

Now Platform administration

Automate business processes across the enterprise. Provide the infrastructure needed to develop, run, and manage applications.

Deliver a common set of core capabilities

Provide all users with high-performance business services that make everyday work fast, easy, and productive.

Eliminate silos with a single data model

Share data across the enterprise by making your instance a single system of action. Extend the data model with a flexible table schema.

Provide reliable and secure cloud services

Provide reliable service from multi-instance cloud services. Secure data and communications with encryption.
