to the *Next Experience Platform Analytics* dashboards, auto-migration is disabled by default to avoid duplicate dashboards.	Xanadu
ITOM Health	Enhance your application service mapping by installing the App Service Extension app from the *ServiceNow® Store*.	Xanadu

ITOM Optimization	Enhance your application service mapping by installing the App Service Extension app from the *ServiceNow® Store*.	Xanadu
ITOM Visibility	For an improved *Service Mapping* experience, install *Service Mapping Plus* version 1.13.0 from the *ServiceNow® Store*. Enhance your application service mapping by installing the App Service Extension app from the *ServiceNow® Store*.	Xanadu
Industrial Process Manager	The *Industrial Process Manager* application now has a dependency with the *Operational Technology Service Management* applications, which include *Operational Technology Incident Management* and *Operational Technology Change Management*. To install *Industrial Process Manager* on your instance, one of the following SKUs is required: • *Operational Technology* Visibility SKU • *Operational Technology Service Management* SKU • Any custom SKU that entitles *Industrial Process Manager*	Xanadu
MID Server	For the latest *MID Server* system requirements, see MID Server system requirements. The minimum JRE version supported is 11.0.9 and the recommended version is 11.0.16.1. If you have installed your own JRE, the upgrade process takes the following actions to verify that the *MID Server* uses a supported JRE: • If a *MID Server* is using an unsupported version of the JRE when it upgrades, the upgrade process displays a warning message with the minimum and recommended JRE version. • If a supported JRE is running on the *MID Server* host, the upgraded *MID Server* uses that version. All *MID Server* host machines require access to the download site at `install.service-now.com` to enable auto-upgrades. For additional details, read how the system manages *MID Server* upgrades. Only one *Windows MID Server* service is permitted according to executable path. Upgraded *Windows MID Servers* that have multiple services pointing to the same installation folder can't start. See *MID Server* fails to start for more information.	Xanadu

	be imported. You can navigate to **All > System Definition > Scheduled Jobs** to search for this job and run it.	

Encryption Key Management	• The GlideEncrypter API uses the three-key Triple Data Encryption Standard (3DES) encryption standard which NIST 800-131A Rev 2 has recommended against using after 2023. The following changes are taking place in the *Yokohama* release in preparation for a full deprecation of GlideEncrypter/3DES in the future.
	  ◦ New *Yokohama* instances can't use GlideEncrypter. All base system scripts have been changed to use alternative encryption processes.
	  ◦ if you're upgrading your *Yokohama* instances, you can still use 3DES, but you can also disable 3DES usage with a system property.
	  ◦ Learn more about 3DES deprecation in KB1704481.
		Yokohama

External Content Connectors	Beginning with version 2 of the External Content Connectors application, external content connectors implement semantic vector indexing for crawled items. When you upgrade to a version that supports semantic vector indexing, your existing connectors will reindex all previously retrieved items the next time they're visited by a crawl, even if those items' content is unchanged. To force semantic vector indexing of your external content items as soon as possible after upgrading, cancel any running crawls, then restart the canceled crawls manually. When you upgrade to version 4 of the External Content Connectors application from an earlier version, searches may not show all previously crawled content until you've completed both a content crawl and a user mapping crawl for each upgraded connector. The first content crawl run after the upgrade will reindex all searchable content from the source system, and the user mapping crawl will reindex all security principals from the source system. All crawled content should be shown in searches after both of these crawls are complete.	Yokohama
Field Service Management	• Upgrading to Yokohama may extend the upgrade maintenance time of a customer due to Appointment Booking. The Appointment Booking configuration tables get extended to the Application File [sys_metadata] table as a part of the upgrade. After upgrading to Yokohama, re-parenting occurs automatically and the duration of the re-parenting depends on the number of records in Application File [sys_metadata] table. • Effective March 1, 2025, Google has designated the Places API, Directions API, and Distance Matrix API as Legacy services. The newer versions of these services are Places	Yokohama

	API (New) and Routes API. You can't enable or generate new API keys for these legacy services. However, you can continue using these services with the existing API keys. If you need to create a new Google API key after March 1, 2025, you must enable the new APIs from Google Console and upgrade to Yokohama Patch 3 version or higher to ensure compatibility.	
Financial Services Card Operations	During the upgrade to *Yokohama*, the *Financial Services Card Operations* plugin reparents the Card Disputes Transaction table [sn_bom_credit_card_disputes_transaction] to the Financial Task table [sn_bom_task] in *Financial Services Operations Core*. Reparenting leverages the benefits and advancements of *ServiceNow® Financial Services Operations Core* while preserving the functionality of existing applications. **Note:** If your instance uses the Card Disputes Transaction table [sn_bom_credit_card_disputes_transaction] and it contains a large amount of data, you may experience increased upgrade times.	Yokohama
Generative AI Controller	*Generative AI Controller* is installed and updated when you install or update any *Now Assist* application. If you have issues installing or updating applications, see this knowledge article for steps that may address your issue. Otherwise, you can make a Support case.	Yokohama
ITOM Visibility	3DES support is planned for permanent removal from the *MID Server* for *MID Servers* with SSH-based Discovery or SSH-based integrations. For more information, see 3DES deprecation in SSH from Xanadu [KB1644950]. After upgrading to Yokohama, a Fix Script named "Add Explicit Public SNMP Credential" might create a public SNMP credential in Production instances. This could lead to unnecessary records via *Discovery*. The Fix Script is present in Yokohama instances, including OOB. Before applying the upgrade of *Discovery* core, Yokohama version, verify the fix script behavior in a sandbox environment. Remove the public SNMP credentials if not required.	Yokohama
Impact	The *Impact Store Application* configuration requires a sequence of tasks. See Configuring the Impact Store Application for details.	Yokohama

Instance Data Replication	Improve the performance and processing efficiency of *Instance Data Replication* (*IDR*) by upgrading your replication sets to V2, which uses *Hermes Messaging Service*. For details, see Upgrading legacy sets. Log rotation is automatically enabled for the Replication Payload Error [idr_replication_payload_error] table after the upgrade. By default, the log rotation schedule is comprised of seven shards, with five days for each shard. All log entries in this table created before the upgrade are automatically truncated.	Yokohama
MID Server	For the latest *MID Server* system requirements, see MID Server system requirements. The minimum JRE version supported is 17.0.10 and the recommended version is 17.0.12. If you have installed your own JRE, the upgrade process takes the following actions to verify that the *MID Server* uses a supported JRE: • If a *MID Server* is using an unsupported version of the JRE when it upgrades, the upgrade process displays a warning message with the minimum and recommended JRE version. • If a supported JRE is running on the *MID Server* host, the upgraded *MID Server* uses that version. All *MID Server* host machines require access to the download site at `install.service-now.com` to enable auto-upgrades. For additional details, read how the system manages *MID Server* upgrades. Only one *Windows MID Server* service is permitted according to the executable path. Upgraded *Windows MID Servers* that have multiple services pointing to the same installation folder can't start. See *MID Server* fails to start for more information. For more information about *MID Server* upgrades, see the following topics: • *MID Server* pre-upgrade check: Describes how the AutoUpgrade monitor tests the ability of the *MID Server* to upgrade on your system before the actual upgrade. • Upgrade the *MID Server* manually: Describes how to upgrade your *MID Servers* manually.	Yokohama
Now Assist Analytics	*Now Assist Analytics* is installed and updated when you install or update any *Now Assist* application. If you have issues installing or updating applications, see this	Yokohama

	ServiceNow® Store and in your *ServiceNow AI Platform®* instance has changed to *Now Assist for Security Incident Response*. You must upgrade to version 2.0.1 to access the following features: • Generate resolution notes in the *Now Assist* context menu. • Generate correlation insights for a security incident investigation from the *Now Assist* panel. The *AI Search* application must be enabled so that the recommended actions skill works for security incidents. To verify that *AI Search* is enabled on your instance, navigate to **All** > **AI Search** > **AI Search Status**. Contact support if the page indicates that *AI Search* is not enabled.	
Now Assist for Vulnerability Response	For more information about required applications for *Now Assist for Vulnerability Response*, see Supporting information. **Note:** Upgrading the *Now Assist* plugins activate any designated skills that were previously untouched by the customer. • If you have the plugins installed but never touched the configuration (never activated the skill nor adjusted associated roles) of a skill, any Default On skill will be activated on a per skill basis upon upgrading. • If you have previously toggled a skill from active and then back to inactive or have updated any roles for that skill, that skill remains inactive upon upgrading. • You maintain full control over deactivating individual skills at any time after activation.	Yokohama
Now Assist in Contract Management	If you're upgrading to *Now Assist* in *Contract Management* starting with Yokohama Patch 3 from a previous version and you have customized use cases, run a fix script to migrate the existing data to the *Now Assist Admin* console. 1. Navigate to **All** > **System Definition** > **Fix Scripts**. 2. In the **Name** field, search for `Upsert DI skill config`. 3. In the script, add the use case ids that you want to migrate to the *Now Assist Admin* console. 4. Select **Run Fix Script**.	Yokohama

	For more information, see Post-upgrade steps for Now Assist in Contract Management.	
Now Assist	If you customized UI actions or other items that are associated with *Now Assist* skills, ensure that your customized code is updated with the new skill releases. Otherwise, certain functions may not work as expected. If you run into issues when you're upgrading a *Now Assist* product, see KB1637452: Issues and mitigation for Now Assist (Generative AI) Applications and Plugin updates. You may need to log in to view the article.	Yokohama
Platform Analytics experience	If you had previously migrated your analytics assets to *Platform Analytics*, assets that were in compatibility mode but are newly supported in *Yokohama* are migrated automatically.	Yokohama
Playbooks in Workflow Studio	After you upgrade to *Yokohama*, update the *Workflow Studio* application in the *ServiceNow Store*.	Yokohama
Portfolio Planning	After upgrading to *Portfolio Planning* v8.8.0, the custom view settings previously saved under user preferences will be cleared. You must reapply these changes and create views as needed. For instructions, see Create a portfolio plan view in Portfolio Planning and Create a free-form roadmap view in Portfolio Planning.	Yokohama
Product Catalog Management and Pricing Management	After upgrading to the May 2025 release of *Sales and Order Management* applications, you must run a scheduled job that automatically enables the **Allow multiple configurations** option when your catalog admin creates product offerings with an associated product specification. This job is called **Scheduled job with an upgrade script to set 'allow_multiple_configurations' to true on an Offering**. When multiple product offering configurations are allowed in configurable opportunities, quotes, or orders, agents can create multiple instances of a child product offering and define custom configurations for each offering instance. **Note:** The **Allow multiple configurations** option is always enabled (set to true) for all product offerings that have an associated product specification. However, if the product specification has a child hierarchy, this option is honored only for orders placed through the TMF APIs. For specifications without a hierarchy, the flag is honored across all ordering channels.	Yokohama

Product	Release notes	Family
	The May 2025 release provides a default pricing plan that includes a new step, Apply Renewal Adjustment. If you've been using a custom pricing plan from an earlier release, review the default pricing plan, which is in a Retired state after upgrading to the May 2025 release. Determine whether you want to publish the default plan or customize the default pricing plan for your needs and then publish the custom plan to be used.	
Public Sector Digital Services	After the upgrade, certain public sector menus and menu items in the *CSM Configurable Workspace* revert to their original *CSM* label names. You can relabel these items for public sector use by updating the labels for the **Customer**, **Accounts**, and **Service Organizations** UX list category records. For more details on relabeling, navigate to **All** > **Constituent Service** > **Administration** > **Guided Setup**, and select **Configurable Workspace for Public Sector Digital Services** > **Customize Workspace Labels Manually**.	Yokohama
RPA Hub	Upgrade any of these currently installed *Microsoft* Software Installers (MSIs) by downloading the RPA applications: • *RPA Desktop Design Studio* • *Attended Robot* • *Unattended Robot* • *Unattended Robot* Login Agent For more information, see Download the RPA applications from RPA Hub. The following upgrade information is applicable only when you're upgrading from *San Diego* or *Tokyo* to *Yokohama*. Based on the number of records in the application file table, you may experience a delay while upgrading the *RPA Hub* applications from *Tokyo* or earlier releases to *Yokohama*. Before upgrading *RPA Hub* to *Yokohama*, you must set the value of the *glide.rollback.blacklist.TableParentChange.change* system property to **false**. If this property doesn't exist in the System Property [sys_properties] table, add the property and set its value to false. For more information on how to add a property, see Add a system property. After you upgrade to *Yokohama*, the bot process definitions change to the new structure, which is the bot process configuration.	Yokohama

Product	Release notes	Family
	Although the bot process configuration doesn't replace the bot process completely, most fields are moved from the bot process to the bot process configuration. If you upgrade to *Yokohama* without updating the system property value, the tables don't extend the Application File [sys_metadata] table. To update the table changes manually, see the Restructuring RPA Hub tables to sys_metadata in Utah and beyond release [KB1223629] article in the *Now Support Knowledge Base*.	
Security Posture Control	For a complete list of the applications that are required to implement *Security Posture Control*, see Install Security Posture Control.	Yokohama

Service Exchange	• When using *Service Exchange* for Providers and *Service Exchange* for Consumers in a single instance, you must upgrade both applications simultaneously to the same version to maintain compatibility.
	• The *Service Exchange* Global Script Include is automatically installed or updated when you install the *Service Exchange* application on the following platform versions:
	  ○ *Washington DC* Patch 9
	  ○ *Xanadu* Patch 4
	  ○ *Yokohama*
	• *Service Exchange* 2.x.x, which was first released with the *Xanadu* release, does not support migration of *Service Exchange* (Legacy) versions. If you are using a *Service Exchange* (Legacy) version, before you upgrade to the *Yokohama* release, you must follow instructions in the *Service Exchange* for Providers (Legacy) - Migration Utility [KB1499823] article in the *Now Support* Knowledge Base to migrate your configuration data.
	• If you are upgrading from *Service Exchange* version 1.x.x, follow the steps in Upgrade Guide - *Service Exchange* for Providers and Consumers application (v2.x.x release) [KB1700387] to migrate your *Service Exchange* applications.
	• Due to the introduction of mismatched version support, new entitlements cannot be activated until both the consumers and providers upgrade to *Service Exchange* version 2.x.x. Older active entitlements will continue to work but new ones cannot be activated.
	• If you upgrade to *Service Exchange* version 2.0.55 with *Sales and Order Management* plug-in version 1.0.4 before upgrading the platform to the *Yokohama* release,

Product	Release notes	Family
Configuration Compliance	If you are currently using *Configuration Compliance*, and you do not intend to upgrade to *Unified Security Exposure Management* (USEM), install a version below v30.x of *Configuration Compliance* and for upgrades to supported third-party integration applications. The Missing Assets [sn_vul_wiz_missing_asset] table used for storing assets imported by the backfill integrations for the Vulnerability Response Integration with Wiz is deprecated. If you are currently using the Vulnerability Response with *Wiz* integrations, after updating to version 1.1, you must backdate any of your existing *Wiz* primary integrations by three days and run them. Please review more information about the *Wiz* integration at SecOps articles on the Security Operations Community. For more information about the released versions of the *Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Zurich* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the *Now Support Knowledge Base*.	Zurich
Configuration Management Database (CMDB)	Due to the removal of the **Design** value for the operational status attribute in a CI, after an upgrade, you must review all CIs that have the discovery source attribute set to *Manual via IRE*. Review the operational status attribute of those CIs and set it to a supported value in *CMDB* for your environment. For example, you can set the attribute to *Non-Operational*. For more information about the operational status values, see Tangible/physical life cycle. On an upgraded *Zurich* instance, to configure the sn_cmdb_admin and the sn_cmdb_editor user roles with the necessary permissions to perform some *CMDB Workspace* tasks, you must manually run the scheduled job *Remove CMDB Roles from ITIL roles and Add CUD access to sn_cmdb_admin/sn_cmdb_editor roles*. This scheduled job modifies the user roles as follows: • Updates the itil user role to no longer contain the sn_cmdb_editor user role, and updates the itil_admin user role to no longer contain the sn_cmdb_admin user role. • If those permissions don't exist, updates the sn_cmdb_admin and the sn_cmdb_editor user roles with create, update, and delete access to the Configuration Item [cmdb_ci] class. For more information about the *Remove CMDB Roles from ITIL roles and Add CUD access to sn_cmdb_admin/sn_cmdb_editor roles* scheduled job, see Remove sn_cmdb_admin	Zurich

Product	Release notes	Family
	○ New *Zurich* instances can't use GlideEncrypter. All base system scripts have been changed to use alternative encryption processes. ○ if you're upgrading your *Zurich* instances, you can still GlideEncrypter, which has been updated to use AES256-GCM encryption via the Key Management Framework. ○ Learn more about 3DES deprecation in KB1704481.	
Encryption	For the GlideEncrypter API, NIST 800-131A Rev 2 has recommended against using the Triple Data Encryption Standard (3DES) encryption. The following changes are taking place in the *Zurich* release with the official removal of 3DES encryption for GlideEncrypter. • The GlideEncrypter API defaults to using the Key Management Framework (KMF) based algorithm, Advanced Encryption Standard (AES), for encryption and decryption operations for upgraded instances only. • For instances created with the *Zurich* release or later, this API isn't supported. • Learn more about 3DES deprecation in KB1704481. In the *Zurich* release, Column Level Encryption has received a required upgrade to Key Management Framework Column Level Encryption (KMF-CLE) due to the platform-wide deprecation of 3DES. For more information about this upgrade, see KB1700704.	Zurich
Enterprise Asset Management	Starting with *Zurich* release, a new menu, Asset put away, has been added to the *ServiceNow Agent* app navigation bar. When upgrading to the *Zurich* release, a fix script identifies whether the *ServiceNow Agent* app navigation bar was customized and takes the necessary action. • If the navigation bar wasn't customized before the upgrade, a new Asset put away icon () is included in the navigation bar • If the navigation bar was customized before the upgrade, two navigation bars appear: Customized old IT Asset Management and IT Asset Management. The new icon appears in the IT Asset Management navigation bar.	Zurich
External Content Connectors	Beginning with version 2 of the External Content Connectors application, external content connectors implement semantic vector indexing for crawled items. When you upgrade to a version that supports semantic vector indexing, your existing connectors will reindex all previously retrieved items the next time they're visited by a crawl, even if those items' content is unchanged. To force semantic vector indexing of your external	Zurich

	content items as soon as possible after upgrading, cancel any running crawls, then restart the canceled crawls manually. When you upgrade to version 4 of the External Content Connectors application from an earlier version, searches may not show all previously crawled content until you've completed both a content crawl and a user mapping crawl for each upgraded connector. The first content crawl run after the upgrade will reindex all searchable content from the source system, and the user mapping crawl will reindex all security principals from the source system. All crawled content should be shown in searches after both of these crawls are complete.	
Field Service Management	Effective March 1, 2025, the *Google* Places API, Directions API, and Distance Matrix API have been designated as legacy services. The newer versions of these services are Places API (New) and Routes API. *Google* Maps APIs for *Field Service* capabilities uses the latest version of the APIs in the *Zurich* release and *Dispatcher Workspace* version 8.0. To help avoid issues with the *Google* Maps APIs, enable Places API (New) and Routes API from *Google Cloud Platform* Console.	Zurich
Flows, subflows, and actions in Workflow Studio	An earlier version of the save as you go feature was released and withdrawn from the *Washington DC* release. If you're upgrading from the *Washington DC* release, you might have manually turned off the save as you go features by setting a system property. To restore the save as you go features, see Restore save as you go functionality.	Zurich
Generative AI Controller	*Generative AI Controller* is installed or updated when you install or update a *Now Assist* application. If you have issues installing or updating applications, see this knowledge article or open a support case.	Zurich
Hardware Asset Management	• Starting from the *Zurich* release, a few workflows have been migrated to *Workflow Studio* as flows. **Note:** The migration of workflows to *Workflow Studio* applies to *Asset Management*, *Procurement*, and *Contract Management* applications. ○ The following workflows have been migrated to *Workflow Studio* as flows: ▪ Procurement Process Flow – Hardware ▪ Transfer Order ▪ Transfer Order Line	Zurich

	• Log rotation is automatically enabled for the Replication Payload Error [idr_replication_payload_error] table after the upgrade. By default, the log rotation schedule is composed of seven shards, with five days for each shard. All log entries in this table created before the upgrade are automatically truncated.	
MID Server	For the latest *MID Server* system requirements, see MID Server system requirements. The minimum JRE version supported is 17.0.10 and the recommended version is 17.0.12. If you have installed your own JRE, the upgrade process takes the following actions to verify that the *MID Server* uses a supported JRE: • If a *MID Server* is using an unsupported version of the JRE when it upgrades, the upgrade process displays a warning message with the minimum and recommended JRE version. • If a supported JRE is running on the *MID Server* host, the upgraded *MID Server* uses that version. All *MID Server* host machines require access to the download site at `install.service-now.com` to enable auto-upgrades. For additional details, read how the system manages *MID Server* upgrades. Only one *Windows MID Server* service is permitted according to the executable path. Upgraded *Windows MID Servers* that have multiple services pointing to the same installation folder can't start. See *MID Server* fails to start for more information. For more information about *MID Server* upgrades, see the following topics: • *MID Server* pre-upgrade check: Describes how the AutoUpgrade monitor tests the ability of the *MID Server* to upgrade on your system before the actual upgrade. • Upgrade the *MID Server* manually: Describes how to upgrade your *MID Servers* manually.	Zurich
Notify	Starting with the *Zurich* release, *Notify* uses subflows instead of workflows. For existing users in *Zurich*, your current workflows are still supported. For new users, your *Notify* plugin installations use subflows. As part of this transition, the following workflow activities are available as flow actions and can be used when creating subflows:	Zurich

	a fix script to migrate the existing data to the *Now Assist Admin* console. **1.** Navigate to **All** > **System Definition** > **Fix Scripts**. **2.** In the **Name** field, search for `Upsert DI skill config`. **3.** In the script, add the use case IDs that you want to migrate to the *Now Assist Admin* console. **4.** Select **Run Fix Script**. For more information, see Post upgrade steps.	
Now Assist	If you customized UI actions or other items that are associated with *Now Assist* skills, confirm that your customized code is updated with the new skill releases. Otherwise, certain functions might not work as expected. If you run into issues when you're upgrading a *Now Assist* product, see the Issues and mitigation for Now Assist (Generative AI) Applications and Plugin updates [KB1637452] article in the *Now Support Knowledge Base*. You might need to log in to view the article. The *Zurich* release introduces enhanced protections for read-only fields across the ServiceNow AI Platform. These changes include a new “read_only_option” field with granular control levels, including “strict_read_only” and “client_script_modifiable". The changes occur in the backend and maintain backward-compatible behavior. This update helps strengthen your instance security while preserving the flexibility you need. If you have custom client scripts that modify ServiceNow-owned read-only fields using `g_form.setValue()` or `g_form.clearValue()`, refer to KB2718122. This article provides additional technical details on how to identify affected fields and adjust their settings. The existing Access Control Lists (ACLs) will be updated to replace the 'admin' role with specific, purpose-driven granular roles within scripts or security attributes. As part of this update, the `getRoles()` API will be replaced with the `hasRole()` API for authorization purposes. Additionally, all references to the 'admin' role in the code will be substituted with the new feature-specific granular roles for authorization use cases. Read https://www.servicenow.com/docs/r/platform-security/granular-admin-roles.html to learn more.	Zurich
On-Call Scheduling	Starting from the *Zurich* release, *On-Call Scheduling* uses subflows, not workflows. You must transition from workflows to subflows, because the workflows are considered as legacy workflows. For existing users in *Zurich*, your	Zurich

	current workflows continue to be supported. However, for new users, the *On-Call Scheduling* plugin installations on *Zurich* and later instances only use subflows. Maintain, build, and modify your own custom on-call scheduling flows in *Workflow Studio* with subflows for new instances. The following subflows are available for configuration:	
Operational Resilience	After upgrading to *Operational Resilience* version 21.0.x, rerun the *Update CSDM and other dependencies* scheduled job to populate the additional metadata that was introduced in this release.	Zurich
Performance Analyzer	Starting with the *Zurich* release, Performance Analyzer is available on your instance automatically. For access to Performance Analyzer on earlier instances, install Performance Analyzer from the *ServiceNow® Store*.	Zurich
Platform Analytics experience	On upgrade, any homepages on your instance that have been opened are migrated to *Core UI* dashboards, which are visible in the dashboard library. For more information, see Homepage deprecation. Simple lists are all converted to the new List element on upgrade.	Zurich
Playbooks in Workflow Studio	After you upgrade to *Zurich*, update the *Workflow Studio* application in the *ServiceNow Store*.	Zurich
Product Catalog Management and Pricing Management	*Pricing Management* v15.0.0 provides a default pricing plan that includes new steps to support pricing strategies introduced in this release. If you're using a custom pricing plan from an earlier release, review the default pricing plan, which is in a Retired state after you upgrade. Determine whether you want to publish the default plan or customize the default pricing plan for your needs. The default plan contains new steps for calculating net pricing and roll-up values for configurable products in quotes and orders: Net Price Calculation, Line Rollup, and Header Rollup steps. This pricing functionality existed in previous releases for quotes and orders but wasn't included in the default pricing plan. To retain this previous functionality for quotes and orders, you must add the Net Price Calculation, Line Rollup, and Header Rollup steps in your custom pricing plan before you publish it for use.	Zurich

Product	Release notes	Family
Skills Foundation	You cannot download industry skills data as part of the guided setup.	Zurich
Software Asset Management	Starting from the *Zurich* release, the following workflows are migrated to Flow Designer as flows: • Reclamation workflow • Procurement Process Flow - Auto allocation enabled When upgrading to the *Zurich* release, a fix script identifies whether the workflows were customized. If you haven't customized the workflows before the upgrade, the fix script deactivates the legacy workflows from the instance and deploys the Flow Designer flows on the instance post-upgrade. If you have customized the impacted workflows in the previous release, the fix script doesn't deploy the Flow Designer flows on the instance post-upgrade. You can view and access the impacted workflows in the instance after the upgrade. However, the deprecated workflows are considered as custom code and *ServiceNow* doesn't support those workflows. Starting from the *Zurich* release, the *Software Asset Workspace* plugin (com.sn_sam_workspace) is moved from the family release to the *Software Asset Workspace* store application. After upgrading to *Zurich*, the *Software Asset Workspace* plugin (com.sn_sam_workspace) is inactivated and the *Software Asset Workspace* store application (sn_sam_workspace) is enabled in the instance. When upgrading to the *Software Asset Management – SaaS License Management* plugin (sn_sam_saas_int) version 16.0.6 or later in the Zurich release, verify that the *Software Asset Workspace* store app (sn_sam_workspace) is updated to version 9.0.4.	Zurich
Source-to-Pay Operations Integrations	**Important:** Due to a performance issue identified with the upgrade fix script, the sourcing fix script has been modified. This script will no longer execute automatically during the upgrade process. Instead, it is now delivered as an on-demand job. Administrators must manually execute this job outside of business hours after the upgrade is complete.	Zurich
Strategic Planning	After upgrading to *Strategic Planning* v4.8.0, the existing **Investment type** and **Investment class** fields will appear as **Investment type (Deprecated)** and **Investment class (Deprecated)** respectively across the Planning page including in the Prioritization and Roadmap views and in the Scenario Planning page. The values from these deprecated	Zurich

	fields will be automatically copied to the new **Investment type** and **Investment class** fields. If you previously applied filters or personalized your view using the deprecated fields, you must update those configurations to use the new **Investment type** and **Investment class** fields across the workspace—including in the Prioritization and Roadmap views on the Planning page, as well as in the Scenario Planning page.	
Subscription Management	*Subscription Management* version 5.0 is active by default on all instances of the *Zurich* release. Update to *Subscription Management* version 6.1 or later to use the latest features. For more information about updating *Subscription Management*, see Update an app or plugin.	Zurich
Synthetic monitoring	If you want to run monitors using a *MID Server* as a location, you must restart the *MID Server* after upgrading.	Zurich
Third-party Risk Management	If you're a *VRM* user upgrading to *TPRM* and upgrading to *Vancouver* or a later release from an earlier release, you must run each upgrade sequentially to ensure that fix scripts run correctly. For example, you must upgrade from *Utah* to *Vancouver*, *Vancouver* to *Washington DC*, and so on. If the scripts don't run in the correct order, you can get data inconsistencies, broken functionalities, and conflicts. After upgrading to version 21.0.x, you can enable the *Smart Assessment Engine* (*SAE*) by setting the *Smart Assessment Engine* enabled (**sn_vdr_risk_asmt.sae_enabled**) property. After setting this property, *Smart Assessment Engine* (*SAE*) becomes the default assessment engine and replaces the legacy experience. The transition isn't reversible. **⚠ Warning:** Set this property in your non-production instances and conduct thorough testing before changing your production instances. Failure to do so may result in unexpected issues. For more information on upgrading from *VRM* to *TPRM* and the differences between the Smart and Classic Assessment engines, see Third-party Risk Management upgrade information. For existing *TPRM* customers, after upgrading to version 21.0.3, data from the Industry column in the Company [core_company] table is automatically migrated to the	Zurich

	tprm_industry column. Migration can take several hours depending on the number of records in the Company [core_company] table. After migration, a system log message confirms that the migration is complete. Review the Company [core_company] table content and update any customizations referencing the Industry field to use tprm_industry. After verifying the migration and updating customizations, you can drop the Industry column.	
Unified Security Exposure Management	*Unified Security Exposure Management* is available to all customers who are entitled to *Vulnerability Response*, however, migrating to *USEM* is a major upgrade that introduces a unified architecture for improved performance, scalability, and streamlined workflows. Before upgrading, leverage the *Migration assistant for Unified Security Exposure Management* that is available as an update set. See the Migration Guidance to Unified Security Exposure Management [KB2556844] Knowledge Base article for more information. This tool provides a guided experience for plugin installation, data mapping, rule migration, and post-migration validation, reducing risk and manual effort. Ensure that all integrations and workflows are reviewed for compatibility before initiating migration. For more information, see Migrating to USEM and Migrate to USEM.	Zurich
Vulnerability Response	If you are currently using *Vulnerability Response*, and you do not intend to upgrade to *Unified Security Exposure Management* (USEM), install a version below v30.x of *Vulnerability Response* and for upgrades to supported third-party integration applications. The Missing Assets [sn_vul_wiz_missing_asset] table used for storing assets imported by the backfill integrations for the Vulnerability Response Integration with Wiz is deprecated. If you are currently using the Vulnerability Response with *Wiz* integrations, after updating to new version 1.1, you must backdate any of your existing *Wiz* primary integrations by three days and run them. Please review more information about the *Wiz* integration at SecOps articles on the Security Operations Community. For more information about the released versions of the *Vulnerability Response* application as well as the third-party and *ServiceNow* applications that are compatible with the *Zurich* release, see the Vulnerability Response Compatibility Matrix and Release Schema Changes [KB0856498] article in the *Now Support Knowledge Base*. Zero Copy Connector for ERP	If you have existing scheduled extractions and have upgraded to Zurich, run the *Scheduled Extraction V2 Move* fix script to place scheduled extractions in a new table where scheduling is done by the scheduled scripts engine. For detailed steps, see Run fix scripts.	Zurich

Upgrade planning checklist

Plan and track the activities related to your ServiceNow instance upgrade. To help ensure that you complete all the tasks for a successful upgrade, follow the step-by-step instructions in the upgrade planning checklist to track and plan the upgrade.

Some optional steps may not be appropriate depending on the number of instances, customizations, and so forth. Mark the ones you do not need in the **N/A** column.

Tip: To download a PDF version of this checklist, click here.

The process for completing steps for self-hosted customers may vary (for example, requesting an instance clone or upgrades). These differences must be considered during planning.

Customer name:	
Product instance name:	https://[instancename].service-now.com
Other instance names	https://[instancename].service-now.com https://[instancename].service-now.com

	Description	Yes	No	N/A
Phase 1 - Read the release notes and plan your upgrade				
1	Review the Zurich release notes for the target ServiceNow feature release and patch, in addition to product and release documentation. For Zurich -specific upgrade considerations, see Pre- and post-upgrade tasks for various products.	❑	❑	❑
Phase 2 - Complete these planning tasks.				
2	Confirm which ServiceNow instances are in-scope for upgrade.			
3	Confirm the instance hosting model. For example, ServiceNow cloud, on-premise, or off-premise.	❑	❑	❑
4	Based on the Zurich release notes and other release materials, determine new functionality or	❑	❑	❑

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

	Description	Yes	No	N/A
	Note: It is important to test on a system that reflects the production instance as closely as possible. If your non-production and production instances are the same size, include the production audit log and the attachment data, and ensure that you have deselected the exclude options.			
Phase 3 - Verify your upgrade configurations and schedule the development instance upgrade in Now Support				
21	Check the configuration of the *Check distribution for possible upgrade* scheduled job to view how often and when it runs.	❑	❑	❑
22	Verify that the **Check distribution for possible upgrade** sys_trigger is set properly for upgrading.	❑	❑	❑
23	Verify that the **Check database for possible upgrade** sys_trigger is set properly for upgrading.	❑	❑	❑
24	Schedule the upgrade in Now Support.	❑	❑	❑
25	If applicable, request a version entitlement.	❑	❑	❑
Phase 4 - Upgrade and validate the development instance				
26	Using the Upgrade Monitor, monitor the upgrade to your instance and validate that the upgrade to your development instance is complete.	❑	❑	❑
27	After the upgrade for your development instance is complete, process the skipped records list in the Upgrade Monitor.	❑	❑	❑
28	Identify your update sets.	❑	❑	❑
29	Before and after upgrading, conduct smoke tests on your development instance. Use your comprehensive test plan to perform functional testing.	❑	❑	❑
Phase 5 - If applicable: Upgrade and validate your other non-production instances, such as your test instance

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

	Description	Yes	No	N/A
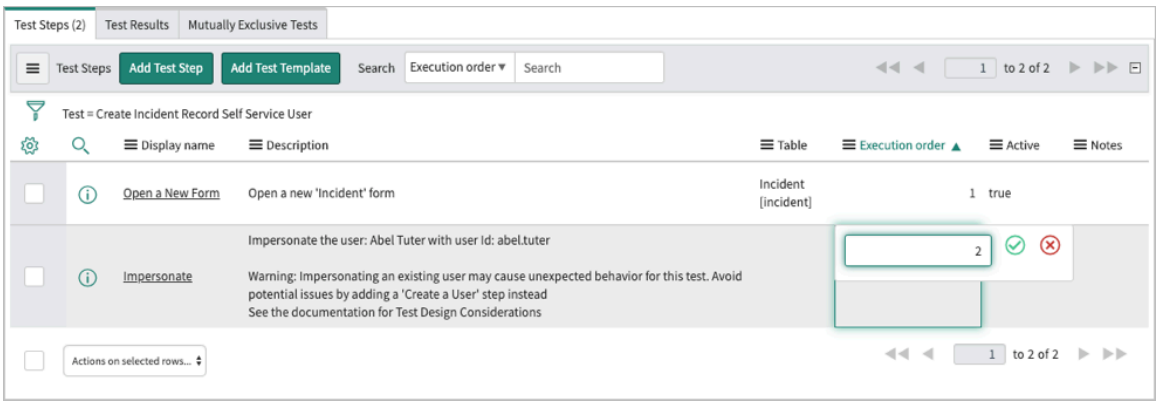
41	Schedule a walkthrough and sign-off of the Implementation Plan with key stakeholders and the core team. Responsible: Customer	❑	❑	❑
42	Submit and obtain approvals for change records as required by the organization change process. Responsible: Customer	❑	❑	❑
43	Send a communication to key stakeholders and end users with details for the production upgrade outage, new features, and so forth. Responsible: Customer	❑	❑	❑
44	Profile the performance of your instance before upgrading.	❑	❑	❑
45	Use the ServiceNow Performance homepage to document the performance of your instance before the upgrade.	❑	❑	❑
46	On your clone, perform functional testing and monitor the performance of your instance.	❑	❑	❑
Phase 7 - Upgrade the production instance				
47	Schedule the upgrade in Now Support.	❑	❑	❑
48	If applicable, request a version entitlement.	❑	❑	❑
49	Monitor the upgrade to your instance and validate that the upgrade to your production instance is complete.	❑	❑	❑
50	Apply any update sets and post-upgrade fix scripts that you have.	❑	❑	❑
51	Validate and test your instance by conducting user acceptance testing (UAT). Verify with all key stakeholders that the system is performing properly after production upgrade, and key functionality is available.	❑	❑	❑

Upgrade tools and resources

Learn about ServiceNow products and tools that can improve your upgrade experience.

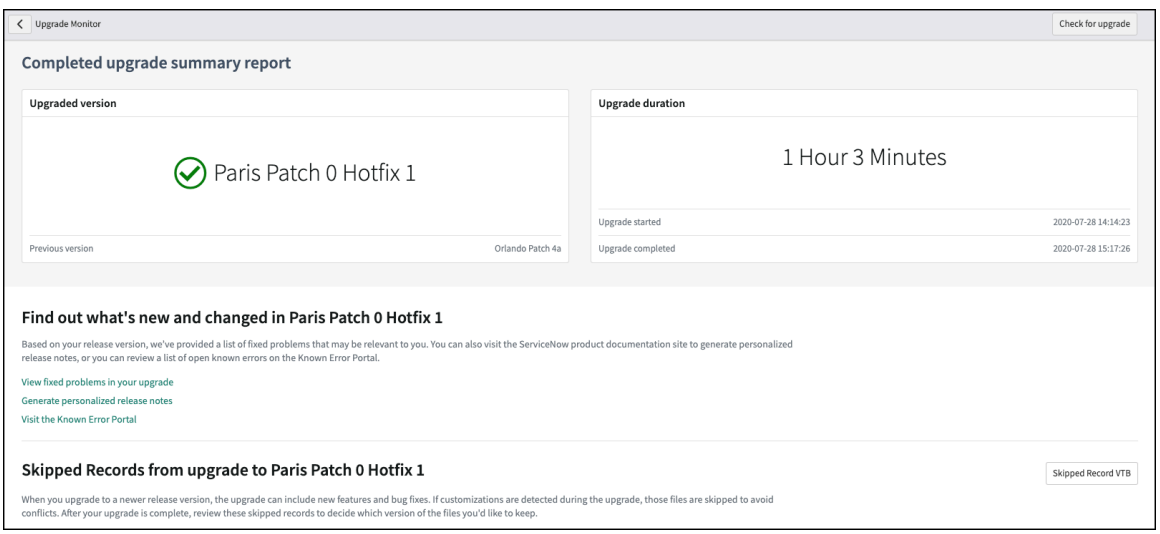
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Products

Use these ServiceNow products to automate parts of your upgrade testing and manage your upgrades from one central place.

Automated Test Framework



The Automated Test Framework (ATF) enables you to create and run automated tests to confirm that your instance works after making a change. For example, after an upgrade, during application development, or when deploying instance configurations with update sets. Review failed test results to identify the changes that caused the failure and the changes that you should review.

Note: By default, the system property to run automated tests is disabled to prevent you from accidentally running them on a production system. Run tests only on development, test, and other non-production instances to avoid data corruption and outage.

Upgrade Center

Use ServiceNow® Upgrade Center to plan and manage your upgrades. Use the Upgrade Preview module to explore different release versions available to you and gain insights about the experience of an upgrade without actually upgrading your instance. You can also monitor the status of any ongoing upgrade and view the summary of your latest upgrade with the new Upgrade Monitor module. The Upgrade Center also features an Upgrade visual task board (VTB) to manage post-upgrade skips. A separate Upgrade History module can be used to view all your past upgrades.

Upgrades and the ServiceNow Store

The ServiceNow Store includes official applications that are developed and released by ServiceNow. Users can download, access, and configure Zurich apps on their instances. Store application versions can be upgraded when you upgrade your instance to a new release version.

New versions for a ServiceNow® Store app can be defined in patch and family releases. This includes the ability to define a minimum version and/or a hotfix for a version you already have

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

installed. If your instance has an installed app version below the defined minimum version, the app will be upgraded to the minimum required version. Similarly, if your instance has an installed app below the defined hotfix version, your app will be upgraded to the hotfix version.

For example, consider an application that defines these versions in a release: 1.7.0, 2.4.1, and 3.0.1. In this example, version 1.7.0 is the minimum version. Versions 2.4.1 and 3.0.1 are hotfix versions.

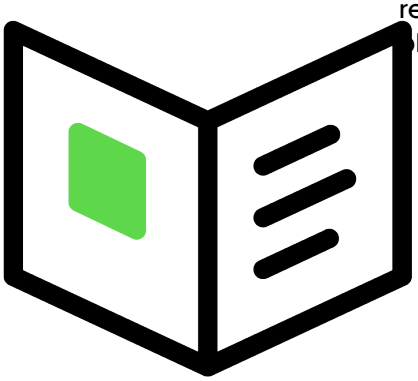
When an instance upgrades to the release version, the following behavior occurs:

Minimum version upgrades

Version installed before the upgrade	Expected version after the upgrade
1.0.0	1.7.0 - The version upgrades to the minimum version
1.3.2	1.7.0 - The version upgrades to the minimum version
1.7.0	1.7.0 - The version stays the same, because the instance was already on the minimum version
1.7.2	1.7.2 - The version stays the same, because the instance was already ahead of the minimum version

Hotfix version upgrades

Version installed before the upgrade	Expected version after the upgrade
1.8.0	1.8.0 - The version stays the same, because the instance was already ahead of the defined hotfix version
2.0.0	2.4.1 - The version upgrades to the defined hotfix version
2.6.0	2.6.0 - The version stays the same, because the instance was already ahead of the defined hotfix version
3.0.0	3.0.1 - The version upgrades to the defined hotfix version
3.0.5	3.0.5 - The version stays the same, because the instance was already ahead of the defined hotfix version
4.0.0	4.0.0 - The version stays the same, because there are no hotfix versions defined for 4.0.0+.



Upgrade to the Zurich release

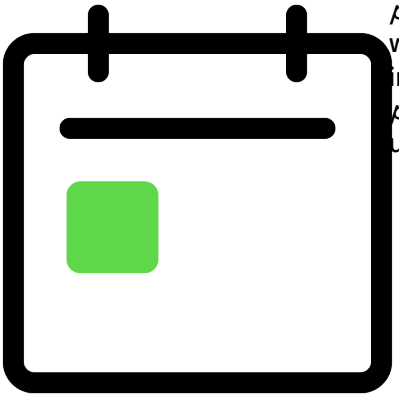
Upgrading and patching your instance requires planning, testing, and validation. To ensure a safe and effective upgrade, read the release notes, create upgrade plans, and test your upgrade on non-production instances before upgrading your production instance.

Important: These topics contain in-depth explanations about upgrades. For a step-by-step reference of upgrade steps, refer to the Upgrade planning checklist.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Phase 1 - Read the release notes and plan your upgrade

Before you begin the upgrade process, it is essential to read the release notes for your target version so you understand the required upgrade and migration tasks. This information helps you plan a safe and effective upgrade.



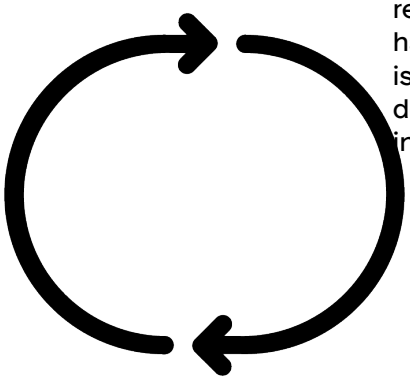
Phase 2 - Prepare for the development instance upgrade

For a better understanding of your production upgrade duration, request a full clone of your production instance (including large tables and attachments) onto a non-production instance. Confirm your current and target release versions, because you will later use this information when scheduling your upgrade in Now Support.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Phase 3 - Verify your upgrade configurations and schedule the development instance upgrade in Now Support

Check the configuration of the *Check distribution for possible upgrade* scheduled job to view how often and when it runs. Review information about timing your upgrade in coordination with the *Check distribution for possible upgrade* scheduled job. Then, schedule your upgrade in Now Support.



Phase 4 - Upgrade and validate the development instance

Track the progress of your upgrades with the Upgrade Monitor. For your first non-production instance upgrade (your development instance), use the Upgrade Monitor to process the skipped list of records that were not addressed in the upgrade. Then identify your update sets and perform functional testing.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Phase 5 - If applicable: Upgrade and validate your other non-production instances, such as your test instance

After you've configured and refined your development instance, request to upgrade any other non-production instances you have, such as a test instance. Immediately after the upgrade is complete, apply the post-upgrade changes made to your development instance, including activating optional plugins, installing and upgrading applications, and applying update sets.

Phase 6 - Prepare to upgrade the production instance

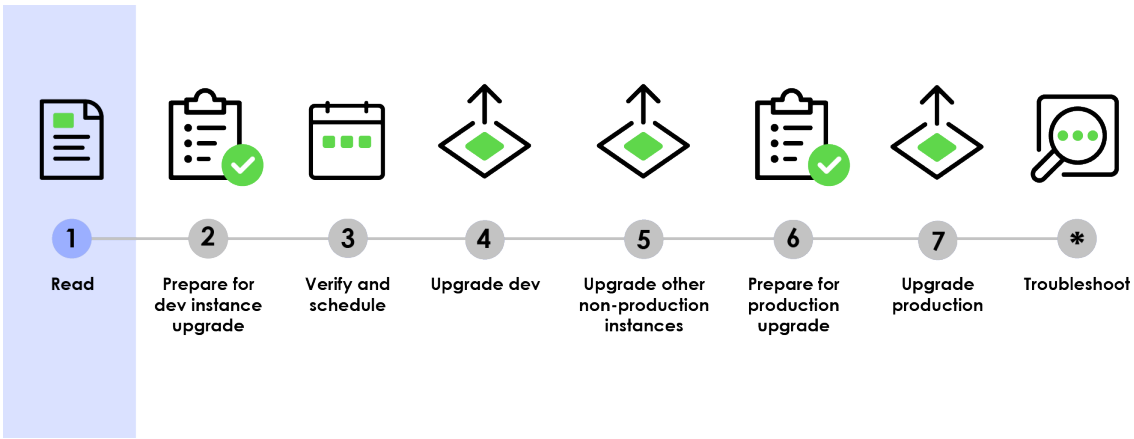
After you have configured and refined your test environment to be a good representation of your production environment, prepare to upgrade your production instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Phase 7 - Upgrade the production instance

After you have upgraded your development, non-production, and test instances, upgrade your production instance last. Then validate that the upgrade was complete, apply update sets and fix scripts, and perform post-upgrade user acceptance testing (UAT).

Phase 1 - Read the release notes and plan your upgrade



Before you begin the upgrade process, it is essential to read the release notes for your target version so you understand the required upgrade and migration tasks. This information helps you plan a safe and effective upgrade.

Before you begin

Important: If multiple software versions are involved in your upgrade, be sure to consult the release notes for each version between your current version and the target version.

Role required: admin.

About this task

Procedure

1. Read the release notes for your target version.
   Review upgrade and migration tasks that you will need to complete before or after your upgrade.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- ServiceNow provides release notes for every release. The release notes offer valuable information about new functionality, notable changes, and fixes available in a particular version. Read the Zurich release notes to determine whether the upgrade contains functionality you need and fixes that resolve any issues affecting your instance. The release notes can also help you determine whether items you previously customized are being upgraded.
- For Zurich -specific upgrade considerations, see Pre- and post-upgrade tasks for various products.
- If you are thinking about upgrading to the Zurich family, problem (PRB) fixes can be an important factor in your upgrade plans. You can generate a list of . Compare the lists of fixed problems across various Zurich upgrade scenarios to help you decide which release version to upgrade to.

2. Complete the preparation and planning tasks in Phase 2 of the Upgrade planning checklist.

   The checklist contains a list of planning tasks that guide you through various aspects of upgrade preparation. You are guided through tasks such as scoping, gathering stakeholders, identifying features to disable and enable, and creating test plans to use throughout the upgrade. Follow these steps to ensure that all aspects of your organization are ready for the upgrade.

3. To better prepare for the upgrade, evaluate the level of customizations on your instances.

   For information on customization best practice guidelines, visit the Customer Success Center website.

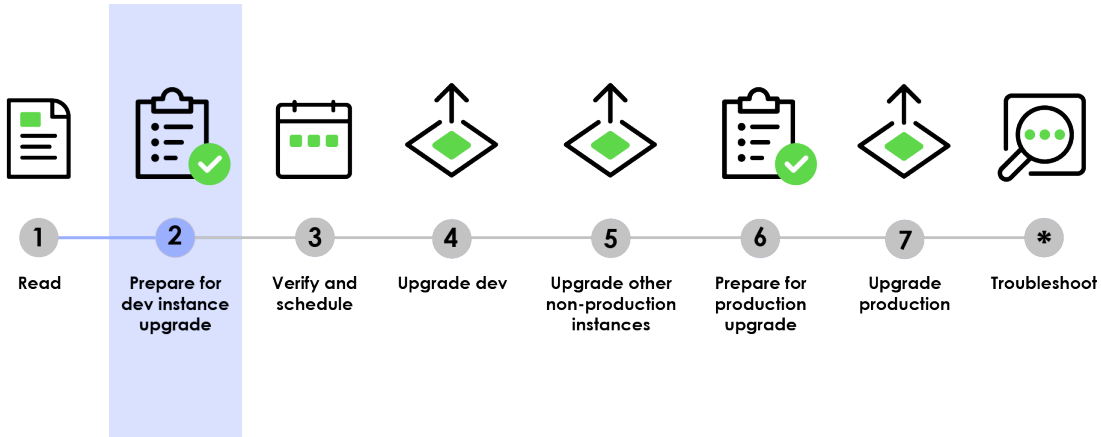
Complexity score	Customization examples
Low	○ Modification to form layout/design ○ Add fields and/or UI policies to forms ○ Build simple custom integration ○ Extend an existing table (such as incident) in scope with new fields only
Low-medium	○ Extend an existing table (such as incident) in scope with some scripting ○ Extend an existing table (such as incident) as the basis for a different application, such as HR
Medium	Build a new scoped application
Medium-high	Build a new global application
High	○ Change baseline business rules (such as modifying the SLA process) ○ Build a complex custom integration

4. Create a comprehensive test plan that includes test cases for all core instance functionality and integrations, including any customizations you may have.

   To efficiently test and evaluate system functionality, create a set of detailed test scripts for your testing team to use. You will use this test plan throughout each instance upgrade.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Instance	Type of testing required
Development	Conduct smoke tests.
Test	○ Use the ServiceNow Automated Test Framework to assist you in testing your non-production instances. ○ You can use Automated Test Framework quick start tests and product testing suites to help you jump start your testing before and after upgrades. For a list of available tests and activation information, see Quick start tests. ○ For extra testing coverage, you can also conduct user acceptance testing (UAT) on your non-production instances.
Production	Conduct UAT. **Note:** The Automated Test Framework is intended for use on non-production instances. On your production instance, conduct UAT only.



Phase 2 - Prepare for the development instance upgrade

For a better understanding of your production upgrade duration, request a full clone of your production instance (including large tables and attachments) onto a non-production instance. Confirm your current and target release versions, because you will later use this information when scheduling your upgrade in Now Support.

Before you begin

Role required: admin.

About this task

Procedure

1. On your production instance, create a system clone and select your development instance as the **Target instance**.

   The clone provides you with an exact copy of production. Performing an upgrade on your clone allows you to simulate an upgrade on your production configuration in a non-production environment. Refer to System clone for details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:

For effective upgrade testing, use this clone to test on a system that reflects the production instance as closely as possible. If your non-production and production instances are the same size, include the production audit log and the attachment data on your production clone. To ensure that all production data is included with the clone, make sure that you clear all the **Exclude** check boxes on the Request Clone form. On your non-production instance, replicate typical user behaviors that occur on your production instance to enhance an estimate of your upgrade duration.

2. Set expectations for performance during upgrades.

   During an upgrade, your performance may be impacted because your nodes initiate the distribution upgrade. All nodes are restarted during an upgrade, but your multi-node instances are available during an upgrade because ServiceNow instances operate on a multi-node system. This multi-node system staggers node distribution upgrades, ensuring that there is at least one active pair of nodes for multi-node instances during an upgrade.

   To help you set accurate expectations for performance during upgrades, be aware of the differences between the nodes on your non-production and production instances. Instances with one node experience a short period of downtime during the upgrade, but multi-node instances do not have UI downtime. For details on your nodes and their status, see the Upgrade Progress screen.

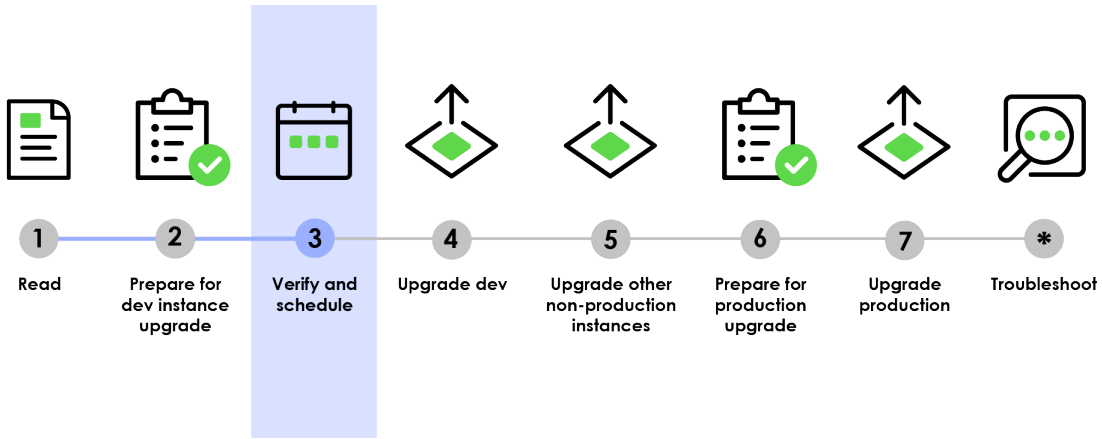
Phase 3 - Verify your upgrade configurations and schedule the development instance upgrade in Now Support

Check the configuration of the *Check distribution for possible upgrade* scheduled job to view how often and when it runs. Review information about timing your upgrade in coordination with the *Check distribution for possible upgrade* scheduled job. Then, schedule your upgrade in Now Support.

Before you begin

Role required: admin.

You must check the configuration of the **Check distribution for possible upgrade** and **Check database for possible upgrade** sys_triggers, which are essential to making sure your instance upgrades to the correct target version.



Note: Starting in the Paris release, 'Upgrade' job has been renamed to 'Check distribution for possible upgrade'. In addition, the 'Check Upgrade Script' job has been renamed to 'Check database for possible upgrade'.

sys_trigger	Function
Check distribution for possible upgrade	• Queries Now Support to ask whether an upgrade is going to happen in a given time interval, which is determined by the configuration for the *Check distribution for possible upgrade* scheduled job. • Asks whether the instance should be running a different version. If so, the distribution for that version is downloaded, and your instance upgrades to the target version.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

sys_trigger	Function
Check database for possible upgrade	• Runs after the distribution has been upgraded. • Performs the database upgrade.

About this task

Important: Your upgrades are orchestrated out of your instance, not Now Support.

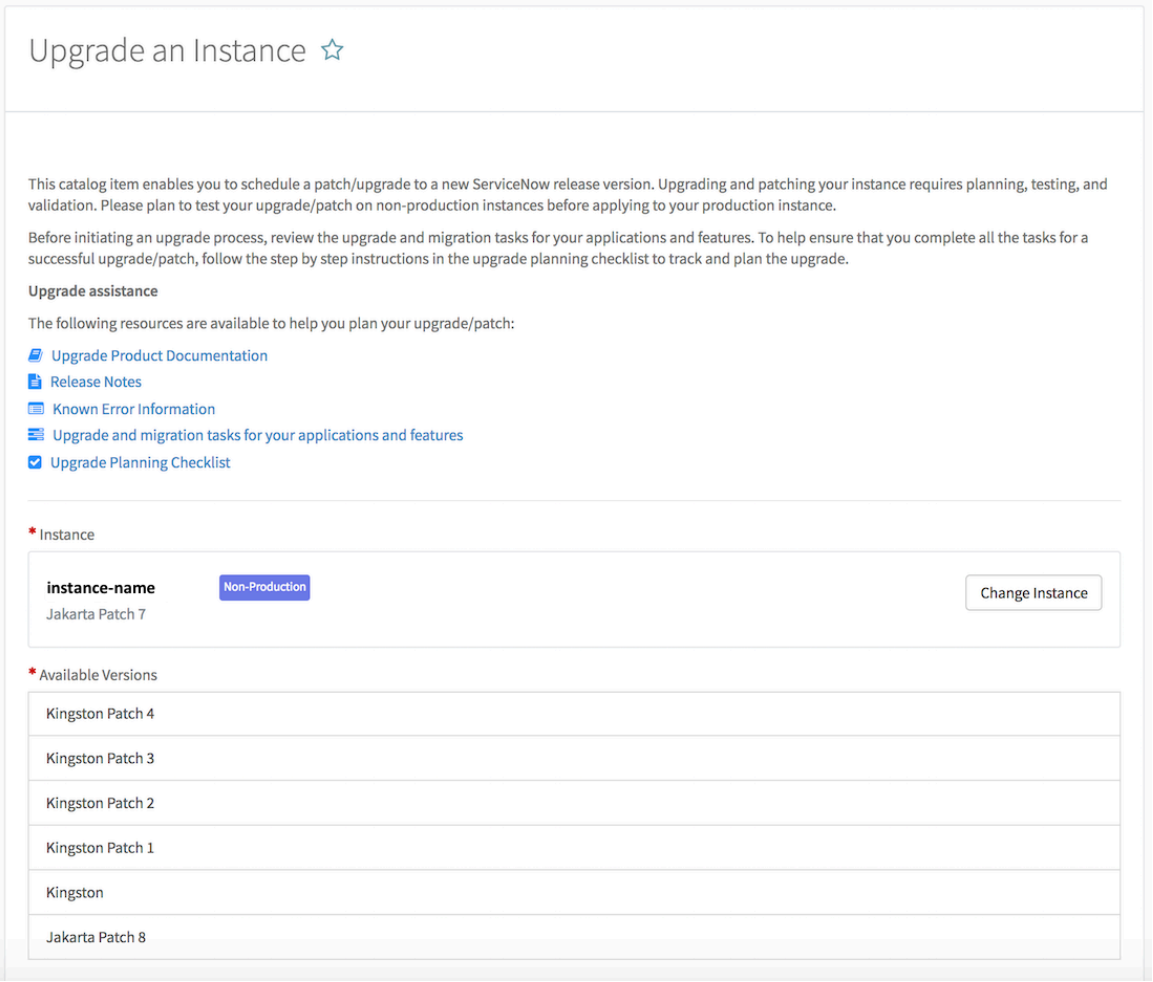
Now Support keeps records of what version you should be running, and your instance periodically queries Now Support to check its assigned version. When you designate a time for your upgrade, your instance begins the upgrade at that time. For example:

Action	Result
You schedule an upgrade to Zurich Patch 8 to take place on June 10 at 3:00pm.	Now Support changes its records to reflect that you should be on Zurich Patch 8 on June 10 at 3:00pm.
Now Support waits to get pinged by your instance after the scheduled time on June 10.	Your instance continues to operate on its current release version, and it periodically pings Now Support.
After the scheduled time on June 10, Now Support receives a ping from your instance.	Now Support tells your instance that it should be on Zurich Patch 8.
Your instance receives a Now Support notification that it should be running a different version.	Your instance starts the upgrade.

How to schedule and manage instance upgrades on Now Support

You can browse the Now Support service catalog to request and self-service tasks such as scheduling an upgrade.

Request plugins and self-service tasks using service catalog on Now Support



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Check the configuration of the *Check distribution for possible upgrade* scheduled job to view how often and when it runs.
   a. Navigate to **System Scheduler** > **Scheduled Jobs** > **Scheduled Jobs**.
   b. In the list, find the *Check distribution for possible upgrade* scheduled job.
   c. View the **Next action** column to determine when the job next runs.
2. Verify that the **Check distribution for possible upgrade** sys_trigger is set properly for upgrading.
   a. Navigate to **System Scheduler** > **Scheduled Jobs** > **Scheduled Jobs**.
   b. Find and click the *Check distribution for possible upgrade* scheduled job.
   c. Make sure that the **Trigger type** is set to **Interval**.
   d. Make sure that the **System ID** is set to **None**.
3. Verify that the **Check database for possible upgrade** sys_trigger is set properly for upgrading.
   a. Navigate to **System Scheduler** > **Scheduled Jobs** > **Scheduled Jobs**.
   b. Find and click the *Check database for possible upgrade* scheduled job.
   c. Make sure that the **Trigger type** is set to **Run at System Startup**.
4. Schedule the upgrade in Now Support.
   a. Log in to Now Support.
   b. Click **Instances** in the left navigation menu.
   c. Select **Manage Instances**.
   d. Partners only: From the user menu, use the **Switch Company** feature to select a company.
   e. Select the instance that you want to upgrade or patch.
   f. In the **Actions** menu, click **Upgrade Instance**.

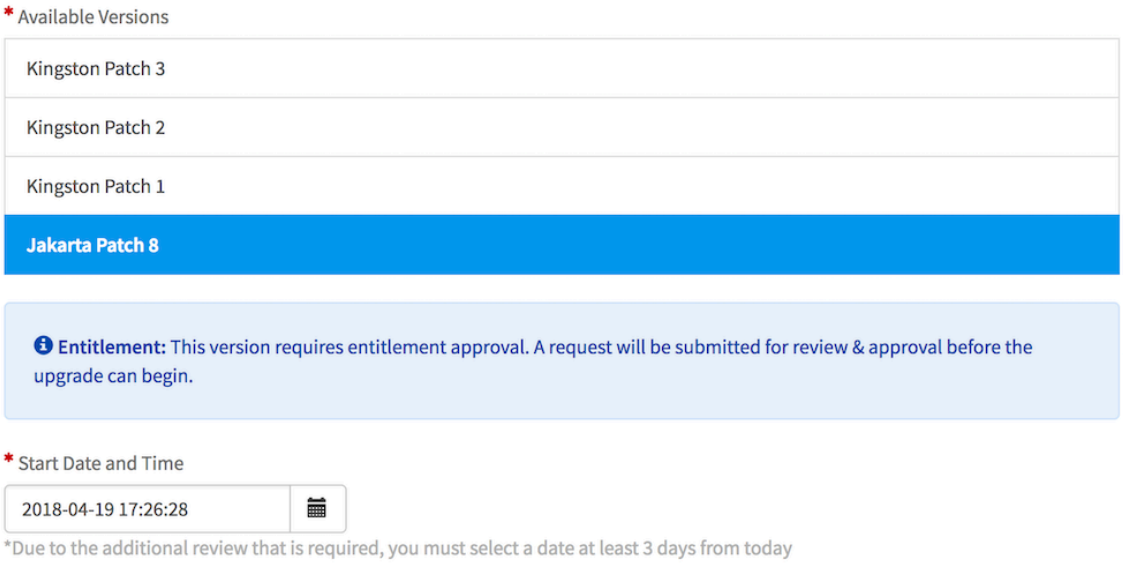
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Upgrade an Instance** Service Catalog item opens up. It is prepopulated with the instance name and available versions to which you can upgrade or patch the instance.

g. To specify a date and time for the upgrade or patch, click the calendar icon next to the **Start Date and Time** field.

h. Click the clock icon to select the time for the upgrade or patch.



> **Note:** Setting the time for an upgrade or patch is important. Set the upgrade or patch to start 10–15 minutes before the *`Check distribution for possible upgrade`* scheduled job runs. This setting allows enough time for the upgrade or patch request to update Now Support 's records about which release version your instance should be on before the *`Check distribution for possible upgrade`* scheduled job runs.

i. Click **Submit**.
A confirmation message appears. If you do not need an entitlement, a change request is created.

5. If applicable, request a version entitlement.

a. In the **Actions** column, click **Schedule**.
If the version does require an entitlement, this screen appears:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. Click the calendar icon and specify a date and time at least three days in the future.

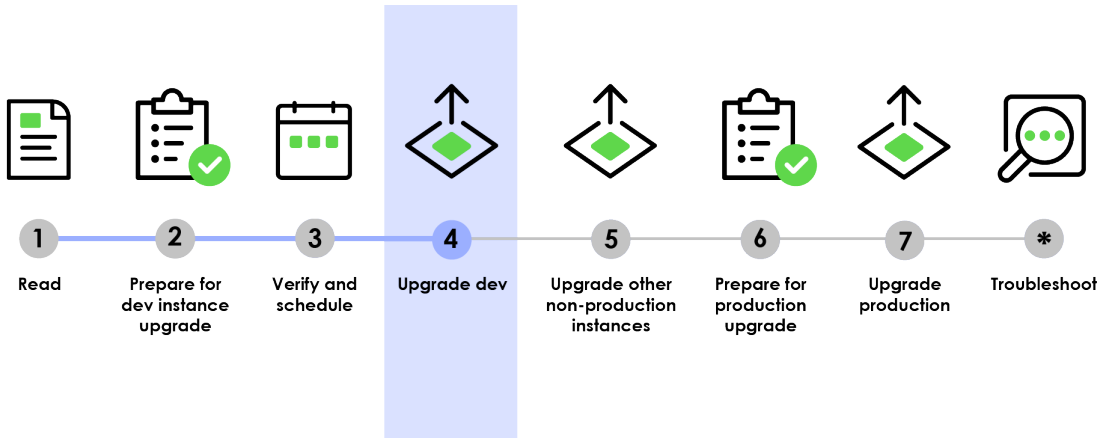
ServiceNow entitlement managers respond to your entitlement request within three days.

> **Note:** Setting the time for an upgrade or patch is important. Set the upgrade or patch to start 10–15 minutes before the *`Check distribution for possible upgrade`* scheduled job runs. This setting allows enough time for the upgrade or patch request to update Now Support 's records about which release version your instance should be on before the *`Check distribution for possible upgrade`* scheduled job runs.

c. Click **Schedule**.
A confirmation message appears. If you need an entitlement, the entitlement request number is included. Click the entitlement request number to view the request.

d. If you have any questions about your entitlement, comment on your entitlement request after you have submitted it.

Phase 4 - Upgrade and validate the development instance



Track the progress of your upgrades with the Upgrade Monitor. For your first non-production instance upgrade (your development instance), use the Upgrade Monitor to process the skipped list of records that were not addressed in the upgrade. Then identify your update sets and perform functional testing.

Before you begin

Role required: admin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

The Upgrade Monitor helps you upgrade an individual instance. You can monitor the progress of an upgrade and resolve conflicts between the upgrade and customizations.

Procedure

1. Using the Upgrade Monitor, monitor the upgrade to your instance and validate that the upgrade to your development instance is complete.
2. After the upgrade for your development instance is complete, process the skipped records list in the Upgrade Monitor.

   As you are processing the skipped list, you may merge and revert records, resolve conflicts for an individual record, and make additional customizations. These changes go into the latest version, which goes into your current update set.

3. Identify your update sets.

   You need these update sets for your subsequent non-production instances. If there are issues that must be addressed after the upgrade, make the appropriate changes and they will go into your current update set. Collect the update sets that:

   - Were created while reviewing the skipped updates list.
   - Were created while changing customizations to work with the latest release.
   - Must go live immediately after your next upgrade.

   Gathering these update sets before your upgrade expedites the process of exporting, importing, and committing them onto your other instances. After the correct update sets are identified, follow the standard process for moving and applying those update sets. Refer to System update sets for details.

4. Before and after upgrading, conduct smoke tests on your development instance. Use your comprehensive test plan to perform functional testing.

   After upgrading, track any defects or deviations from the pre-upgrade testing results. Defect tracking can help identify root causes and create fixes. When a fix is identified, capture the fix in a single update set. The resulting update sets hold the cumulative fixes that should be applied to the production instance.

   To help automate your testing and validation on non-production instances, use the Automated Test Framework. You can use Automated Test Framework quick start tests and product testing suites to help you jump start your testing before and after upgrades. For a list of available tests and activation information, see Quick start tests.

Phase 5 - If applicable: Upgrade and validate your other non-production instances, such as your test instance

After you've configured and refined your development instance, request to upgrade any other non-production instances you have, such as a test instance. Immediately after the upgrade is complete, apply the post-upgrade changes made to your development instance, including activating optional plugins, installing and upgrading applications, and applying update sets.

Before you begin

Role required: admin.

About this task

This instance naming convention assumes that you have three ServiceNow instances. If you have three instances, upgrade your instances in this order:

1. Development
2. Test
3. Production

If you have more or less than three instances, or if you are using Team Development, these instance labels will be different. In general, upgrade your instances furthest from production towards your production instance.

After you have applied your development update sets to your test instance, perform the following tasks on your test instance (and other non-production instances, if applicable).

Procedure

1. Create a system clone down from your production instance.
2. Schedule the non-production upgrade in Now Support and verify your upgrade configurations.
3. Validate that the upgrade to your non-production instance is complete.
4. Install any optional plugins that were installed on your development instance.
5. Install any custom applications and post-upgrade fix scripts that you need.
6. Install update sets.
   Use these update sets to move your initial changes into your subsequent non-production instances.
7. Perform functional testing and monitor the performance of your instance.
   Reproduce the typical user activities that occur on your production instance. The Automated Test Framework can greatly assist you in testing your non-production instances. You can use Automated Test Framework quick start tests and product testing suites to help you jump start

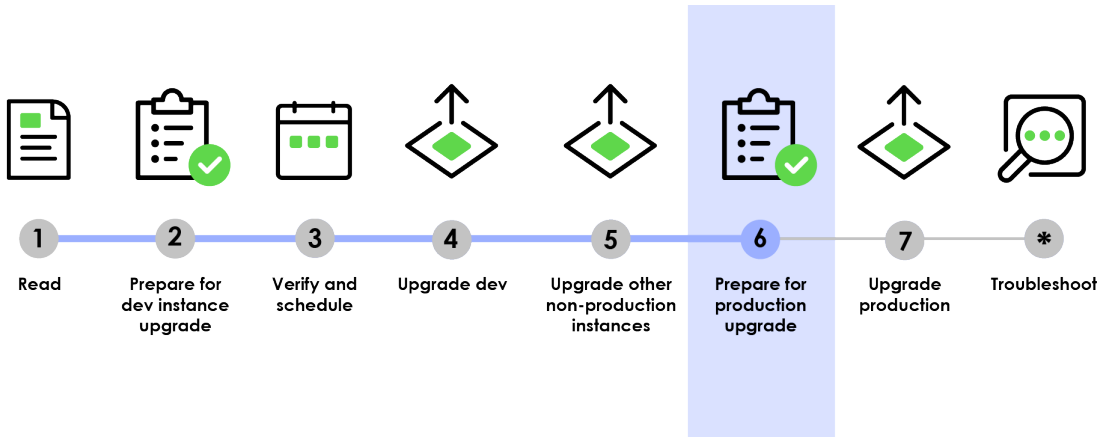
your testing before and after upgrades. For a list of available tests and activation information, see Quick start tests. For extra testing coverage, you can also conduct user acceptance testing (UAT).

Phase 6 - Prepare to upgrade the production instance

After you have configured and refined your test environment to be a good representation of your production environment, prepare to upgrade your production instance.

Before you begin

Role required: admin.



To ensure that all stakeholders in your company are prepared for the final production upgrade, complete the administrative planning tasks in Phase 6 of the Upgrade planning checklist. When upgrading a production instance:

- Obtain confirmation from IT and management that all non-production instance defects have been fixed, validated, and included in an update set.
- Use the change management process established by your organization to track the upgrade.
- Communicate effectively with your user community regarding changes, new features, and process updates resulting from the upgrade.
- Negotiate a suitable upgrade time for all users of the ServiceNow system.

  For example, schedule the upgrade after hours, to minimize impact to your users. Remember to schedule the upgrade to occur 15–20 minutes before the *Upgrade* scheduled job interval.

- Allow time in your change window to run all test cases and validate that all integrations, key business functionality, and system performance are acceptable. Add a time buffer for responding to errors without breaching the change window.

About this task

Procedure

1. Profile the performance of your instance before upgrading.

   Pre-upgrade instance validation can provide a reliable benchmark of the current operating environment and alert you to any issues that may appear after the upgrade. For example, it sometimes appears that specific functionality is broken by an upgrade. Analysis might show that the functionality did not work properly in the production instance, even before the upgrade.

   Before performing the upgrade, analyze the current operating environment. Specifically, review:

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Key functionality
- Integrations
- Instance performance

2. Use the ServiceNow Performance homepage to document the performance of your instance before the upgrade.

   You will later compare and contrast this information during your post-upgrade validation and testing. Benchmarks will be different for each of your instances.

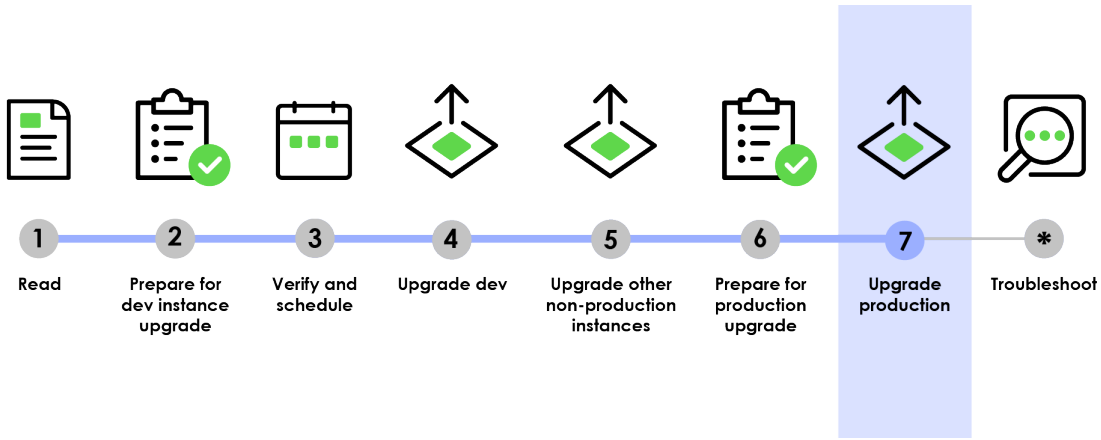
   To access the ServiceNow Performance homepage:

   a. Log in to your instance.

   b. From the list in the top left of the instance homepage, select **ServiceNow Performance**.

3. On your clone, perform functional testing and monitor the performance of your instance. Replicate typical user behaviors that occur on your production instance. Assign a consistent core team of power users and key stakeholders to validate important functionality in the ServiceNow instance before and after upgrades.

Phase 7 - Upgrade the production instance



After you have upgraded your development, non-production, and test instances, upgrade your production instance last. Then validate that the upgrade was complete, apply update sets and fix scripts, and perform post-upgrade user acceptance testing (UAT).

Before you begin

Role required: admin.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. Click the calendar icon and specify a date and time at least three days in the future.

ServiceNow entitlement managers respond to your entitlement request within three days.

> **Note:** Setting the time for an upgrade or patch is important. Set the upgrade or patch to start 10–15 minutes before the *`Check distribution for possible upgrade`* scheduled job runs. This setting allows enough time for the upgrade or patch request to update Now Support 's records about which release version your instance should be on before the *`Check distribution for possible upgrade`* scheduled job runs.

c. Click **Schedule**.
A confirmation message appears. If you need an entitlement, the entitlement request number is included. Click the entitlement request number to view the request.

d. If you have any questions about your entitlement, comment on your entitlement request after you have submitted it.

3. Monitor the upgrade to your instance and validate that the upgrade to your production instance is complete.
There are several methods of verifying that your upgrade is complete:

- Navigate to the **System Diagnostics** > **Upgrade Monitor**.
- Navigate to **System Diagnostics** > **Upgrade Log** and locate the `Notifying HI that upgrade has been completed` message.
- Navigate to **System Definition** > **System Upgrades**. Information about all system upgrades is listed.
- Navigate to **System Diagnostics** > **Upgrade History** and search for the most recent upgrade.

4. Apply any update sets and post-upgrade fix scripts that you have.

5. Validate and test your instance by conducting user acceptance testing (UAT).
Performance and operating information is available in the system logs, which offer an excellent source of information for evaluating the inner workings of a ServiceNow instance. Use this
